16. *Carriages of greater Weight than Four Tons may be used on Railways.*] And whereas by various Acts relating to railways it is enacted, that no carriage or waggon shall carry or bear at any one time upon the railway (including the weight of such carriage) more than four tons, and experience has shown that it is in many cases more conducive to safety to use a heavier description of carriage or waggon upon railways than was originally contemplated; be it therefore enacted, that every provision contained in any such Act or Acts respectively limiting the weight to be carried or borne at any one time in any carriage or waggon upon any railway (including the weight of such carriage or waggon) to four tons, shall be and the same is hereby repealed; and that, notwithstanding anything in any Act contained, it shall be lawful for any Railway Company to use and to permit to be used upon any railway carriages or waggons carrying or bearing (including the weight of such carriage) a greater weight than four tons, subject to such regulations as may from time to time be made and be in force, pursuant to any Act or Acts of Parliament already or hereafter to be passed in that behalf.

17. *Punishment of Persons employed on Railways guilty of Misconduct.*] And whereas by the said recited Act for regulating railways, provision is made for the punishment of servants of Railway Companies guilty of misconduct, and it is expedient to extend such provision; be it enacted, that it shall be lawful for any officer or agent of any Railway Company, or for any special constable duly appointed, and all such persons as they may call to their assistance, to seize and detain any engine-driver, waggon-driver, guard, porter, servant, or other person employed by the said, or by any other Railway Company, or by any other Company or person, in conducting traffic upon the railway belonging to the said Company, or in repairing and maintaining the works of the said railway, who shall be found drunk while so employed upon the said railway, who shall commit any offence against any of the bye-laws, rules, or regulations of the said Company, or who shall wilfully, maliciously, or negligently do or omit to do any act whereby the life or limb of any person passing along or being upon such railway or the works thereof respectively, shall be or might be injured or endangered, or whereby the passage of any engines, carriages, or trains, shall be or might be obstructed or impeded, and to convey such engine-driver, guard, porter, servant, or other person so offending, or any person counselling, aiding, or assisting in such offence, with all convenient dispatch before some justice of the peace for the place within which such offence shall be committed, without any other warrant or authority than this Act; and every such person so offending, and every person counselling, aiding, or assisting therein, as aforesaid, shall, when convicted upon the oath of one or more credible witness or witnesses before such justice as aforesaid (who is hereby authorised and required, upon complaint to him made upon oath, without information in writing, to take cognizance thereof, and to act summarily in the premises), in the discretion of such justice, be imprisoned, with or without hard labour, for any term not exceeding two calendar months, or, in the like discretion of such justice, shall for every such offence forfeit to her Majesty any sum not exceeding 10*l.*, and in default of payment thereof shall be imprisoned, with or without hard labour, as aforesaid, for such period, not exceeding two calendar months, as such justice shall appoint, such commitment to be determined on payment of the amount of the penalty; and every such penalty shall be returned to the next ensuing Court of Quarter Sessions in the usual manner.

18. *Sheriffs to have Jurisdiction in Scotland.*] And be it enacted, that in all cases in which by the present or the said recited Act for regulating Railways it is provided that offenders shall be taken before one or more justices of the peace for the place within which the offence was committed, it shall be lawful, in case the offence is committed in Scotland, to take such offenders before the sheriff of the county, or other magistrate acting for the district within which such offence shall be committed, or where such offender shall be apprehended, without any warrant or authority other than this Act; and such sheriff or magistrate is hereby empowered and required, on the application of the Railway Company, to proceed in all respects as if the words "sheriff or magistrate" had been substituted for the word "justice" in the said Acts, and shall be entitled summarily, and without a jury, to execute the powers thereby and hereby committed to him.

19. *Communications to and from the Board of Trade, and Service of Notices, &c., on Railway Company.*] And be it enacted, that all notices, returns, and other documents required by this Act or by the said recited Act to be given to or laid before the Lords of the said Committee shall be delivered at or sent by the post to the office of the Lords of the said Committee; and all notices, requisitions, orders, regulations, appointments, certificates, certified copies, and other documents in writing, signed by one of the Secretaries of the said Committee, or by some officer appointed for that purpose by the Lords of the said Committee, and purporting to be made by the Lords of the said Committee, shall, for the purposes of this and of the said recited Act, be deemed to have been made by the Lords of the said Committee, and that in the absence of evidence to the contrary, without proof of the authority of the person signing the same, or of the signature thereto; and service of the same at one of the terminal offices of any Railway Company on the Secretary or clerk of the said Company, or by sending the same by post addressed to him at such office, shall be deemed good service upon the said Company.

20. *Railway Companies shall convey Military and Police Forces at Prices to be settled.*] And be it enacted, that whenever it shall be necessary to move any of the officers or soldiers of her Majesty's forces of the line, ordnance corps, marines, militia, or the police force, by any railway, the Directors thereof shall and are hereby required to permit such forces respectively, with their baggage, stores, arms, ammunition, and other necessaries and things, to be conveyed at the usual hours of starting, at such prices or upon such conditions as may from time to time be contracted for between the Secretary at War and such Railway Companies for the conveyance of such forces, on the production of a route or order for their conveyance signed by the proper authorities.

21. *Meaning of the words "Railway" and "Company."*] And be it enacted, that whenever the word "railway" is used in this or in the said recited Act it shall be construed to apply to all railways used or intended to be used for the conveyance of passengers in or upon carriages drawn or impelled by the power of steam or by any other mechanical power; and whenever the word "Company" is used in this or in the said recited Act it shall be construed to extend to and include the proprietors for the time being of any such railway, whether a body corporate or individuals, and their lessees, executors, administrators, and assigns, unless in either of the above cases the subject or context be repugnant to such construction.

22. *Application of Penalties.*] And be it enacted, that all penalties under this Act for the application of which no special provision is made, shall be recovered in the name and for the use of her Majesty, in the manner provided by the said recited Act for regulating railways.

23. *Act may be repealed this Session.*] And be it enacted, that this Act may be amended or repealed by any Act to be passed in the present session of Parliament.

South-Eastern Railway.—During the past week an inspection of the works by the Directors and Engineers has taken place throughout the line, and it has proved most satisfactory. Indeed the rapidity of the execution, and the facility with which apparent difficulties are practically surmounted, is matter of surprise and astonishment to those uninitiated in such matters. The long continuance of favourable weather has enabled the workmen unremittingly to pursue, both by night and by day, their important labours; and it is not doubted but in a short time the rail communication will be still further extended to Ashford. The traffic through this town (Hythe), has very greatly increased during the last week, in connection with the railway from Headcorn, not only by the private carriages of the nobility and gentry, but by additional public conveyances, which are well filled. It is expected that, within ten days, the interruption occasioned by the powerful springs found in the Saltwood tunnel will be abated, and a very formidable corps of miners employed upon that excavation. —*Kent Herald.*

Employment of Women in the Formation of Railways.—The *Moniteur des Chemins de Fer* says, one will remark with astonishment that nearly one-half of the labourers employed on the Vesdre Railway are females, who are preferred by the contractors to men for works of importance, from their superior docility, strength, and courage. The country of Liege has this particularity—that the females undertake all those works which require superior skill and application that in other countries are reserved for men.

RAILWAY PROSPECTS.

FROM A LETTER TO BRITISH CAPITALISTS BY G. S. WRIGHT, C.E.

[As quoted in the "*Surveyor, Engineer, and Architect.*"]

THE GREAT WESTERN RAILWAY.—In June, 1840, when but a comparatively small portion of this line was opened, the price of the shares reached 108½, or 43½ premium. In June, 1841, when a longer portion was opened, and the weekly receipts were much increased, the price was only 95, or 30 premium; and in June, 1842, when the receipts for the first six months (307,411*l.* 9s. 2d.) are nearly double the amount taken in the first six months of 1841, (187,780*l.* 16s. 2d.) the price is only 88, or 23 premium. The dividend now paying by this line is 6 per cent. per annum; but as a balance nearly equal to 1 per cent. more (10,937*l.* 5s. 1d.) remained undivided at the last audit, and the traffic is greatly increasing, and the expenses materially diminishing, (the expenses in the first half of 1841 were 44.9 per cent., and in the second half, only 37.3 per cent.), there is every reason to expect that a larger dividend will be declared at the next meeting, and there is every promise that the returns will steadily increase, until they yield a dividend of 10 per cent. per annum, or higher. It is a remarkable anomaly in this railway, that the half shares do not bear a proportionate price to the whole shares, although they participate proportionately in the dividend. The last dividend on a whole share, (65*l.* paid) was 39s., and on a half share, (50*l.* paid) it was 30s., which sums are strictly proportionate; but while the whole shares are at 23, the half-shares are only at 11½ premium. In the proper proportion the half-shares should be at 17 to 18 premium, *e. g.* If 65*l.* 23s., 50*l.* 17$\frac{4}{11}$s. But the principal object I have in view is to show that railway stock yields a better return for capital than funded property. The present price of 3 per cent. consols is 91, which yields an interest of 3*l.* 6s. per cent. per annum; thus, if 91*l.*, 3*l.*; 100*l.*, 3*l.* 6s. But the present dividend of 6 per cent. per annum on the Great Western stock, and which is fully realised by the *original* shareholders, yields an interest of 4*l.* 8s. per cent. per annum on capital outlaid by purchasers of shares at their present price, *e. g.* If 88*l.*, 3*l.* 18s.; 100*l.*, 4*l.* 8$\frac{4}{11}$s., and to purchasers of the half-shares the return is greater, by reason of the disproportionate price of the shares noticed above. This is the result according to the present dividend, but as other lines in connection with this are extending, and the traffic largely increasing, there is no doubt but that the dividend must soon much exceed 6 per cent. A great progressive increase of traffic up to a certain extent may be depended upon in all leading lines of railway—witness the London and Birmingham, on which, as the auxiliary traffic has developed itself, the dividend has increased to upwards of 2 per cent. per annum, and may probably increase still more. The Liverpool and Manchester, and Grand Junction, are also cases in point, confirmatory of this view. Another source of increased revenue may also be found in the diminished expense at which, as experience has been gained, all the leading lines have been worked.

THE LONDON AND BIRMINGHAM RAILWAY.—This railway being one of the earliest constructed, and having been now some years in full operation, its capabilities are well developed, and the consequence is, a good dividend *nominally* of 9*l.* 10s., but *really* of 12*l.* 15s. per cent. per annum. The dividend of 9*l.* 10s. is payable on the *full amount* of shares, and as the whole sum has not yet been paid up on the whole, or on the quarter-shares, hence the larger per-centage upon the amount actually advanced. Such are the benefits accruing to the original shareholders. To the present purchaser, the market price of the whole share is 178*l.*, and upon this sum the dividend of 9*l.* 10s. is equal to 5*l.* 6s. per cent. per annum on the amount invested thus:—

If 178*l.* : 9*l.* 10s. :: 100*l.* : 5*l.* . 6 $\frac{7}{17}$.

and as the interest derived from 3 per cent. consols is, as before stated, 3*l.* 6s. per cent. per annum, on the money invested, shares in the London and Birmingham Railway, yielding 5*l.* 6s. per cent. per annum, show an advantage of 2 per cent. per annum, and it must be borne in mind, that stocks already yield their maximum rate of interest; while, as the Chairman of the London and Birmingham Company hinted at the last meeting, the present amount of dividend is by no means to be regarded as the maximum of the Company's prosperity, and as new feeders are continually opening, there is every reason to expect increased dividends hereafter, though not to so great an extent in this longer established line, as in those which are more recently opened. The total receipts of this railway for the first six months of the present year, have exceeded those of the corresponding period of last year by about 8,000*l.*; being 390,184*l.* 11s. 10d. against 382,452*l.* 16s. 1d.

THE LONDON AND SOUTH-WESTERN, OR SOUTHAMPTON, RAILWAY.— This railway has also now been open the whole way long enough for the traffic upon it to be pretty well developed, and, accordingly, the dividend already amounts to 7*l.* 14s. 3d. per cent. per annum on the original outlay, which, at the present price of 61*l.* per share, is very nearly 5 per cent. per annum upon money invested in the purchase of the stock. The traffic upon this line has increased more in proportion during the half-year just ended than that of the London and Birmingham, the receipts having been 134,362*l.* 7s. 3d., against 122,766*l.* 9s. 7d., for the corresponding period in 1841. There is every prospect of an extension of the traffic on this railway, from the increase of passengers arriving and departing by the numerous steam-vessels connected with Southampton, and when the docks now forming there are opened, which they shortly will be, there will probably be a considerable traffic in goods.

THE LONDON AND BRIGHTON RAILWAY.—This line has been much injured in public estimation by having been badly managed by its Directors, and by a series of misfortunes, partly on its own, and partly on the Croydon line. These causes have tended to depress the shares, which are now below their real value, the price of a 50*l.* share being only 35*l.* To any one, however, who watches the progress of these works, it must be obvious that the Brighton Railway will, during the present year, yield a remunerating return to the original shareholders, and a very handsome one to those who have purchased them at the price now current. The receipts have already this year (*i. e.* for the first six months) amounted to 60,000*l.*, and this large sum has been taken notwithstanding the discouragements to travel on it during the earlier months of the period, by the slips on the Croydon line, and notwithstanding the season, which has been that of the least traffic between London and Brighton. As the year advances the traffic will greatly increase, and there is every probability that during the next six months it will reach 100,000*l.* making a total for the year of 160,000*l.* This alone should suffice to pay a dividend of 5 per cent. per annum on the capital outlaid; but, besides this, there is the accumulated traffic of last year still undivided, and which must amount to nearly 50,000*l.* There is also still to be received from the London and Dover Railway a sum of about 300,000*l.*, which will either have to be returned to the shareholders, or be applied to pay off loans and liabilities, and thus diminish the capital outlay, and increase the dividends. It appears to me that the original shareholders may now safely reckon upon at least 5 per cent. per annum for their capital, which, to purchasers at the present price of the shares, will yield 7 per cent. per annum; and as the traffic developes itself, and auxiliary lines are opened, the returns may be expected to increase to a greater extent. The loan notes (10*l.* each) of this railway form a favourable medium of investment. Interest at the rate of 6 per cent. per annum is guaranteed to them for three years, at the expiration of which period they will be paid off, or the holder will have the option of converting four of them (40*l.*) into a share of 50*l.* Should the shares at the end of three years be only at par, this will be a bonus of 25 per cent.

PRESTON AND WYRE RAILWAY.—Yesterday week (Friday), being the Guild week, the scholars of the different Sunday schools in Preston were treated by their teachers, and other friends, with a trip per railway to Fleetwood-on-Wyre, at which delightful place they enjoyed themselves most heartily in parading the different streets, &c. The number of scholars was 2,164, exclusive of teachers and others, to the number of 200, making in the whole train 2,364 persons, which were gallantly drawn by the Preston and Wyre No. 1 engine, in 27 open carriages. On the arrival of the train from Fleetwood at the break station, Poulton, at which place they halted about half an hour, the scene was truly imposing, each carriage being studded with numerous colours, bearing appropriate mottoes, and the whole multitude being engaged in singing hymns. Such a display was never before afforded to the inhabitants of Poulton, who mustered largely, and were highly gratified in witnessing such an interesting sight.—*Preston Chronicle.*

EDINBURGH AND GLASGOW RAILWAY.—As a proof of the numbers who went to see the royal cortege, we may mention that nearly 3,000 persons passed along the Edinburgh and Glasgow Railway for the various stations of Castlecary, Falkirk, and Linlithgow, and several extra trains were employed. The train which left Edinburgh at five, and was due here at half past seven last night, was so much crowded that it did not reach the terminus till within a few minutes to nine.—*Edinburgh paper.*

RAILWAY TO HARWICH.—*Harwich, September* 17.—Arrived H. M. S. *Shearwater*, from Leith, having formed one of the Royal squadron during her Majesty's late visit to Scotland. The Shearwater brought, as passengers, the Earl of Liverpool, the Lord Steward of her Majesty's household, and the Earl of Hardwicke, Lord in Waiting, with their suite: their Lordships immediately on landing proceeded to join her Majesty at Windsor. We understand that both these noblemen expressed their admiration of the extent and security of our harbour; and another proof has just been afforded of its value as the best point for reaching London, where despatch and regularity are an object, as in the case of carrying mails; at the time of the *Shearwater's* arrival it was blowing a fresh breeze from the south-west, and therefore directly contrary, and a strong ebb or northerly tide was running, so that a steamer would not have reached London till 9 or 10 at night, whereas by landing here and taking advantage of the railway, their Lordships would arrive with ease before 6 o'clock; and of course, as soon as the railway to Harwich is completed, the advantage of this as the means of communication with all Northern Europe will be manifest.—*Essex Standard.*

RAPID TRANSMISSION OF NEWSPAPERS.—The morning papers, which used to reach Maidstone at about half-past 1 o'clock, are now delivered, via the South-Eastern Railway about 11 o'clock.—*Maidstone Gazette.*

As her Majesty appears to have taken such a liking of Scotland, we have no doubt that the beautiful scenery of that country will attract the notice of strangers even more than it has hitherto done. We understand that the Directors of the northern railways are about making an arrangement to run the train which leaves London at a quarter-past 9 in the morning, through to Darlington (where there are some most comfortable inns) in 12 hours. There are coaches from Darlington to Edinburgh in about 14 hours. When this arrangement is completed a person will be able to leave Brighton in the morning, say at half-past 6, and reach Darlington that night soon after 9. The whole expense from Brighton to Edinburgh by the first-class carriages, and outside the coach beyond Darlington, is under 6*l.*!—*Brighton Gazette.*

RATING THE GREAT WESTERN RAILWAY.

Corsham, Sept. 21.—The long-expected decision of the magistrates in this case was given at the Petty Sessions held here this day. Mr. Saunders, the Secretary, Mr. Knapp, the Solicitor, to the Company, Mr. G. Goldney, and several other parties interested in the decision, were present. Mr. Clutterbuck, the Chairman, regretted that Sir J. Awdry, who had taken very great pains, and had gone into a variety of calculations to enable him to come to a fair and just conclusion, was not present. At a private meeting of the justices, Sir John had stated to them his reasons and calculations, in which the other magistrates entirely concurred, and they had accordingly come to the conclusion of adopting the principles laid down by Lord Denman at the late contested case in the Court of Queen's Bench, but reducing the sum at which the Company were assessed from 1,450*l.* to 900*l.* per mile. Mr. Knapp and Mr. Saunders thanked the bench for the trouble they had taken; though the latter, with due submission, thought it a very unsatisfactory result, and requested permission to see the calculations of Sir J. Awdry. This was of course thought likely to open the whole question again, and therefore could not be complied with, without the consent of Sir John Awdry; but the Chairman would make the application, if Mr. Saunders wished it. The decision now given was, however, *final* as far as the magistrates were concerned. Mr. Saunders then applied for expenses, which he thought ought to be allowed, more especially as the reduction from 1,450*l.* to 900*l.* per mile was so very considerable. He would not, he said, press the question, had it not been for the monstrous effort made by the parish to rate them so high. Mr. G. Goldney observed, in reply to the latter remark of Mr. S., that he had gone again and again through his figures, had furnished Mr. Saunders with them, and conscientiously believed his calculations to be correct. The Bench thought each party ought to pay their own expenses. The rate was then amended. Nothing was said of an appeal to the Court of Queen's Bench, which must be made within five days.

ELECTRO-MAGNETIC LOCOMOTIVE.—Under the patronage of the Directors of the Edinburgh and Glasgow Railway Company, Mr. Davidson, philosophical instrument maker, has been employed in a series of extensive experiments as to the practicability of applying electro-magnetism for propelling trains along the line of a railway. The experiments having succeeded so far, a machine containing six powerful batteries, huge magnetic coils, and three large magnets, fastened on each of two revolving cylinders, through which pass the axles of the driving-wheels, has been constructed, and, on Saturday last, its motive capabilities were tested in one of the carriage sheds belonging to the Railway Company, in presence of several of the Directors. The ponderous machine, weighing between five and six tons, was instantly set in motion on the immersion of the metallic plates into the troughs containing a solution of sulphuric acid. One curious phenomenon connected with the motion of this new and ingenious instrument, was the extent and brilliancy of the repeated electric flashes which accompanied the action of the machinery. The motion produced, although not rapid, was such as clearly to establish the principle that this agent is adapted to the purposes of locomotion.—*Edinburgh Witness.*

EASTERN COUNTIES' RAILWAY.—The public look with much interest to the opening of the Eastern Counties' Railway, but the general opinion is that it is impossible to open the line to Colchester on the 1st October. The temporary station which was brought down to Chelmsford ready framed, is being erected on the eastern side of the viaduct in Duke-street. It is about 200 feet in length. The bridge of three arches over the Blackwater at Kelvedon, which fell a short time back, is again rising out of its ruins, and it is expected, should the weather continue fine, that the turning of the arches will be completed by the end of the week. Also the railway station, which stands near the bridge, is in a forward state.—*Essex Standard.*

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to grant Mortgages of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

Interest Warrants, for the whole term for which the Loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London, or Bolton as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

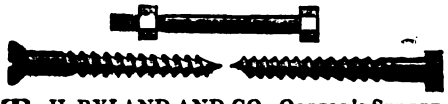
Bolton, 24th May, 1842.

PATENT PORTABLE STEAM-ENGINE, OR FACILITATOR.—NATHAN GOUGH, Engineer and Machine Designer, 46, Water-street, Manchester, respectfully calls the attention of Builders, Contractors, Excavators, Masons, Joiners, proprietors of Stone Delphs, Coal, Metal, and other Mines, to the following advantages possessed by his Patent Portable Steam-Engines, or Facilitators, over all others. They are from three to eight horses' power, and are a complete machine, being connected and fitted up with every requisite before leaving the manufactory, so that they can be set to work immediately on arriving at their destination, and the purchaser can also ascertain his whole outlay beforehand. They can be fixed on wheels to move from place to place, without disconnecting their machinery. They are very durable, easily managed, made of the best materials and workmanship, each being fitted up with a metallic piston, governor, force-pump, water-regulator, heating chamber, &c. &c. They consume less fuel than any other description of engine, which, added to their portability, renders them particularly well adapted for working where fuel is scarce or expensive

These Engines have been employed in raising building materials for erecting the Manchester and Birmingham Railway Station; in pumping water and raising earth for the excavation of the Junction Canal; in deepening the River at Manchester, and in making the North Midland, the Midland Counties', Southampton, and other Railways; and also at the Chorley Tunnel, the New Houses of Parliament, London, and the Victoria Bridge, Manchester, where they may be seen at Work.

The following are a few of the many purposes for which these Engines will be found serviceable:—

Hoisting Materials for Buildings, Stones in Quarries—Grinding Mortar, or Clay for Bricks—Pumping Water out of the Foundations of Bridge Piers, River Walls, &c.—Raising Water for Gentlemen's Mansions or Public Institutions—Drawing Materials up Inclined Planes—Raising Earthwork for Railways and Canals—Drawing Waggons (in the place of Children), Pumping Water, and Ventilating at the bottom of Coal Pits, &c. &c.



Engines and Pumps let out for Hire.

TO CONTRACTORS and ROPEMAKERS.—The Directors of the Blackwall Railway Company are ready to receive TENDERS from parties willing to CONTRACT for—1. The maintenance of the permanent way. 2. The maintenance and keeping in working order the sheaves on the line. 3. The maintenance of the service of the rope. The Directors will be ready to treat for any of these objects, either separately or together, but a preference will be given to any tender which embraces the maintenance of the sheaves and service of the rope, and the Directors will not under any circumstances bind themselves to accept the lowest tender.

The conditions of contract may be seen at the office of the Company, 60, Fenchurch-street, on and after Friday, the 30th of September, and the tenders must be delivered before 12 o'Clock on Tuesday, the 11 of October next.

By order of the Board.
JOHN F. KENNELL, Sec. pro tem

September 20, 1842.

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws, Screw Bolts, Spikes, &c. for Railway and other purposes, also Boiler Rivets, &c.

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—The First General Meeting of the Shareholders of the Newcastle and Darlington Junction Railway Company will be held on Tuesday, the 4th day of October, next, at Twelve o'Clock, at Noon, in the Directors' Room, at the Railway Station, in York.

GEORGE HUDSON,
Chairman of the Board of Directors.

THE YORKSHIRE FIRE AND LIFE INSURANCE COMPANY, Established at York, 1824, and empowered by Act of Parliament.—CAPITAL, £500,000.

PATRONS.

The Archbishop of York	Sir G. Strickland, Bart., M.P.
The Marquis of Londonderry	Sir Francis Lawley, Bart.
The Earl Fitzwilliam	Sir W. B. Cooke, Bart.
The Earl of Tyrconnel	Sir W. A. Ingilby, Bart.
The Earl of Zetland	Sir Tatton Sykes, Bart.
The Earl of Yarborough	Sir E. M. Vavasour, Bart.
The Bishop of Ripon	Sir S. Crompton, Bart., M.P.
Viscount Morpeth, M.P.	The Archdeacon of York
Lord Wharncliffe	Archd. of the East-Riding
Lord Feversham	The Archd. of Cleveland
Lord Hotham, M.P.	J. Hen. Lowther, Esq., M.P.
Lord Howden, K.C.S.K.L.H. &c.	G. F. Barlow, Esq.,
	Robert Cracroft, Esq.
Lord Wenlock	Robert Denison, Esq.
Lord Worsley, M.P.	P. Saltmarshe, Esq.
Hon. E. R. Petre	Marmaduke Wyvill, Esq.

Actuary and Secretary—Mr. W. L. NEWMAN, York.

London Agent for the Life Department—Mr. EDWARD HENWOOD, 46, Watling-street.

The attention of the public is requested to the terms of this Company for LIFE INSURANCES, and especially for FEMALE LIVES.

FIRE INSURANCES are also effected by this Company, on the most moderate terms.

FARMING STOCK Insured without the Average Clause.

Prospectuses, with the Rates of Premium, and every information, may be had at the Head Office in York, or of any of the Agents.

Just published, Division C of

BLUNT'S CIVIL ENGINEER and PRACTICAL MACHINIST; Practical Treatises of Civil Engineering, Engine Building, Machinery, Mill Work, Engine Work, Iron Founding, &c. &c. By CHARLES JOHN BLUNT, Civil Engineer and Practical Machinist. Accompanied by full Reports, Specifications, Estimates and Journals of Progress, and the Formulæ, Calculations, Tables, &c. in use by the first authorities. Division C contains Plans relating to the Thames Tunnel and Shield, by Sir Isambard Mark Brunel; and Land and Marine Steam-Engines, Cranes, and Dredging Machinery, by the Messrs. Rennie. The Plates and Letter-press Descriptions, price 14s.

London: Published for the Proprietors, by Messrs. Ackermann and Co, Repository of Arts, 96, Strand; J. Weale, Architectural Library, High Holborn; J. Hebert, Cheapside. Trade orders for the work executed by Mr. Kirton, No. 1, Great Portland street, Oxford-street.

TO THE INFLUENTIAL ON RAILWAYS, &c.—A Gentleman aged 25, who has been engaged as a Clerk on a midland Railway upwards of Two Years, and who holds an unexceptionable Testimonial of Character and Abilities from the Directors, would be happy to present £20, or more, to any Gentleman through whose influence a *similar permanent* Situation could be procured on any Railway, or other public Company, in the kingdom. A sufficient reason can be given for leaving, and the most inviolable secresy may be relied on. Address (pre-paid) to "Omega," Post-office, Derby.

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by

FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter-press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bogner, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by ANDREW FREELING.

"A work in which the elegant and the useful are ingeniously combined."

CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY.—Twelfth Half-yearly General Meeting of Proprietors.

At the Twelfth Half-yearly General Meeting of the Cheltenham and Great Western Union Railway Company, held in pursuance of the provisions of the amended Act, at the Subscription Rooms, in Stroud, on the 20th day of September, 1842.

CHARLES FREDERICK SAGE, Esq., in the Chair;

It was resolved unanimously—

1st.—That the Report of the Directors now read be received and adopted, and printed for circulation among the Proprietors.

2nd.—That the best thanks of the meeting be given to the Chairman and Directors for their valuable services.

C. F. SAGE, Chairman.

REPORT OF THE DIRECTORS.

This, the first meeting under the provisions of the new Act, which received the Royal Assent on the 13th of May last, has been deferred to the latest allowable period, to enable the Directors to lay before the meeting as much information as possible, relative to their proceedings under the powers lately obtained from Parliament.

The Directors lost no time in opening a negociation with the Directors of the Great Western Railway Company, as being the Company most interested in forwarding the completion of this undertaking. The Directors were desirous of selling to the Great Western Company, upon terms, the finished portion of the line, and their powers to construct the remainder. This arrangement the Directors considered would be most consonant to the wishes which have been occasionally expressed by the proprietors; but it did not meet with the views of the Great Western Board, who seemed inclined not to go further than to engage to take a lease of the line, when completed, at a rent to be now fixed. This difference occasioned an interruption in the treaty: subsequently a plan has been suggested to the Directors, by which it is hoped that the completion of the line may be secured, an adequate rent obtained—without subjecting the Company to any risk of indefinite expenditure—and an arrangement satisfactory to both Companies be carried through.

The Directors will not be remiss in pressing this business to a conclusion; and so soon as any plan is matured, it will be submitted to a special general meeting of the proprietors, for their consideration and adoption.

A dividend having been declared and paid up to the 24th of June, the next half-yearly dividend, to Christmas, will be declared at the general meeting to be held in February, 1843.

The half-yearly statement of accounts is annexed.

C. F. SAGE, Chairman.

Statement of Receipts and Expenditure to 24th June, 1842.

General Abstract of Expenditure.	To 25th Dec., 1841.	To 24th June, 1842.	Total Expenditure.

John Bradbury, Esq.	Joseph Janson, Esq.
William Cash, Esq.	Sam. Hayhurst Lucas, Esq.
Thomas Castle, Esq.	Charles Lushington, Esq.
James Crofts, Esq.	John St. Barbe, Esq.
John Feltham, Esq.	Richard Shortridge, Esq.
Joseph Hargrave, Esq.	Samuel Smith, Esq.
Thomas Hodgkin, M.D.	

Medical Directors—J. T. Conquest, M.D., F.L.S.; Thomas Bevan, M.D., F.L.S.

Solicitors—Messrs. Hardwick and Davidson.

Members whose premiums become due on the 1st October next, are reminded that the same must be paid within 30 days from that time.

Among the privileges to be derived by effecting Assurances in this Institution, is that of members being able to secure the benefit of their policies to nominees free of any charge; the whole of the profits are divided among the members.

Prospectuses, together with the Report to the Sixth Annual Meeting of the Members, held on the 15th December last, and every other information, may be obtained by applying at the office, or of the Agents and Medical Referees in the Country.

JOSEPH MARSH, Secretary.

London, September 22, 1842.

TO CONTRACTORS. — THE LLANELLY RAILWAY AND DOCK COMPANY

are ready to receive Tenders for the following works and engagements:—

For the keeping in repair and working order their Locomotive Engines and Tenders, and for the haulage of Coal and Culm, &c., over the line.

For the keeping and maintaining in repair the Permanent Way and Branches of the Railway.

The conditions of the above Contracts may be seen on and after the 26th instant, at the Company's Office, 59, Old Broad-street, London, or at the Dock Office, Llanelly, Carmarthenshire, where further information may be obtained.

Tenders may be sent in for the works and engagements separately, or for the whole, and must be delivered sealed up, and headed, Tender for ———, at the Office in London, on or before the 13th October next.

The Company do not pledge themselves to accept the lowest Tender.

By order of the Committee of Management.

JOHN BIGG, Secretary.

HUGHES'S PATENT ROYAL ALBERT

CRAVAT can be strongly recommended to prevent the ill-effects of sudden changes of temperature incident to this season of the year. Its elastic frame cannot be injured by the neck, and is universally preferred in shooting, hunting, and under all circumstances where comfort and durability is required. Circulars and patterns forwarded from the manufactory, 247, High Holborn. Patent Trusses, Belts, &c. &c. Anatomical Machinicians. Established, 1785.

LONDON AND DOVER RAILWAY.—EXTENSION TO HEADCORN.

— Dover in 6¼ hours, Maidstone in 3¼ hours.

Trains leave the London Station at

1	2	3	4	5	6
a. m.	a. m.	a. m.	p. m.	p. m.	p. m.
30 past 7	30 past 9	30 past 10	30 past 1	4	¼ past 6

Coaches run to Dover in connection with the trains numbered 3 and 4, to Maidstone 1, 3, 4, and 6. The journey to Dover, through Ashford, Hythe, Sandgate, and Folkestone, will be completed in 6¼ hours (at reduced fares), and to Maidstone in 3¼ hours at fares, exclusive of the Railway charge, of 1s. outside, and 2s. inside. Places and parcels for Dover must be booked at the Golden Cross, Charing Cross; Spread Eagle, Gracechurch-street; or at any of Messrs. Horne and Chaplin's booking-offices. Parcels may also be booked at the London and New Cross stations.

Post horses can be obtained at Headcorn, or any of the Company's stations, by notice being given the previous day of the hour they will be required.

Trains leave the Headcorn Station for London at

1	3	4	5	6
a. m.	a. m.	p. m.	p. m.	p. m.
5 past 7	20 bef. 9	5 bef. 11	25 past 2	25 past 4	10 past 6

Coaches will leave Dover to meet the trains numbered 4 and 6, and Maidstone to meet the trains numbered 1, 2, 4 and 6.

Time-tables, with full particulars of the Trains, altered Times, and reduced Fares, may be had on application at the various Stations on the line; at the London Bridge Station; at the booking offices; and at the Company's office.

The Fares to and from London and New Cross to the following places, will be as follows:—

	From London.		From New Cross.		
	First-Class.	Second-Class.	First-Class.	Second-Class.	Third-Class.
	s. d.	s. d.	s. d.	s. d.	s. d.
Headcorn	10 0	7 0	8 6	6 0	3 8
Staplehurst	9 0	6 0	7 6	5 0	3 4
Marden	8 0	5 6	6 6	4 6	2 9
Maidstone road	7 6	5 0	6 0	4 0	2 6
Tunbridge	7 6	5 0	6 0	4 0	2 6

Reigate	4 8	3 4	4 0	2 6	1 6
Croydon	2 3	1 9	1 6	1 2	1 0

Post-horses are in readiness at the New Cross Station on the arrival of every train to convey carriages to and from all parts of London, at 10s. 6d. each, including the driver; also at the London Bridge Station.

Omnibuses meet every train at New Cross for Charing Cross, Gracechurch-street, &c.

By order, JONN WHITEHEAD, Secretary.

London, 10, Coleman-street, September 3, 1842.

MANCHESTER AND LEEDS RAILWAY—TO ENGINEERS, MILLWRIGHTS, &c.

—The Directors of the Manchester and Leeds Railway will MEET at their Offices, Hunt's Bank, Manchester, on Monday, the 3rd day of October next, to receive Tenders for the supply of One Pair of High-pressure Steam-Engines, constructed on the marine principle; Cylinders, 33 inches diameter and 5-feet stroke, with three boilers, capable of working at a pressure of 50lb. per square inch; also the Rope Geering required for working the Extension Line to Hunt's Bank, consisting of rope wheels, pullies, balance frame and weight, with shafting, pedestals, wall-boxes, &c., fixed complete.

The specification and drawings, showing the details of the rope geering and general arrangement of the engines, will be ready for inspection at the Engineer's office (Mr. Gooch's), Palatine Buildings, Hunt's Bank, Manchester, on and after Monday, the 19th day of September next. The Tenders must be delivered at the Secretary's office, on Monday, the 3rd day of October, 1842, not later than ten o'clock in the forenoon; and parties tendering will be required to be in attendance at three o'clock in the afternoon of the same day.

Manchester, August 31, 1842.

BRISTOL AND EXETER RAILWAY.—

Notice is hereby given, That in pursuance of a Resolution of the last General Meeting of Proprietors, the Directors of this Company are ready to receive Tenders of Loans of Money, in sums of not less than £200, and for terms of not less than three, nor more than seven years, on security of Loan Notes, under the Corporate Seal of the Company, bearing interest at the rate of 4½ per cent. per annum, payable half-yearly.

Tenders, expressing the sum, the term of years, and the residence of the Lender, to be addressed to the Secretary.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Bristol Office, 30, Broad-street,
September 2, 1842.

Interest-Warrants will accompany the Loan Notes.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY.—CONTRACTS FOR WORKS.—EXTENSION OF TIME.—The Directors of this Company having been applied to by several Contractors for an Extension of Time, to enable them to copy the Plans, Specifications, &c., of the Dinting Vale Viaduct, No. 6, and the Longdendale Contracts, Nos. 7 and 8, have agreed to Postpone the Letting of the above-named works until the 28th instant, at the Company's Office, 15, Piccadilly, Manchester, where Tenders are to be delivered not later than Twelve o'Clock at noon on that day.

By order,

JOHN PLATFORD, Secretary.

Manchester, 15, Piccadilly, September 14, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY—CONTRACT FOR WORKS.—The Directors are now ready to receive Tenders for the following Works:—

Contract No. 6, or Dinting Vale Viaduct Contract.—To commence at the termination of the Gamesley Contract, in a field No 226 on the plan, in the parish of Glossop, and to terminate in the field No 209 on the plan, in the said parish; the length of the viaduct being 484 yards or thereabouts.

Contracts Nos. 7 and 8, or Longdendale Contracts.—To commence at the termination of the Dinting Vale Viaduct Contract, and to terminate in a field No. 2 on the plan, in the parish of Glossop, near to the entrance of the Summit Tunnel; the length being 6 miles and 73 chains, or thereabouts.

These Contracts to comprise the whole of the works necessary for the completion of the lengths of the railway herein mentioned, including the ballasting and laying of the permanent road, except the rails and chairs, which will be found by the Company. The contract is also to include the maintenance of the works for twelve months after their entire completion.

Plans, sections, specifications, and draft forms of contract may be seen on application to the Secretary, at the Railway Office, 15, Piccadilly, Manchester.

Sealed tenders, addressed to the Secretary, and endorsed "Tenders for Works," to be sent in on or before Twelve o'Clock at noon on Wednesday, the 28th September inst, after which day no Tender will be received.

Printed forms of Tender may be obtained at the office, and no others will be attended to. The Directors will not consider themselves bound to accept the lowest offer.

By order of the Board,

JOHN PLATFORD, Secretary.

Manchester, 15, Piccadilly, September 14, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY.—Forfeited Shares.—By a Resolution passed at a Special General Meeting of the Shareholders, held at Sheffield on the 12th day of January last, Interest at the rate of 5 per cent. per annum will be paid on all Shares on which the full amount of calls has been paid, until such time as the Railway shall have been opened six months throughout.

The Directors are now prepared to receive Tenders for any portion of the 1,419 Shares which were forfeited at the last half-yearly general meeting, on the 31st August last, as having the full amount of calls (£82 10s. per share) paid up; the persons now purchasing will, therefore, be entitled to interest on that amount from the date of purchase.

These shares now offer to capitalists grand advantages as an investment—the Treasury having granted their first loan of £50,000. The line will be further opened to Glossop early in November next.

All the shafts of the Summit Tunnel are now down, and 1,601 yards of the double line of drift way have been driven within the last six months—making 3,129 yards now driven: and before the 1st March next, it is now ascertained, they will be opened throughout, and the undertaking placed in the position to which its advantages so strongly entitle it.

Any further information may be obtained on application to the Secretary, at the Company's office, 15, Piccadilly, Manchester; or at the Chambers of Joseph Locke, Esq., Engineer to the Company, Adam-street, Adelphi, London.

Sealed Tenders for the purchase of Shares to be addressed to the Secretary on or before the 27th day of September instant, endorsed "Tender for Shares."

By Order,

JOHN PLATFORD, Secretary.

15, Piccadilly, Manchester, September 14, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,

JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

FALMOUTH HARBOUR.—TO ENGINEERS, CONTRACTORS, and OTHERS.—The Falmouth Harbour Committee are desirous of receiving TENDERS for Deepening part of the Inner Harbour of Falmouth, and for removing therefrom either 30,000, 60,000, or 90,000 tons, as may hereafter be decided upon.

Persons Tendering must deliver separate estimates for the several quantities, and state separately the price per yard or ton for which they will raise and discharge the soil, and for which they will remove and deposit it. The work to be accomplished will require sufficient power to remove the soil from a depth of water not greater than 25 nor less than 8 feet.

All communications to be made to the Falmouth Harbour Committee, or to W. J. Genn, Esq., Secretary thereto, at whose office plans and specifications of the work required to be done may be seen, and every information obtained, and where Tenders will be received until the 13th day of October next.

There is no rock within the space proposed to be excavated. The material to be dredged is well adapted, and is in demand for manuring purposes.

Specimens of the soil already raised will be sent to any parties if desired.

Dated 13th September, 1842.

DOVER AND LONDON (SOUTH-EASTERN) RAILWAY.—The following Coaches are in connection with the above Railway, and depart from the

Golden Cross, Charing Cross,
33, Regent Circus, Piccadilly,
George and Blue Boar, Holborn, and
Cross Keys, Wood-street, Cheapside,

For	Trains.
Hastings and St. Leonard's, at	10 30, 1 30 and 4
Hawkhurst and Rye..... at	1 30
Cranbrook and Tenterden .. at	1 30 and 4
Dover and Folkestone..... at	10 30 and 1 30
Sandgate and Hythe..... at	10 30 and 1 30
Maidstone..... at	7 30, 10 30, 1 30, 4, and 6 15
Ashford ..... at	10 30, 1 30 and 4

And to Tunbridge Wells at 7½, 9½, 10½, 1½, 4 and 6½.

Omnibuses to and from every Train.

Parcels received at the above Offices, and duly forwarded for the above places, and all parts on this line of Railway.

B. W. & H. HORNE, Proprietors and Agents.

GUARANTEE SOCIETY.—Established by Act of Parliament.—To afford Security to Bankers, Merchants, Commercial and Trading Communities in general, is the *first* object of this society; to relieve relatives and friends from painful obligations and responsibilities the *second*.

The experience of the first year (during which the Society has been eminently successful) already numbers amongst its Patrons the principal Bankers, Merchants, and Public Institutions in the Metropolis and provincial districts, and by providing Guarantee for their integrity, has secured a competency for several hundred individuals:—

DIRECTORS.

Thomas Attree, Esq.	Lieut.-Col. Prosser,
James Colquhoun, Esq.	James Row, Esq.
William Croft, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. E Shuttleworth, Esq
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col. Moody, R. E.	B. G. Windus, Esq.
G. Palmer, Esq.	

Standing Counsel—R. Ryder Dean, Esq.

Solicitors—Messrs. W. and S. Cotton, 76, Basinghall-street.

This Society presents to the public (and particularly to Bondsmen) the following advantages:—

1. No individual need hereafter incur the responsibility of becoming security for the *integrity* of another.

2. Individuals who are already surety for the *fidelity* of others, may immediately protect themselves from loss by insuring with the Society.

3. The expense and painful obligation of obtaining approved sureties, or of replacing them when removed by death or otherwise, will be altogether obviated.

4. All risks attending *irresponsible* sureties will be removed.

5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, or being desirous of holding, Confidential and Responsible Situations, the Guarantee Society presents immediate Facilities, where, for a moderate Premium, Surety for Integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, 28, Poultry, London.

By Order,

THOMAS DODGSON, Secretary.

WANTED, a trustworthy, experienced, and active Person, of good address, to undertake the Management of an Hotel and Refreshment Rooms, on one of the principal Railways in the north of England. As the situation is one of great trust, most respectable reference and security to a considerable amount will be required, and a liberal salary given. A married man will not be objected to, provided he has no children.

Applications by letter, post paid, with testimonials, to be addressed to A. B., care of P. Ayres, Sise-lane, Cheapside. To save trouble, none need apply who are not thoroughly conversant with the various duties of such a situation, and whose character will not bear the strictest investigation.

NORTHERN and EASTERN RAILWAY.—Notice is hereby given, That a Special General Meeting of the Proprietors of this Company will be held at the London Tavern, Bishopsgate-street, on Wednesday, the 5th day of October next, at One o'Clock precisely, for the purpose of considering the subject of disposing of 3,136 forfeited shares, and also to authorise the Directors to borrow a sum of money not exceeding £155,110.

JOHN ROSKELL, Deputy-Chairman.
WM. BOURNE, Secretary.

Shoreditch, London, September 21, 1842.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

THE ELEVENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, *London*.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride, Fleet-street, Middlesex.—Saturday, September 24, 1842

" Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 247. Vol. V.—No. 39.] SATURDAY, OCTOBER 1, 1842. [Price 6d.

BRISTOL AND GLOUCESTER RAILWAY. At a General Meeting of the Proprietors of this Undertaking, held at the White Lion Inn, Bristol, on Thursday, the 29th September, 1842, pursuant to public advertisement,

GEORGE JONES, Esq., in the Chair,

The Secretary read the Report of the Directors and their audited account; after which the following Resolutions were unanimously passed, viz.:—

1. That the Report and Audited Account, now read, be adopted, printed, and circulated among the Proprietors.

2. That the Committee of Management be, and they are hereby empowered to borrow, and take upon such terms as they shall think fit, and at the times and in manner provided by the Acts of Parliament relating to the undertaking, the monies thereby authorised to be borrowed and taken upon loan; and that Loan Notes, with the Seal of the Company, shall be security for all such monies as shall have been advanced in the meantime.

3. That the thanks of this meeting be given to the Directors for their services to this Company.

GEORGE JONES, Chairman.

The Chairman having left the chair, the thanks of the meeting were voted to him for his able conduct therein.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,
ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

PARIS AND ROUEN RAILWAY.—Offices of the Company, 52, Rue Basse du Rempart, Paris.—By the seventh article of the Statutes of the Company, the Tenth and last Call of the Capital will be due and payable on 12th October, 1842. The Shareholders are requested to pay the said Call of £2 per Share on or before that day to either of the undermentioned Bankers:—

London—Messrs. Stone, Martin, and Stone.
Liverpool—Messrs. Moss and Co.
Paris—Messrs. Jacques, Laffitte, and Co.; Messrs. C. Laffitte, Blount, and Co.

ADOLPHE THIBAUDEAU, Secretary.

N.B.—Interest will be charged at the rate of 5 per cent. per annum on all payments not made on or before the 12th instant.

Paris, 1st October, 1842.

YARMOUTH AND NORWICH RAILWAY.—First Call of £3 per Share.—Notice is hereby given, That, in pursuance of a Resolution of the Board of Directors, the Proprietors of Shares in this Company are hereby required to pay a First Instalment of £3 on each of their respective Shares, on or before the 15th October now next ensuing, to any of the undermentioned Bankers. Interest, at £5 per cent. per annum, will be charged on all such sums as remain unpaid after the day above appointed:—

London—Messrs. Glyn and Co.
Great Yarmouth—Sir E. Lacon and Co.
Norwich—Messrs. Harvey and Hudsons.

G. STEPHENSON, Chairman.

By order,
H. PATTESON, Secretary.

Office, Warneford-court, Throgmorton-street, London, September 15, 1842.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph: with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

TO RAILWAY DIRECTORS, &c.—WANTED a Situation upon any line of Railway in England or Scotland, by a Young Man, who has been in the service of one of the leading Railways for the *last three years*; during *two* of which he has had the *management* of a *Passenger* and *Goods Station*, where Mr. Edmondson's system of issuing tickets, &c., has been carried out. Most satisfactory references as to character and abilities, and unexceptionable security, can be given.

Address, J. A. T., No. 4, Cecil-street, Greenleys, Manchester.

MORTGAGES.—Wanted, on MORTGAGE of the TOLLS and WORKS of the MANCHESTER AND BIRMINGHAM RAILWAY, EIGHTY THOUSAND POUNDS, in Sums of not less than £500 each, at 4½ per cent. Interest payable half-yearly, either in London or Manchester.

The Railway is completed, and was opened throughout for Traffic on the 10th of last month.

Mortgages will be granted for the undermentioned periods and amounts respectively:—

For the period ending 25th Dec.,	184 ..	£
Do.	do.	,,	184 ..
Do.	do.	,,	184 ..

For further particulars apply at the Company's offices, in Manchester; or at the office of Messrs. Slater and Heelis Princess-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, September 19, 1842.

WEST LONDON RAILWAY.—Copy of RESOLUTIONS passed at the Adjourned Half-yearly General Meeting, on Thursday, the 29th September, 1842.

1. Moved by Mr. William White; seconded by Mr. Whittaker, and

Resolved—That the whole number of new shares of the first-class not having been taken by the present shareholders, the simple contract creditors be requested to extend the time mentioned in the agreement signed by them, from the 1st of October to the 1st of January next, or for such shorter period as may appear to them desirable, and that the Directors, after giving a fortnight's further time to the present shareholders to come in, do then offer the remaining shares to the public, and do use such means for disposing of the same as in their discretion they shall think fit.

2. Moved by Mr. John White; seconded by Mr. Russell White, and

Resolved—That Mr. Stephenson's reduced estimate be laid before the proprietors at the next meeting.

3. Moved by Mr. Garland; seconded by Mr. William White, and

Resolved—That this meeting do adjourn till Wednesday the 1st of November next, to be then held at this office at One o'Clock precisely.

ROBERT GUNTER, Chairman.

11, Abchurch-lane, September 29, 1842.

EASTERN COUNTIES' RAILWAY COMPANY'S SCRIP.—The holders of Scrip and of Bankers' Scrip Receipts are reminded, as a matter of caution, that the remaining Instalment of £2 per Share will become due on WEDNESDAY, the 5th of October next, and unless punctually paid on that day to the Bankers of the Company, the right to the New Shares will be forfeited in accordance with the terms of the Resolutions of the General Meeting of Proprietors held on the 22nd of February last.

By order of the Board,
A. BULKELEY, Secretary.

Offices, Shoreditch Station, September 27, 1842.

RUSSIAN STEEL IRON—CCND.—The undersigned having been appointed sole Agents for the Messrs. de Demidoff, in England, the above mark of Iron can only be obtained through them, at

18, HIGH-STREET, HULL, and
29, AUSTIN FRIARS, LONDON.

At Liverpool, they have appointed Messrs. Carne and Telo; and at Bristol, Messrs. P. Maze and Son, their Agents.

The undersigned particularly request all buyers of the CCND to make their purchases through them, or through their Agents, which will effectually put a stop to a fraud which is extensively practised by unprincipled parties selling a loose, roaky, inferior Iron, with a counterfeit mark of the CCND, by which Manufacturers have been grossly imposed upon, and the old, favourite, genuine mark, unjustly discredited.

ANTHONY AND GRAHAM.

29, Austin Friars, 7th September, 1842.

WEST LONDON RAILWAY COMPANY—ADJOURNED MEETING.

THE adjourned general meeting of the proprietors of the West London Railway Company was held on Thursday, at the Company's offices, Abchurch-lane, City.

On the motion of Mr. Garland, ROBERT GUNTER, Esq., was unanimously called to the chair.

The SECRETARY (John Thompson, Esq.,) then read the minutes of the last meeting,* which were unanimously confirmed.

The CHAIRMAN said that, in consequence of the resolution come to at the late meeting, the Secretary, accompanied by Lord Kensington, to whom they were particularly indebted for giving up so much valuable time, had proceeded to Manchester, to lay the scheme for the issue of new shares before the proprietors resident there. He believed that Mr. M'Farlane, formerly a Director of the Company, had met the deputation, and had offered them his best wishes, but at the same time the Manchester proprietors generally desired to have some further time for consideration. The only difficulty which lay in the way of such delay was, in his opinion, the arrangement with the creditors, who required that a decision should be come to prior to the early part of October. If they could induce the creditors to extend the time, probably the result would be advantageous. He had the pleasure to state that, in accordance with the wish expressed at the last meeting, Mr. Wilkinson, who had qualified for the office, had been elected a Director. (Hear, hear.) Since that period, Mr. Burge, another of the candidates, had qualified, and from his well-known energy and activity, it was to be hoped that he would instil fresh blood into the Management. (Hear, hear.) The third gentleman nominated, Mr. Bird, had, he was sorry to say, declined serving as a Director, although he had put down his name for 100 shares. The matter was now before the proprietors, and it would be for them to decide. As far as he could learn, the Manchester shareholders entertained the best feelings towards the scheme, and if they could be brought actively into it, probably the advantage would be very great. (Hear, hear, hear.)

Mr. GARLAND inquired how many new shares had been taken up by the London proprietors.

The CHAIRMAN said, they could not precisely state the number of shares taken up. They had received offers from most respectable contractors to complete the whole line, taking a large proportion of the amount in shares; and until some agreement were come to, the Directors could not state the exact amount of the subscriptions. He might also state, that they had been applied to by other parties, not shareholders, to take up the new shares, should the existing proprietary decline to subscribe.

Mr. GARLAND was only anxious to know with what number of London subscribers they had presented themselves to the Manchester shareholders.

The SECRETARY stated, that the whole number of shares subscribed for in London was 953, thus producing a sum of 9,530*l.* This was not quite one-third of the amount required.

Mr. JOHN WHITE inquired how much would be required to complete the railway to the Uxbridge road.

The SECRETARY read an estimate given in by Mr. Bidder, from which it appeared that, taking the stations on a reduced scale, the expense would be 9,000*l.*

The CHAIRMAN said, he had been told that the original estimate of Mr. Stephenson, amounting to 32,000*l.*, had now been reduced to 25,000*l.*, and this had only been made known previous to the departure of the deputation for Manchester. This was for a single line of rails, leaving room on the bridges and other parts of the railway for a double line.

Mr. GARLAND inquired what time the Manchester shareholders would require.

The SECRETARY said, no day had been named, but probably a week or two would be sufficient.

Mr. GARLAND thought the time asked for should be granted, more especially as nothing could at present be done in pressing the line to completion. He thought an extension of time would be beneficial to all parties. (Hear, hear, hear.) He was sure that the creditors would not thus be placed in a worse position. (Hear, hear, hear.)

Mr. WHITCHURCH (a Director) went at great length into what had been said at the last meeting with respect to the allowance granted to the Directors. He was not then present, and he thought it right now to offer a few words in explanation. It had then been pressed upon the Directors that they ought not to accept their allowance, and he was authorised to say that such allowance had been given up from January last. The Directors were anxious to extend the operation of this resolution still further back, but they could not do so, as they found that many of those who previous to that period had held seats in the Direction had since retired, and moreover the accounts had been made up to that date. With respect to the Directors writing off the amount of their allowance against the arrears on calls, he believed it hardly applied to the present Board. The Directors had had a most unpleasant duty to perform in suing some of their late colleagues for arrears, and in several of these cases, where the proceedings were certainly very doubtful, the Board had thought themselves fortunate in being able to compromise the matter by writing off the claims for allowance against the amount in arrear. The duties of the Directors had, he would repeat, been extremely onerous. They had had to encounter doubts on doubts, and difficulties on difficulties, and they had not, since he had been connected with the Direction, received one sixpence in hard cash for themselves. He made this statement partly from what had been said at the last meeting, and partly from the remarks which had been made in newspapers justly exercising a strong influence on railway proprietors and the public. He might carry the justification of the Directors still further. The Board did not deem themselves answerable for the delay which had occurred in carrying out the scheme. The mistakes which had hitherto impeded their progress had been mistakes from the commencement, and the great business of the present Board had been to remedy these mistakes. There could be no doubt that their affairs now wore a more promising aspect, and that the undertaking would ultimately be carried out. (Hear, hear.) This might not take place to-day nor to-morrow, but it was his firm conviction that the circumstances of the West London Company were not irretrievable. (Hear, hear.) He had reason to believe that, if the line were not taken up by the shareholders, it would be taken up by other parties. The Directors were quite willing to allow more time to the original proprietors, but if the meeting were of opinion that sufficient space had already been granted, they would at once authorise the Directors to offer the stock to the public, and he had no doubt the public would respond to the call. The more the scheme of these new shares was looked into, the more favourable would it appear to new investors. (Hear, hear.) The large capital already expended could not all have been wasted. (Hear, hear.) The land alone which they had secured was worth from 50,000*l.* to 70,000*l.*, and property in that neighbourhood was daily increasing in value. At this moment the Directors had offers—for he believed he might call them offers—to complete the line; and although these offers were within moderate bounds, the cost was probably higher than would be incurred if the original shareholders were generally to come forward. He thought that what had transpired the other day in the Court of Common Council, in the matter of the river Navigation Committee, showed that the extension of the West London line to Knightsbridge could not fail to be followed by most profitable results. It appeared that Sir Frederick Trench had given notice for next session of a motion for the embankment of the Thames from Chelsea to London Bridge, and, from what was rumoured out of doors, he had little doubt the project would be carried into execution. It might not be the work of one year or two years, but succeed it must eventually; and with the West London line at one end of the embankment, and the metropolis at the other, it could not but happen that a great amount of the Birmingham and Great Western traffic would come by that route—if, indeed, the existing termini of these great lines were not altogether abandoned. (Hear, hear, hear.) When they looked at the rapid growth of steam navigation on the river, they could not but feel satisfied that many persons proceeding northwards would prefer the facilities of river transit to the jolting of omnibuses through the crowded districts of the metropolis. He might be more sanguine than others, but he thought it possible that, in the construction of the proposed embankment along the margin of the Thames, a plan might be devised to bring the Birmingham and Great Western Railways by means of a tunnel under such embankment into the heart of the city; but if this scheme were deemed wild and impracticable, the embankment would still be the highway to the West London Railway, and through it to the great lines with which in was in connection. Then there was the local traffic on the line which could not but be very considerable. To secure all these advantages what sacrifice had they to make? There was only the sum of 32,000*l.* to be subscribed by upwards of 100 individuals. It must be apparent to bystanders that all the difficulties of the undertaking had originated with the proprietors themselves. (Hear, hear.) He hoped this meeting would not countenance any further delay, and that the Directors would at once be authorised to bring the scheme before the public. (Hear, hear, hear.)

Mr. WILLIAM WHITE inquired if the creditors were so numerous that they could not conveniently be applied to for an extension of time.

The SECRETARY said, they were by no means numerous, and could easily be applied to.

Mr. W. WHITE thought delay would in that case be advantageous. Even to the London shareholders, scarcely sufficient time had been afforded to consider the requirements of the case.

Mr. WHITCHURCH wished it to be distinctly understood, that he had no desire to shut out any of the original proprietors, but he thought a day ought to be fixed, after which those proprietors who did not choose to accept the new shares should be deprived of all participation in the expected benefit. The golden opportunity now offered by the state of the money market might soon pass by. Knowing the high respectability and extreme liberality of the creditors, he did not anticipate any refusal from them for an extension of time, but nevertheless, he did not expect a more favourable period for proceeding than the present. (Hear, hear, hear.)

Mr. JOHN WHITE dilated upon the impolicy of the scheme proposed, as tending to "swamp" the original proprietors.

It was answered by the Chairman and others, that the Company had no choice; they must make a sacrifice, and if the scheme now offered were not carried into effect, there was no likelihood that any other would be successful.

Mr. GEORGE WALTER said, he had watched this concern for many years, and he was surprised that it had not by this time attained the importance it deserved. The honourable (non-)proprietor then entered at some length into the detail of a scheme which he said he had laid before the Greenwich, Croydon, Brighton, and Dover Companies, for connecting the Arsenals of Woolwich, Sheerness, Chatham, &c., with the South-Western and South-Eastern Railways, and expressed an opinion that by means of the West London Railway (the passage by a bridge across the Thames not being, as he said, difficult), the northern railways might be similarly connected. Mr. Walter added, that his scheme had been laid before the Engineers of the railways referred to, who had expressed their approval of it, but on the principle that "everybody's business was nobody's business," nothing had yet been done in the matter.

* See *Railway Times*, September 10.

Digitized by Google

Mr. C. Craufurd was very unwilling to offer ny observation with reference to the Directors, ut he must say that, in his opinion, what had been dduced by Mr. Whitchurch went for nothing. Jp to January last the Company had been regularly charged with Directors' allowance, and whether that allowance passed into the pockets of the Board, or was sunk in what had been called their canal of a railway," mattered nothing to the proprietors who had to pay it. The Company were exceedingly obliged to the Directors for foregoing heir allowance from January last, but still the onstitution of the Board was not such as to inspire onfidence in the public. He was sorry to say that here were gentlemen at the Board who had not aid up, and could not pay up, their arrears of alls on the original shares, and who, consequently, ould not subscribe for new shares. Then there ere three members of the Board who had not subcribed at all for new shares, and two who had not aken their quota——

Mr. Whitchurch (interrupting) did not think he honourable proprietor could have had any opportunity of vouching for these assertions as facts, ince the subscription list had not been made ublic.

Mr. Craufurd begged pardon, but he *did* know t, and more than that, he could tell exactly the umber of old shares held by each Director, and he number of new shares for which he had put lown his name. Moreover, to show that he had ot obtained his information by underhand means, e might mention that he had expressly informed he Secretary, from whom the particulars were erived, that he intended to bring the matter before he present meeting.

Mr. Garland ridiculed the idea of keeping back ny information of the kind. The Secretary had nly done what he (Mr. Garland) should have expected him to do, had he applied for similar particulars. (Hear, hear, hear.)

Mr. Craufurd said, the most extraordinary part of the business was that, as he was told, the proprietors had no power under the Act of Parliament to turn out the Board. It was most monstrous that the Direction should thus be converted into a rotten borough, and that parties not qualified to vote should contribute to make a quorum for the transaction of business. (Hear, hear.) It was very painful for him to offer any remarks on this subject. He trusted, however, that the Directors would communicate with the contractors who, as he understood, were ready to help forward the undertaking. As to the swamping of the original proprietors, he hoped Mr. White would read a letter in the *Railway Times*, which would show him that an original proprietor taking up his quota of the new shares, would receive 4 per cent. on his investment, supposing the original calculations of traffic to prove correct. (Hear, hear, hear.) For his own part he was not inclined entirely to cut off the remuneration of the Directors, although while the Company continued in its present depressed state, a smaller allowance might suffice.

Mr. Garland inquired what was the qualification of the Directors.

The Secretary replied, that it was 20 shares.

The Chairman begged to say, that not one sixpence had ever been credited to his account for Directors' allowance. So far from being in arrear with calls, he had frequently paid beforehand, taking discount, so as to enable the Company to discharge their liabilities. (Hear, hear.)

Mr. Whitchurch said, he had bought the whole of his shares when the full amount was paid up, and therefore could not have been in arrear for calls.

Mr. Garland wished that he had become a shareholder under similar circumstances. ("Hear, hear," and a laugh.)

The Secretary then (at the request of Mr. Garland) read the clauses in the Act relative to the appointment of Directors.

Mr. Garland wished to know how many members of the Board there were that had not been qualified within the last 12 months.

The Secretary replied, that there was no member not qualified in respect of the number of shares held, and but one who was disqualified from voting by reason of arrears on calls.

Mr. Garland contended that such Director was *bona fide* disqualified. He should be glad to know how many Directors there were, and what number of times each had attended within the last 12 months. (Hear, hear, hear.)

The Secretary said, the number of Directors was 10; he would get a list prepared of the number of attendances before the meeting separated.

After some desultory discussion on this point,

Mr. Ramsay (a contractor and creditor) said, he had had an opportunity since the last meeting of having an interview with Mr. Burge, and also with Mr. Price, one of Mr. Stephenson's contractors. Mr. Price had expressed his readiness to complete the line at Mr. Stephenson's estimate, and to take one-fourth part of the price in shares. (Hear, hear, hear.) Mr. Burge had also stated that he could find an ironmaster who would supply the iron at market prices, and if the Company could not find the money would take one-half the amount in shares. (Much applause.) He had received a letter from Mr. Burge, in which that gentleman stated that if the Company could raise 10,000*l.* by shares, there would be no difficulty in completing the line, and that he (Mr. Burge) would undertake to do it in three months from the commencement of active operations. (Renewed applause.)

Mr. John White suggested that Mr. Stephenson's estimate should be read.

The Secretary said, no detailed estimate had been given in by Mr. Stephenson. The estimate of 32,000*l.* was stated as a round sum. Within the last few days, however, Mr. Roy, the Company's Solicitor, had seen Mr. Stephenson, and Mr. Stephenson had expressed his conviction that from the present price of labour and materials, the estimate could be reduced to 25,000*l.* (Hear, hear.) Mr. Stephenson was now preparing a detailed estimate.

Mr. J. White again objected to the scheme for the issue of new shares, as not doing justice to the original proprietors.

Mr. Ramsay begged to state that the creditors had expected a settlement on the 18th of June last, and he was sure that, however much disposed he might individually be to accommodate the Company, any attempt to interfere with the arrangement which had been entered into with the creditors would entirely defeat the resuscitation of the concern. (Hear, hear, hear). He would appeal to the Secretary whether it had not been with the greatest difficulty that the creditors had been induced to accede to the terms now proposed; in fact, they had been two days in getting one signature. (Hear, hear.)

The Secretary, after alluding to the exertions of the previous speaker in accomplishing an arrangement, said they had been more than two months in obtaining a particular signature. (Hear, hear, hear.)

It was now notified that the list of the Directors' attendances was ready, and the Chairman put it to the meeting whether the same should be read. It was decided in the affirmative.

The Secretary thereupon read the list, from which it appeared that from January last, Mr. Alexander had attended 19 Board meetings; Mr. Gunston 21; Mr. Gunter 19; Lord Kensington (who, as the Secretary explained, had resigned during a portion of the period) 8; Mr. Lewis 3; Sir John Scott Lillie 6; Mr. Morgan 19; Mr. Sturch 6; Mr. Whitchurch 17; and Mr. Wilkinson (who was elected on the previous Friday) 2.

Mr. Sturch explained, that he had been anxious to retire altogether from the Direction, after losing upwards of 3,000*l.*, and that he had been induced to remain solely to enable a quorum to be made. He had done so principally on the urgent request of Mr. Thompson, the Secretary, to whom the proprietors were most deeply indebted for the mode in which he had transacted the Company's business—more deeply perhaps than they were at present aware of. (Hear, hear, hear.) As to remuneration for his services, such an idea had never entered his mind. (Hear, hear, hear.)

Mr. John White, after referring to the reduction in Mr. Stephenson's estimate, brought forward a motion that the 10,000*l.* of expected saving be deducted from the amount proposed to be raised from the shares of the first class. Mr. White argued that this would reduce the sacrifice to the original proprietors. He also contended that there ought to have been a power of redemption vested in the original proprietors, so as to enable them hereafter to buy up the shares issued at 10*l.*, at their nominal amount of 20*l.*

Mr. Whitchurch very forcibly replied, urging that if the Company were to appear thus fickle—taking up one scheme to-day and another to-morrow—neither the creditors nor the public would place the smallest confidence in them. If they could save 10,000*l.* in the original estimates of Mr. Stephenson, so much the better would it be for all parties, for in that case, instead of borrowing as now proposed, 15,000*l.* on debentures, they would have to borrow only 5,000*l.* (Hear, hear, hear.) With respect to any further delay in offering the new shares to the public, it was, he conceived, the duty of the Directors to look after the interest, not of those proprietors who were inert in the present crisis of the Company's fate, but of those who were willing to step forward with assistance. The Directors had not hurried forward this measure. It had been in agitation for nearly two years, and the creditors having waited so long, why should they be required to wait longer? (Hear, hear, hear.) The money market was now in a favourable position, but it might not be so in November or December next; and if the present opportunity were let slip, no doubt the Directors would be blamed (and in his opinion blamed justly) for want of energy. (Hear, hear, hear.) He was, however, not opposed to a short delay, although even *that* might risk the success of the whole plan.

Mr. Wm. White explained, that he had been anxious for some further delay, solely in consequence of what had been said respecting the Manchester proprietors.

After a good deal of desultory discussion, it was moved by Mr. Wm. White and seconded by Mr. Whittaker, and, after a verbal amendment by Lord Kensington, carried *nem. con.*, (Mr. John White protesting against the word "unanimously,")—

"That the whole number of new shares of the first-class not having been taken by the present shareholders, the simple contract creditors be requested to extend the time mentioned in the agreement signed by them, from the 1st of October to the 1st of January next, or for such shorter period as may appear to them desirable; and that the Directors, after giving a fortnight's further time to the present shareholders to come in, do then offer the remaining shares to the public, and do use such means for disposing of the same as in their discretion they shall think fit."

The Chairman said, the Company were obliged to Mr. Walter for his suggestion, which had been much talked about, and which if it could be carried out would no doubt prove useful. He (the Chairman) lived in the neighbourhood of Brompton, and had he not been an eye witness, should have deemed it incredible that so many persons could visit that part of the suburbs. (Hear, hear, hear,) There were absolutely shoals of them arriving by successive steam-boats, and no doubt very many of them, if an opportunity presented itself by the West London Railway, would go further on. (Hear, hear, hear.)

Mr. William White, in proof of the desire of he urban population to extend their holiday rambles, stated that two steam-boat piers were to be erected at Kew, in the ensuing spring.

Mr. Lewis (a Director) went at some length, and with much spirit, into a vindication of his attendances at the Board. The number of times at which he had been present in London was small, but he had taken many journeys, spent much time, and incurred a cost of more than 50*l.* out of his own pocket, during the present year, to procure interviews with Mr. Brunel, in the hope that the Great Western Company would enter into an arrangement for the lease or purchase of the line. (Hear, hear, hear.) At one time he had hoped that the

Digitized by Google

arrangement would end satisfactorily, although for very obvious reasons it had "gone off." He had, he conceived, done his duty as a Director, although his intentions had not been fully carried out. (Hear, hear, hear.)

The CHAIRMAN said, the Company were much indebted to the honourable Director for the active measures he had taken in the matter referred to, and he had no doubt his valuable services would be fully appreciated by the proprietors. (Hear, hear, hear.)

Mr. GARLAND, after disclaiming all personal offence to Mr. Lewis, referred to the Director who had not paid up his arrears on calls, and after stating that he was not acquainted with the name of the member, moved that the gentleman alluded to at once retire from the Direction.

Mr. CRAUFURD would gladly second the motion, although he did not think it would be of any use. They might, however, find a remedy when certain of the Directors retired in February next.

A long discussion ensued on this point. It was urged that no practical difficulty had arisen, as there were several vacancies still to be supplied. It was stated in the course of discussion, that Mr. Craufurd had been requested to serve on the Direction, but had declined.

Ultimately Mr. Garland shaped his motion so as *to request* the obnoxious Director to retire; Mr. Craufurd energetically insisting that the constitution of the Board of Directors had led the public to distrust the whole concern.

Lord KENSINGTON made a most energetic appeal to the meeting on this point. The gentleman referred to had been one of the greatest losers by the railway. He had paid at least 3,400*l.* in bank notes for the railway; and if he had gone beyond his means in embarking in shares, he was to be pitied rather than condemned. (Hear, hear, hear.)

Mr. GARLAND, after some further discussion, withdrew his motion, amid applause.

Mr. RAMSAY took occasion to state, that Mr. Burge, in recommending the ironmaster to take half his amount in shares, had looked upon the undertaking as a good investment. (Hear, hear, hear.)

Mr. LEWIS wished it to be understood that the contractor in question did not stand alone. He was acquainted with a contractor who was willing to undertake the completion of the West London Railway, and to give ample credit. (Hear, hear, hear.) The party in question had recently had a contract of 32 miles on an important line, and had found all the materials. (Hear, hear, hear.)

Mr. JOHN WHITE, after some preliminary observations, moved that Mr. Stephenson's estimate be laid before the next meeting.

After an intimation by the Secretary that the Report would probably be ready in time for the next meeting, the motion was carried unanimously.

It was then, after some discussion, resolved that the meeting stand adjourned to Wednesday, the 1st of November next, at 1 o'clock.

Lord KENSINGTON, in very complimentary terms, moved the thanks of the meeting to the Chairman.

Mr. GARLAND seconded the motion, and on being put by Lord Kensington, it was carried by acclamation.

The CHAIRMAN having made a suitable acknowledgement, the meeting separated.

PRESTON AND WYRE RAILWAY—THE NEW TOWN OF FLEETWOOD.

WE [*Liverpool Standard*] feel happy in being enabled to extract the following from the *Manchester Courier*, from its account of the Preston Guild, as doing justice to the new and beautiful watering place—Fleetwood. Fleetwood is two hours and a half ride by railway from Liverpool and Manchester:—

"We find we have omitted to state in the proper place, that of the 5,514 children belonging to the national and other public schools, who were entertained and promenaded during Friday, 190 were sent down by the Preston and Wyre Railway to the new and elegant marine town of Fleetwood, where they were entertained in the most liberal manner, at the North Euston Hotel, by Mr. Kilner, the house steward, in the absence of Mr. Vantini, the spirited lessee. Mr. Kilner considerately extending the same attention to his humbler visitors, so scrupulously observed towards all who visit the hotel for pleasure or sanative advantages, adorned the tables laid out in the assembly-room with some of the magnificent plate of the establishment, and the children were in other respects permitted to enjoy a most delightful visit. All this, owing to the admirable regularity and judicious arrangements which mark the internal economy of this vast and truly magnificent hotel, was effected without the slightest inconvenience to the other inmates.

"Fleetwood is indeed one of the wonders of the north. Within five or six years, by the energy and enterprise of the honourable Baronet whose name it bears, seconded by agents of integrity and ability, a barren waste has been converted into a populous and elegant town, that will already vie with any of our English watering places, in point of salubrity and beauty of situation, combined with taste and grandeur of construction, with a prospect of becoming, at no distant day, highly important in a commercial point of view. The single line of the Preston and Wyre Railway, constructed with a view to add another pair of rails when the traffic of the place shall call for it, is of itself a singular specimen of those triumphs of art over the difficulties of nature that have distinguished the present age, and reflects high credit upon the skill of Mr. Bidder, the resident civil engineer. For three miles at the Fleetwood end, the line is constructed on piles across the low lands of the Fylde, being washed on each side by the waters of the Irish Channel when the tide is at the flood, and presenting the singular appearance of a railway through the sea. Yet, from the massive character of the works the transit is perfectly safe. The next object of attraction is the North Euston Hotel, a truly splendid structure not surpassed, if indeed it is equalled, in extent, accommodation, comfort, or elegance, by any similar establishment in the kingdom. With every luxury that pertains to the most *recherche* of the London hotels, it has the additional advantages of repose from the bustle and din of a populous city, coupled with a fresh and salubrious atmosphere, and an adjacent country abounding in attractions to the admirers of fine scenery.

"We were happy to learn from Mr. Jones, the intelligent and active Secretary of the Fleetwood Company, that Sir Hesketh Fleetwood, with a generosity and disinterestedness that do him honour, has voluntarily given up his family seat of Rossall Hall, for the purposes of the proposed Fleetwood Colleges. This is a noble example, worthy of emulation by the public; and we hope soon to be enabled to announce the establishment of an institution that promises such valuable advantages to the rising generation."

REDCAR RAILWAY.

WE have for some time intended to notice more particularly the scheme for this very interesting line, which has been projected, to the Middlesbro' branch of the Stockton and Darlington line from the town of Redcar, skirting the estuary of the Tees and the North Sea, and thus opening a communication with Darlington, and then by means of the Great North of England and North Midland Railways, with all the principal towns in the kingdom. As a bathing-place Redcar has no doubt been long distinguished; its sands are unrivalled in extent and firmness, and the splendid scenery of the immediate neighbourhood renders it a delightful retreat, either for the invalid or the votary of pleasure. A more direct communication is only required to render Redcar one of the best frequented watering-places in the north of England, and therefore it behoves all who are interested in the welfare of the town to take an active part in the formation of the projected line. We understand that the total length of the line is 7¾ miles. The whole cost of construction, purchase of land, stations, depots, and Parliamentary and law expenses, is estimated at 32,150*l.* This calculation is made for a single line of railway, but it also includes the purchase of lands sufficient for a double line, if at any time it may be found expedient to adopt one. It is a commonly received opinion that the estimated expense of any public undertaking must fall short of its actual cost; but the experience of late years, from the construction of so many railways, has furnished data for calculating the cost of these undertakings with a degree of certainty almost positive. By the present reduced price of materials used in the construction of railways, the expense of such undertakings is considerably reduced. Another material feature affecting the cost of this line is the peculiar nature and situation of the land through which it is intended to pass, the level having no parallels in this county, and severance is avoided by the line running along the bank of the river Tees, and a considerable portion of the land through which it passes is of comparatively small value. In calculating the cost of the undertaking, and the consequent capital required, no notice has been taken of a very expensive portion of the preparations made by some Companies—locomotive power, coaches, and other carriages, and the accommodation and tools requisite for performing more or less of the attendant repairs. The adjoining district of South Durham so abounds with parties competent to contract for the supply of these needful appendages to a railway, that it may be sufficient to state that they can be in readiness whenever the works admit of their use, and that they can be had with a certainty of completeness which a limited undertaking like the present could not ensure within itself, and upon terms which leave no inducement to the Redcar Railway Company to invest capital to an incalculable amount in this department. The projected line appears to have strong claims to support—from the owners and occupiers of land, by opening to them a wider market for their produce—from the merchant and manufacturer, by facilitating the transit of goods; and from the public at large, by the opportunity thus afforded of obtaining renewed health from the invigorating sea air; in fact, by benefitting all classes and injuring none. It may be as well to state, that this line of railway may be completed and in full operation within twelve months from the commencement of the works.—*Northern Times.*

THE LEEDS AND MANCHESTER JUNCTION WITH THE MANCHESTER AND LIVERPOOL RAILWAY.—The utmost exertions are making by the former Company to complete their part of this important work. By the end of this week the centres of eight arches will be fixed in the immediate vicinity of the intended station, Hunt's Bank, whilst in nearly every part of the Junction line equal exertions appear to be making. The Liverpool Company, however, appear to be much more sluggish in their operations, as an immense number of houses have yet even to be pulled down. It would seem to be impossible that the Liverpool and Manchester Company will be able to complete their part of the undertaking in anything like the time that the Leeds and Manchester appear certain to do.—*Leeds Mercury.*

RAILWAY PLEASURE TRIPS—THE BRANDLING JUNCTION RAILWAY.—The Brandling Junction Railway Company, determined to carry out to the fullest extent their project of affording all classes an opportunity of enjoying healthy recreation in the fine bracing air of an autumnal day, to fortify their constitutions against the approaching winter, have advertised another cheap trip for Sunday next. Laying aside all interested motives, we assert, that the attention to these Siamese twins, Gateshead and Monkwearmouth—connected by a ligature of iron, is to the Company highly creditable. We venture to suggest that cheap trips to Boldon Flats, in the approaching (it is to be hoped clear, frosty) season, would meet with the approbation of the visitors to that re-invigorating arena.—*Northern Times.*

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—I beg permission to call the serious attention of my brother shareholders in the Blackwall Railway to the critical position of our property; and for the reasons herein alleged to entreat them to call immediately a special meeting of proprietors to take into consideration the present circumstances of the railway, with the view to the appointment of a Committee of Inquiry, should such a step appear desirable. I beg, then, to submit the following reasons for an immediate meeting of the shareholders.

First of all then, I say, the *boat question* must be immediately settled. It must be set at rest, and for ever, in some way. The vaguely expressive and darkly-significant language uttered by the Directors respecting the proprietorship of these boats, term it as they may, legal, equitable, or moral, demands an honest, unambiguous, and full explanation from their lips. Their conduct and language respecting these boats are universally considered disingenuous and thoroughly unsatisfactory. A real or supposed liability as to these boats, on the part of the railway shareholders, has already proved highly injurious to our property. Some persons have sold shares under the influence of dread of this real or supposed liability, whilst the same fear causes the property to be considered and spoken of in the market as suspected and hazardous. Thus parties are prevented from making investments in it. And since the demand for an article regulates its price, be that article what it may, it follows that when buyers are few, as at present, those parties who, from pecuniary or any uncontrollable circumstances, are compelled to sell their shares, must incur a heavy loss. Now, whether the liability in question is real, or only imaginary, is obviously not of the slightest possible importance to these wronged and injured sellers. Their loss, nay, their wrong, is real, be the liability what it may. The fear and misgivings in the public mind on the subject are real, and have produced real and ruinous effects. And the fact that the crooked policy of the Directors produced the injury and the wrong is real likewise. Their policy gave birth to the monster liability—the illegitimate offspring of illicit steam-boat and railway connection. The Directors are the authors of the mischief of which we complain; they are alone to blame. And who, I ask, but the parties who have caused the wrong, and deserve the blame, should bear the punishment? Let then a special meeting be called, and let it be the business of that meeting to see that their fellow shareholders are not wronged with impunity.

But besides the enormous mischief caused by this question of liability in the ways described, it is not thus only that these boats are the occasion of injury, for they have been and are at the present moment the occasion of injury to the *revenue* of the railway. And I beg the particular attention of the shareholders to this point, since I believe it has been totally overlooked. It does not appear to have been even mentioned at the last meeting. But when the liability question was kept out of view, it seemed to be universally admitted, if silence is to be construed consent, that the Directors' boats (let no one be guilty of a misnomer and call them railway boats), had benefitted the railway. Nothing, however, can be more unfounded or contrary to fact, as I will show, the fact being that these *five* boats are upheld only at the expense of the railway. And I say further, and will presently prove, that the interests of the railway require that the Directors' boats should immediately and entirely cease running; that the Directors should be compelled instantly to withdraw all their boats from the Brunswick Wharf, unless they will relinquish for them those privileges, exemptions, and advantages, which are alike injurious to the railway, and unjust and injurious to other boat-owners who powerfully support the traffic of the railway. I say the Directors' boats injure the *revenue* of the railway; and since the matter has been overlooked, let us consider it fully, and see how, precisely in what way, this injury is inflicted. And first as to the three Gravesend boats, the *Brunswick*, *Blackwall*, and *Railway*. That these three boats did, in the first instance, assist in bringing the old Gravesend Companies to their senses, I at once and frankly admit. That they did so is indisputable. That they have, therefore, been of some benefit to the railway, and in this way, I grant; but I insist that this benefit, without underrating it, has been in a thousandfold degree outweighed by the great subsequent injury these boats have occasioned; for, and let it be borne in mind, these boats have been the sole real obstacle to effecting arrangements with the *Diamond* and other powerful and respectable Gravesend Steam-boat Companies, of a highly favourable character to the railway. But for the Directors' boats, these arrangements would long since have been effected and now in operation, to the benefit of every railway shareholder.

Now see the effects of not making these arrangements. The Diamond Company alone have *five* steam-boats, making *seven* or *eight passages* daily; but hear, O shareholders! (and if you can hear it without feelings of disgust, I participate not in your feelings), not a single Diamond boat will your Directors permit to call at your railway pier to embark passengers for Gravesend! What!—I think I hear some of the shareholders exclaim—Are the Directors stupid or treacherous? Surely they are not "holding with the hare, and running with the hounds!" We cannot, they say, have too many boats embarking passengers from our railway. For, on the contrary, it is evident that if there could be a Gravesend boat every quarter of an hour throughout the day, in connection with every railway train, it would be to the advantage of the railway. And every approximation to this incessant, uninterrupted railway communication with Gravesend must likewise be beneficial; since it must raise the character of the railway as a certain, constant, and rapid means of communication with that place, for it would proportionally diminish the number of those annoying detentions of passengers at Blackwall, which must of necessity take place whenever, as is now constantly the case, they arrive by a train not in connection with any Gravesend boat. It may be asked what inducement the Directors can have thus to injure the railway. And here is an answer. It is to support their own boats that they are induced to sacrifice the success of the railway. The *Diamond* boats, however, are not the only boats absolutely prohibited from embarking passengers at the railway wharf. One at least of the *Star* boats is likewise prohibited. And one of the *Eagle* boats lies under the same interdict. The fact then is just this—*nine* or *ten boats* (or *passages*) are daily in the season prevented from encouraging railway traffic, solely because the Directors' boats would suffer in consequence, by not having so many passengers. But the question here to be considered is not merely one as to the number of boats prevented from running in advantageous and friendly connection with the railway; for it is equally, or even more, important to bear in mind the number of boats now running in hostile opposition to it, in consequence of the Directors' boats. This is a most material part of our grievance. Were it merely our complaint that the Directors prevented the railway communication with Gravesend being so frequent and expeditious as it would otherwise be, they might perhaps tell us that we had little or no ground for complaint. They might remind us that their own packets made *eight* or *nine passages* daily to Gravesend, and at reduced fares; and that the prohibited boats scarcely exceeded that number of passages. And they might, perhaps, plausibly say that the superior character of two of their boats, and the reduction of fares, fully compensated for any injury sustained by the trifling diminution in the number of passages from the railway pier to Gravesend. But it is when the hostility to our railway, which these boats have provoked, and which they alone perpetuate, is taken into account, that the evil becomes apparent in its real character and magnitude. For here lies the great evil. There are at least *ten* boats or passages to Gravesend daily, in opposition to the railway, solely in consequence of the Directors running boats. But for these boats there is good reason for believing that not one of these opposition passages would be made; no hostile excursions would take place. It is quite clear then, that those shareholders who at the last meeting saw no objection to the Directors being permitted to run boats to Gravesend, provided they, the Directors, ran them *bona fide* as their own boats, solely and exclusively—provided, I say, that these boats neither were, nor were to be considered to be, in any way, or in any degree, the property or speculation of the railway shareholders, as shareholders—evidently took a mistaken and imperfect view of the matter and its bearings—since it is certain, for the reasons given, and others to be noticed presently, that the question of liability is not the only important one respecting these boats for consideration. But since the withdrawal of the Directors' boats from the Gravesend trade is essential to the complete success of the railway, that matter must engage, seeing that it imperatively demands, our prompt and serious attention. And the result of mature deliberation on the point can, I am convinced, be no other than this conclusion:—*that conclusive as may be the reasons why we shareholders should have nothing whatever to do with the boats in question, there are reasons why the Directors should not run them, being their own private and exclusive property, scarcely, if at all, less conclusive.*

I have hitherto been speaking of the three Gravesend boats only; I will now say a few words about the two Greenwich boats belonging to the Directors; they are called the *Flirt* and *Coquette*. Strange names, I must confess, they seem to me—a staid, domestic, family man. But we will not pick a quarrel about names, when things principally concern us. That the boats, *Flirt* and *Coquette*, have been injurious to the railway, there is no room for reasonable doubt in the mind of any shareholder who is fully acquainted with their history. The selfish and impolitic manner in which the *Waterman's* Company—a Company running seven boats between *London Bridge*, *Greenwich*, *Blackwall*, and *Woolwich*—have been treated, has notoriously operated to the serious injury of the revenue of the railway. This treatment was occasioned solely by the determination of the Directors to uphold *per fas et nefas* their own boats. Owing to the unhandsome and unfair manner in which the Directors started, and have subsequently managed their two pet boats, and the general treatment, uniformly offensive and unjust, which the *Waterman's* Company have received at their hands, is mainly to be attributed the existence of a rival pier at Blackwall-stairs, only a few hundred yards from the railway pier. But this, though a great injury, is not all the mischief. These two boats have been the means of exciting that vigorous and skilfully-directed hostility of that Company to our railway, which has already resulted in the annihilation of half its Woolwich trade, and in the placing in jeopardy three-fourths of the remaining moiety. The benefit which the two boats have conferred by conveying to and from Greenwich a few railway passengers (and few indeed they have been), is utterly insignificant, and of no appreciable value, as a set off against the mischief they have produced in the way described.

In the absence, however, of these facts, reasons would readily occur to the mind of every reflecting shareholder, why the Directors should not be permitted to run boats in connection with the railway, such boats being their own property, exclusively of the railway proprietors, as proprietors. In the first place, the Directors' interests as boat-owners, must conflict with the interests of other boat-owners who support the traffic of the railway, and these conflicting interests may prove injurious to it. In the second place the interests of the Directors as boat-owners, and their interests as railway proprietors, may clash, and injure the railway. Take the first case. This may give rise to partiality on the part of the Directors towards their own boats. (The

Digitized by Google

fact is, this partiality is now in mischievous operation.) We may conceive that the railway servants, for instance, may be instructed to pay every attention to the comfort and convenience of travellers by the Directors' boats, in order to ensure future custom. Porters, it may be, shall be ordered to attend to carry their luggage, and politely herald their way to the booking-office; and even it may happen that the very train shall be detained a minute or two, if such detention will promote their convenience. In short, every effort may be made to give the most perfect satisfaction to travellers by the Directors' boats. On the contrary, when other boats, not the property of the Directors, arrive, it may be (such is the fact) that the railway servants may not be instructed (which they know is tantamount to a positive prohibition, and is intended to operate as such) to pay the like attention to passengers to these strange boats. These passengers, it may be, shall be left to carry their own luggage, if they have sufficient physical strength; if they have not, or for any reason object to being their own porters, they shall be put to the expense of hiring some person, whom they may chance to be able to get at the moment, to act in that capacity. They shall then, it may be, be left to grope their way up the flight of muddy stone steps, which through inattention to the stages and other matters, is frequently inconvenient and dangerous. They may then be left to find their way to the pay-clerk, as well as they, and their probably ignorant guide, are able. Thus shamefully neglected, and thereby detained, it is not unlikely they may now be mortified at the discovery that it is a minute or two past some quarter of the hour; and be gruffly told by some rude official, that they need not be in a hurry as the train is just gone. If the ill-treated, neglected passengers complain of the treatment they have received, they may perhaps be told that they must wait, and may whistle if they please, until the next train starts, which will be in just 13½ minutes. My meaning is this, that travellers who do not travel by the Directors' boats, but who, the Directors' servants know, are the friends of other boats, and regularly travel by them, will, it is probable, be barely treated with common civility. This exercise of partiality, consequent upon the Directors' running boats, is palpably injurious to other boat proprietors, and to the railway. For, can these boat proprietors be the hard and fast friends of the railway when they are thus unfairly treated by the Directors? And will the travelling public tolerate insult or gross neglect at the hands of railway servants? No, most assuredly they will not. They have too much self-respect, and cannot, and will not, pocket these affronts. For my own part, I avow I would sooner go from Gravesend to London Bridge, and ensure respectful treatment, (and I know that this treatment can be ensured) even if I were half a day on the passage, than reach town in an hour and a-half by the railway, if I must encounter, what I cannot but call, the blackguardism of Blackwall. And I say further, that if my fellow shareholders are actuated by a proper feeling and degree of self-respect, they will not tacitly consent to lie under the odium and obloquy which attach to themselves in some degree, in the public mind, on account of the shameful partiality and its consequences which I have felt it my duty to reprobate.

I said in the second place that the Directors should not run boats, since that their interests as boat-owners and as railway proprietors might clash, and the results be injurious to the railway. This is an insuperable objection to these boats, and should alone justify a demand to have them put down, since it may obviously happen that a given loss inflicted by the Directors on the revenue of the railway, may be more than compensated by the resulting gain to them on their boats. I am now speaking of a *direct loss* inflicted on the revenue of the railway, for I have already shown that it may be politic on the part of the Directors, conflicting as are their interests, to injure the revenue in many indirect ways. Can our Directors then, I ask, settle our railway fares uninfluenced by no other feelings than those of concern for the advantage of the railway? Is it possible that they can all have the advantage of the railway only in view, when some of them have a heavier and more unmanagable stake in the boats? It is necessarily impossible. Suppose, for the sake of illustration, the Directors some few months since to have been sitting in conclave, to fix the railway fares. Suppose further, that our late Director, Mr. Rennie, acting solely with a view to the benefit of the railway, thus addressed his companions:—"Gentlemen, I see that boats are running from London Bridge to Gravesend for sixpence; could not, therefore, the three Blackwall boats, their passage being seven miles shorter, run for sixpence likewise? I beg to propose, gentlemen, that we continue to charge 1s. from London to Gravesend, but apportion the 1s. thus: 6d. for railway, and 6d. for boat." Now, supposing it to have been agreed unanimously beforehand, that the fare from London to Gravesend should be 1s., it is evidently Mr. Rennie's interest, representing as he does at this meeting the interest of the railway only, to get as many pence out of that 1s. as he can for that railway; and he acts accordingly. He therefore endeavours to secure 6d. per passenger, or 2d. more than the bulk of them had hitherto paid. It is still more to his interest even to reverse the present fares, if he can do so, and to make them 8d. for railways, and 4d. for boat: and in short, to take 11d. out of every 1s., if it can be had, and to send poor Gravesend Jack up and down the river with but a single shot in his locker. I hardly need say, I am not here speaking of these particular changes as practicable, but am simply exposing the clashing interests of our Directors. Now with what different motives, feelings, and interests, must the boat-owner Directors, at the supposed meeting, have approached the question of fares, and must at all times view it, so long as they shall be boat-owners! They could not at that meeting proceed to the settlement of the railway fares without making the advantage of their own boats an important item in their calculations. Their interest in the boats must conflict with, and may preponderate over, their interest in their railway. When fixing the fares, they may be thinking that the less people have to pay in getting to their boats, the more they can pay for riding in them. They may be interested in reversing the case of Gravesend Jack, and to vote to him 11 coppers, and to the public a 1d. railway; and to maintain this desirable state of things (for them), their third vote may be, that whenever we poor shareholders choose to travel by our own railway, we shall be always favoured with a 1d. ride for 2d. I mean that the result of conflicting interests, if these are allowed to continue much longer, may be the ruin of the railway; it may not pay its own expenses, and consequently we shareholders may be *invited* to pay them.

Now, let a fact or two show the certain tendency of the Directors' boats as affecting the question of steam-boat fares generally. At the present time no fewer than *eight* of the Gravesend boats, which disembark passengers for the railway, charge as their fares 1s. and 1s. 6d. These boat charge as much for the passage from Gravesend to Blackwall as from Gravesend to London Bridge: the fares are the same. *Five* other boats charge 10d. and 1s. 2d. from Gravesend to Blackwall, and 1s. and 1s. 6d. from Gravesend to London Bridge; and there are two boats, and only two, which run at the same fares as the Directors' boats, namely, 8d. and 1s. from Gravesend to Blackwall; these two boats also charge 1s. and 1s. 6d. from Gravesend to London. Now is it not glaringly obvious, that if all the boats I have mentioned charged the same low fares as the Directors' boats, the railway would be very greatly benefitted? And is it not equally certain, that in this case the Directors' boats would be very greatly injured? Yes, undoubtedly; both consequences would inevitably follow. Can it then, I ask, be reasonably expected that our Directors should be either very sincere or very anxious in their efforts to induce those boat-owners to lower their fares to Blackwall? Will they take much pains to persuade those boat-owners to charge their passengers to Blackwall 4d. or 6d. less than they charge their passengers to London Bridge? But suppose for a moment that the Directors did attempt to persuade these boat-owners to lower the Blackwall fares, what reply could they expect to get? What answer could they look for but this? "*Gentlemen, put down your boats, and then we will talk to you.*"

Shareholders! I implore you, look to these matters. I bring no charges here against your Directors; they may be all honourable men; I will suppose them to be such; but they have, I say, inducements to become dishonourable. Should they be thus tempted? To be plain, is it *safe* for us, that the avowed ostensible friends, and legal guardians and Directors of the Blackwall Railway, shall be any longer so circumstanced as that it shall be to their pecuniary interest to injure that railway? The common sense of every shareholder says it is unsafe. Then let a special meeting say that the cause of the danger shall cease.

Other matters should also be considered at the meeting. I will only briefly mention one or two, and not enter into many details. I cannot, however, pass them by entirely unnoticed. The causes of the utter failure of the goods' traffic should be ascertained, since there are the best grounds for believing that this matter was misrepresented at the last meeting. As to the lowering of the carmen's charges being the grand cause, it is reported to be all *fudge*. The fact is currently believed to be, that the railway, owing to the bungling but most expensive apparatus, is mechanically unable to carry any considerable quantity of merchandise. Again, the partial and disgraceful management of the railway wharf, in part at least the consequence of the Directors' boats, deserves condemnation. The favoured boats of the Directors are permitted to rob other boats of their railway passengers, and as the Directors' boats are notoriously the least punctual boats on the river, it continually happens that they are an entire quarter of an hour behind their advertised time in starting. In this case it is sometimes their practice to steal a whole train of passengers and smuggle them on board; the passengers thus filched away belonging of right to some *Star* boat, or a *Sons of the Thames* boat, as it may happen to be. And if the boat with the plunder on board can get out of sight before the plundered one arrives in time to discover the theft, it is deemed by the Directors' servants, the pier-master and his men, a capital practical joke. Then they laugh heartily in their sleeves, and chuckle with extreme delight. But if, however, as has again and again been the case, the victimised boat drops down the river from London Bridge, or elsewhere, a little quicker than was expected, and catches them at their tricks, or even just in time to spy the receiver of stolen goods steaming it away in *Bugsby's*, then a remonstrance from the plundered Captain is the certain consequence, and probably there will be a long and noisy quarrel between him and the pier-master. The ears of travellers may be annoyed by the dispute, and they will be fortunate if their eyes are not invited to witness a fine imitation of a St. Giles's or Whitechapel shindy. Now, the pier-master should have a time-keeper over the boats frequenting the pier. All should have fair play as to time, as well as in all other respects. If the pier-master then acts in the partial manner described, does he discharge the duties of his office? And if, as I have no doubt is the case (for the pier-master is a respectable man), the Directors instruct him thus to act (and they of course are respectable men, too), is it not our business to see that the instructions given are of a very different character? Let me add, in conclusion, that the state of almost total darkness in which the floating barges are kept when vessels arrive in the evening, is very discreditable. It is then frequently far from being either a safe or convenient landing place for our railway passengers. Several minor matters, though neither unimportant nor undeserving of censure, the length of my letter compels me for the present to pass by. My im-

Digitized by Google

nediate object, Sir, in writing, was to show cause or a special meeting of my fellow-shareholders; nd that more than sufficient has been written to nake its necessity obvious is respectfully submitted for their consideration, by one who is sincerely and *entirely* their friend—*by one who has o interest conflicting with that of the London and Blackwall Railway, which, they are again reminded, is more than their Directors or Chairman an say.*

I am, Sir, your obedient servant,
A LONDON CITIZEN.

City, September 27, 1842.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

Sir,—On reference to the proceedings of the ast London and Blackwall Railway Company's general meeting, it will be found that much of the lisappointment which the present prospects of the railway have occasioned is attributed to the errors in the engineering estimates of cost of construction nd working expenses. With the view of establishing a more just feeling on this subject, I beg to annex the following short statement of the estimates connected with this railway, to which I feel assured you, with your usual desire to do justice to all parties, will afford a place in the columns of your paper.

The present London and Blackwall Railway Company was matured by the railway fervour of 1835, and the present line was selected in preference to a rival line after a contest in Parliament, the estimates for which were prepared by Sir J. Rennie and Mr. Tite, and were as follows:—

Engineering, including a viaduct 47 feet in width to accommodate four lines of rail	£336,000
Purchase of property for site of above and two side roads each 12 feet wide, making the total width to be bought 71 feet	264,000
Total cost	£600,000

Towards the end of the year 1837, Mr. Stephenson and I being applied to for a Report on the best mode of working this railway, recommended stationary engines to be adopted, assigning as the advantages which would thereby be secured, the following, namely, that two lines of railway would be found sufficient for the accommodation of the estimated traffic, and thus the viaduct might be reduced to a width of 29 feet, which together with other detailed alterations would effect a saving in the cost of construction of 168,000*l.*, exclusive of saving in cost of purchase of property for the diminished width; also that the engines would admit of being worked for 11,000*l.* per annum, including, as was explained by me in my evidence on the extension to Fenchurch-street, the interest of 5 per cent. on cost of engines and machinery; and that the maintenance of the rope would require 1,000*l.* per annum.

Our Report was laid before the proprietors, accompanied by an address from the Directors, which stated that the cost of the railway would be reduced to 440,000*l.*, and that the gross annual revenue might be taken at 139,800*l.*, which would yield a net return of 22*l.* per cent. to the shareholders.

With the above estimates, Mr. Stephenson and I were in no way identified, as indeed may be gathered from the address itself, nor were we at all consulted in reference to them, the Directors having in fact deducted the estimated amount of saving to be effected by constructing a narrower and less elevated viaduct from the original Parliamentary estimate, relying upon the sufficiency of the estimates of purchase of property for a width of 71 feet, when applied to the lesser width of 29 feet to afford them the means of meeting any contingent expense—a reasonable conclusion, had the original estimates been adequate.

The only estimates for which Mr. Stephenson and I are responsible, are those prepared on the occasion of the Company's application to Parliament for the extension of the railway to Fenchurch-street in 1839, viz.:—

Estimated by Engineers—	
Engineering, including formation of railway, engine houses, Fenchurch-street passenger station, and an outlay of 10,000*l.* at the Minories station, but exclusive of machinery, carriages, and road stations	£239,000
Estimated by the Company's Surveyor—	
Purchase of property	379,000
Total	£618,000

The sum of 182,000*l.*, making with the above amount the total estimated capital of the Company 800,000*l.*, was deemed sufficient to meet the Parliamentary and legal expenses, salaries, &c., as well as the other items referred to.

The attention of the Committee was particularly called by me in my evidence to the circumstance that the cost of machinery, engines, and carriages were not included in the above estimates, and the reason for so doing was stated at length, together with the circumstance that the difference between the above amount of 618,000*l.*, and the total capital of 800,000*l.* must be called upon to meet these charges.

By the last half-year's accounts it will appear that the total expenditure to June 30th last, had been as follows:—

Works	£415,000
Purchase of property, less value of materials and property sold	470,000
Carriages	36,000
Salaries, office expenses, Direction	25,000
Parliamentary and legal expenses	111,600
Interest on loans carried to capital	48,000
Total cost (subject to a deduction for surplus property unsold)	£1,105,600

To the engineering estimate of 1839, the following sums must be added for the purposes of comparison:—

1. Engines, machinery, well and tanks	£62,000
2. Electrical Telegraph	5,000
3. Repairs to houses not required to be taken down, to render them more saleable, making arches water-tight for same purpose, and work done in lieu of pecuniary compensation to landowners—total to be carried to purchase of property	12,200
4. Works executed on Dock Company's premises to save payment of 7 per cent. per annum on their cost, had they been paid for by Dock Company	10,200
5. Extra to extending roof over the whole viaduct from the Minories to Fenchurch-street station, and extra depth to piers to provide for vaults	5,000
6. Carriage repairs, shops, tools, &c.	3,000
7. Goods' warehouses, and machinery	10,000
8. Road stations not executed by the engineers	12,000
9. Extra to Minories station to accommodate the whole traffic of the railway whilst the extension was being completed, the Company from inadequacy of funds being unable to complete both simultaneously	7,000
Total	£126,400

If this sum be added to the engineering estimates of 1839, viz., 239,000*l.*, and the total thus acquired be deducted from the amount charged to works, there will still remain 50,000*l.* unaccounted for. How much of this excess is referrible to engineering purposes I cannot state with precision, inasmuch as frequently the head of "Works" in railway accounts forms the refuge for all stray items of expenditure; as for instance, in the case in question, it includes boarding in of property on the whole line of railway, repairs to houses, not done by direction of the engineers, accommodation for landing passengers and goods at the wharf, preparing room for entertainment at the opening, &c. On the whole, I am of opinion that one-half the above, or 25,000*l.*, is all that can fairly be charged to engineering. A portion of this excess has arisen from circumstances over which the Engineers could exercise no control, viz., maintenance of way for the first year, which it is now usual to carry to capital, extra to forming embankments from possession of property being withheld, extra on foundation of engine-house from delay in obtaining possession of sites of same, &c., and a deduction of 1,000*l.* must be made for proceeds of sale of old materials; 2,000*l.* however, the excess on cost of rails arising from increase of weight and a more elaborate mode of manufacture, was incurred under the advice of the engineers, besides which the cost of the first ropes used on this railway has been carried to capital—their rapid destruction being supposed to be incidental to the want of experience attending the novel mode of working introduced on this line.

Having thus compared the estimates of cost of construction with the actual expenditure, I propose to apply the same process to the estimates of working expenses, with reference to which it has already been stated that the annual cost of engine power, including interest on their first cost, was taken at 11,000*l.* per annum. By the last half-year's accounts it appears that the cost of fuel and repairs has been 2,824*l.*, to which add 1,000*l.* for wages of enginemen, &c., and the total expense has been 3,824*l.*, or after the rate of 7,648*l.* per annum, to which add 3,100*l.*, being amount of interest on 62,000*l.* (the outlay on engines and machinery), and the result will be 10,748*l.*, or 252*l.* per annum less than the original estimate.

The maintenance of rope estimated at 1,000*l.* per annum, it appears has cost 2,500*l.* per annum, but as the Chairman informed the meeting, a reduction on this amount may be anticipated. An excess, however, of from 500*l.* to 1,000*l.* per annum on this head of current expenditure over original estimates must be admitted.

The engineering errors of estimates will consequently be confined to 25,000*l.* on construction, and to from 500*l.* to 1,000*l.* per annum on maintenance of ropes, whilst a saving of 252*l.* per annum on cost of engine power has been effected.

Nevertheless, I feel myself bound in candour to admit that at one time I stated that a saving might be expected on the estimates, and though this saving was realised on the particular works I had then in view, yet it was absorbed by excesses in other works which I did not at that time foresee; and I must also admit that I for one confidently looked forward to the sum of 182,000*l.* surplus over estimates and whole amount of capital to be raised, viz., 800,000*l.* as being ample to cover the items expressly omitted from the Parliamentary estimates, together with Parliamentary and legal expenses. The only excuse for all parties in entertaining this belief must be the novel circumstances under which this railway has been completed. I never conceived that the protection of the Company's interest would require an expenditure of 30,000*l.* per mile in Parliamentary and legal expenses, or that the financial difficulties of the times would require 48,000*l.* interest on loans to be carried to capital. Such, however, has been the case.

By the last half-yearly statement it will appear, after deducting rent of wharf, salaries of wharf manager and assistant, and the sum of 4,829*l.* interest on debentures, that the actual cost of working has been 15,000*l.*, that is after the rate of 30,000*l.* per annum.

Now, supposing for a moment that the expectations entertained by the Directors of realising annually a revenue of 139,800*l.* were fulfilled, we should then have to add to the 30,000*l.* before mentioned, 3,000*l.* per annum for Government duty, and 5,000*l.* per annum for augmentation of establishment, giving a total annual expenditure of 38,000*l.*, that is 9,000*l.* per annum less, as compared with the estimates of 1838. This sum deducted from the above gross revenue leaves a net income of 101,800*l.*, or nearly 10*l.* per cent. on the whole amount of capital of the Company.

With the above statement, which I believe admits of no material correction in any of the figures, I shall close my remarks, and remain, Sir,

Your most obedient servant,
GEO. P. BIDDER.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—The Directors of the Blackwall Railway may not possibly be indisposed to adopt a suggestion, even though offered through the medium of the public press.

Not seeing the policy of *purposely* incommoding any particular denomination of travellers, I would propose that seats be introduced into all the *second-class* carriages, a measure which would tend greatly to the comfort of passengers, and one involving only a trifling outlay on the part of the Company. As a means of reducing the current cost of working the line, it might be worthy of consideration whether the wants of the public would not be sufficiently met by running the trains every 20 minutes, or three times within the hour, instead of, as at present, every quarter of an hour throughout the day.

The expenses already incurred appear to have been excessive, but with prudent and more economical management in future, I should not despair of seeing this particular concern brought into a state of considerable prosperity.

Your obedient servant,

A TRAVELLER.

RAILWAY "MONOPOLY" AND THE PUBLIC.

To the Editor of the Railway Times.

SIR,—I observed, in your paper of Saturday last, a letter signed "An Examiner, but not the Original," on Railway Monopoly and the Public, and with all possible deference and courtesy to the writer, it appeared to me but a flimsy, self-sufficient, defence of the monopoly which he would uphold. The analogy which he attempts to draw between the public investing their money in railways, and the correspondent whom he is addressing investing his in the erection of a pump and placing his effigy upon it, is very *facetious*, but unfortunately, as far as elucidating the point under discussion, just good for nothing; and *par parenthese*, I may remark that this is not unfrequently the case with some people, who seem filled to over-flowing with drolleries and witticisms, but the most droll and funny part of the affair always appears to me to be the concoction and publishing of the letter itself. Now if your correspondent, instead of confining himself to cachinnatory ejaculations in the shape of a lecture to another upon the free-and-easy style displayed in his writing, had condescended for a moment to look into what he himself had written, I think the oft-quoted parable of the man with a beam in his own eye attempting to pluck the mote from his brother's, must have forcibly presented itself to his mind; and although the world might have, by this process of ratiocination, taking place in his mind, lost his very lively though not perhaps very sensible letter, his reputation, if he has any, would not have been a whit injured in the world's estimation by the omission.

The reasoning, by analogy, so powerful as it undoubtedly is when skilfully and correctly prosecuted, makes the falsity of the reasoning of a bungler but the more apparent.

Between the two things which your correspondent has attempted to establish an analogy, there is in fact none whatever; no more than there is a similitude between Monmouth and Macedon. To complete the analogy, or to make any at all, between the constructing of railways and the erection of your correspondent's hypothetical pump, there must have been prior to the erection of the before mentioned "pump," *another pump* which answered all the purposes of the neighbouring villagers, which gave them just as good water as the new, but which required more oscillations of the pump handle to bring the water to the surface; and the proprietor of the new pump must have obtained an Act of Parliament by representing the superior advantages in cheapness and quality which were to be obtained by his erecting a new pump, and on account of which certain privileges were reserved to him; and by reason of which privileges and immunities the new proprietor is enabled, in a competition, to undersell the old proprietor, and eventually to drive him and his pump to destruction. Then the proprietor of the new pump, all competition having ceased, has a monopoly, and is able *to pump* the *public* to his own gain and advantage. To constitute a strict analogy between railways and your correspondent's pump, all this must be pre-supposed with regard to the pump, as it has already taken place in respect to railways, and then the reasoning of the "Original Examiner," although denominated "free and easy" by your correspondent, will, in my opinion, be sound and conclusive.

The process of reasoning, to show the right the public have to modify existing arrangements on railways, is simple and easy. The legislature has created these "monopolies," and surely the same power that made can legitimately unmake, or at all events has the power to unmake, that monopoly. Would your facetious correspondent dispute this? Before he does, let him beware of the anomaly which he would create. Let him look to the utter incompatibility with order and good government with which such admission would be fraught; it would inevitably add to the creation of an *imperium in imperio*. I think he will pause before he disputes my position. These monopolies are allowed, let him recollect, not in order that certain proprietors may make their 15 or 20 per cent., not in order to enrich a few at the expense of the many, but for the sole benefit and advantage of *the many*—the mass—the public. And when these monopolies, by their mismanagement or intentional obstruction to the convenience and accommodation of the public, thus abrogate, as it were, the reasons for which they were licensed, not only has the legislature a right, but it is a positive duty on their part, to interfere to obtain for the public protection against an evil which their short-sightedness in legislation in the first instance has enabled to assume so obnoxious a form. But, having these rights which I believe the "public" to possess with regard to railways, it is inconceivable how the blindness and stupidity of railway Directors can so long continue, and not see the identity of the interests of the shareholders with the convenience and accommodation—aye, and the cheap travelling too—of the public.

The policy of high and low fares has had such ample experience that it is surprising the Directorial public can any longer hesitate as to the line of conduct which their own interest and duty to railway proprietors point out as the most proper and profitable to be pursued. The Croydon, the Northern and Eastern, the Blackwall, and the South-Eastern Railways, afford incontestible proof that low fares and good accommodation are best for the interest of the proprietary as well as the public.

Before concluding, I owe, perhaps, the "Original Examiner" an apology for having intruded myself into his quarrel; if I have not rendered him good service, he will see that it is not for the want of the will.

I am, Sir, your obedient servant,

P. Z.

September 26, 1842.

RAILWAY "MONOPOLY" AND THE PUBLIC.

To the Editor of the Railway Times.

SIR,—Your *Non-Original* "Examiner" of last week does not belie the adjective portion of his signature. There is nothing very original in scolding, nor will hard words make out a case, more than "fine words" will "butter parsnips." Your correspondent, apparently a wealthy shareholder, taunts me with my poverty and lack of gratitude to him and his, "who have enabled me to escape from the close and smoky atmosphere of a great city for an hour." In his simile of the "pump," "N. O. E." misstates the case. The pump he has erected, and the well he has made, are his undoubted property, but the pump and well will yield but little return, if the price set on their use be thought by the neighbours unreasonable, unless they can be entirely precluded from digging wells, and making pumps of their own. In such case they would probably set on foot an inquiry as to the right of property in the water, and give "N. O. E." to understand that all *rights* must have correspondent *duties*. His pump revenues would become as valueless as the fabled "draughts on Aldgate pump."

In my former letter there was no proposition to take possession of railway or any other property, though in the abstract the State has just the same right to take possession of the railways, as it had to take possession, or give railway Companies the land of others to make them on—always paying the compensation. "N. O. E." does not seem to comprehend either the moral or legal tenure of "property." His wealth has blinded his understanding. It is really a result of human skill and industry held in trust by an individual or individuals, for the benefit of themselves and the community at large. As thus: One George Stephenson, a member of nature's aristocracy, showed practically, by dint of strong brains and indomitable perseverance, that highways were wasteful contrivances, the railway being the true principle of land conveyance in civilised communities. The State was too ignorant to comprehend the profit to be obtained, or to wish to take advantage of it for the benefit of the community. "N. O. E." was more shrewd, and obtained from the state the privilege to make a railway between the metropolis and the largest manufacturing town, undertaking to convey the middle classes on apparently moderate terms. The highways were open to competition, but the mechanism of the railway involved a monopoly. A free press, free trade, and free locomotion, are three elements essential to natural progress, to which all have an equal right. If the State were to authorise the doctrine that the railways of the whole kingdom should remain for ever private property, it would effectually put an end to progress. It would be monstrous injustice to the community. As well might the light and air of the community be entrusted to private hands.

I give "N. O. E." the full benefit of his position, that the State would have wasted more money in the construction of railways than private individuals have done, though on this point there are various opinions. But what then? Must the public for ever suffer the penalty, because the State possessed less intelligence than George Stephenson? Let "N. O. E." keep the full and entire possession of his railway, which has been guaranteed to him by the State, for ever, or till the State may choose to take it from him at its cost or value. If his railway were a patent monopoly he would have *exclusive* rights for fourteen years; but being a property in perpetuity, the public have the right to make other railways for the purpose of competition. The only effective competition would be a State competition, which would have the effect of reducing the railway of "N. O. E." to the condition of a private road. By this process the public would suffer a loss of capital equivalent to the cost of the new line—say half the cost of the old one; but on the other hand they would have a gain far more than equivalent, by the larger facilities of travelling and transport. Will "N. O. E." prefer this alternative? Or will he attempt to show that the State is bound to uphold his monopoly to the great loss of the community. Let him meet the question fairly—not by calling names—but by sound logical argument, and I will undertake the lists against him, notwithstanding the immeasurable distance he assumes between my unimportant "four-and-sixpence," and his own large share of the "sixty or seventy millions."

Above all, let him not forget that railways were made for the benefit of the community, the individual advantages of the proprietors being only a contingency, like those of steam-boat owners, public carriers, or manufacturers. The railway proprietor was in the outset a speculator, and in calculating chances, should not forget the essential principles of justice, without which no public body can maintain itself; and it must have been only through the habitual dereliction of the principles of justice that the proverb arose—"Public Com-

panies have neither souls to be saved, nor persons to be chastised." The body corporate perform, without hesitation, the dirty work which the individual would shrink from.

I remain, Sir, yours,

EXAMINER.

September, 23, 1842.

RAILWAY MANAGEMENT.

LETTER III.

To the Editor of the Railway Times.

SIR,—The triumphant proofs adduced of the superior safety of railway travelling as compared with pre-existing modes of conveyance, have set the question at rest. It will seem a paradox, yet it is true that the superiority of railways in this respect is in part owing to the formidable nature of the dangers to which travelling on them is exposed. These dangers are so imminent, and their consequences so frightful, that the first object of Railway Management is to guard against them. Accordingly the precautions taken with this view, are now so complete that the chance of accident is expressed by an infinitesmal fraction. It is then really true that "from the nettle *danger*, has been plucked the flower *safety*." The knowledge of this fact should moderate the vehemence of the outcry so often raised against railways and their managers, and should also reconcile the public to the restraints, while within the precincts of railways, which are imposed solely for their security.

The degree in which the admitted safety of the new mode of locomotion is the result of the excellence of that management which has been so much maligned, will be made evident to those who have not turned their attention to the subject, by a simple enumeration of the risks to be watched. This enumeration in fact forms a part of the promised subject of this letter.

These risks may be divided into two classes—those which may arise without the direct intervention of human agency, and those in which human agency is directly concerned. The first class embraces—firstly, the risk of obstruction from the slipping down of earth on the road in excavations, or the straying of cattle or other animals upon it. Secondly, the risk of the deviation of the permanent way from the true line of gradient, or from the standard width of gauge, the effect either of the subsidence of the ground, or of the ordinary action of trains in passing along the road. Thirdly, risks from the derangement of the locomotive machinery, resulting from bad construction, bad materials, or neglect; and fourthly, the risk of carriages breaking down from similar causes—to which may be added risks from the alleged phenomenon of the crystalization of iron by rapid friction long continued.

The second class embraces, first, risks from obstructions placed on the rails through negligence, or with a malicious intent. Secondly, risks arising from collision which may take place between trains which are proceeding in the same direction along the same line, but with unequal velocities; between trains, one of which is in motion, and the other at rest; between trains proceeding in opposite directions on the same line, and between trains one of which is crossing from one line to the other. Thirdly, risks from the state of the road when undergoing repair; and lastly, risks from neglect of duty on the part of the persons appointed to execute the arrangements for guarding against all the forgoing dangers.

Persons the least acquainted with the subject may now form some conception of the extent, variety, and complexity of the arrangements which constitute a good system of Railway Management; and of the skill and vigilance required for their execution. A department so organised as to centralise responsibility, in other words, a resident engineer, with a staff of overlookers, must be employed to watch the state of the permament way, of the cuttings, embankments, tunnels, fences, and other works, and have always the means of instant repair at hand. To another department must be confided the duty of watching the condition of the locomotive power. A large and costly establishment with the requisite machinery for the construction and repair of engines, must be provided. Competent persons should be appointed as inspectors of the engines in use. and that this inspection may be frequently repeated, and all damage quickly repaired, the journey performed by each engine should be as short as possible. Engine-drivers should be qualified to remedy partial or trifling derangement of the machinery, and no engine should leave the factory without the tools for executing such repairs, as well as the implements required for removing obstructions of the road caused by accident. It has been found beneficial to appoint a driver to each engine, and to reward those whose engines show to the best advantage on a comparison of the work done, with the sum expended in repairs.

An establishment similar to the locomotive factory must be provided for the examination and repair of carriages of all descriptions. Before a carriage is attached to a train, every part of it, but more especially its wheels and axles, should undergo the strictest scrutiny.

The prevention of the negligent or wilful obstruction of the road must be left to the law. Persons guilty of such misconduct should be severely punished, and indeed usually are.

Of all the dangers to which travelling on railways is exposed, the most formidable and the most dreaded is the danger of collision. To guard against the occurrence of an event so likely to be disastrous, is the first duty of a railway Manager. This can only be done by a well-arranged system of signals. Each train should have two sets of signals affixed to it; one set in front indicating that the train is approaching or at rest; the other set behind, indicating that the train is going onwards or at rest. The attendants of the train should likewise be furnished with signal lamps, that they may be able to make signals should circumstances render such a proceeding necessary. In a conspicuous place at each extremity of road stations, at junctions, at all the points where a common road crosses the railway on a level, at switches, and tunnels, signal posts should be erected, with the means of giving notice to engine-drivers when to stop, when to proceed with caution, and when to advance without fear. Trains in motion, if the one be following the other, should not approach nearer than a mile to each other, and the speed of a train should be slackened when passing a station, more especially if another train be stationary there. In such cases the moving train should give notice, by whistling, of its approach. If it ever be necessary to proceed with a train in a direction opposite to that for which the line is commonly used (with an up-train on the down line, for instance), extraordinary precautions must be taken. Notice should be sent to stations in both directions to stop all trains which run the least risk of coming in contact, and a similar notice should be given when a sudden obstruction of the road takes place. The Electric Telegraph would be invaluable as a medium of communication on occasions of this kind. A mode of making signals audible to those conducting a train in thick weather, when the ordinary signals cannot be seen, and a ready and certain means of communication between engine-drivers and guards, are desiderata which remain to be supplied. Might not portable steam-whistles be constructed to serve these purposes? Platelayers, while repairing the way, should be furnished with signals to give notice to approaching trains of the existence of danger; and the person making the signal should be at least a quarter of a mile in advance of the place which is unsafe. If the road be repaired by contract, the contractor should be made responsible in cases where the law cannot reach the delinquent, for all omissions or acts of his workmen which are dangerous to the public safety.

The persons entrusted with the duty of making signals should be subjected to a constant and vigilant supervision at uncertain intervals, and a well-arranged system of daily reports, bearing on each other, should be in operation. The first [illegible] of the chief Superintendent, every morning, should be to collate these reports, and to punish every case of proved neglect, or other misconduct, by reprimand, fine, or dismissal, as the case may deserve. Cases of flagrant cases will, of course, demand the intervention of the law.

The servants who have it in charge to prevent passengers from exposing themselves to danger, should be enjoined to perform their duty with all the civility compatible with its effectual execution, and should be punished if found to have been needlessly harsh.

It will not be out of place here to notice certain charges brought against Railway Companies, grounded on such of their regulations as impose restraints on passengers. These regulations have been from time to time denounced as flagrant infringements of the liberty of the subject, and gross abuses of irresponsible power. These charges are as baseless as many others which have been used by interested or unthinking persons, to render railways unpopular. Because one is not permitted to place himself in situations in which he might endanger not only his own life, but the lives of others, he must exclaim, forsooth, that a great wrong is done to him, and that his freedom of motion is needlessly circumscribed! The truth is that Railway Companies would gladly be relieved, both from the obloquy, and the expense of enforcing the obnoxious regulations, if the enforcement could be safely dispensed with, but every calm thinking and judicious person will readily believe that the public themselves would be the first to suffer by a relaxation of the salutary restrictions which these regulations impose. The rapidity of motion on railways renders it difficult for inexperienced persons to judge of the distances which are safe, and if danger come suddenly upon them, it is so appalling that few can retain their presence of mind. They either become paralysed and unable to move, or in their terror and confusion, rush on the peril they would avoid. Mr. Huskisson's fearful fate is at once an illustration of the danger to be apprehended, and a justification of the stringent regulations which have been so much condemned.

I am, Sir, yours, &c.

VIATOR.

PROPOSED UNION OF THE SHEFFIELD AND MANCHESTER AND BIRMINGAAM AND MANCHESTER RAILWAY COMPANIES.—The following letter appears in the *Railway Times* of this week. We know nothing of the rumour referred to, and can at present give no opinion with respect to its probability or the prudence of the union in question. In one respect, however, we differ from the writer. Our firm impression is, that if any party will be benefitted, that party is the Manchester and Birmingham Company. The Sheffield is, at bottom, the better concern of the two. All, however, will depend upon the terms agreed upon between the respective Companies. [Then follows the letter which appeared in the *Railway Times* of last Saturday, under the signature of "Publicola].—*Liverpool Standard.*

—o—

WILSONTOWN, MORNINGSIDE, AND COLTNESS RAILWAY.—This railway, which, as our readers are probably aware, is an extension of the Wishaw and Coltness line, through a most valuable mineral district, is now rapidly progressing. The contractors, Messrs. Ward and Barr, have been at work but four months; but we understand that the work executed by them in that time is considerably more than the usual average of such undertakings. The masonry, in bridges, &c., which is heavy, is mostly completed, a very considerable quantity of excavation and embanking has been done, and a large portion of the permanent way laid. Every exertion is making to ensure the completion of the entire line early next summer; and the spirited manner in which the views of the engineer are carried out by the contractors, entitles them to the highest praise.—*Glasgow Courier.*

THE LATE RAILWAY MEETINGS AND DIVIDENDS.

To the Editor of the Railway Times.

SIR,—Your correspondent "Diogenes" gives us a few pithy facts and figures on some half-a-dozen lines, for no purpose that I can see but to demonstrate the "unsatisfactory results" to the unfortunate shareholders. But surely there needs no cynic ghost come from the grave to tell us this. I will venture to assure him that we were all fully convinced that "railways should advance, not recede," and that "not one 6d. retreat in the dividends should take place."

How to effect this very desirable object is the question, and for answer "Diogenes" points to the London and Birmingham, where "all the original hopes have been realised." Why? Because "if the expenditure *was* considerably more than was expected [to be sure it was more than double], the revenue has increased in like proportion." Gentlemen of the Hull and Selby, Eastern Counties', Manchester and Leeds, North Midland, Greenwich, and Croydon Railways, and all you that have spent twice or thrice as much as you ought to have done, depend upon it you will never get the promised dividends until "your revenues increase in like proportion." Then will your original hopes be fulfilled, your Cockerish calculations realised, and not till then! "This I prophesy, and this (*ergo?*) all shareholders may confidently look to." But "Diogenes" goes further, and points to the *Management* as the source of a large portion of the London and Birmingham traffic. Without the least wish to disparage their admirable management as regards convenience and punctuality, I may perhaps ask whether there are good grounds for this opinion, at least to anything like the extent here intimated as regards increase of traffic. I am well aware that convenience and regularity will form a great inducement to travellers, but on the other hand, their fares are as high as, if not higher than, those of any other line in the kingdom, and management must be good indeed to make people eager to part with their cash. Perhaps "Diogenes" will be kind enough to inform us of the particular mode of management requisite for this purpose in the case of those railways which have adopted low fares, or those which, like the North Midland, have rather fallen short of their expected traffic than otherwise. I really ask seriously and for information, and I will promise "Diogenes" that if he will let the Directors of one or two lines that I can name into the secret of doubling their traffic as well as their expenditure, I will head a subscription for a new tub for him. I am afraid, however, that he will not be content with only a tub and sunshine. Fancy "Diogenes" clamouring for higher dividends and holding on Edinburgh and Glasgow's for 55*l.*! After all, he is no cynic to the "Northern London and Birmingham."

I am, Sir, yours, &c.,

AMALGAMATION OF ADJACENT RAILWAYS.

To the Editor of the Railway Times.

SIR,—In an article in your paper of the 17th instant, on the autumnal meetings which have terminated, you offer a suggestion which is well worthy the consideration of railway proprietors, viz. the amalgamation of the interests of adjacent lines, with a view of their more economical working. You promise to return to this subject; I earnestly beg of you to do so. As you are so much more competent to judge of the numerous advantages likely to result from the adoption of your plan than I am, I do not trouble you with enumerating those that occur to me. I cannot avoid, however, mentioning the facility it would afford to the experiment of low fares. In the discussion of this topic at the North Midland meeting in August, 1841, one of the reasons assigned by Mr. Robert Stephenson against the reduction of the intermediate fares, was the consequent necessity of reducing the through fares. It is not to be expected that a link in a chain of railways will make a sacrifice for their united welfare, without a corresponding reduction by the other Companies, which the Directors of those Companies may not be inclined to make. This impediment to low fares, if not wholly removed, would be considerably abated by the adoption of your plan. I am, Sir,

A THREE YEARS' READER OF THE "RAILWAY TIMES," BUT NO CONTRIBUTOR.

Dublin, September 26, 1842.

AMALGAMATION OF ADJACENT RAILWAYS—THE LONDON BRIDGE LINES.

To the Editor of the Railway Times.

SIR,—For some time past rumour has been busy, with the probability of an amalgamation of the interests of the four railways terminating at London Bridge. Such amalgamation would indeed be advantageous to the public, as well as to each Company, if it could be brought about on an equitable basis. As a preliminary, I would suggest that two members of the Direction of each Board be formed into a Provisional Committee, such members qualifying to act by an *equal* investment in each of the Companies. It is to be hoped that a simultaneous move may be made by each Board of Directors to bring about so desirable an object as speedily as possible. It may be difficult to accomplish, but where all concerned have but one object in view, their interests being considerable and united may do a great deal. Lend your aid, pray, and oblige,

A CONSTANT READER, AND SHAREHOLDER IN EACH OF THE FOUR.

September 28, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I should hardly have troubled myself to notice the short letter of a "Shareholder," which appears in your last paper, if it were not so good a specimen of the kind of criticism to which the Management of the Brighton Railway has been exposed. In the short space of nine or ten lines it asserts what is not the fact, makes a charge which has no foundation, and hazards a sweeping condemnation of the line, without assigning any reason for such an opinion.

First, it asserts that my letter, to which it alludes, "was evidently written to uphold the Directors." Now I positively disclaim any such object. I neither know, nor am known to, any one of the Directors; and, moreover, I do not sufficiently respect them, as a body, to enter the lists in their defence. My object was, to give an opinion upon the prospects of the line, which I think are not properly appreciated by the proprietors, and in doing that it was necessary to state that the traffic is carefully conducted, and that *at present* the Directors *appear* to be doing their duty.

In the second place, this angry gentleman insinuates that you are inconsistent, because having opened your columns to attacks from all quarters, you have permitted a solitary individual to attempt a defence. He certainly has odd notions of the duty of a consistent and impartial journalist.

Lastly, he says, that "the works on the line are in many respects the worst possible, and that nothing but the dry weather has prevented this fact from being apparent." Now, this condemnation may or may not be a just one; but as it rests solely upon the *ipse dixit* of Mr. "Shareholder," I am not inclined to allow it to supersede the evidence which I have derived from careful examination and inquiry. That the line is perfect I by no means assert; it undoubtedly has its weak points, as all other lines must have (witness the slip which has just happened on the Birmingham); but I do deny that it is more than usually incomplete, or more liable to accidents than any other recently-constructed railway.

Let the shareholders, such at least as are not disappointed *con*-tractors or spiteful *de*-tractors, be assured, that the devil is not so black as he has been painted. Our receipts continue good, our prospects are not bad at present; and I, for one, look forward to a steady and gradual improvement.

I am, Sir, yours, &c.,

J. S.

—— Club, September 27, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—In reference to Mr. Wright's remarks respecting the Brighton Railway in your paper of this day, I beg to state, that the sum of 300,000*l.* due by the Dover Company to the Brighton Company was vested about two months since, in consols, in the names of the Chairman and others of the latter Company. There may be a trifling balance to be settled between the Companies, but certainly nothing to affect either party. I also would remark, that the Brighton loan-notes bear an interest of 5*l.* per cent., and not 6*l.*, as stated in the letter referred to.

I am, Sir, your obedient servant,

A HOLDER OF SHARES BY LOAN NOTES IN THE BRIGHTON.

September 24, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Shareholders of the Brighton Railway.

GENTLEMEN,—I fear there are a great many timid holders of stock in this line, who are influenced by the thousand-and one unfounded reports which are daily circulated by interested parties, and are inconsiderately playing into their hands by sacrificing their shares.

I have made two calculations regarding the results which will appear at the next meeting, which I beg to lay before you, and which if correct, as I think they are, show that the prospects of this railway are as bright as the parties I have alluded to wish to make them appear gloomy. At the last meeting, our Chairman stated that from weekly receipts of 3,480*l.* we should be enabled to pay the expenses of working and maintaining the line, pay the interest on loans, and divide 5 per cent. per annum among the shareholders. Assuming this to be correct, I find that the half of the half-year since the meeting has produced as under, viz.:—

For week ending July	2	£3,266	11 9
,, ,,	9	3,477	4 10
,, ,,	16	4,028	18 5
,, ,,	23	4,173	19 11
,, ,,	30	4,386	5 4
,, Aug.	6	5,087	18 7
,, ,,	13	4,679	0 4
,, ,,	20	4,461	7 4
,, ,,	27	4,491	6 4
,, Sept.	3	4,253	3 4
,, ,,	10	4,228	7 5
,, ,,	17	4,499	6 11
,, ,,	*24	4 499	6 11
Total		£55,742	12 5

Being an average of 4,288*l.*, or 800*l.* per week, or more than one-third over the *proportion* of the 3,480*l.*, our Chairman required to pay a dividend of 5 per cent. per annum, or, on *his* calculation, *above* 6¾ per cent. per annum. According to this calculation, the shares at the present price will yield above 9 per cent. per annum.

I make another calculation, and as my wish is to elucidate the truth, if *it* is incorrect, I shall feel obliged by being put right by any of my brother shareholders.

I estimate the half-yearly expenses for the current year, as on the past, in round numbers, at 39,000*l.* (being 203*l.* 4s. 2d. over last half-year); interest on loan of 600,000*l.*, 15,000*l.*; making total expense for half-year of 54,000*l.* Allowing the money to be received from the South-Eastern to pay off the loan-notes, which it will more than do,

Taking the half-yearly receipts at 4,300*l.* per week for 26 weeks, I find the half-year's revenue will amount to	£111,800
From which deduct total expenses, namely	54,000
Remains to be divided among 26,000 shares, or 3*l.* 8s. per share	57,800
Leaving 3,800*l.* as balance after paying at the rate of 6 per cent. per annum	£54,000

* I assume this week's receipts to be as the one previous, not having got the returns in full.

Digitized by Google

Only one point more remains to be noticed. Will the ending three months be equal in revenue to the past three months of the half-year? I think they will, but this, time alone can determine. Should the Court visit Brighton for six weeks, as announced, many with whom I have conversed, think that during the "Season," namely, November, the weekly receipts will greatly exceed those hitherto. The Brighton shares are now worth par; after the meeting in January they will sell at a premium.

I am, Sir, yours, &c.,

A SHAREHOLDER IN THE BRIGHTON.

Glasgow, Sept. 26, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Your valuable paper has been so much filled with reports of the railway half-yearly meetings of late, that I have not ventured to address you upon the subject of the mismanagement of the Directors of the London and Brighton Railway. Because you have ceased making any further remarks upon their conduct, they hug themselves that the storm has passed over; but let them not lay this flattering unction to their souls. If proprietors have allowed one meeting to go over, without inquiry, let them not suppose that such a wasteful expenditure can be suffered to pass without a reason being given for it. Sir, if an individual were to employ an agent to manage his estate, or his ironworks, and that agent were to estimate the expense of working it at 850,000*l.*, and were to spend 3,000,000*l.*, would not the employer call upon the agent for an account—a strict account well vouched? Why then should not the London and Brighton Railway proprietors call upon their Directors for an account well vouched? Not merely a statement upon a sheet of paper, but a detailed account of whom they have purchased either land or materials—who fixed the price, and who paid the money. * * *

The management of railways is a new line of business, and great opportunities present themselves to those in power to help themselves of that which belongs to others, and which has been committed to their care as trustees. If my servant, who has the care of my plate, robs me, how severely is he punished, although the robbery may not amount to more than a few pounds, but in the case of Railway Management, where a million is gone no one knows where, no steps are taken to inquire!

This matter must be inquired into, and I hope that now you have more space and time you will resume your exertions. I am, &c.,

VERITAS.

LONDON AND BRIGHTON RAILWAY.

[From the *John Bull*, Anti-Railway Journal.]

A LARGE printed sheet has been sent us, headed "Case of the Brighton Railway Company, and Supposed Misapplication of the Funds by Persons connected with the Management," which is calculated to strike with amazement individuals unlearned in these matters.

The first estimate of all the expenses likely to be incurred in the formation of the line, viz., works, land, and compensation, and the Shoreham branch, was 845,800*l.* This was in 1837.

In the following year a new estimate was laid by the Directors before the proprietors, which, taking in "every contingency," swelled the foregoing sum into 1,120,000*l.*

Next year it was ascertained that 1,800,000*l.* would be required. With this statement the Directors express their opinion that the proprietors will be highly gratified.

To increase this gratification, 190,000*l.* are added on next year.

By way of adding to the general content, the sum takes a leap in the ensuing year, and becomes, quite as easily as we write the figures, 2,089,081*l.*

A stride is made the present year, in order to complete harmony, and lo!—2,152,893*l.* odd shillings and pence "smoke upon the board."

Of this pretty sum there has been touched from the shareholders 2,500,000*l.*

The money seems lightly come by; the question is, whether it is lightly gone. On this point, the printed sheet enters quietly and rationally into statements and calculations, which the writer of it, who signs himself "A Shareholder," contends, establish the following assumptions, or, to use his term, facts:—

"1st. That the Reports and accounts of the Directors and Engineer have been from time to time of a most extraordinary contradictory character.

"2nd. That Mr. Catley and other Directors had notice in the years 1839 and 1840 of the questionable manner in which the affairs of the Company were conducted.

"3rd. That the Report of the Directors and Engineer, prepared for the last meeting, were without one satisfactory explanation relating to the enormous extra expenditure.

"4th. That the office in Angel-court is without satisfactory accounts of the expenditure, or quantities, of the respective works, plans, or sections.

"5th. That the Directors have stated that the estimated works were contracted for, and the land purchased, within the Parliamentary estimates.

"6th. That the Engineer's Report respecting the stability of the line is not correct; and his advice to contract for its maintenance for a term of years, is calculated to lead shareholders into a continued waste of their funds. The maintenance of way being one of trifling cost under efficient management.

"7th. That no further proof can be required of systematic deception, on the part of some persons connected with the management, than a comparison of the first estimate of 840,000*l.*, allowing the most liberal prices for the works, and including 70,000*l.* for contingencies, with the last estimate in January, 1842, of 2,500,000*l.* and upwards; being an excess of upwards of a million and a half, against which no value can be found, except in the carrying department, a few acres of land, and a share in the joint station at London-bridge, therefore leaving a sum considerably above a million unaccounted for in value.

"8th. That numerous circumstances connected with the contracts are of a suspicious character; which, added to the unsatisfactory accounts kept of the receipts and expenditure, the absconding of the Secretary, and his threats to expose the management, remove all doubts respecting the absolute necessity for rigid investigation, in which the respectable portion of the Directors are deeply interested, and the Engineer, also in proving to the world that they are not directly or indirectly concerned in the supposed misapplication of the funds."

We must say that No. 7 is "an awkward figure;" and seeing the tendency that the estimate had to increase and multiply every year, we cannot wonder that having 80 shares, he got rid of 79 of them. He says:—

"Subsequent information I received, and an inspection of the works, induced me to dispose of 79 out of the 80 shares, and become a loan creditor for a smaller amount, to enable me to assist in working out reform in the management, and thereby protect my local interests, in common with those of the shareholders, in a portion of the public highway in Sussex, where I have considerable property."

His prudence is commendable, as will be that of such shareholders as shall join with him in insisting upon an explanation. There assuredly seems to have been considerable negligence; but "systematic deception" sounds harshly.

LONDON AND BRIGHTON RAIRWAY—A NEW BREAK.—Last week an experimental trial was made between Brighton and Hayward's Heath, of a new break, invented by Mr. Thornton, civil engineer, and one of the late contractors. Several eminent engineers witnessed the experiments, which were highly satisfactory. A carriage, going at the rate of 32 miles an hour, was stopped within a hundred yards by means of this break, the strength of which can be increased to any extent.—*Standard.*

SLIP ON THE LONDON AND BIRMINGHAM RAILWAY.

AN Accident occurred on Saturday last upon the London and Birmingham Railway. As usual, the particulars of the occurrence have been very considerably exaggerated, but the following official letter gives the exact facts. General Pasley has since inspected the railway. Both lines of rails are now open:—

"Sir,—I am instructed to report to you, for the information of the Lords of the Committee of Privy Council for Trade, that in consequence of a slip, about 50 yards in length, which occurred on the down side of the Rugbrook excavation of this railway, half way between the Blisworth and Weedon stations, about 4 o'clock in the afternoon of Saturday, the 24th instant, several thousand cubic yards of earth covered both lines of rails, and obstructed for a time the regular passage of the trains.

"By extraordinary exertions, however, the up line was cleared before 8 o'clock the same evening; and the up and down trains have since continued to pass uninterruptedly over it. Both lines will, it is expected, be clear in the course of this week.

"The only practical inconvenience which resulted from this circumstance (for it was happily unmarked by casualty) was the exchanging of passengers between the carriages of the York up train and the 1h. 30m. p.m. down train on the opposite ends of the slip, and the delay of rather less than two hours in the arrival of two of the other trains.

"The surface of the ground, both above and on the face of the excavation, had presented no previous appearance to indicate a slip; but the attention of the overlooker of the road, and the engineman of the 9h. 45m. a.m. down train, having been called to this point by a slight deflection of the rails of the down line inwards, it was carefully watched. The Company's Engineer is desired to examine the slip, and to report as to the immediate cause.

"I have the pleasure to add, that the Directors have every reason to be satisfied with the strict observance of regulations, and the zealous exertions which were manifested on this occasion, by every person in their employ.

"I have the honour to be, Sir, your most obedient servant, "R. CREED, Secretary.

"S. Lang, Esq., Railway Department,
"Board of Trade."

LONDON AND BRIGHTON RAILWAY—THE TERMINUS AT BRIGHTON.—On Thursday, the Directors of this railway voted the sum of 500*l.* towards the formation of the new road from the terminus to North-street. During the summer nearly 50 men have been engaged on the line of road, and the operations have been greatly facilitated by the remarkably dry weather. The street, when finished, will no doubt be one of the best in Brighton. A fine hotel is already built and licensed. It is expected the road will be opened for carriages in in about a month.—*Globe* of Saturday.

AN EFFECT OF RAILWAYS—It is a somewhat singular fact, as showing the changes causes by railway traffic, even in the humblest pursuits of gain, the the heath and birch-broom trade, which used to be of very considerable extent at Reading Michaelmas fair, and from which may of the industrious poor profited, has fallen away to a mere nothing; when the dairymen had their cheese brought up the old road, they used to load the waggons home with brooms, but now, since the mode of conveyance is changed to the railway, it does not answer the purpose of the dealers to pay the carriage for them by that mode of transit.—*Berks Chronicle.*

QUICK TRAVELLING.—The *Panther* locomotive engine, Thompson, engineer, Aston, guard, left Manchester on Thursday, at 22 minutes to one o'clock, and arrived in Liverpool at 18 minutes past one, completing the journey in 40 minutes. We believe the distance has never before been done in so short a time since the opening of the railway. It was a special train, engaged by Lord Eglintoun's trainer, who, we understand, was on the race course within an hour and ten minutes from the time he left Manchester.—*Liverpool Chronicle.*

NOTES TO THE TRAFFIC TABLE,
(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, as also the toll from the Manchester and Birmingham Company. The divisor employed to ascertain the daily receipts per mile is 121 (85+15+21.) The Company do not now carry goods to Manchester. The coaching amount for the corresponding week of 1841 included receipts for the conveyance of soldiers.

14. The receipts include those derived from the Cheltenham and Exeter lines; the former opened for 18 miles, and the latter for 45. The divisor employed to ascertain the daily receipts per mile is therefore 181½ (118½+18+45.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. At the last meeting no dividend was declared, the disposable balance from the previous six months' working being only 1,472*l.* 10s. 9d.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,326*l.*, and there was a balance from the previous half-year of 12,479*l.* Out of these two amounts combined, the dividend (after making certain deductions) was paid.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c., and subject to payments to the Grand Junction Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 5,018*l.* 0s. 7d. are the receipts after deduction omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 30*l.* 17s. 6d.; carriages, 52*l.* 12s. 0d.; dogs, 2*l.* 2s. 6d.; parcels, 221*l.* 8s. 8d.; cattle, 21*l.* 16s. 0d.; corn, 8*l.* 16s. 8d; heavy goods, 595*l.* 4s. 9d.; coal and lime, 139*l.* 0s. 8d. —Total, 1,071*l.* 18s. 9d.

31. The amount of stock *created* is 3,000,000*l.*, on which dividends are payable; and the sum of 850,000*l.* is borrowed money at interest. The 3,000,000*l.*, however, is nominal, inasmuch as the shares were some of them issued at a discount, which reduced the actual amount to 2,589,500*l.*, viz.:—15,000 shares at 100*l.* = 1,500,000*l.*; 15,000 of 50*l.*, issued at 40*l.* = 600,000*l.*; 22,500 of 33*l.* 6s. 8d., issued at 21*l.* 13s. 4d. = 489,500*l*; total 2,589,500*l.* The details of the receipts are as follows—Passengers, 2,795*l.* 16s. 6d.; carriages and horses, 188*l.* 2s. 5d.; parcels, 216*l.* 1s. 7d.; mails, 50*l.* 5s. 9d.; merchandise, 1,253*l.* 9s. 9d.; minerals, 296*l.* 2s. 4d.; cattle, 23*l.* 1s. 0d. — Total, 4,822*l.* 19s. 4d.; including North Midland proportion of Manchester and Leeds traffic, and amount received for Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The length stated includes branches.

39. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Investments in Railways.—We are constantly receiving applications for advice with respect to the sale or purchase of particular shares. We have repeatedly stated, that we are very unwilling to offer any opinion upon such points, and, indeed, our readers have the same data as ourselves whereby to form a judgment. Nevertheless, as they *will* have our opinion, we cannot refuse to give it. We wish them, however, to bear distinctly in mind, that we do not, in any instance, hold ourselves answerable for the event. The course we recommend to our correspondents, is simply what we ourselves would follow, were we buyers or sellers under the circumstances detailed by them respectively. With this caution, which we shall take care to keep before parties who apply to us on such subjects, we proceed to notice the applications of the week. We may just add, that the figures and letters have no reference whatever to our traffic list, or to the initials of any railway. We cannot notice questions where this rule is violated:—Clericus. *We would not, if we could help it, sell out No.* 1, *as we have no doubt they will eventually rise very considerably in market value. We have a very high opinion of No.* 2, *for investment. We would rather have nothing to do with No.* 3, *and most assuredly not with No.* 4. *In No.* 2, *it matters little whether new or old shares are purchased.* A Subscriber *(R.).—No.* 5, *we think the best. No.* 1 *may eventually become profitable. Nos* 2 *and* 4 *will assuredly go much lower, and at present prices we should be sorry to purchase. No.* 3 *will remain, we imagine, nearly stationary for some time.* S. P. A. *(Berks.).—We should certainly say* "Yes;" *but perhaps not for a year or two.* A Shareholder *(near Leeds.)—We believe there is a very fair prospect of* 5 *per cent At present prices the line can scarcely fail to be a good investment.* △ *(Paris.).—Do not purchase No.* 2 *at present prices. No.* 1 *are probably safe.* One of your Earliest Subscribers.—*We think they will come lower, perhaps a pound or two per share.* J. D.—*Nos.* 3 *and* 4. *Avoid No.* 6. A Subscriber *(Waterford).—We do not think the present rate of dividend will be maintained.* Mr. B. *(Leeds).—We have no great opinion of either—more especially of the former.*

R. N. B.—*We have given a report of every meeting that has come under our notice. Will our correspondent state more distinctly to what he refers,*

We shall be happy to hear from Viator *again. He may rely on the strictest secrecy, as referred to in his private note.*

A Constant Reader and Subscriber *(Birmingham).—The "average cost per share" in the South-Western, Greenwich, and Blackwall Companies, is reckoned from the price at which the original and subsequent shares were issued. The new shares of the South-Western, for example, were issued at* 50 *per cent. discount, which to a proprietor holding an original share and then taking a new share, of course brought the aggregate price of the two much below* 100*l.*

Diogenes.—*In our correspondent's letter of last week, the figures* 20,000*l., as applying to the Eastern Counties', were by mistake printed instead of* 200,000*l.*

A Railway-man *will see that Mr. Wright's error has been noticed elsewhere. We gave our authority for the paper in question, and are not to be held responsible for the facts or opinions brought forward.*

"Pounds, Shillings, and Pence."—*A very excellent little work under this title has just been published by Mr. T. Martin, the accountant. It has reference principally to the process of mental calculation. We strongly recommend it.*

"Black's Map Book and Railway Guide for England."—*This work is valuable only for its maps. The timetables may be had in other publications for less than one fourth of the price. It is ridiculous to get up so expensive a work, when the times of starting are so frequently changed*

Lancaster and Preston Railway.—*We took the advice of* Inquirer, *and wrote to Mr. Gregson, the Managing Director of the Company, to request that the traffic returns which have recently been discontinued should be again forwarded. We have received an answer stating, that as the line has now been leased to the Lancaster Canal Company, the returns need not hereafter be given. To ourselves, it is a matter of not the smallest consequence; but as* Inquirer *says, "if he [Mr. Gregson] declines complying with so reasonable a request, I will suggest a mode by which you may shame him into it," we shall be glad to hear further from our correspondent.*

A correspondent at Sheffield will see that we have noticed the subject of his communication. We shall be happy to hear from him again.

Brighton Railway.—*A correspondent, who says he frequently travels on this line, wishes us to call attention to what he calls the dangerous condition of the road between the Three Bridges and the Hayward Heath stations, more especially of one particular embankment. He states that he has frequently pointed this out to the authorities, but without effect. He adds, very justly, that the late slip on the Birmingham Railway ought to render Engineers doubly vigilant.*

Once a Clerk *shall be inquired into, but he must let us have the* whole *of his case*

W. G. *shall be considered.*

A Subscriber and Shareholder *will perhaps, at his convenience, complete his letter. Circumstances prevent us, as well as himself, from filling up the blanks this week.*

A Constant Reader *(Leicester).—The subject shall not be overlooked. He will find some communications on the subject in our present number.*

Engineer.—*Yes; the notices may now be given in November. He should consult a Parliamentary agent as to details*

F. H. *will see that his fears are groundless. Will he enable us to make the corrections of which he speaks?*

Will the writer of A Railway Parallel *favour us, in confidence, with his name?*

P. Z.—*The letter referred to never reached us.*

Inquisitor *has not been overlooked.*

Birmingham and Gloucester Railway.—*We must again inform a (so called)* Shareholder, *that we can have nothing further to do with him. Does he wish us to prove that he is not a* bona fide *"shareholder?" We are quite prepared; but perhaps if we were to give his name,* that *would be sufficient.*

THE RAILWAY JOURNALS.

The Stamp Returns for April, May, and June, just published by Order of the House of Commons, enable us to complete the Returns for the year ending the 30th of June last. The results, as affecting the railway journals, are as follows:—

RAILWAY TIMES.....	**146,374**
Railway Magazine	68,500

Majority in favour of the RAILWAY TIMES .. **77,874**

from which are to be deducted 10,874 Supplement stamps used for double numbers, still leaving the ordinary circulation of the *Railway Times* just about double that of its contemporary.—*September* 17, 1842.

THE RAILWAY TIMES.

SATURDAY, OCTOBER 1, 1842.

THE few words of counsel which we offered last week to the Committee appointed to investigate the affairs of the North Midland Railway Company, were, it turns out, somewhat too late. Before we or the shareholders in the concern could have deemed the Committee's labours well begun, these labours were at an end. They came—they saw—they were satisfied; such seems to be the history in brief of the Committee's proceedings. Whether those who appointed them will rest content with this summary mode of settling a disputed question remains to be ascertained. The following paragraph from the *Leeds Mercury* of Saturday last chronicles the dates of the commencement, course, and conclusion of the "investigation!"—

"The Committee of Inquiry appointed at the last half-yearly meeting of the shareholders of the North Midland Railway met on Wednesday week, at Derby. There were present Mr. Peter Brancker and Mr. Alston, of Liverpool, the Auditors; Mr. George Hudson, Chairman of the York and North Midland and the Newcastle and Darlington Junction Railways; Mr. John Waddingham, of Leeds; Mr. Murgatroyd, of Bradford; and Mr. Wilson, of Sheffield. The only member of the Committee who did not attend was Mr. Starkey, of Huddersfield. Mr. Brancker was appointed the Chairman of the Committee. We understand that the labours of the Committee were very arduous, and their inquiries very searching. They examined the principal servants of the Company in each department, and obtained a great amount of information. They prosecuted their labours at Derby until Monday last, then visited the stations on the line, and closed

Digitized by Google

their inquiry at Leeds on Tuesday evening. We hear that the Committee were exceedingly dissatisfied with many branches of the expenditure and management, and recommended very extensive changes and reductions. Their Report has been sent to the Chairman of the Board of Directors, Mr. Newton, who happens to be in Ireland; and it will no doubt shortly be published, and a special general meeting of the shareholders be convened for the purpose of determining on the measures to be adopted in consequence."

Just *four* clear days did the Committee devote to an examination which, if conducted as it ought to have been, and as we had hoped it would have been conducted, must have occupied at least as many weeks. Well may the results of these "Committees of Inquiry" be looked upon as in the highest degree farcical! Well may Directors chuckle at the success of their plans (for paradoxical as it may appear, such plans are sometimes *theirs*), in thus getting rid of real, searching, thorough investigation, through the help of the shareholders themselves. It wanted but this North Midland exhibition to give the finishing-stroke to noisy professions at public meetings resulting in—nothing. "*Very* arduous," indeed, must the labours of the Committee have been, and "*very* searching" their inquiries, if they have in four days elicited anything likely to lead to satisfactory practical results. Did they imagine that it was merely a question of the fitness of this Director for his post, or the amount of salary to be paid to that officer for his services, that they were delegated to examine and report upon? When the official record of their sittings is laid before the proprietors, we shall doubtless be able to determine in what spirit they undertook the task of inquiry, and to what extent they carried it out; but in the meantime we have not the smallest hesitation in expressing our opinion, that *no* Committee, however able, or however zealous—however "arduous" their labours, or however "searching" their inquiries—*could* by possibility have accomplished in less than a week such a full, fair, and unflinching investigation of the present position, as bearing on the future prosperity, of the North Midland Railway as alone ought to satisfy the much-disappointed proprietors of that undertaking. The idea of any such feat having been performed is absurd. The Committee, it is to be feared, assembled at Derby with a determination to support foregone conclusions, either of condemnation or approval. Praise or censure, grounded upon an examination so flimsy and superficial as this must of necessity have been, can carry with it no weight; and very rash indeed would be that body of Directors who should venture to act upon the *ipse dixit* recommendations of six gentlemen, who fancy that, by the "arduous labours" of less than six days, they have probed to the bottom the causes of dissatisfaction and discontent, and devised a remedy.

And then, the mode in which the Committee seem to have conducted their inquiries! "They examined—[we are told in the semi-official paragraph above quoted]—the *principal* servants of the Company in each department, and obtained a great amount of information." Had the examination been extended to some of the subordinates, we have reason to think that the amount of information elicited would have been greater still. It is notorious that upon no railway in the kingdom is there so great an abundance of useless and inefficient "*principal* servants" as on the North Midland. The present Reforming Board—we believe *they* too had a Committee—very energetically dismissed booking-clerks, and cut off twelve-pence a week from the wages of policemen and porters, but took most especial care to meddle as little as possible with the almost sinecure offices of sundry "principal servants." And what is the consequence? Why, that on no line in the empire is the staff so inefficient, or so discontented. Not a week passes that some two or three of (*not* the "principal servants" but) the overworked and underpaid subordinates, many of whom were enticed from other Companies by the offer of more liberal wages, are applying for situations in other quarters—aye, even where the scale of remuneration is not higher—so disgusted are they with the paltry proceedings of which they have been the victims, and so naturally suspicious of what may hereafter transpire, should this Committee, like the last, carry out further schemes of so-called "economy." Had the Committee condescended to examine some of these parties, we deem it not unlikely that there might have been some light thrown upon the past management and daily working of the railway in respect of the "principal servants" themselves.

We are informed, it is true, by the paragraph already given, that "the Committee *were* exceedingly dissatisfied with *many* branches of the expenditure and management, and recommended very extensive changes and reductions." Whether the "principal servants" referred to convicted themselves out of their own mouths, so as, in the opinion of the Committee, to render change and reduction necessary, or whether the foregone conclusions of which we have spoken were operating in the breasts of the examiners, we cannot of course tell; but it is to be hoped that the grounds of dissatisfaction will be clearly and explicitly set forth in the Report. The mere opinions of the Committee will go for little.

It may be said that our remarks are premature in thus commenting upon the Committee's labours before their own account of the course taken, and the results arrived at, has been laid before the public. We beg it to be clearly understood, that we neither uphold nor condemn the parties by whom, or respecting whom, the exceeding dissatisfaction alluded to in the Leeds paper has been, or may be, expressed. When the Report appears we shall express our sentiments on its contents. At present we merely say, and we say it without fear of contradiction, that taking into consideration the past working of the North Midland Railway—the disappointments which from time to time the shareholders have been doomed to undergo—the suspicion generally prevalent of inefficient management from the highest department to the lowest—and the confident expectations expressed by competent judges that, with a thorough, sweeping, *radical* reform, the line might even now, notwithstanding the lavish, reckless, and most unjustifiable expenditure in construction, be made to return a moderate dividend; taking these things into account, and many other collateral circumstances upon which we need not dwell, we assert that, in a flying visit of a few days, no Committee in the world, however well intentioned, however able, or however assiduous (and we give more than one member of this Committee credit for these qualifications), *could* have accomplished all that the necessities of the case imperatively demand. Had there been 60 of them instead of 6, and they had been constituted into Sub-Committees of *one*, they could not, in the time, have "inquired"—*that* we believe was their function—into the affairs and position of the Company, with a view to future amendment, in such a way as is likely to be satisfactory to the proprietors at large, and (we may add) to such an extent as sooner or later *must* be effected, ere the true value of the property can be ascertained.

The mention made by our provincial contemporary of the Committee's dissatisfaction inclines us to believe, that having seized upon a few (or it may be *many*) prominent abuses, they considered it unnecessary to go into the minutiæ of mismanagement. How strongly we dissent from any such judgment as to the duties devolving upon a Committee of Investigation, we shall not now say; but what a lamentable view does it present of the present management of the North Midland Railway, if after a few days' inquiry a Committee of proprietors have been, in the words of our Yorkshire contemporary, "*exceedingly dissatisfied with* MANY *branches of the expenditure and management, and recommended* VERY *extensive changes and reductions!*"

An intelligent correspondent, whose communication has come to hand since the foregoing remarks were penned, appears to regard the proceedings of the Committee in a different light. As he has (for the nonce) assumed the Editorial style, we cannot do better than append his observations, merely premising that we hold ourselves in no way responsible for the opinions therein set forth:—

"We find the Committee appointed by the North Midland shareholders at their last meeting to examine into the state of their affairs arrived at a conclusion last Tuesday, having been occupied nearly a week in their vocation, the principal part of which was spent at Derby, where we presume they would find the greatest portion to do, being the seat of the Executive, and where, if any rottenness existed in the establishment, they would have most facilities for detecting it.

"They subsequently passed down the line, visiting the different stations in their route, more with a view of confirming by personal proof the information previously obtained than in actual research at the localities. Indeed, we believe the last Committee of Investigation so effectually and unsparingly used the pruning-knife in those districts that further incision would have been impolitic and injurious. After all, what will it amount to?

"The object for which the Committee was formed was undoubtedly a good one, and must have the effect of convincing the proprietary that the line is hereafter to be worked at its lowest possible figure, both as regards numerical strength and money, but will that bring back the original outlay, or even draw traffic to compensate for the immense sum spent in its formation? Figuratively, 'Can butter be extracted from a dog's throat?' It is gone, and the best must be made of a bad bargain.

"We do not, however, condemn the principle on which this Committee has been started, and we hope and expect to see other Railway Companies following the example. It is nothing but common justice, especially to individuals, many of whom are dependent on their investment for support, that the depressed financial condition should be restored if possible, and that the 'future prosperity of the undertaking' should be a deep and primary consideration; therefore, in the contemplated wholesomeness of the system, and an improved state of trade, let the shareholders take courage, and adopt '*nil desperandum*,' as a consoling motto under the circumstances. The North Midland is a main trunk line, not so easily affected by competition as

Digitized by Google

some of its neighbours, and the resources of its traffic are hardly developed, so that with good management and consistent economy it is sure eventually to flourish. But to return to the subject of reducing the expenditure by curtailing the remuneration to clerks and porters, &c.

"We should be sorry to see such names as Alderman Hudson, Messrs. Brancker, Alston, &c. &c., with others of the Committee whom we know to be humane, just, and honourable men—men who have toiled through a long life, and buffetted the adverse winds and waves of fortune, fathers of families, and judges of domestic demands, as well as railway tacticians—we repeat we should share the humiliation to witness these men sliming their escutcheons by descending to advise a deeper gash into the salaries of the clerks, and wages of the porters. By all means dismiss men holding SINECURE offices, and reduce those receiving more than their duties, merit, or experience warrant, but we appeal to them on behalf of those honest, industrious servants who, having the welfare of the Company at heart, are already screwed down to that point which barely affords them a present subsistence, with no prospect for the future. On behalf of these men, we say, 'let justice be tempered with mercy.' On their line we are personally acquainted with worthy characters of many years' railway practice, bearing a heavy responsibility, treating the concern as their own, toiling 14 successive hours per day for 7 days a-week with scarcely any intermission, and spending the prime of their life for remuneration which, on an average with time, is scarcely equal to the pay of a bricklayer's labourer. Should such men suffer further, or is it policy to goad the animal constitution to extremes, and treat them worse than galley slaves?

"We trust the Committee will consider this, and prove themselves not only a scrutinizing but an equalizing body, so shall they reap applause as well from their servants as their partners in the unfortunate speculation in which they are embarked. We know this feeling to actuate the majority, who are doubtless sensible that the 'labourer is worthy of his hire.' We shall now anxiously look forward for the Report, and the manner in which it will be received by the Directors, who have certainly displayed much wisdom in forbearing to impugn, or attempting to throw obstacles in the way of the Committee; on the contrary, we are glad to find they have been everywhere met in the most courteous and candid manner, and every assistance rendered them, by all grades of servants, that they appeared to need. May their mission be accomplished with satisfaction and success!

"We are told that Mr. Robins, of the late firm of Robins, Mills, and Co., has received the appointment of 'Goods' Manager;' from this we may expect some endeavour to effect an improvement in the system of carrying. There are ways and means of extending the revenue, which we shall hereafter return to, if the proceedings of this Committee do not forestal us by recommending."

NOTHING was finally settled at the adjourned meeting of the West London Railway Company on Thursday last, with respect to the completion of that unfortunate project; but affairs bear a more promising aspect, and we hope that previous to the next meeting all doubt and difficulty on the subject will be removed. We can only reiterate what we have on so many previous occasions stated as to the unquestionable productiveness of the scheme to parties now, for the first time, connecting themselves with the undertaking.

We are not sorry, however, that a little further time has been granted to the original shareholders for consideration. We are satisfied that the more the new scheme is investigated, the more favourable it will be found for new investors; and in what other position can the original proprietors consider themselves placed? The money already called up and expended is, but for this scheme, literally lost, and the only chance of redeeming even the wreck of it is now before the proprietors. If they do not embrace it, the blame will rest with themselves. All that we ask is, that they seriously and candidly give the plan their best attention.

We regret to find that any attempt should be made to mix up with the West London Railway the projected and problematical embankment of the Thames, or the still more problematical scheme of a railway to the Royal Arsenals. Let the West London Railway stand by itself or fall. Neither Mr. WHITCHURCH, the Director, nor Mr. GEORGE WALTER, the non-proprietor, will do the undertaking any service by delineating these fine castles in the air.

The proceedings of the meeting, elsewhere reported, will well repay perusal. The discussion as to the Director in arrear of calls is instructive. We do not question that the gentleman referred to invested in the concern more than he could afford, but whose fault was *that*, and *why* did he do it?

A SPECIAL meeting of the Northern and Eastern Railway Company is to be held in the ensuing week, "for the purpose of considering the subject of disposing of 3,136 forfeited shares, and also to authorise the Directors to borrow a sum of money not exceeding 115,110*l*." Such meeting seems to present a very fitting opportunity for those of the shareholders who are desirous of ascertaining the true position of the railway to elicit information, and with that view we now propose to offer a few hints for their guidance.

In the first place, as it seems that more money is to be borrowed, it may be desirable to say a few words upon a practice to which we alluded last week, and which it is to be feared is not peculiar to this concern—we mean the practice of charging the interest of loans to capital as long as the capital account is open, or will bear it without being too palpable. The principle, or rather the want of it, on which this proceeds is plain enough. A distinction is drawn between money raised *by shares* and money raised *on loan*, although the latter is merely an anticipation of, or substitute for, the former. They are equally concerned (in proportion to their amounts) in acquiring the revenue, the surplus of which, *if any*, is however to be appropriated exclusively to the share-list, and the loan gentlemen turned over to capital for their interest! It would be curious to know how much interest has been thus *swamped*—how much of the excess of cost over estimate in more than one railway scheme is due to this cause. Pending the execution of the works, when no return can be had, and in fact when there is no other fund to draw upon, the interest on loans must, of course, be paid out of capital—it is analagous to the shareholders lying out of interest for their money—but whenever any portion of a line comes into operation, all further payment from that source should cease on the borrowed money applied to the construction of the portion so opened, and the charge be immediately transferred to the revenue arising therefrom; and if the accounts have been properly kept, there can be no difficulty in making the alteration. This is doubtless the true and wholesome principle, but we fear it has little chance of becoming a favourite or general practice, while early and large, although nominal and ficticious, dividends are so much required—for what purposes matters not, whether of Directors, even if some of them happen to be Chairmen, or of simple shareholders, although some of them may be members of the Stock Exchange.

With respect to the re-issue of the forfeited shares, the meeting of Wednesday next appears also to be a favourable occasion for inquiring still further into recent transactions in the share-market. We trust Mr. CRAWSHAY, the late Chairman, will be present. It is matter of notoriety that an engagement was entered into by certain parties not to dispose of their shares within a certain period. Is that document still in existence? If so it ought to be produced, as it is material to know whether it referred only to shares *then* held by the subscribing parties, or whether it did not extend to a prohibition of *selling at all*, until a certain time, namely, the opening of the line throughout to Bishop Stortford.

There are one or two other points upon which we are very unwilling to touch, but it is essential to the proprietors that the *truth* should be known. Perhaps some of them, therefore, will inquire on Wednesday:—

1st. Whether a Committee of Directors did or did not in October last raise the fares without any authority from the Board at large?

2nd. Whether that circumstance, coupled with a personal difference between the late Chairman and the present Deputy-Chairman, did not cause the Committee to resign?

3rd. How it happened that the Deputy-Chairman was again called into active service?

4th. Was he elected at a Board meeting, when only Mr. CRAWSHAY, Mr. ROUTH (Mr. CRAWSHAY'S partner), Captain DOLPHIN (Mr. CRAWSHAY'S son-in-law), Mr. ROSKELL, himself, and one other Director, *just making a quorum and no more*, were present, and was this done without previous notice having been sent to the other Directors?

5th. Was not the result a formal protest from one or more of the Directors thus treated?

And, lastly. Is it not the fact that at the present moment the Northern and Eastern Board is rent with dissensions?

These are a few of the matters into which the proprietors would do well to inquire. We have little doubt that a good many strange disclosures would repay their pains.

The leasing scheme, it would seem, is entirely at an end. No doubt the Chairman of Wednesday's meeting will state *why*. On this subject we have received many communications, but until we hear the explanation of the Directors we defer the publication of these letters, with the exception of one which appears elsewhere, and to which we call the attention of our readers.

A LETTER will be found in another column from Mr. BIDDER, who was associated with Mr. STEPHENSON in the construction of the Blackwall Railway, attempting to show that the excess over the estimates given in by Mr. STEPHENSON and himself is comparatively small. How far Mr. BIDDER has succeeded in making out his case we leave to our readers

Digitized by Google

to determine. It is certainly but proper that the blame should fall upon the right shoulders, and assuredly the engineering profession has quite enough miscalculations and errors of its own to answer for, without being held responsible for those of other parties. Our object in noticing at all in this place the letter of Mr. BIDDER, is to express our satisfaction that professional gentlemen have at last seen the necessity of giving some explanation of their proceedings. Hitherto they have stood too much upon their assumed infallibility, deeming it quite beneath them to give any account of their several stewardships. We hope the example set by Mr. BIDDER and Mr. STOREY will be imitated by other engineers. The great cause of complaint against the Engineer-in-Chief of the Brighton Company is not so much that he has exceeded his estimates as that he has never shown how such excess has arisen, and that it was unforeseen and unavoidable. Until he shall think proper to do so, he must rest under the suspicion that no good account *can* be rendered.

Mr. BIDDER's letter discloses one or two curious particulars. "Frequently [says he] the head of "Works" in railway accounts forms the refuge for all stray items of expenditure." In proof of this he states, that the expense of preparing the room for the convivial entertainment at the opening of the line was included under the head of Works! Was the entertainment itself—memorable for its display of virulent political prejudice—comprised in the same item? When will railway proprietors insist upon a *full* as well as a *true* account of the vast amounts (said to be) expended on their behalf?

We learn further, that the Parliamentary and legal expenses on the Blackwall Railway have risen to the enormous sum of 30,000*l. per mile!* This, be it remembered, *does not include a twelvemonth's account still unrendered.* We trust that at the next meeting some proprietor will move that this outstanding account be printed in detail. It will be a most instructive document, and cannot but contribute to lessening the legal expenditure on other lines. Messrs. TYERMAN and PEARCE can, we presume, have no objection to this course, seeing that they are so ready to refer their bills to other professional men!

THE adjourned general meeting of the Eastern Counties' Railway Company takes place to-day at the Shoreditch station. It is understood, however, that no business will be transacted, and that the meeting will be again adjourned. A circular issued by the Directors states, that "the Engineer of the Company having reported to the Board that from circumstances over which he had no control the railway cannot be opened for public traffic on the 1st of October," the Directors think it desirable to postpone the meeting to a later day in that month, "with the view to afford the shareholders the opportunity of inspecting the works previously to opening the line." "The chief obstacle in completing the undertaking at the time proposed has [says the *Essex Herald*] been the occasional wet weather within the last few weeks; for it is not merely the loss of the time sustained when a rainy day or night occurs, but the work in the cuttings is much retarded for two or three days afterwards. The works altogether, however, have made great progress within the last week; the heavy embankment to meet the Cann viaduct is drawing to a close; the arches in the Town Field are rapidly advancing, and the temporary station is rising up; the large bridge at Kelvedon is nearly rebuilt; lower down towards Colchester equal activity is apparent; and knowing as we do the zeal and energy of the Engineer, there is a fair prospect that with weather at all favourable, the openings will be all closed up and the line connected throughout before October has expired."

—o—

THE *Liverpool Mail* very forcibly exposes the hollow and inconsistent conduct of the ultra-righteous opponents of Sunday travelling on railways. "We find [says our contemporary] the following in an Edinburgh newspaper, devoted, as certain persons believe, to religious purposes:—'The Rev. Dr. Chalmers has returned from Ireland. On arriving by the Belfast steam-packet at Glasgow, at 6 o'clock on Tuesday morning, he found awaiting him the most pressing letters to be in Edinburgh at the Commission of the Church of Scotland on that day; and, as no place in a public coach could be procured, he was urged by some to avail himself of the Edinburgh and Glasgow Railway, on the plea of necessity, arising out of the unusual importance of the occasion. The reverend Doctor declined, saying, that the possible advantage of his presence at the Commission was counterbalanced by the positive disadvantage of countenancing a railway which profaned the rest of the Sabbath. He therefore posted to Edinburgh in the course of the day.' This is a melancholy exposure of human frailty. Dr. Chalmers is now an old man, most probably in his dotage; but not even this latter circumstance can be taken as an excuse for so miserable an attempt to arouse the prejudices of his countrymen against a great undertaking, under the plea of being opposed to railway travelling on Sunday..... *Did Dr. Chalmers ever object to mail-coach travelling? Did he never travel in a mail-coach on Sunday?* WE ONCE TRAVELLED WITH HIM IN A CANAL-BOAT ON SUNDAY! Why, then, all this superannuated fuss about railway travelling? In a country like this it would be madness to interrupt the intercourse of correspondence. Dr. Chalmers never refused to receive his letters and newspapers on a Sunday. He does not object to the Glasgow steamers arriving in the Clyde on Sundays. He would not decline receiving a letter informing him that he had been appointed to the divinity chair of Glasgow, because the said letter came by the railway on Sunday. Wherefore, then, all this new-blown sanctity, all this antipathy to steam, all this love of riding horses to death, and this hatred of cold iron and steam-boilers?"

The *Scotch Reformers' Gazette*, which has done itself great honour by the course it has pursued on this question, thus notices the statement of our Liverpool contemporary:—"We observe the Editor of the *Liverpool Mail* has this week made a statement that he once journeyed with the reverend Doctor on a *canal* on a Sunday. We can make a more surprising statement still. We once heard the reverend Doctor preach, after a posse of police officers, and a company of soldiers with fixed bayonets, were called from the Glasgow barracks to keep the streets clear for the carriages rattling to his church on Sunday. No 'desecration' then. Not a breath about it. But really this latent cry against the railway is fast fading away. It served the purpose of Mr. Revival Burns for a short period; it added to the zeal of Mr. Glass, of Carronshore; it illustrated the eminent piety of our Bains and Leadbetters; and in a little while Dr. Chalmers, we hope, will take a seat on the railway, and be astonished at his own transition!" In another part of the same paper it is said:—"A correspondent asks whether it be really true that the Rev. Dr. Robert Buchanan — the great non-intrusion gun, and furious declaimer against Sunday travelling per railway—was himself snugly seated on the Edinburgh and Glasgow line, during some period of the Sabbath within these three weeks last past? We cannot answer the question positively, though we have heard the matter notoriously spoken about."

—o—

A DARLINGTON correspondent writes thus:—"Having observed in the *Railway Times* of last week a notice of some experiments having been performed on the Edinburgh and Glasgow Railway with the view of ascertaining the applicability of magnetic attraction as a locomotive power, it has occurred to me that it might prove highly advantageous to railway interests were the principal Companies to unite in offering a handsome premium for the production of a magnetic locomotive, capable of performing certain stipulated conditions. Supposing that the necessary power could be obtained without requiring a machine of extraordinary weight, I am inclined to think that the current expense of working and repairs would eventually be much less than that which is entailed by our steam locomotives; and the wonderful improvements in the construction of the latter, which ensued upon the offer of a premium by the Liverpool and Manchester Railway Company, would surely warrant a similar liberality in the present instance."

—o—

THE Blackwall Railway Company have this week lost upwards of 120*l.* by the raising of the fares, as compared with the corresponding week of last year, while the number of passengers has diminished from 46,034 to 27,551.

RAILWAY OFFENCES AND OFFENNDERS.

Two persons named Ansell and Jardine, who described themselves as "gentlemen," were on Thursday charged before Mr. Grove, police magistrate, Greenwich, with being drunk, and obstructing and assaulting the officers of the Greenwich Railway Company in the execution of their duty. It appeared by the evidence of Inspector Bishop, and constables Smith and Moore, of the railway police, that on the previous evening, about 7 o'clock, the prisoners went to the pay-office at the terminus at Greenwich, and having paid their fare were allowed to go up to the carriages; but it being then perceived that they were very much intoxicated, the inspector told them that they could not be permitted to go by the train, and sent them down again, directing the money to be returned to them, which was done. They became very abusive, and were turned out three times before they were given in charge. They also struck Smith, and tore the stock off his neck. The officers said, every forbearance was shown on their part, but the prisoners completely stopped the business for the time. The prisoners expressed great contrition. Mr. Grove said, they had subjected themselves to a fine of 5*l.*, or two months' imprisonment; he would, however, as they appeared penitent, mitigate the fine to 10*s.* each, which the defendants (*of course*) immediately paid. We wish the "two months' imprisonment" spoken of had been substituted.

Digitized by Google

Last week, at the Eton Petty Sessions, a working-looking man was charged by the Chief Superintendent of the Great Western Railway police, with travelling behind the last carriage, and seated upon the buffer of the day mail-train, which left Paddington at a quarter past 10 o'clock on the day before, without being provided with either a ticket or any money to pay his fare. It appeared that just after the train had left Paddington the man was seen to jump up on the buffer of the hind carriage, but as the train, which had proceeded some little distance, was then going at a considerable and an increasing speed, the engine-driver could not be made aware of the circumstance. Upon the train arriving at Slough the man slipped off, and on being challenged there by the officers of the Company with riding without paying his fare, he confessed that he had ridden from Paddington, that he had no money, and that it was his intention to have walked a little way on the railway from Slough, and again mounted the buffer to have got on to Bristol. He made the same admission before the Bench. The most extraordinary part of the affair is, how it was possible, from the construction of the hindermost part of the carriage and the buffer attached to it, that the man was able to hang on (the train proceeding at the rate of 30 miles an hour the whole distance, without stopping) during the 35 minutes he was in his perilous situation. Had he fallen off, he must inevitably have been killed. The magistrates inflicted a fine of 20s., and 18s. 6d. costs: and in default he was committed for two months to Aylesbury gaol.

Thomas Rollstone, a porter employed on the Eastern Counties' Railway, was charged at Worship-street Police-office, on Monday, with having stolen various articles of property belonging to the Company. It appeared that on the arrival of the 6 o'clock train at the Shoreditch terminus, a few evenings since, a porter named Doherty observed the prisoner enter a second-class carriage, which the passengers had just left, and abstract from it an umbrella, which he deposited in a vacant carriage a short distance off. The porter communicated the circumstance to a policeman named Neale, who watched the prisoner's movements, and soon afterwards saw him return back to the carriage and remove the umbrella, upon which he took him into custody. The prisoner said that he had never done anything of the kind before, and begged the officer, for the sake of his family, to take no notice of it. The umbrella was supposed to belong to a gentleman who had complained of having lost one, but who departed in a cab without waiting until search was made for it. After the prisoner had been locked up his lodgings were visited, and a uniform jacket, with other articles that had been stolen from his fellow-servants, were therein discovered, together with upwards of 60 duplicates relating to a quantity of property which was presumed to have been lost by different passengers, although the railway authorities were unable to trace any of the owners. Mr. Duncan, the Solicitor to the Company, said that in consequence of the vast amount of property for the safety of which they were responsible, the Directors considered that they were bound in duty to the public to prosecute the prisoner to the utmost extent, as a warning to the numerous servants employed on the establishment. The prisoner was accordingly committed for trial.

On Wednesday week David Alsop, of Crich Car, was taken before Messrs. Jedediah Strutt Radford, and Francis Hart, magistrates at Belper, and fined in the mitigated penalty of 4s. 6d., and costs, for trespassing upon the North Midland Railway, near Amber Gate.

LONDON AND DOVER RAILWAY.

Traffic Receipts for the Week ending September 27, 1842—the Fourth Week of the Low Fares.

Date.	First-Class.	Second-Class.	Third-Class.	Total.	Amount.
Sept. 21....	251½	477	272½	901	£206 12 9
,, 22....	243	478	256	972	204 5 8

Add total to the 20th September, from last week's *Railway Times*.....				3,298½
Total loss to the Greenwich Company in *four* weeks by their prohibitive toll.....				4,859

PLEASURE EXCURSION ON THE GREAT WESTERN RAILWAY.

ON Thursday morning last the 7 o'clock train from Bristol, drawn by two engines, and containing between 600 and 700 persons, arrived at the Paddington terminus at about a quarter to 12. The train, which was a curiosity, from its extreme length and freight of passengers, conveyed a highly respectable body of the inhabitants of Bristol and its vicinity, who had availed themselves of the opportunity held out by the Directors before the close of the summer, of taking a trip to the Great Babylon, and of spending Michaelmas amongst their friends. Each person in the party was provided with a ticket for the fare, which was reduced on the occasion to one-half the ordinary price. They were thus enabled to travel the whole distance from Bristol to London, and back again, for the economical charge of 21s. About half an hour's delay was occasioned in the arrival of the train, principally owing to the high wind which prevailed, and from the train stopping to take up a fresh load of passengers as it passed the Bath, Chippenham, and Swindon stations. The party, who were encumbered with little in the shape of luggage, beyond a few Michaelmas geese as presents to their friends, will leave town on their return to Bristol by the 5 o'clock train this evening. This, we believe, is the second excursion of the kind which has taken place upon the Great Western Railway since it was opened.

We understand that the excursions on the Croydon Railway to Anerley Gardens, have not proved so attractive as was expected.

THE TOLL QUESTION---THE LONDON BRIDGE RAILWAYS.

(OFFICIAL LETTER).

To R. S. Young, Esq., Secretary of the London and Croydon Railway Company.

SIR,---The Board of Directors of the London and Greenwich Railway Company have desired me to acknowledge the receipt of your letter of the 12th ultimo, and also that of the 26th instant, the former intimating that the Croydon Railway Company had entered into an agreement with the South-Eastern Railway Company for a commutation of the tolls payable by the latter to the former Company, and the latter containing a copy of the resolutions of your Board relative to the toll payable to this Company.

In answer to these letters I am desired to inform you, that the Directors of this Company are still unanimously of opinion that, owing to the course adopted by the Croydon Company to prevent a fair development of the traffic, they cannot enter into any new terms or compromise with respect to the toll fixed by Parliament after many days' discussion; and especially as they have good reasons for believing that more than nine-tenths of the proprietors of the Greenwich Railway would consider it a violation of the trust reposed in them.

There may be good grounds for Companies, carrying on their traffic *jointly*, entering into terms which are altogether inapplicable to the Greenwich Company. It appears to this Board that it must have been forgotten by the Croydon Company that when the agreement was entered into with them to take 3d., instead of 9d., per passenger, which the original Act empowered the Greenwich Company to take, that it was upon the full understanding that the passengers of the Croydon and other Companies should pass on the Greenwich line, *and that no means whatever would, after so great a reduction of toll, be resorted to, to divert from their line the anticipated traffic.* It should also be borne in mind that the mileage duty and parochial rates materially reduce the toll of 3d.

With respect to the additional toll of 1½d., the Directors of this Company beg to remind the Directors of the Croydon Company that the very large sum expended in making the additional works, was for the *exclusive use* of the Croydon Company, and others paying large tolls to them; that it was at the instigation of these Companies that Parliament fixed two penalties of 50*l.* each per day, payable by the Greenwich Company to them, in the exent of such works not being erected within a limited time.

The toll of 1½d. was granted by Parliament in perpetuity, instead of ceasing, as was proposed by the Greenwich Company, on the repayment of the outlay.

The Greenwich Company having, therefore, widened the line, and appropriated their own reserved land, purchased and cleared at a great expense, and having raised, at an enormous sacrifice, a sum sufficient to accomplish the required works, *solely on the faith of the additional toll of* 1½d., the Directors consider it would be a gross injustice to those who subscribed the requisite capital, were they, in the present undeveloped state of the auxiliary traffic, to entertain the proposal of the Croydon Company for a reduction.

The Directors protest against this subject being called an existing "*dispute;*" for Parliament, after the fullest investigation, settled the matter, a decision to which this Company have accordingly adhered.

In conclusion, the Greenwich Railway Directors take leave to remark, that the various propositions which they have received from the Croydon Company appear to be based on the assumption, that railway traffic may be profitably increased to an almost unlimited extent by the adoption of reduced fares; but the result of the experiments made, both by the Blackwall Railway Company, and by the Greenwich Railway Company, show a very different result.

I am, &c. &c.,

(Signed) J. Y. AKERMAN, Secretary.

Terminus, September 28, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—As the best reply to the many critiques upon this railway, I beg to offer the following simple calculation :—

A dividend of 3 per cent. upon the paid-up capital, for the present half-year, will require the sum of	£90,750
The rent of the branches	30,000
Interest	88,000
For the depreciation fund	10,000
	£218,750
To which add expenses, as per last half-year	127,778
Total	£346,528

Taking the rents, interest, and expenses, at the above high estimate, a gross receipt of 346,528*l.* will be required to pay a dividend of 3 per cent. for the half-year; and to pay a dividend of 3½ per cent. a gross receipt of 361,653*l.* would be requisite.

Receipts up to September 18, from June 30, have been	£174,521
Suppose an average of 13,700*l.* per week, from September 18 to October 30	82,200
From October 30 to November 27, of 14,000*l.*	44,000
From November 27 to December 31, of 12,000*l.*	58,286
Total	£359,007

If to this be added the surplus of the last half-year of 2,605*l.* the net sum will give a dividend of 3½ per cent. for the half-year.

But take the receipts to September 18, from June 30	£174,531
And suppose an average to October 30, of 13,000*l.* per week	78,000
From October 30. to November 27, of 10,000*l.*	40,000
From November 27, to December 31, of 11,000*l.*	53,413
	£345,944
To which add the surplus of the last half-year	2,605
Total	£348,549

And there will be a dividend of 3 per cent., and a surplus of 2,011*l.*

This calculation will, I think, convince the shareholders, that while the present rate of dividend at least is sure, there is, even now, a probability of a higher rate, and a certainty of it when trade improves. I am, Sir, yours, &c.,

L.

GREAT WESTERN RAILWAY FARES.

To the Editor of the Railway Times.

SIR,—It will be seen by the following account, taken from the Company's table of times, distances, and fares, that the Wallingford passengers travelling to and from Reading and Pangbourne are made to pay a much higher fare than their distant neighbours from Bristol to Bath and Corsham, although this part of the line has not cost half of that between Bristol and Corsham—as must be admitted, from the number of short tunnels that have to be passed through between Bristol and Bath, as also the long expensive tunnel at Box. Notwithstanding, the following are the fares charged :—

From *Bristol to Bath*, 11½ miles, 2s. 6d. first class, and 1s. 6d. second class; whilst

From *Wallingford to Pangbourne*, only 6½ miles, is 2s. 6d. first class, and 2s. second class. Also

From *Bristol to Corsham*, 20 miles, 4s. 6d. first class, and 2s. 6d. second class; whilst

From *Wallingford to Reading*, only 10¾ miles, is 3s. 6d. first class, and 2s. 6d. second class.

I trust this will, through the medium of your journal, meet the eye of the acting officials of the Company, who will see the propriety of causing a reduction to be made in the next new bills, expected to be issued on the 1st of November for the winter months, of 1s. in the first class, and 6d. in the second class, from Wallingford Road to Reading, and the like reduction to Pangbourne, which would, I am certain, be the means of securing a number of passengers situated in the villages around the Wallingford station, who now either take their horse or their horse and gig to Reading.

I am, Sir, yours, &c.,

A CONSTANT READER.

Wallingford, September 26, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Taking a walk last Thursday, as I often do, in the neighbourhood of the Great Western Railway station, at Paddington, and stopping for a few minutes to look at their works, what a pity, I could not help thinking, it is that the Directors of the Company should allow the approaches to the London terminus to remain in so untidy, and really disreputable state. As you stand on the Westbourne-road Bridge, you look down upon dirty sheds of all sizes and shapes, arranged without any order, old tumble-down houses left standing ever since the ground was purchased, and before the railway was commenced, and an immense number of rusty wheels, and not a few broken-down locomotives, to give one a favourable idea of the care which is displayed to preserve them in repair, and from the weather. One would think that the Directors would, in common reason, endeavour to render the station and approaches of the noblest railway in the world at least, if not the grandest, surely not the shabbiest and meanest, of all the railways, and that too which our Queen often uses.

I remain, Sir, yours, &c.

SCRUTATOR.

London, September 23, 1842.

THE GREAT WESTERN RAILWAY AND ITS TRIBUTARIES.

To the Editor of the Railway Times.

SIR,—The numerous letters on the subject of the Great Western Railway, which have from time to time appeared in your able and valuable journal, sufficiently show the degree of anxiety with which the future prospects of that Company are regarded by the public; and whilst the disappointment evinced on the one hand is but too often the reaction of an over-sanguine temperament, the hope expressed on the other is not characterised by that confidence which can alone animate and support it. Although not an original shareholder in the Company, I have now a considerable stake in it, and of its ultimate success I entertain no doubt. Its resources are yet to be developed; they are not local merely, and therefore to be immediately opened, but must be sought for and cultivated, as nourishment is brought to the tree by the extension of its roots. The Great Western Railway differs from most others in this—that it is a line for "the future." It is a main "western" line, from its construction capable of working an immense traffic, with gradients as perfect as can ever be accomplished, and perhaps of all others the least likely ever to encounter opposition. No doubt, had it been constructed on a less costly principle, its immediate results would have been more satisfactory. But the policy, the *wise* policy, of the Great Western Direction has always been to render their line adequate to the wants of the vast extent of country which it was designed and calculated to drain and supply. If this view of the case were more generally adopted, as assuredly it should be by those who gave to the line its peculiar character, by their advocacy of its peculiar construction, we should not see so many hasty and injudicious strictures on the policy of the Board, with reference to the Bristol and Exeter and Cheltenham Union lines. Of the Exeter line I have less to say, as not coming so much within my immediate notice; but a temporary residence in one of the watering-places in the south of Devon convinced me, that when the Great Western carriages shall be seen in Exeter, all the expectations that have been formed in that quarter will be fully realised. Any one of the different projects for extending the benefit of railway communication from that point into Cornwall, would add vastly to the revenue to be contributed to the Great Western, through the agency of its Exeter branch. It is, however, with respect to the Cheltenham Union line that I desire more particularly to speak, and here I am satisfied that much misapprehension exists. I will not enter upon the question as to whether the Cheltenham and Great Western line would pay as a distinct undertaking. The question is, would it pay the Great Western Company to work it on any and on what terms? The traffic which would be brought to the Great Western Company by this branch, if completed, may be divided into two classes: first, that which it would obtain under any circumstances from the country through which the branch must pass, whether that branch were completed or not; and secondly, that which, by means of that branch, would be called into existence, or diverted from some other channel.

The profit which would result from this traffic may also be divided into two classes. First, that which would arise upon the sum charged upon the 42 miles of branch; and secondly, that which would arise upon the amount charged for the subsequent distance travelled by each passenger, either east or west.

On the first description of traffic, it is obvious that the only profit resulting to the Great Western Company would be the excess of fare over the expense of carriage on each passenger thus brought to Swindon by rail, instead of by his own or any public conveyance.

But upon the second description of traffic there would result, not only the profit above referred to, but the profit upon all subsequent distance. And this traffic it is which of all others would be most productive, for with or without it, there must be all the fixed expenses of the line. Carriage room, and perhaps a little addition of locomotive power, could alone be charged, together with the mileage duty, against the receipts under this head. This appears so obvious, that it only remains to inquire what prospect there would be of *creating* or *diverting* such traffic.

Seventeen miles of railway would complete the line to Gloucester, and therefore, by the seven miles of redeemable line (whether so redeemed or not), to Cheltenham. A large natural traffic must of necessity arise from so considerable a population as that of Cheltenham, Gloucester and Stroud, and this traffic would of course increase in the ratio usual upon increased facilities. A vast increase would also result in the traffic from Ross, Monmouth, and Hereford, with the surrounding districts, when brought within easy reach of the Western line, and a great impetus would likewise be given to travelling from the whole of South Wales; for the passages of the Bristol Channel are always objectionable even from Chepstow to Bristol, and there is danger even in the more insignificant ferries higher up the river. The bridge at Gloucester is the first safe and convenient point at which the river can now be crossed, and should a line of railway ever be constructed to connect South Wales with the metropolis, Gloucester is the point from whence it must inevitably start. The road to Cirencester from Gloucester, Stroud, or Cheltenham, is tedious and hilly—the journey from either place at present cannot occupy less than from two hours to two hours and a-half. That from Gloucester cannot be travelled by coach, and that from Stroud is difficult and dangerous with full loads. That the completion of the line, therefore, would create additional Great Western traffic admits not, I think, of doubt. A considerable amount would also be diverted from other channels. Worcester is equi-distant from Birmingham and Gloucester. From Birmingham to London by rail the journey occupies 5 hours, at least, by the fastest trains—from Gloucester 4½ hours would suffice. Who can doubt that the latter route, avoiding the Lickey incline, and saving half an hour in time, would be the one adopted? Who that has travelled by the London and Birmingham and Great Western lines will say that the ease of motion, the speed, and the comfortable arrangement of the carriages on the latter line may not draw, if connected with Gloucester, not merely the traffic which would pass through Worcester, but that from Droitwich, Bromsgrove, at the foot of the Lickey, with their surrounding districts, and even from the neighbourhood of Birmingham itself?

The difficulty of access from Cheltenham and Gloucester to Cirencester, drives much of the Lon-

Digitized by Google

don traffic thence through Birmingham. This would be immediately regained, and a vast addition brought with it. Now is the time for action. Let not the Great Western delay till Worcester has a branch into the London and Birmingham, but by an early arrangement with the Cheltenham Union, and by subsequent management, which it would now be premature to discuss, secure that which ought to be its own, the whole traffic from the west of England and South Wales.

Only one point more remains. On what terms should the proposed arrangement be made? This I am content to leave to the Directors. They are competent to the task, and will not abuse the trust.

I am, Sir, your obliged and obedient servant, and

CONSTANT READER SINCE 1838.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—You have interpreted the meaning of what I said, at the last meeting of shareholders, on the capabilities of the Northern and Eastern Railway, as desponding; that was not what I wished to convey. My aim was to avoid language that could be interpreted as averse to the letting of the line. It was my opinion, and that of the Board, that the shareholders ought to be the parties to determine the course to be pursued, and that all expression of the opinion of the Board should be suppressed. It was in this spirit that I said, as reported in your paper, "that the Directors did not assume that the profit under their management would equal the return offered by the lessees;" and fearing that I might be misunderstood, I immediately after said, "that the Directors *had no wish* to make the proprietors believe that the *lease* would not be better for the Company, if it could be carried out;" but I never meant to give an opinion that the railway would not pay 5 per cent., or even a much larger per-centage. My sole object was to avoid giving any opinion, or do any act that should interfere with the free and unbiassed will of the shareholders.

I remain, Sir, your most obedient servant,

JOHN ROSKELL.

Shoreditch, September, 29, 1842.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Your leading article in the number of the 24th instant, is extremely severe on the Board of the Northern and Eastern Railway Company; be it deserved or not, it will seriously alarm many of the shareholders. I am one, but I am not frightened by it. I am sure there is a large additional traffic to be brought to this line, if the business of the undertaking be conducted with talent and energy. The road to Hertford and Ware must be made. That done, a large traffic in goods as well as passengers will inevitably follow, and thence our weekly returns will give us good dividends. It is quite clear, however, that these advantages can only be reached by an active and united Board of Directors; those in it now are, I fear, incompetent to the task without the aid of some business talent. No one can dispute the talent and energy of the late Chairman, but he has deserted us, the proprietary it is to be hoped will, at the meeting next week, urge the Directors to strengthen their ranks by the addition of two or three real men of business, who may have experience in railway management, and can devote time to ours. A Board so strengthened need have no Managing-Director—a good Board requires no such expensive officer. If it be a weak Board, then such an office should be filled by a talented and practical man. The gentleman now filling that situation, to whom you have alluded, is highly respectable in character and standing, but he is entirely unfit, as you justly say, to such a service. If it be true, as you tell us, that the Board have voted him a large salary, they have done that which cannot be justified, and which, in the necessity of carrying on the concern with economy, the proprietors will not submit to. The Directors will be asked if they persist in this appointment. They will no doubt reply, "no; the gentleman in question has returned to our ranks and will do his best there, and be moderately paid for it with the rest of us." Mr. Editor, *do* aid the shareholders in this work of regeneration, and you will deserve the grateful thanks of all.

A SHAREHOLDER.

NORTHERN AND EASTERN RAILWAY.

To the Shareholders.

GENTLEMEN,—In the *Railway Times* of last Saturday, you, for the first time, look your actual position boldly in the face, and see how *capital* and *revenue* really square in the best half year you have had. I avail myself of the same medium to address you on the subject of the proposed lease, which I have a strong misgiving the Directors will still make a vigorous effort to *cushion* if they can, although I *guess* their power to do that or anything else has been *rather* shaken by the trenchent *expose* they have received, and *for your interests*, not before it was due.

As shareholders, I apprehend your only object is to get the best possible return for your money invested, and consequently, the principal question with you will be whether you are likely, by continuing the concern in your own hands, to secure as good or a better dividend than is offered to you by the proposed lessees. You now see the fruits that have as yet been yielded; the line partially opened for nearly two years—now completed throughout; the profit in reality *nil*; and worse than all, a sinking revenue (as per the weekly return) in what are generally considered the best months in the year. Added to which, coaches still flourish on the road; the mails still continue their old routes, although your trains run at their very hours; hardly a ton of goods diverted from the ancient channels (indeed the weekly returns do not show anything as received from goods), and that everlasting changing, both in the *personal* and principle of management (referred to by the *Railway Times*), for all which there may be doubtless very good grounds; but it denotes, I fear, a want of that persevering energy, stability of purpose, mutual confidence and unity, indispensable to the proper working out of such a trade as yours.

In thus noticing the short earnings, I am aware that I have indicated the sources of an increase of revenue on which you may reasonably calculate—no doubt of it; and more must have been seen and canvassed, and appreciated by the capitalists concerned in the offer that has been made, to justify them in making it. Are you—have you good grounds for being—equally sanguine of the results, judging from the experience you have had? If so, there may be the less inducement to close with the proposal, although a *safe* 5 per cent., with a probable addition to it, is something in a speculation of which the results have up to this time been nothing—*literally nothing*, with at present no sign of improvement. But individual energy and enterprise, urged on by interest, and left free to act for themselves, have many times succeeded when the cumbrous operations of a Company (not always *as one* in itself) have altogether failed in producing a profit. So, in my opinion, will it be in the present case, and at the expiration of the lease. If you do not then choose to *renew*, you will have the concern returned into your hands, with a trade developed instead of struggling for birth, and experience of the various modes of working it which would otherwise have taken you the period of the lease to attain.

Your Directors have been chary of their advice; will they now have the face to raise the cuckoo-cry about confidence in *them?* Heed it not; the day for it has gone by, and you must now look to your material interests on your own account, and with your own eyes—not through the spectacles of others; but if I mistake in this, and you must *still* have an index to guide you, take the late Chairman's estimate of the value of the concern under present circumstances, as written by his acts, which no words can efface. He, shrewd man as he is, would not have sold at a discount, if he had seen his way clearly to 5 *safe*, and probably 6 or 7 per cent.; for I am loath to believe that in selling out, *when and as he did*, he could entertain any idea of making an increased profit by buying in again at a price made lower probably by his own deed.

But if things are to be maintained as they are in the main, there has, I am glad to observe, been at least one good change. You are no longer to have the honour of an unpaid Direction, which it is always indeed the fashion to compliment; but I, for one, do not agree in the propriety of such fulsomeness; I think the labourer is worthy of his hire, and have in short neither relish for, nor confidence in, services *so disinterested*, even when given with a *grace* to which you, of this Company, have been strangers. The opprobium is, however, now removed; the remuneration you have sanctioned is liberal, and you have a right to exact a proper responsibility in return—which no Company ever had, or can have, while Directors act gratuitously. Their proper function is now that of the *ministers* and not the *masters* of the shareholders, and it will be your own faults if you do not make them act as such.

I am your friend,

SCRUTATOR.

P. S. Since the above was written I have learned the lease has *gone off*, but as my observations are general, this cannot affect the question as regards the Company's interests; other parties may come forward. The names of the intended lessees have appeared in print, but *not correctly*: they were Mr. Stephenson, Mr. Mills, Mr. Bramah, and Mr. Lewis Cubitt, and according to report, Messrs. Grissell and Peto, although the latter parties were not, I believe, put forward. I may next week, unless the general meeting in the meantime renders it unnecessary, have some further information to communicate on this. At present some reflection seems to be thrown on Mr. Roskell (the Deputy-Chairman) in the matter.

SOUTH-EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In your last impression "Philos" says "the present price of 22*l.* per share; equal to about 33*l.* 3s. discount." He must have meant 33⅓ *per cent.* discount.

There is in this Company the large number of 56,000 30*l.* shares, issued at such a sacrifice that about 33*l.* only was received; the price of 22*l.* therefore indicates a discount of 11*l.*, or 33⅓ per cent.

An Act of Parliament for a station at the Grange-road has yet to be contested for; the stations at Dover, London, and Grange-road, which the Chairman does not include in estimating the cost of the line, will cost much money, and when it is considered that all the share-capital is appointed to be paid up many months previous to the completion of the line, and that loans are not obtained with facility, it becomes evident that next year a further creation of shares must take place, notwithstanding the excellent management of the Direction.

On the 28,000 new shares two calls of 5*l.* each, making together no less than 280,000*l.*, must be paid before the 5th proximo and 5th November, respectively, under penalty of forfeiture; and these low-priced shares being in weak hands chiefly, many must be brought to market to avoid these calls. These shares are at this moment in the midst of that crisis, and must continue so for a month longer. It is right the public should know this, as wary jobbers, ever on the watch, are now employing their peculiar tactics by giving a fictitious consequence to this line to entrap the unsuspecting public, to relieve them of their shares at forced-up prices. This object once accomplished—themselves out and the public in—they pierce the bubble with the needle; it bursts; their victims, usually parties of

Digitized by Google

small means, see their simplicity, become distracted, rush in a body to sell out, when they part with their shares at a ruinously low price to the very parties who had just made them pay so dear for them.

In respect to the Paris traffic—the sheet-anchor of this line—the circuitousness of its course implying expense of time as well as of fare, will prove an additional disadvantage in the competition with its various rivals, viz., the route *via* Southampton and Rouen Railways—the steam-boats *via* Herne Bay—the direct steam-boats to Calais and Boulogne—and route *via* Brighton, Dieppe, and Rouen.

The mar in the way of a trip to Paris is the tedious diligence journey of 150 miles from Calais to Paris; until, therefore, there be a railway from Calais to Paris, the mere Dover line cannot be expected to create Paris traffic, whilst I think the Southampton and Rouen Railways will; and I confess I fear the best part of a dozen of years may have elapsed ere the 150 miles long railway from Calais to Paris shall be constructed.

Under all these circumstances, the shares of this line, compared with others similarly situated, do not appear to be "dirt cheap," as the refined gentlemen-jobbers in shares call (I say not, think,) them; but on the contrary, to be on the point of a considerable fall so soon as "certain operations" amongst the jobbers shall be closed.

I am, Sir, your obedient servant,

IDEM.

SOUTH-EASTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—Allow me, through the medium of your publication, to point the attention of the Directors to what the Edinburgh and Glasgow Directors have lately done in relieving the holders of their new shares from the stringent part of the resolution inflicting forfeiture for non-payment of calls. Now that three calls have been paid, I cannot but think that the Directors might adopt a similar course as to the remaining two calls. It would be a great boon to the scrip-holders, many of whom took the new shares as a matter of self-defence, and I think it might be done without at all interfering with the progress of the works, unless the Directors think of opening beyond Ashford much sooner than the time stated. With so much of the line already opened, the speedy extension to Ashford, and the abundance of money, surely the Directors can have no difficulty in raising money on loans to the full extent they are authorised to do, and in that case surely the payment of the remaining two calls might be postponed for a time, as it cannot be necessary to have *all* both on loans and shares paid up in January, when the line is not expected to be completed throughout before the end of next year. and to Folkestone in the summer. I have the greatest confidence in our Directors, and I feel satisfied they would gladly do anything to relieve the scrip-holders, which they think they can do without crippling their means of getting on with the works, that as a shareholder I continue no longer to doubt. We are in a very different position to what we were in former times as to money matters, and I do think the Directors might relax a little, and let the remaining 10*l.* rest in our pockets for the present. It would be a gain to us holders of scrip, and no loss whatever to the Company, as it appears to me.

I am, Sir, your obedient servant,

A DOVER SHAREHOLDER, AND A CONSTANT READER OF THE "RAILWAY TIMES."

September 28, 1842.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

Sir,—I find that persons going north from London, say to York, and booking at the Birmingham station, proceed *via* the Derby and Birmingham line, and that unless they specify the Midland Counties' Railway, the clerks at the Birmingham station here book *via* the Derby line. Surely the Midland Counties' Directors are very culpable in not seeing to this, and making it publicly known that theirs is the *direct*, *cheapest*, and *shortest* line to the north from London. They may depend upon it that a majority of the persons proceeding to the north, who are not *particularly* acquainted with the various railways, stations, &c., go the whole way to Birmingham, and it is obvious that it is not to the interest of the Birmingham line to point out the cheaper and speedier course.

I am, Sir, yours, obediently,

WATCH.

London, Sept. 24, 1842.

[This is not the case. The London and Birmingham Company preserve a strict neutrality, and book by either line, as the case may be. When the two Companies came to an understanding relative to the London traffic, it was agreed that of the six daily trains by which passengers can book through from London to Derby, &c., four should be devoted to the Midland Counties' traffic, and the other two to that of the Birmingham and Derby Company, and that on Sundays *all* the traffic should pass over the Midland Counties' line. This arrangement has been most impartially carried out, and it is much to be regretted, therefore, that "Watch" had not taken the trouble to make himself acquainted with the facts of the case, before he ventured to charge the Directors of the Midland Counties' Company with culpable negligence, or those of the London and Birmingham line with indifference to the convenience of the public. We notice the matter, because we have heard similar statements from other quarters relative to the Derby and Midland Counties' lines.—Ed. R. T.]

MANCHESTER AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

Sir,—At the recent half-yearly meeting of the Manchester and Birmingham Railway Company, the first after the complete opening of the line, intimations of the necessity for severe economy on the part of the Directors were thrown out with tolerable plainness by several proprietors, and were glibly enough acquiesced in by the gentlemen to whom they were addressed, who, however, appealed to the patience of the proprietors, promising what excellent things they would do in this way at some future time.

In truth, the appointments on this line have been made upon a most absurd, and, indeed, profligate scale.

You are aware, that under the new agreement the Grand Junction Company work and provide all things requisite for all the traffic of the Manchester and Birmingham Company between Crewe and Birmingham. The Manchester line is therefore a mere branch, 31 miles long, instead of being (as originally designed) a main trunk of something like a 100 miles (inclusive of its branches).

And yet, for this mere shadow of its former self, the Directors (of whom, by-the-bye, there are about a dozen, who divide 800*l.* amongst them) have already appointed a Manager at a salary of *a thousand per annum*; a Treasurer, with *six hundred*; a Goods' Traffic Manager, with 400*l.*; a Storekeeper, with 200*l.*; a Book-keeper, with, I think, 300*l.*; a Resident (besides a "Consulting") Engineer, with 300*l.*; making an outlay among these higher functionaries of about 3,000*l.* per annum, in addition to the Directors' allowance on the one hand, and to the salaries of the subordinate (and, perhaps, really *working*) members of the establishment, such as superintendents of engines, of police, &c., on the other!

Surely this monstrous evil ought not to be allowed to continue even for one half-year.

It is obvious that such a staff is unnecessary, and wholly disproportionate to the extent of the line and of its traffic. The Directors, therefore, ought to apply the pruning-knife, if for the present it be only partially, and I trust to obtain your able co-operation in demanding its application. I verily believe that the Grand Junction, with a line of about 100 miles, and a weekly traffic even now of some 8,000*l.*, have a less costly establishment than this of the Manchester and Birmingham Company.

Your obedient servant,

A SHAREHOLDER.

September 26, 1842.

GREAT NORTH OF ENGLAND RAILWAY.

To the Editor of the Railway Times.

Sir,—Your strictures upon the last half-yearly meeting of this Company entitle you to the thanks, not only of the shareholders, but of the public. Evils of the most extensive sort have been committed in almost every public Company, to the utter ruin of numbers of unsuspecting people; therefore your remarks are calculated to put persons on their guard, and to originate scrutinising Committees, such as are now going on in the Brandling Junction Railway, &c. &c.

In your observations upon the conduct of Engineers and other paid servants, I think you hardly proportion rightly the relative obligations as between them and the Directors; for, after all, what are they but the servants of the Directors, appointed by them, paid by them, and liable to be discharged by them? Therefore, whilst you charge upon the Engineer the being a party to deceiving the public, how much more wicked and unpardonable must be the conduct of the Directors. The Engineer knows full well that if he thwarts the wishes of the Directors he must prepare to resign. And is it to be supposed that they will not have a specious enough case to make out against him; hence, great allowance ought to be made for Engineers under such influences.

However, Sir, enough is now out to call for for a public justification of the charges adduced by Mr. Storey against the Directors. The Company must expect it at their hands, otherwise they ought to call a special general meeting, and institute inquiry.

These Committees of Inquiry and public meetings are, *although often marred*, the only safeguards for public Companies, and do more than anything to keep in check the mismanagement and jobbing, whether of Engineers or Directors.

I am also interested. Mr. Editor, in the two other Railway Companies of the county; in one we have had our half-yearly meeting lately to *no great gratification;* in the other we also meet very soon, and I anticipate no better results; but I trust that some influential shareholder will move for such a scrutiny as before alluded to, and let us understand the real nature of our property and prospects. We also are in the hands of Directors, and Engineers, and for anything I know, similar mismanagement may be carrying on. All are now honourable men, till their conduct is scrutinized; but are they all sagacious, understanding, business men, and are our own Engineers prudent, economical, and trustworthy?

I am, Sir, yours, &c.,

A SHAREHOLDER.

Durham, September 26, 1842.

Accident on the South-Western Railway.—It having been currently reported this morning that a serious accident had occurred to the up train on the South-Western Railway, in consequence of the boiler bursting, by which the engineer and three passengers lost their lives, we made inquires at Vauxhall, and learn that the mail train was detained this morning, near Basingstoke, for two hours, owing to some derangement of the engine's machinery. We are happy to state that no lives were lost, nor any person injured.—Sun of Tuesday.

RAILWAY BILLS IN THE HOUSE OF COMMONS.

We extract the following from a return just issued to an order of the House of Commons, dated the 1st of August, 1842. It is entitled, "A List of the Private Bills which, in the present Session, have been treated as Opposed Bills, together with the number of Days which the Committee on each such Bill has sat; the Names of the Members selected, and the number of Days on which each selected Member has served on such Committee; number of Petitions presented in conformity with the Standing Orders; number of Petitions for leave to present Petitions; number of Petitions referred to Standing Orders Committee; number of Petitions rejected by Standing Orders Committee; number allowed to proceed; number of Bills brought from the Lords; number of Bills read the first time; number of Bills read a second time, and committed; and number of Bills reported:"—

Name of Railway Bill.	Names of Members selected.	Number of days on which each Member attended.	Number of days during which Committee sat.	Day appointed for Committee on Bill.	Postponements.	Remarks.
Bolton and Preston	Lord C. Fitzroy.....	.....	.....	April 21 ..	.....	Attended by seven members on the Speaker's list.
	Mr. G. W. Heneage....	.....	One.			
	Mr. Grogan					
	Captain Rous.....	One.				
	Mr. Farnham.....	One.				
	Mr. Thorneley	Chairman.				
	Mr. P. H. Howard					
Belfast and Cavehill	.....	.....	.....	April 25 ..	.....	Committee discharged, parties not being prepared to proceed.
Belfast and Cavehill, re-appointed	Colonel Powell.....	Four.....	.....	May 24....	.....	Attended by three members on the Speaker's list. Three selected members, but only one member on the Speaker's list being present on the third day, the Committee were unable to proceed. The case was reported to the House, and leave given to proceed with four members.
	Mr. A. Cresswell					
	Mr. Savile Ogle.....	Four.				
	Mr. Childers					
	Mr. Ormsby Gore.....					
	Sir G. Strickland	Chairman .	Four.			
Bristol and Gloucester ..	Mr. James	One	.....	May 2	.....	Attended by three members on the Speaker's list.
	Colonel Bruen					
	Colonel Westenra.....					
	Mr. G. E. Welby	One				
	Lord C. Manners	Chairman .	One.			
	Mr. Wodehouse	One.				
	Mr. Lambton					
	Mr. Antrobus.....					
Cheltenham and Great Western Union	Lord Worsley	Chairman .	Five	March 17 ..	.....	Attended by eleven members on the Speaker's list.
	Mr. Lawson	Five.				
	Viscount Marsham	Five.				
	Mr. Rashleigh					
	Mr. Halford					
	Mr. J. Tollemache	Four.				
Dundee and Arbroath ..	Mr. O. Morgan	.....	.....	April 20 ..	May 2	Attended by three members on the Speaker's list.
	Mr. Rice Trevor					
	Colonel Conolly.....					
	Mr. M. Milnes	One.				
	Mr. Towneley	One.				
	Mr. Buck					
	Mr. Archbold	Chairman .	One.			
Edinburgh and Glasgow .	Mr. Granville Harcourt	Chairman .	Two	March 21 ..	March 22..	Attended by eight members on the Speaker's list. The members for Glasgow and the shires of Lanark and Dumbarton were added by a resolution of the House.
	Mr. Legh	Two.				
	Colonel Wyndham	Two.				
	Mr. J. Abel Smith	One.				
	Sir T. Esmonde.....	One.				
Glasgow, Paisley, & Ayr.	Captain Hatton	Two	.....	March 18..	.....	Attended by eight members on the Speaker's list. Captain Hatton being prevented from attending on the last day, the Committee, by leave of the House, proceeded with two selected members.
	Mr. Grimsditch.....	Three				
	Sir J. Easthope.....	Chairman .	Three.			
	Mr. Broadley					
	Mr. Smythe					
Great North of England .	Mr. O. Morgan	.....	.....	April 18 ..	.....	Attended by seven members on the Speaker's list.
	Colonel Rushbrooke ..					
	Mr. E. P. Shirley (Monaghan county).....	One.				
	Mr. F. F. Berkeley (Bristol)					
	Mr. T. Sheppard	Chairman .	One.			
	Mr. E. Rice					
	Mr. Cochrane.....	One.				
London and Greenwich (No. 1)	Mr. Packe	.....	.....	March 7 ..	.....	Attended by five members on the Speaker's list.
	Mr. Forbes Mackenzie..	Chairman .	Three.			
	Sir J. M'Taggart	Three.				
	Mr. Mundy.....	Three.				
	Sir T. Colebrooke	Three.				
London and Croydon; Grange Rd. Approach	Mr. F. W. Knight	.....	.....	April 21 ..	April 25 ..	Attended by six members on the Speaker's list. The Chairman was unavoidably absent during two days. In the interim, Mr. Bagot was called to the chair, and leave given to proceed with two selected members.
	Sir Ralph Lopes					
	Mr. R. Clive	Chairman .	Six.			
	Mr. Dawnay	Six.				
	Mr. A. Cresswell					
	Mr. Lefroy					
	Mr. H. R. Yorke					
	Mr. W. Bagot	Six.				
London and Blackwall ..	Mr. Gally Knight.....	.....	.....	April 21 ..	.....	Attended by seven members on the Speaker's list.
	Captain Layard.....					
	Mr. Stuart Wortley	Chairman .	Two			
	Mr. Langston.....	Two.				
	Mr. Rundle.....					
	Mr. C. W. Howard					
	Mr. W. H. Stanton	Two.				
	Mr. R. B. Hale					
London and Greenwich (No. 3)	Lord W. Paget	....	.....	June 1	.....	Attended by three members on the Speaker's list.
	Lord A. Hervey.....					
	Mr. Bannerman.....	One.				
	Mr. Alexander					
	Mr. Hope Johnstone ..	Chairman.	One.			
	Sir John Mordaunt	One.				
	Mr. C. Gorlng					
	Mr. Stafford O'Brien ..	One.				
Northern Union, Newcastle and Darlington Junction	Mr. Villiers Stuart	Three	.....	April 12 ..	April 14 ..	Attended by twelve members on the Speaker's list.
	Sir C. Lemon.....					
	Mr. T. D. Acland.....					
	Mr. Bernal.....					
	Mr. Wm. Miles.....	Chairman .	Three			
	Lord Northland.....	Three.				
	Mr. Archbold.....					
Stanhope and Tyne	Mr. Escott.....	Seven	.....	March 10..	.....	Attended by fifteen members on the Speaker's list.

	Lord Clements					

EDINBURGH AND GLASGOW RAILWAY.

[From a Correspondent.]

The receipts on this line for the past three months amount to	£36,380
If for the next 13 weeks they average 2,000*l.*, or ..	26,000
We shall have for the half-year.....	£62,380
Deduct working expenses, say 33½ per cent	£20,793
Half-year's interest on 375,000*l.* of loan..	9,375
	30,168
Leaves for division.....	£32,212
This upon whole shares	£900,000
And (say) two-fifths of quarters	90,000
Or, of capital.....	£990,000
Would afford a dividend of 6 per cent., viz.	29,700
With surplus of.....	£2,512

In addition to what is in hand.

Part of the loan is effected at 4 per cent., and the working expenses will probably be under one-third, both of which circumstances are in favour of a higher return.

A LAMENT FOR OLD TIMES—EFFECTS OF RAILWAYS—(*From an Old Roadster*).—Maidenhead, once (indeed within the past four or five years, a most flourishing little town, and the great thoroughfare from the metropolis to nearly all the western districts of England, is now in a most miserable plight, with reference to the great decrease in its trade since the opening of the Great Western Railway. Who that has travelled formerly (for these are now "things that are gone") by the mail, leaving the White-Horse Cellar, Piccadilly, at ½-past 8 o'clock in the evening, does not recollect the "nice hot supper" that awaited him at the Bear Inn, Maidenhead, where "a good 20 minutes" were allowed him to stow away some three or four shillings' worth of boiled fowls and ham (as the case might be) to support his inward man during the night? Alas! the glories of the Bear are fast fading away, and for ever. This celebrated hostelry is about to be permanently closed as a public inn. Nearly all the towns in the vicinities of the lines of the railways in Middlesex, Berks, Surrey, &c. (such as Hounslow, Egham, Staines, Colnbrook, &c.), have equalled suffered by the railways.

SMOKING IN RAILWAY CARRIAGES.

A CORRESPONDENT of the *Mechanics' Magazine* complains of the course taken by the Management of the London and Brighton Railway, with respect to a tobacco-smoking passenger. He thus states the case:—

"A short time since, a foreigner travelling in the coupée of a second-class carriage on the Brighton Railway, smoked a cigar. The guard warned him that the practice was not allowed. Nevertheless, the gentleman, most likely used to the way such things are managed on the Birmingham line, when the guard retired from performing his duty, continued to smoke, and finished his cigar. At the next station, he was met by a demand for his ticket, ordered out of the coupée, and subjected to the following treatment. The guard, addressing one of the officers on the platform, warned him that "that person was not to be allowed to proceed to London by any train that night," and there the gentleman was left! The guard, on being remonstrated with, very civilly replied he could not help it—such were his orders—he should be discharged, or fined, if he did not execute them—and there was a Director in the next carriage. Now, Sir, I ask whether such a mode of punishment ought to be tolerated in a free country? If such is the rule of the Brighton line, it ought to be distinctly notified to every passenger. Complaint at its enforcement could not then be made, although we might exclaim against its severity. Surely, to have taken the man's ticket away, and forced him, before he could proceed to London to buy another, would have been punishment enough. Nine shillings and sixpence for smoking a cigar is paying dearly for one's whistle, but arbitrarily to debar him from proceeding by the same train was, to my thinking, most unjust and cruel."

We wish the Directors of the Brighton Railway (who as the correspondent in question very truly remarks "are not over popular") had nothing more serious to answer for than this enforcement of a very proper regulation. The passenger, having been warned, suffered most properly for persisting in violating the laws of the Company. Our contemporary of the *Mechanics' Magazine*, although he appears to deem his correspondent's complaint "reasonable," says, the circumstance "brings to mind the remedy once facetiously proposed by another of our contributors, for the nuisance—for such it undoubtedly is—the commission of which involved his foreign friend in such unpleasant consequences. It was to this purpose—that smoking on railways should not be absolutely prohibited (for the liberty of the subject's sake!) but that the smokers should be obliged, by Act of Parliament, as the engines are—*to consume their own smoke.*"

TIME BARGAINS IN SHARES.—The publication of a clause in the new Bankrupt Act, which will shortly come into operation, has caused some uneasiness among the dealers in shares. This Act will reach most of the parties usually engaged in time-bargains, and the clause particularly alluded to provides that all certificates shall be void if the bankrupt, "in any gaming, or wagering, loses 20*l.*, or within one year next preceding his bankruptcy has lost 200*l.* by any contract for the purchase or sale of any Government or other stock, where such contract was not performed within one week after the contract, or *where the stock bought or sold was not actually transferred or delivered in pursuance of such contract.*" A more complete death-blow to time-bargains can scarcely be conceived.

SHEFFIELD AND MANCHESTER RAILWAY.—We understand that in consequence of some delay in getting possession of the land, Messrs. Buxton and Clark have not yet been able to set to work an additional number of hands. It is satisfactory to learn that the men who are employed work very heartily, and have already made surprising progress. It is moreover stated that they are able to earn from 1s. 6d. to 2s. per day, but as they become more accustomed to the labour, we trust they will be able to improve upon this. The Board of Guardians with a view to the employment of a greater number of men have requested the Directors to let another contract, and we understand that the question is to be considered at the meeting of the Directors on Monday next.—*Sheffield Independent.*

THE ATMOSPHERIC RAILWAY.—The ceremony of formally taking possession, "sod and twig," of the ground over which the atmospheric railway is to run between Kingstown and Dalkey took place on Monday. The Chairman, F. Low, Esq.; Vice-Chairman, James Perry, Esq., and Treasurer, James Pim, Esq., of the Dublin and Kingstown Railway Company, received possession at the hands of Mr. Gibbons, the authorised officer of the Board of Works. The Right Hon. T. F. Kennedy, with a number of gentlemen interested in the undertaking, were present. The works will be proceeded in with every celerity, and in the early part of next year it is confidently expected the line will be open for the conveyance of the public.—*Dublin Evening Mail*, Sept. 25.

MR. HALL'S "SMOKE-CONSUMING" PATENT.

Liverpool, September 20.

To W. Y. Caister and Samuel Crompton, Esqs., Honorary Secretaries to the Manchester Association for the Prevention of Smoke.

GENTLEMEN,—Mr. Hall having adopted the extraordinary proceeding of lithographing a letter of mine, addressed to him in 1839, and, as he himself states, of "sending a fac-simile to every member of the British Association at the late meeting held at Manchester," accompanied by a letter from himself to you, containing much misrepresentation, I submit the following observations on the same; and, first, to state that this insidious and unwarrantable proceeding, being taken without my knowledge, although meeting and speaking to Mr. Hall at the meeting, I had no opportunity of exposing its fallacies and errors before the meeting had separated. I first saw these lithographs when Mr Houldsworth, of Manchester, handed me the copy addressed to himself, remarking, however, that it was not worth replying to, and I therefore took no further notice of it.

Mr. Hall having subsequently tried his plan of burning coal in the *Star* locomotive-engine, at Liverpool, I was induced to examine his mode of admitting atmospheric air, and found it to be a direct infringement of the principle and mode adopted by myself, although most injudiciously applied by him, as I shall hereafter prove. Three several trials were made in July, the last in the presence of Mr. Hall himself, and all equally unsuccessful, as stated to me by a person to whose word and opinion I attach more credit than to that of Mr. Hall; and although the latter states that "the apparatus acted perfectly well, and the smoke was consumed effectually"—the latter, however, being a chemical and physical impossibility.

Apprehensive that the principle of my own patent might be prejudiced by Mr. Hall's misapplication of it, I wrote the letter which appeared in the *Mechanics' Magazine* of the 3d instant (and for which Mr. Hall has foolishly endeavoured to frighten or silence me by the threat of legal proceedings), undertaking to prove the three propositions there stated. This letter of mine brought forth Mr. Hall's *second* letter, inserted as an advertisement in the *Mining Journal* of the 10th instant. My present purpose is to reply to both, the subject being one of great public interest, involving several important chemical and practical details, and being directly connected with the object to which, during the last eighteen years, as a matter of business, and as Managing Director of the Dublin Steam Company, I have paid great attention; and on which, also, I am now engaged, with a view to the publication of the second part of my *Treatise on Combustion, Chemically and Practically Considered*.

Mr. Hall observes (as the plausible, but certainly not the real motive for his letter), "I have been told by several that I am a plagiarist, and merely an imitator of Mr. Williams, and that my methods of supplying air to furnaces are, in fact, essentially the same. As this opinion appears to be daily gaining ground, I feel it a duty I owe to myself, although I do not wish to give offence to Mr. Williams" (how considerate, at the time he was stabbing me behind my back), "to lay before you such an explanation as will enable you to judge who is the plagiarist or the imitator."

Now, this plausible statement is manifestly got up for a special but very different purpose than this avowed, the real purpose being to induce a belief that a similarity did exist, as regards his operations on *land* and *marine* boilers. Cunning, however, often overreaches itself. Certainly no one who has looked into the subject could say there was resemblance, either in principle or practical details, between the place, mode, or conditions under which I introduce *cold* air to the gaseous matter of coal, and his mode of introducing *hot* air, as described in his patent of 1838, the only one I have now to deal with. As regards locomotive engines, I have never even attempted their improvement in anything that regards combustion, or the admission of air, and therefore this pretended or assumed resemblance could not apply—indeed, I very nearly agree in opinion with Mr. Kearsley, that "coal cannot be advantageously used as fuel for locomotive engines under their present construction." As to land and marine boilers, Mr. Hall's plans and mine are directly opposed to each other, and therefore I make no charge of imitation; but I do assert that the mode now adopted by Mr. Hall in locomotive engines is an imitation, both in principle and practice, of my patent.

Mr. Hall's assumed evidence of plagiarism on my part is given as follows:—Not by reference to the patents, or their *real* dates, or to the furnaces themselves; but to the single fact, that in 1839 I wrote him a letter, asking what his patent was? Mr. Hall observes—"The *first* patent which I obtained for the consumption of smoke bears date the 24th June, 1836. On the 12th April, 1839, Mr. Williams addressed a letter to me respecting it, of which I annex a fac-simile." This is both cunning and incorrect. It was not "*respecting it*" (the patent of 1836) on which I asked for information, for it then lay before me, as inserted in the *Repertory of Patent Inventions* for May, 1837, and I should have read it through, had it been, as Mr. Hall states, "for the *consumption of smoke*," and thus have saved me the trouble of writing. But I certainly had not taken the trouble of reading his very long specification, not expecting to find a patent for the "*consumption of smoke*" under the title it bore—namely, for "improvements in propelling vessels, also improvements in steam-engines, and in the method or methods of working some parts thereof." My letter to Mr. Hall was in consequence of hearing some flattering accounts of his proceedings, and thinking he had *some other* patent, or some better hot air principle than that of Mr. Coad, with which latter I was but too well acquainted, and of the failure of which my lithographed letter shows, in direct terms (and now, fortunately for me), that I was aware.

Of Mr. Hall's reply I have no recollection, and, certainly, was not likely to preserve it. I am now, however, curious to know what "scientific views" he had favoured me with, for they must be orignal, as coming from one who manifestly does not perceive the chemical distinction between the combustion of *coal gas* and that of *smoke*. My attention, therefore, being again directed to his propelling patent of 1836, I perceived at once that there was nothing in it—that it was but a second edition of Coad's patent of July, 1835 (See *Newton's Journal for July*, 1836), and even a direct plagiarism, or theft, as regards the *mode* of heating the air—differing only in the *place* where such air was to be admitted—Coad adopting the bridge and Hall the furnace, and both being chemically and practically wrong, as I have already proved!

Wholly opposed as I was, and am, to the use of hot air, *when the combustion of the gaseous matter of coal is concerned*, my letter at once proves that I was not likely to be an imitator of Hall, who was himself but an imitator of Coad; and the more so, as the patent which I was then about taking out, after many experimental proofs, was directly opposed, in principle and details, to both. Strange proof of plagiarism on my part, one would think.

But now as to my charge of duplicity, as well as plagiarism, against Mr. Hall. In his advertisement letter (See *Mining Journal* of the 10th inst.) he observes—"Whether Mr. Williams or myself is the party guilty of piracy, will be shown by my (cunning and deceptive) explanation of the respective dates and principles of our patents in my above mentioned letter, and a fac-simile of the one from that gentleman to me—*proh pudor!*" To this, I think, every right-minded man will echo *proh pudor!* Mr. Hall, when he finds that this "explanation" is wholly and designedly deceptive, and the reference to "dates and principle" shamefully inaccurate, by reason of his having designedly suppressed any allusion or reference to the real point in question—namely, his own *second* patent: the very one, and the only one, in regard to which I charge him with plagiarism.

Mr. Hall says—"The *first* patent which I obtained for the consumption of smoke bears date the 24th June, 1836." I ask, why has he not given the date of his *second* patent? Was it candid or honest to suppress it? Why omit, in these two letters, any reference to this main feature in the case? Why omit the part of Hamlet? Manifestly because it would at once have disposed of the whole question, and put him out of court, as well as exposed the unworthy manœuvring which pervades the whole. I have now before me an office copy of this *second* patent, and find the date to be the 14th January, 1841, and the specification enrolled 14th July, 1841—just two years subsequent to the date of my patent. Now, this is the very patent under which his present locomotive exploits are carried on and claimed, and not that of 1836—and against this it is which I charge piracy. The title to this patent is not for propelling steam-vessels or working steam-engines, but for "improvements in the combustion of fuel and smoke."—Combustion of smoke!

The very long and confused specification of this second patent, the object of which is manifestly to correct the errors into which he had fallen in his first, and at the same time so to confound the two as to blind the public and cover the deception, has not been published, as far as I have seen; a brief notice, however, is given of it in *Newton's Journal of Arts and Patents*, for October, 1841; a perusal of it will show how ingeniously Mr. Hall has contrived to dove-tail the errors of the first with the corrections of the second patent, and as I shall hereafter explain Let any candid man now read Mr. Hall's two printed and abusive letters against me, and say how far he has any claim hereafter to credit on his own mere assertion, and let the right name be given to such designed misrepresentation and wilful suppression of dates. In compassion to Mr. Hall, I will suppose him to have forgotten the date of his second patent, and to have believed that it was 1838, and not 1841, for it appears that he actually conveyed that idea to the Editor of the *Mining Journal* (See Number for September 10).

Mr. Hall asks—"Does Mr. Williams lay claim to the exclusive use of cold air?" My answer is—No; but I do lay claim to its exclusive use in a peculiar manner—and just as both he and Coad have claimed the exclusive use of hot air, each in his own peculiar manner, and also to their peculiar modes of heating it; but Mr. Hall will find he has no legal right, by a patent taken out in 1841, to adopt the leading feature of mine of 1839, under colour of an improvement of his first patent of 1838. Here is the whole case, and here the dates are defined.

With reference to his operations on the *Star* locomotive engine, Mr. Hall speaks of but one trial; he knows there were no less than three trials in July, and, as already stated, all were failures. Further trials have this week been made, and with equal ill success. With respect to the last, made this day (Sept. 20), Mr. Stripe, who was permitted to accompany the engine, reports to me as follows:—"The *Star* went off this morning with a train of two waggons of timber, and twelve empty waggons. The steam was so completely exhausted by the time we reached the Sutton incline, that the train came to a stand. On returning to Liverpool the same deficiency of steam was experienced—the train having to be put twice into sidings to allow the passenger trains to pass. A great body of smoke almost constantly issued from the chimney, and never entirely disappeared. Seventeen bags of coal were consumed on the trip, instead of about five of coke, the quantity usually consumed." No doubt Mr. Hall will attribute this to the design, or to the fault, of the Engineer, as he did in the case of Mr. Kearsley. Now I myself, in company with other gentlemen who were waiting its arrival, can vouch for this important fact, and which all were sensible of, that the back part of the smoke-box had been redhot during the trip—thus confirming Mr. Kearsley's Report. The cause of this I will explain when I come to comment on Mr. Hall's injudicious and unchemical introduction of the atmospheric air. My further comments shall appear in my next.

I am, gentlemen, your obedient servant,

C. W. WILLIAMS.

MR. SAMUEL HALL'S PATENT SMOKE-CONSUMING APPARATUS.—The following papers may be had gratuitously, on application by letter to Messrs. H. and W. Good, No. 60, Moorgate-street; or of Mr. Hall, No. 18, King's Arms Yard, London,

Refutation of Mr. Josiah Kearsley's incorrect Report to the Directors of the Midland Counties' Railway respecting the above Apparatus.

Remarks on Mr. John Fox Bell's Defence (if Defence it may be called) of Mr. Josiah Kearsley's misstatements, as advertised by Mr. Bell in the *Railway Times*, the *Railway Magazine*, and the *Mining Journal*, of the 3rd instant. Also,

An Exposé of the pretended claims and overweening vanity of Mr. Charles Wye (*alias* Counsellor) Williams, as displayed in his paper published on the 3rd instant in the *Mechanics' Magazine* and the *Mining Journal*.

THE YORKSHIRE FIRE AND LIFE INSURANCE COMPANY, Established at York, 1824, and empowered by Act of Parliament.—CAPITAL, £500,000.

PATRONS.

The Archbishop of York	Sir G. Strickland, Bart., M.P.
The Marquis of Londonderry	Sir Francis Lawley, Bart.
The Earl Fitzwilliam	Sir W. B. Cooke, Bart.
The Earl of Tyrconnel	Sir W. A. Ingilby, Bart.
The Earl of Zetland	Sir Tatton Sykes, Bart.
The Earl of Yarborough	Sir E. M. Vavasour, Bart.
The Bishop of Ripon	Sir S. Crompton, Bart., M.P.
Viscount Morpeth, M. P.	The Archdeacon of York
Lord Wharncliffe	Archd. of the East-Riding
Lord Feversham	The Archd. of Cleveland
Lord Hotham, M. P.	J. Hen. Lowther, Esq., M.P
Lord Howden, K.C.S.K.L.H. &c.	G. F. Barlow, Esq., Robert Cracroft, Esq.
Lord Wenlock	Robert Denison, Esq.
Lord Worsley, M. P.	P. Saltmarshe, Esq.
Hon. E. R. Petre	Marmaduke Wyvill, Esq.

Actuary and Secretary—Mr. W. L. NEWMAN, York.

London Agent for the Life Department—Mr. EDWARD HENWOOD, 46, Watling-street.

The attention of the public is requested to the terms of this Company for LIFE INSURANCES, and especially for FEMALE LIVES.

FIRE INSURANCES are also effected by this Company, on the most moderate terms.

FARMING STOCK Insured without the Average Clause.

Prospectuses, with the Rates of Premium, and every information, may be had at the Head Office in York, or of any of the Agents.

TO DIRECTORS AND ENGINEERS.—A Gentleman who has been engaged in the construction of several lines of Railway wishes for a Situation, as Assistant Engineer. He has a good practical knowledge of Railway Work in all its various details, including Surveying, Levelling, &c. &c., and has had considerable experience in the getting up of Parliamentary Plans and Sections for Railways, with books of reference thereto. The highest Testimonials as to character and ability can be shown.

Address by letter, post paid, to J., *Railway Times* Office

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

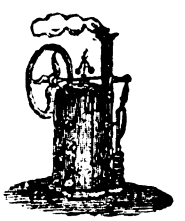
Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

FALMOUTH HARBOUR.—TO ENGINEERS, CONTRACTORS, and OTHERS.—The Falmouth Harbour Committee are desirous of receiving TENDERS for Deepening part of the Inner Harbour of Falmouth, and for removing therefrom either 30,000, 60,000, or 90,000 tons, as may hereafter be decided upon.

Persons Tendering must deliver separate estimates for the several quantities, and state separately the price per yard or ton for which they will raise and discharge the soil, and for which they will remove and deposit it. The work to be accomplished will require sufficient power to remove the soil from a depth of water not greater than 25 nor less than 8 feet.



All communications to be made to the Falmouth Harbour Committee, or to W. J. Genn, Esq., Secretary thereto, at whose office plans and specifications of the work required to be done may be seen, and every information obtained, and where Tenders will be received until the 13th day of October next.

There is no rock within the space proposed to be excavated. The material to be dredged is well adapted, and is in demand for manuring purposes.

Specimens of the soil already raised will be sent to any parties if desired.

Dated 13th September, 1842.

PATENT PORTABLE STEAM-ENGINE, OR FACILITATOR.—NATHAN GOUGH, Engineer and Machine Designer, 46, Water-street, Manchester, respectfully calls the attention of Builders, Contractors, Excavators, Masons, Joiners, proprietors of Stone Delphs, Coal, Metal, and other Mines, to the following advantages possessed by his Patent Portable Steam-Engines, or Facilitators, over all others. They are from three to eight horses' power, and are a complete *machine*, being connected and fitted up with every requisite before leaving the manufactory, so that they can be set to work immediately on arriving at their destination, and the purchaser can also ascertain his whole outlay *before*hand. They can be fixed on wheels to move from place to place, without disconnecting their machinery. They are very durable, easily managed, made of the best materials and workmanship, each being fitted up with a metallic piston, governor, force-pump, water-regulator, heating chamber, &c. &c. They consume less fuel than any other description of engine, which, added to their portability, renders them particularly well adapted for working where fuel is scarce or expensive

These Engines have been employed in raising building materials for erecting the Manchester and Birmingham Railway Station; in pumping water and raising earth for the excavation of the Junction Canal; in deepening the River at Manchester, and in making the North Midland, the Midland Counties', Southampton, and other Railways; and also at the Chorley Tunnel, the New Houses of Parliament, London, and the Victoria Bridge, Manchester, where they may be seen at Work.

The following are a few of the many purposes for which these Engines will be found serviceable:—

Hoisting Materials for Buildings, Stones in Quarries—Grinding Mortar, or Clay for Bricks—Pumping Water out of the Foundations of Bridge Piers, River Walls, &c—Raising Water for Gentlemen's Mansions or Public Institutions—Drawing Materials up Inclined Planes—Raising Earthwork for Railways and Canals—Drawing Waggons (in the place of Children), Pumping Water, and Ventilating at the bottom of Coal Pits, &c. &c.

Engines and Pumps let out for Hire.

NEW TRAVELLING MAP OF ENGLAND.

Published this day, price 4s. 6d., handsomely done up in a case, and labelled in gold,

BLACK'S ROAD and RAILWAY TRAVELLING MAP of ENGLAND and WALES, carefully compiled from the Maps of the Ordnance Survey, and beautifully engraved by Sidney Hall; with all the Roads, Railroads, and other Topographical information required by the Tourist or Traveller on Business.

Also, lately published,

Black's Travelling Map of England. 2s. 6d.
Black's Travelling Map of Scotland. 2s. 6d.
Black's Travelling Map of Ireland. 2s. 6d.

Adam and Charles Black, Edinburgh; Longman and Co., Simpkin, Marshall, and Co., Whittaker and Co., and Hamilton, Adams, and Co., London.

DOVER AND LONDON (SOUTH-EASTERN) RAILWAY.—The following Coaches are in connection with the above Railway, and depart from the

Golden Cross, Charing Cross,
33, Regent Circus, Piccadilly,
Swan-Two-Necks, Lad-lane,
Spread Fugle, Gracechurch-street,
Universal Office, Piccadilly,
George and Blue Boar, Holborn, and
Cross Keys, Wood-street, Cheapside,

For	Trains.
Hastings and St. Leonard's, at	10 30, 1 30 and 4
Hawkhurst and Rye.....at	1 30
Cranbrook and Tenterden ..at	1 30 and 4
Dover and Folkestone.....at	10 30 and 1 30
Sandgate and Hythe.....at	10 30 and 1 30
Maidstone..... at	7 30, 10 30, 1 30, 4, and 6 15
Ashford .....at	10 30, 1 30 and 4

And to Tunbridge Wells at 7¼, 9¼, 10¾, 1¼, 4 and 6¼.

Omnibuses to and from every Train.

Parcels received at the above Offices, and duly forwarded for the above places, and all parts on this line of Railway.

B. W. & H. HORNE, Proprietors and Agents.

GUARANTEE SOCIETY.—Established by Act of Parliament.—To afford Security to Bankers, Merchants, Commercial and Trading Communities in general, is the *first* object of this society; to relieve relatives and friends from painful obligations and responsibilities the *second*.

The experience of the first year (during which the Society has been eminently successful) already numbers amongst its Patrons the principal Bankers, Merchants, and Public Institutions in the Metropolis and provincial districts, and by providing Guarantee for their integrity, has secured a competency for several hundred individuals:—

DIRECTORS.

Thomas Attree, Esq.	Lieut.-Col. Prosser,
James Colquhoun, Esq.	James Row, Esq.
William Croft, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. E. Shuttleworth, Esq
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col. Moody, R. E.	B. G. Windus, Esq.
G. Palmer, Esq.	

Standing Counsel—R. Ryder Dean, Esq.

Solicitors—Messrs. W. and S. Cotton, 76, Basinghall-street.

This Society presents to the public (and particularly to Bondsmen) the following advantages:—

1. No individual need hereafter incur the responsibility of becoming security for the *integrity* of another.

2. Individuals who are already surety for the *fidelity* of others, may immediately protect themselves from loss by insuring with the Society.

3. The expense and painful obligation of obtaining approved sureties, or of replacing them when removed by death or otherwise, will be altogether obviated.

4. All risks attending *irresponsible* sureties will be removed.

5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, or being desirous of holding, Confidential and Responsible Situations, the Guarantee Society presents immediate Facilities, where, for a moderate Premium, Surety for Integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, 28, Poultry, London.

By Order,
THOMAS DODGSON, Secretary.

THAMES WHARFAGE.—TO SOUTH AND WEST COUNTRY CARRIERS, WHARFINGERS, STEAM-BOAT COMPANIES, &c.—TO LET, on the Surrey bank of the Thames, near Vauxhall Bridge, and immediately adjoining the Wharf of the Southampton Railway on the London side, the premises known as BELMONT HOUSE and GROUNDS, comprising nearly Three Acres of Land, with a frontage on the Thames, an extensive abutment in the Wandsworth-road, and another in Nine Elms-lane, within — yards of the Railway Terminus. The premises are most advantageously situated for the business of South and West Country Carriers, Wharfingers, Engineers, or Distillers, or for a Steam-boat Pier, or any business requiring great space, and a command of Land and Water Frontage.

To view apply on the Premises; or to Messrs. Barron and Cullen, Solicitors, 29, Bloomsbury-square.

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by

FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter-press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bognor, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by ARTHUR FREELING.

"A work in which the elegant and the useful are eminently combined."

London: Ackerman, Strand; *Railway Times* Office, Tilt & Bogue, and Bell & Wood, Fleet-St.; and all Booksellers.

CIVIL ENGINEERING—A[illegible]—UNIVERSITY COLLEGE, London.—The Prospectus of the Courses of Instruction in this Department may be had at the Office of the College. The Classes are as follow:—

Mathematics—Professor De Morgan.
Natural Philosophy, Mechanics, &c.—[illegible]
Chemistry—Professor Graham.
Geology—Professor Webster.
Drawing—Teacher, Mr. G. B. Moore.
Civil Engineering—Professor Vignoles.
Architecture—Professor Donaldson.

R. G. LATHAM, A.M., Dean of the [illegible]
CHARLES C. ATKINSON, Secretary to the Council.
1st September, 1842.

NEW EDITIONS of the following useful Works are [illegible] published at the *Railway Times* Office, 122, Fleet-street:

TUCK'S MAP OF THE RAILWAYS for 1842, throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper cover[illegible] canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to August. Price 1s., in cloth.

ROBINSON'S RAILWAY DIRECTORY for 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

TABLES OF HACKNEY CARRIAGE[illegible] from the BIRMINGHAM RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand, with a Map of London. Price 6d.

TABLES OF HACKNEY CARRIAGE[illegible] from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand, with a Map of London. Price 6d.

THE ELEVENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., [illegible] free, on receipt of a Post office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive *indulgence*, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; Sowler, No. 4, St. Ann's-square, Manchester; [illegible] South Castle-street, Liverpool; Fannin and Co., [illegible] ton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now [illegible] to the public, *ten thousand copies having been circulated since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the station of a *parent*, a *preceptor*, or a *clergyman*."—*Sun* evening paper.

"This is a work that we fear there exists [illegible] for to cause us to hesitate to recommend it for perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vice, is succinctly treated, and divested of all medical technicality; plain and easy directions are given for the best mode of pursued in all cases, however complicated or apparently hopeless. To the married, as well as [illegible] little work alike affords consolation and [illegible] cases, and we are doing a service to society in [illegible] ing it to general notice."—*Essex and Herts Mercury*.

"Messrs Curtis's work, entitled Manhood, is one of the few books now coming before the [illegible] ect which can lay claim to the character of [illegible] professional, at the same time that it [illegible] all who read it. The moral and medical [illegible] it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be [illegible] their residence, No. 7, Frith-street.

Country Patients are requested to be [illegible] in the detail of their cases. The [illegible] accompanied by the usual consultation [illegible] In all cases the most inviolable secrecy may be [illegible]

LONDON: Printed by JAM[illegible] 138, Aldersgate-street, in the Parish of St. [illegible] out, Aldersgate, in the City of London, and [illegible] him at the *Railway Times* Office, No. 122, Fleet-[illegible] (facing Saint Bride's Church), in the Parish of St. [illegible] Fleet-street, Middlesex.—Saturday, October 1, 1842.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 249. Vol. V.—No. 41.] SATURDAY, OCTOBER 8, 1842. [Price 6d.

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to grant Mortgages of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

Interest Warrants, for the whole term for which the Loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London or Bolton, as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

Bolton, 24th May, 1842.

BRISTOL AND EXETER RAILWAY.—Notice is hereby given, That in pursuance of a Resolution of the last General Meeting of Proprietors, the Directors of this Company are ready to receive Tenders of Loans of Money, in sums of not less than £200, and for terms of not less than three, nor more than seven years, on security of Loan Notes, under the Corporate Seal of the Company, bearing interest at the rate of 4½ per cent. per annum, payable half-yearly.

Tenders, expressing the sum, the term of years, and the residence of the Lender, to be addressed to the Secretary.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Bristol Office, 30, Broad street,
September 2, 1842.

Interest-Warrants will accompany the Loan Notes.

BRISTOL AND EXETER RAILWAY COMPANY.—Dividend of £1 8s. per Share for the Half-Year ending on the 6th of October.—Notice is hereby given, That Warrants for the above Dividend will be transmitted to the Shareholders in this Company in the course of the present month.

By order of the Directors,
J. B. BADHAM, Secretary.

Bristol Office, 30, Broad-street.
5th October, 1842.

RUSSIAN STEEL IRON—C C N D.—The undersigned having been appointed sole Agents for the Messrs. de Demidoff, in England, the above mark of Iron can only be obtained through them, at

18, HIGH-STREET, HULL, and
29, AUSTIN FRIARS, LONDON.

At Liverpool, they have appointed Messrs. Carne and Telo; and at Bristol, Messrs. P. Maze and Son, their Agents.

The undersigned particularly request all buyers of the C C N D to make their purchases through them, or through their Agents, which will effectually put a stop to a fraud which is extensively practised by unprincipled parties selling a loose, roaky, inferior Iron, with a counterfeit mark of the C C N D, by which Manufacturers have been grossly imposed upon, and the old, favourite, genuine mark, unjustly discredited.

ANTHONY AND GRAHAM.

29, Austin Friars, 7th September, 1842.

TO ENGINEERS, CONTRACTORS, &c.—A Gentleman, of middle age, and of active habits, wishes for an Engagement on any Railway, or other Engineering work. He has had many years' practical experience on works of Drainage, Canals, Harbours, Docks, and Railways, would make himself useful in taking Levels, and preparing Sections or Calculations, and is particularly qualified to superintend workmen. He can be well recommended, and requires but a moderate salary. Has no objection to go abroad.

Address, pre-paid, A. B., *Railway Times* Office, 122, Fleet-street, London.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph: with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

CRANES, ROPE BLOCKS, AND SCREW JACKS, manufactured by Ellis and Noton, Salford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs, and Warehouses, to lift from 5 cwt. to 20 tons and upwards, either by hand or steam power; Patent Signal Switches for Railways; Travelling and Fixed Crabs for builders, and Hoisting Tackle of every description, on the most improved principle.

Drawings of the above may be seen, and particulars obtained, at the works in Manchester, and at the office of C. F. Cheffins, 9, Southampton Buildings, Holborn, London.

HAVRE AND ROUEN RAILWAY (in continuation of the Paris and Rouen, which will be opened in May next).

ENGLISH DIRECTORS.

Sir John Easthope, Bart., M. P.
William Chaplin, Esq. } London.
John Moss, Esq.,
Charles Lawrence, Esq., } Liverpool.

Engineer—Joseph Locke, Esq.

Length—Fifty-eight Miles.

Share Capital, £800,000, in Shares of £20 each, one-half to be Subscribed in England and the other half in France,

Applications for Copies of the Prospectus, and for Shares, to be addressed on or before the 14th of October, to Messrs. Clay and Swift, Solicitors, Liverpool; or Mr. Smallbone, Paris and Rouen Railway, 4, Austin-friars, London.

A Deposit of £2 per Share will be required, but no further payment till June, 1843.

FORM OF APPLICATION FOR SHARES.

I, ———, of ———, request the English Directors of the Havre and Rouen Railway to allot to me —— Shares therein; and on such allotment being made, I engage to pay the Deposit of £2 per Share, and to execute the Subscribers' Agreement, when called on.

Dover and Folkestone..... at	9 30, 10 30 and 1 30
Sandgate and Hythe..... at	10 30 and 1 30
Maidstone..... at	7 30, 10 30, 1 30, 4, and 6 15
Ashford ..... at	10 30, 1 30 and 4

And to Tunbridge Wells at 7½, 9½, 10½, 1½, 4 and 6½.

Omnibuses to and from every Train.

Parcels received at the above Offices, and duly forwarded for the above places, and all parts on this line of Railway.

CHAPLIN & HORNE, Proprietors and Agents.

TO RAILWAY COMPANIES, CONTRACTORS, &c. &c.—To be sold by Private Contract, a decided bargain, in good working order (having lately undergone thorough repair), Two Six-wheeled Locomotive-Engines and Tenders, 13-inch Cylinders, Copper Fire-boxes, 18-inch stroke, Wrought-iron Wheels, 4 feet 8½-inch gauge; built by Jones, Turner, and Evans, of Warrington. May be viewed on application to Edward Lovell, Swindon, Wilts, and further particulars known on application to W. T. Paris, Solicitor, Stroud.

TWENTY-FIVE CART HORSES, BRICK CARTS, HARNESS, &c.—To be Sold by Auction, by Mr. DIXON, at his Repository, Barbican, on Friday, October 14, 1842, at One o'Clock, Twenty-five valuable, fine shaped, good, seasoned Cart Horses, with the Thill and Chain Harness; 14 Brick and Rubbish Carts, that have been employed on the South-Eastern Railway; sold in consequence of having completed the contract.

Colours—Blacks, Bays, Browns, Chesnuts, and Greys.

Also (taken in Execution), 1 Coal Waggon, 2 Weighing Machines and Weights, 1 Chaff Machine.

☞ The above stock of useful seasoned Cart Horses are worthy the attention of Brickmakers, Farmers, Carmen, Contractors, Wharfingers, Warehousemen, and Tradesmen, as they are from constant and hard work, and for absolute sale.

On view, and catalogues had two days before the sale.

A Large Assortment of New and Second-hand Carriages constantly on sale at this establishment, remarkably cheap.

BRISTOL AND GLOUCESTER RAILWAY COMPANY—GENERAL MEETING.

THE first half-yearly general meeting of shareholders in this undertaking, including those in the line from Bristol to Coalpit Heath, as well as those in the extension line, was held on Thursday, September 29, at the White Lion, in Broad-street, Bristol; GEORGE JONES, Esq., Chairman of the Board of Directors, in the chair.

The advertisement convening the meeting having been read by Robert Fletcher, Esq., Secretary,

The CHAIRMAN said, this was the first half-yearly meeting of the proprietors held as directed by the recent Act of Parliament; and in accordance with that Act, in future the Directors would have the pleasure to meet the proprietors twice in the year instead of only once, as heretofore. He hoped that, as the railway continued to make further progress, that progress would be satisfactory, and the pleasure of all parties at their periodical meetings would go on increasing. In no railway, he believed, had more been done towards advancing it successfully to completion than in this; it being always considered that the results effected must ob in proportion to the resources available. The pretion of the works which had only been begun in May last had gone on in a most satisfactory manner, and he hoped that every succeeding meeting would afford still greater cause of satisfaction. Their Directors, he might fairly say, if they had no higher claim to approbation, had at least the merit of being a working body, who had assiduously attended to their duties, and forwarded the works entrusted to them in every possible way. In doing this, they had availed themselves of the power afforded by the Act of Parliament to make calls; which, though he was sorry to say they had not been answered as promptly as he could wish, yet in most instances had been responded to with a success which had been of great advantage to the undertaking. This was a step which the Directors had adopted, and without it they could not have made such progress as they had made. They now looked forward, he was happy to say, to the final completion of their line, upon which event he hoped the conduct of the Board would receive the approbation of the proprietors; at any rate, if they did not receive it, they would endeavour to deserve it. The Report of the Directors would now be read to them by the Secretary, to which more particular information as to the actual state of their line would be added in the Report of Mr. Brunel.

Mr. FLETCHER then read the following

DIRECTORS' REPORT.

To the Shareholders in the Bristol and Gloucester Railway.

The present being the first half yearly meeting of the proprietors, and held by virtue of a new Act of Parliament obtained this year, your Directors desire to express the satisfaction they feel in having it in their power to meet the shareholders on the interests of the undertaking with the same frequency that prevails in similar concerns. Hitherto your meetings (except on special occasions) have been held annually: but this circumstance arose out of the original Act of Parliament for the construction of the line to Coalpit Heath having been left unrepealed in this particular.

Your Directors reported at the last general meeting, that the whole of the contracts between Westerleigh and Stonehouse had been let, and they have now the pleasure of stating that the works since then have proceeded very favourably, and are in that state of forwardness which leads them to believe that the whole will be completed within the time limited.

The depressed state of the iron market appearing to afford an opportunity for entering into a contract for the rails on favourable terms, your Directors deemed it right, a few months since, to negociate for the purchase; and they are happy to state that they succeeded in accomplishing their object, having agreed for the purchase of the whole quantity required, at the then market price.

Your Directors have, after giving the subject much consideration, determined on the adoption of a continuous timber bearing for the support of the rails; being fully satisfied, from information obtained by them of the working of other lines, and from the knowledge and experience of the Engineer, that economy in the first cost, as well as in the maintenance of the line, would, upon the whole, be best secured by that system.

Since the settlement of this matter the timber has been contracted for on reasonable terms, coupled with a contract for laying it down and fixing the rails. The benefit afforded by the new Tariff has been secured in the price of the timber; and the terms for laying the permanent way are quite as favourable as those obtained for the execution of the other departments of the works.

The alterations to be effected on the line now in work from Bristol to the Westerleigh junction will shortly be commenced. The Engineer is prepared with the requisite plans, and contracts for their execution will be entered into in sufficient time to secure their completion simultaneously with that of the Extension line.

In their last Report your Directors stated, that applications were then before Parliament from themselves and the Cheltenham and Great Western Union Railway Company, for powers to enable the two Companies to effect arrangements, whereby delay in perfecting the railway communication between the place where your works terminate (viz. Stonehouse) and the city of Gloucester, might be prevented. The requisite powers have been obtained; and arrangements, based on those powers, are now under consideration. Your Directors trust, that before your next meeting takes place the formation of the line from Stonehouse to Gloucester will have been commenced.

Your Directors have thought it right, with a view to expedite the completion of the undertaking, and to relieve the proprietors for a time, to avail themselves of a redundancy of money in the market, by an early publication of the intention of the Company to commence borrowing the sum which they have authority in your Act of Parliament to raise on the security of mortgage debentures on your line and its tolls; they have the pleasure to say that they have already obtained more than one half of the required amount, and that tenders of loans continue to come in almost daily.

The half-yearly audited account is also laid before you: the balance in hand has been increased, and stands now at the sum of 60,893*l.* 19s. 1d.

ENGINEER'S REPORT.

Bristol, 27th September, 1842.

To the Directors of the Bristol and Gloucester Railway.

Gentlemen,—Since the last half-yearly meeting the works upon the whole line, from the junction with the Coalpit Heath Railway to Stonehouse, have been proceeding steadily, and with few exceptions to my satisfaction. The works immediately contiguous to the junction, and between this point and the heavy cutting at the tunnel, are not extensive, and have been commenced only within the last six months; they are nevertheless about one third completed. Of the great cutting south of the tunnel, containing about 95,000 cubic yards, about 90,000 are excavated. The cuttings immediately north of the tunnel, and the works generally for the distance of 1¼ miles, are completed—excepting the ballasting, trimming slopes, and some minor works. The next contract of 2¼ miles in length, comprehending the heavy embankment over the Charfield Valley, especially referred to in the last Report, is also in an advanced state; out of nearly 300,000 yards of earthwork, only 25,000 remaining to be done. For about nine miles beyond this the works are comparatively light, and were commenced only in April last. The periods fixed for those contracts expire in July next, and at their present rate of progress they can easily be completed within this time

The next contract, which extends into the middle of the valley of Frocester, is nearly completed, and all the earthwork will certainly be finished before the winter. The embankment beyond this and over the remainder of the valley, is also nearly completed, and the short viaduct connecting these two embankments is now proceeding with. The tunnel has, I am happy to say, been proceeded with without meeting any increased difficulties. The arrears which the contractor had fallen into, and which were referred to in the last Report, have to a great extent been redeemed by the measures which I then stated had been adopted for that purpose. Of the whole length of 1,400 yards, upwards of 825 are excavated, and 675 completed in every respect.

Upon the whole, I believe that this statement, together with your own knowledge from personal inspection of the state of the works, must satisfy you that every endeavour has been made, and successfully, to ensure as rapid a progress as is consistent with due regard to economy in execution, and to their ultimate stability.

I. K. BRUNEL.

Abstract of the Receipts and Payments of the Bristol and Gloucester Railway Company, 30th June, 1842.

RECEIPTS.

Deposits on 8,000 shares, at 5*l.* per share	£40,000	0	0

Ditto, of the Secretary	172	7	11
	19,078	9	4
Total	£166,738	7	10

On the motion of Thomas Reynolds, Esq., seconded by W. D. Wills, Esq., the Report was unanimously adopted.

C. B. FRIPP, Esq., then said, the next resolution to be proposed was one which he had no doubt would be very satisfactory to the meeting, but there was one point in it that required explanation. The resolution was, that the Committee of Management be empowered to borrow money, &c. (as stated in the advertisement in last week's *Railway Times*.) He did not know whether the effect of this resolution was to be retrospective, or to have reference to further loans to be raised.

ROBERT OSBORNE, Esq., said it had reference to all loans raised for completing the line up to Stonehouse.

Mr. FRIPP—Then it includes of course all loans already made.

ABRAHAM ALEXANDER, Esq., seconded the resolution.

Mr. REYNOLDS asked whether any further sums would be required to complete the line from Stonehouse to Gloucester?

The CHAIRMAN said, the Act of Parliament gave them power, when they commenced that line, to borrow money on loan notes, and to raise it by creating new shares.

In answer to a further question from Mr. Reynolds,

Mr. OSBORNE said, the Act authorised the Company to borrow in both forms 200,000*l.* for that purpose, half of the sum being raised on loan notes.

The resolution was then unanimously agreed to.

Mr. FRIPP expressed a wish that efforts should be used to get in the arrears.

The CHAIRMAN said, every exertion had been used in this respect short of some rigorous measures, which were the last resource the Directors would wish to resort to; though he feared they must in some instances resort to these means. He could, however, assure the meeting that at any rate facilities of borrowing money would not lead the Directors to lose sight of this subject.

On the motion of William Cross, Esq., seconded by Samuel Lucas, Esq., thanks were voted to the Directors, and acknowledged by the Chairman in appropriate terms.

A vote of thanks to the Chairman was then moved, and carried by acclamation, which having been acknowledged, the meeting broke up.—*Bristol Journal.*

EDINBURGH and GLASGOW RAILWAY.—Messrs. Haggie, Brothers, of the Patent Ropery, South Shore, Gateshead, have "dropt a *line*" to the Directors of the Edinburgh and Glasgow Railway, upwards of three miles long, and weighing 15 tons! How many postage stamps such a "line" would require we must leave Mr. Parker's pupils at the British School to calculate. It is heavier by five tons than any line ever manufactured before, and is intended for the tunnel on the Edinburgh and Glasgow Railway.—*Gateshead Observer.*

RAILWAY CARRIAGES FOR THE CONTINENT.—On Monday afternoon 12 handsome railway carriages, viz. four first and eight second-class, made at the "London Works, Birmingham," and named *Leopold*, arrived in the St. Katharine's Dock, where they are to be shipped in a few days for Leghorn.—*Sunday Times.*

PARIS AND ROUEN RAILWAY—GENERAL MEETING.

(From the *Liverpool Standard* of Tuesday).

A NUMEROUS meeting of the English shareholders in the Paris and Rouen Railway was held in the Clarendon Rooms, South John-street, at 1 o'clock, on the 29th ult., for the purpose of receiving a Report of the Directors and Engineer, with respect to the state of the concern up to that time.

On the motion of Mr. CHARLES LAWRENCE, Mr. Moss was called to the chair.

The CHAIRMAN commenced by stating, that the Directors had convened the meeting for the purpose of answering any questions which the shareholders might desire to ask. The best course, in his opinion, would be in the first instance to read the Report, in order to enable gentlemen to put more pointedly any questions either to the Directors or to Mr. Locke, or to Mr. Reed, who were also present. As far as the Report went, he (Mr. Moss) thought it would be found satisfactory. In one respect certainly it must be so, for it gave an assurance that before they had again the pleasure of meeting, the opening of the line for the purpose of working would have taken place. The only question for the consideration of the shareholders now not connected directly with their own line, would be, how far they would think it desirable to give support to the projected continuation line to Havre, by taking shares in that concern. Some explanations would be given to them upon that subject, and with those explanations he would leave it in their hands.

Mr. SWIFT then read the Report of the Directors, of which the following is a copy:—

REPORT OF THE 'CONSEIL D'ADMINISTRATION' TO THE GENERAL MEETING.

Paris, 30th August, 1842.

Gentlemen,—At the period of the general meeting last year we were in a manner but preparing for our labours.

The first year had been employed in arranging the final plans, and accomplishing the formalities prescribed by the law in letting asportion of the works, and in entering into contract for the engines, rails, and chairs.

Our plans and propositions have afforded general satisfaction to the legitimate claims of the localities, and were subjected to very little alteration.

The purchase of the land, which one year ago was scarcely commenced, has been carried on with the greatest activity, and now draws to a close. For this purpose the line was divided into two sections—the one containing 19 communes and the other 29 communes. The first section has all been purchased, excepting that part required for our goods station at the Batignolles, of which a few parcels remain to be expropriated* in order to complete this station. We are, nevertheless, in possession of a sufficient portion of the land to be enabled to commence the works. In the second section all the land required for the railway and the intermediate stations, with one exception in the communes of Sotteville and Rouen, is already purchased. The contemplated construction of the Havre line required some alterations in our plans in these communes, or the land would also have been purchased by this time. The new plans have, however, passed the ordeal of the Committee of Inquest, and we shall now proceed without loss of time to obtain the land.

Notwithstanding that the property required for the railway is divided into 7,500 parcels, the value of the land and houses, together with the difficulties attendant on passing through towns and villages, such as Poissy, Mantes, and Vernon, the result has been satisfactory. The greatest portion of the purchases have been made by private contract. We have only had recourse to expropriation in a few cases, where the properties were of great value, and these were settled by the jury in the most equitable manner.

Great care has been taken in drawing up the different conveyances. As soon as the few remaining purchases are completed an exact account of this portion of our outlay will be made out. In the interim everything is so settled as to place the Company in perfect security.

In the last accounts which we had the honour to lay before you, the expenditure for the works amounted but to 200,000f. (8,000*l.*); on the 30th June last it reached the sum of 11,419,404f. 36c. (456,776*l.* 8s.); and at the present moment it is 14,238,460f. 41c. (573,538*l* 8s.) This will show the activity which has prevailed in conducting the works. We now lay before you the Report of the Engineer-in-Chief, which will give you a more complete account of the progress of our enterprise.

[Then follows Mr. Locke's Report upon the state of the works. This document will be found in the *Railway Times* of September 17.]

To this Report we beg leave to add, that the advanced state of the works leaves us under no apprehension as to their early completion, nor have we any fear that the expenditure will exceed the capital. Our hopes and calculations on these two points have not been disappointed. The whole line will be finished two years earlier, at least, than the time allowed us by the Bill. We shall thus be enabled to diminish the charge for interest payable during the construction of the line, and anticipate the period when the dividends will be paid from the profits of the railway.

The result will fully justify the manner of contracting for the works which we selected. We have taken advantage of the experience acquired in England in these matters. Every doubt which existed as to success on the application of this mode of proceeding, so new to France, has been completely removed by the energetic means which our contractors have employed—difficulties have been overcome and new methods introduced with perfect success.

Upon this subject we feel called upon to contradict, in the most formal manner, the incorrect reports which have been circulated in respect to the want of harmony among the workmen of various nations employed on our works. We can safely affirm that, among the 8,000 men now employed, nothing has ever occurred beyond slight disputes, which it is almost impossible to prevent among so vast a body of men. They have never been of such a nature as to compromise or even retard the execution of the works.

In respect to the nature and solidity of the works, every precaution has been taken in order that they may stand the test of the most scrutinising examination. They have been adjudged according to specifications, drawn up after the most mature deliberation. An efficient staff of engineers has been placed on the different portions of the line to watch over the execution of the works in their most minute details.

We have never had occasion, in any matter of importance, as far as regards the works, to differ with the contractors; they have at all times, with the utmost promptitude, complied with the orders of the Engineer in Chief.

The few accidents which have really occurred on the line have been greatly exaggerated; they were perhaps inevitable on such a difficult and extensive line of works, requiring so much rapidity in their execution; but they were most promptly attended to, and always at the charge of the contractors.

If these works have been adjudged on terms not hitherto obtained here, be assured, gentlemen, that their solidity has not been sacrificed to a false economy; every means have been taken to secure their stability, and to afford, at the same time, perfect security in the working of the line. A railway is of itself a great monument. Its splendour is to be found in its utility.

During the period which has intervened since our last meeting, we have completed our contracts for the supply of rails and chairs. The distance of the iron works is very great; and the extraordinary dryness of the season, together with accidents on the canals, have hitherto retarded the deliveries; but we have taken every means to secure the strict execution of our contracts; and we have, besides, received the most positive assurances that the whole quantity will be delivered within the present year.

The construction of the engines, carriages, &c., for working the line has kept pace with the works. Two month ago there was but one engine at work in the manufactory where our locomotives are in the course of construction, at this moment more 5 000 men are actively employed, together with the most complete machinery ever yet in application here.

In fine, every part of our enterprise is in the most satisfactory position, for which we are greatly indebted to the powerful resources you have confided to our care.

The calls have been paid up with remarkable punctuality.

At the period of the last general meeting, the receipts amounted to 12 692,086f. 23c. (504,083*l.* 9s.); on the 30th June last they reached 28,320,991f. 25c. (1,132,839*l.*); and at this present time they amount to 31,703,872f. 35c. (1,286,154*l* 18s.).

We have not been obliged to have recourse to legal proceedings to get in any of the calls. Ninety-four shares only have been sold, and these sales have generally been caused by the death or absence of the party.

Your example will not fail to produce a beneficial influence in the execution of great public works. In France, complete justice was rendered to you in the Chambers during the discussion of the law on railways.

Our monthly outlay has increased with the progress of our works; and in the last six months of the past year it has progressed from 1,200,000f. (48,000*l.*) to 2,600,000f. (94,000*l.*), and it now reaches 3,500,000f. (140,000*l.*) each month.

The total amount of the expenditure is 27,428,591 f. 31c. (1,097,143*l.* 12s.). Although our resources are not yet exhausted, we nevertheless thought it expedient, at the commencement of the year, to make application to the Ministers for Public Works for the return of our caution money, and at the same time to pave the way by complying with the various forms required for claiming the loan of fourteen millions from the State. At this moment, even, we are pressing the Ministers for return of the 3,600,030f. (44,000*l.*) caution money, which must precede the loan of 14 millions (560,000*l.*), return of 4 5ths of the same has just been granted; and it is perhaps owing to a greater respect for the letter rather than the spirit of the law, that the whole is returned, for it is impossible for the Government not to perceive that our money would be much better employed in carrying on the works than it is in the coffers of the State—that a security is only of real use in guaranteeing the formation of an association; but when a Company has already executed works to the amount of 28 millions (1,120,000*l.*) the guarantee of a few hundred thousand francs must be perfectly useless.

You may rest assured we do not lose sight of the period when the payment of the loan will commence; and we have too much reliance in the interest which the Government takes in our enterprise, to have any fear or respect to useless delays.

As our works proceed we are better able to appreciate the future resources of this undertaking; and we have every reason to believe that our estimates of revenue will prove to be as correct as are those of the cost of the construction.

The Havre line is the necessary consequence of the Rouen line. It promises a vast addition to the number of passengers, and its construction will remove every doubt as to the extent of the transport of merchandise.

We have taken a prominent part, with the Government and the Chambers, in obtaining the assistance of the State for this line; and we may say, that to the example of the Rouen Company may be mainly ascribed the favourable terms of this Bill. The common interest which unites the two Companies will continue to be the best guarantee for their mutual co operation.

In conclusion, permit us, gentlemen, to refer back to the origin of our undertaking. You will bear in mind that the law of concession dates from 15th July, 1840—some days after we met in general assembly to examine the modifications made in the law and in the statutes, but a graver subject then occupied and kept public attention in suspense. In the presence of great political embarrassment you did not hesitate to maintain the association. You had confidence in a better futurity.

You did not for a moment believe that one of the best creations of a time of peace could possibly be suspended by the mere rumour of war. By your energy and resolution, you gave us the first example how to overcome all difficulties. This confidence was nobly responded to by your associates on the other side of the water. If we allude to the circumstance of the shareholders being of two nations, it is only for the purpose of assuring you that only one feeling has always animated them, although the object to be attained was a great and national work, the advantage of which would exclusively belong to France.

On all occasions, under the critical circumstances which threatened our commencement, and in the progress to those better times which have now arrived, the English co-operation has never flagged; we have received all that we could hope for—the powerful assistance of its capital, and the benefit of its great experience.

Thus nothing has been able to shake the first basis of our association. Upon it we have been permitted to found one of the most useful and beautiful monuments of human activity, and to consecrate the noble alliance of the industry of two great nations.

The CHAIRMAN again rose, and expressed his own opinion that the Report was most satisfactory. It was an important fact, and therefore he would state it publicly, there was not a single Director who now had the smallest doubt as to the line being completed within the first estimate of cost, and within the stipulated time. He himself felt sure, not only that the line would be completed, but that every part of the works, engines, stations, &c., would be furnished within the original estimate; and Mr. Locke, who was present, would confirm him, and would state, that when the line should be opened the Company would have paid all their engagements, and have some little capital still in hand. He trusted the meeting would not separate without returning their thanks to the Directors in Paris for their very great exertions in forwarding the undertaking. They and the English Directors had worked together for two years, and although the English Directors had originally had reserved to them the power of voting by proxy on all points in which they differed from their French colleagues, they had never had occasion to put that power forth, so harmoniously had the two bodies worked together. He had to add, that owing to the rate of exchange between the two countries, a sum of money would stand to the credit of those English shareholders who had paid their calls in this country.

Sir JOHN EASTHOPE, Bart., said, the proper object of the meeting was, that the shareholders might be as well satisfied as they could be upon two questions; the one was the efficiency of the capital thoroughly and entirely to complete the works, and the other as to the time of their completion. Mr. Reed and Mr. Locke were both present, from whom the Chairman, Mr. Lawrence, Mr. Chaplin, and himself, had mainly derived their own information. They had examined the accounts, they had looked over the Reports, and they had inspected the minutes very carefully; but, at the same time, they had derived all the other information they possessed from those gentlemen. In other words, he understood the object of the present meeting to be, that every gentleman present should, as far as he possibly could, have the same means of information as the English Directors, in order to lead them to the same conclusions as they themselves had arrived at. The Directors said that they had the utmost confidence that by the month of May the line would be open. They calculated, from the Reports of Mr. Reed and Mr. Locke, that the works would be substantially finished in March, but that it would not be expedient to open till May. With regard to the question of capital, inasmuch as they had no legislative power to raise further capital, it was a vital question to be ascertained, whether the capital already authorised was itself amply sufficient for the purpose. He understood from Mr. Reed, Mr. Locke, and Mr. Lafitte, that they had no doubt upon that question; but, at the same time, he wished the

* By the word "expropriation" is meant the power to take the land required for the railway.

Digitized by Google

proprietors, by any question which they could put, to have just the same information as the Directors themselves, because it was an agreeable thing for Directors to be released from a certain portion of responsibility by their partners having the same means of judging as themselves. These were the two great practical questions upon which satisfaction should be given at the present meeting. The next question for the consideration of the proprietors was, how much might their concern be advantaged by an extension of the line to the sea; and whether or not, if *that* extension was desirable *per se*, it would be for the interest of those interested in the promotion of *this* line to engage in that. Now as to that, both himself and his colleagues had been for some time under considerable hesitation, because they had before them that which it well became every inquiring and thinking person to investigate, namely, the navigation of the Seine, which afforded a constant competition, and they had also the expense of executing the line. That it would be an advantage to the Paris and Rouen line, no man could entertain a moment's doubt; it was impossible that it should not be so; it was impossible that a population like that of Paris would be content without the facility of getting to the sea with the same celerity they had got to Rouen. He was glad to say that the result of the inquiries which had been made as to the cost and the traffic, gave results which promised, satisfactorily to his mind, an ample reward for the capital to be employed; but the English Directors would afford all the information they possessed, so that an undue amount of responsibility might not attach to them or their opinions. They had all four embarked in it a considerable amount of capital as the result of their confidence in it. It was, however, upon these points that gentlemen should have information. One of the first items was this, the French Government actually gave 320,000*l.*; the town of Havre 40,000*l.*; the Paris and Rouen 200,000*l.*, which made 560,000*l.*, besides which the French Government lent 400,000*l.* at 3 per cent., commencing eight years from the present time; and the principal repayable by equal instalments at the end of 15 years—in fortieths, he believed; so that the whole sum *probably* required for the completion of the line, left 800,000*l.* to be furnished by the shareholders. He said *probable*, because it was *possible*, that 200,000*l.* more might be required. One point on which he was disposed to think the meeting should be informed, was, what was the amount of that *possibility*. Mr. Locke had hopes that he should not require that 200,000*l.*, but not feeling confident that he should be able to perform the work without it, he had, with his usual caution, and very properly, deemed it right to be on the safe side. The honourable Baronet then adverted to a great feature in the concern, the payment of interest upon the capital during the construction of the works, and the establishment of a sinking fund; and he said that when all these items were taken into account, he apprehended that they met the whole question which he had proposed.

Mr. REED then came forward and said, that in offering the observations he had to make, it would be better to go back to the consideration that the present was a meeting only of the Paris and Rouen Railway shareholders; and before they entered on the discussion of the question whether or not they would commence a new undertaking, to obtain an assurance that that which they were now engaged upon was proceeding to a successful issue. If he had felt any doubt on that subject, he would not have ventured to appear before them in connection with a new scheme; but the Report just read, as well as the letter of Mr. Locke, conveyed to the shareholders all the assurances which he (Mr. Reed) thought were necessary; the railway would be finished for the capital subscribed, and in less time than was predicted. For those advantages the shareholders were much indebted to the great exertions of Mr. Locke, who had applied all the energy and experience which he possessed to make this, his first work in France, remarkable for the speed of its execution, and the correctness of his estimate of cost. There would have been still less delay in the completion of the railway but from the unfortunate political circumstances which prevailed when the shareholders met there two years ago to determine whether they would go on with the line or not. Just at that period the treaty which created such bitterness of feeling between the two countries, had received the signature of the Continental Powers; and although there had been no very great loss of time, the commencement of the work was in some degree retarded. Since then, however, their progress had been satisfactory; every difficulty had disappeared; and he believed they should finish this railway of 80 miles long, in less time than any line of equal length had ever been completed. There had been no less than 7,500 parcels of land purchased. This had certainly been very troublesome, but, like all other difficulties, had disappeared; and the Company was now in the possession of the last portion of land—that which was necessary for building a station at Rouen. They had also had considerable anxiety on another point—they did not know how English contractors and English workmen would be received in France. They did not know whether the French labourers would be able to go on at that railway pace which was observed in England. These anxieties, however, were at an end. Before closing this part of the subject, he would say a few words in reference to an article, or paragraph, contained in a late number of the *Railway Magazine*, respecting one of the bridges across the Seine. [Mr. Reed having stated the substance of the paragraph, proceeded as follows:]—Now, what would have been the course in this country? Why, instead of being told by an engineer of the Government that we must remove our bridge, some gentlemen of the law, equally acute, if possible as my friend Mr. Swift, would have been instructed to move for an injunction, and, after having drawn out a case long enough to stretch from hence to the Court of Chancery, he would, in his turn, have instructed two or three gentlemen in black gowns and white wigs to make that move, and after stopping our works, and which way it might, we should have moved off minus some hundreds, or perhaps 1,000*l.* for law expenses. How was it settled in France—simply thus, a written Report condemnatory of our bridge was made by the engineer of the navigation to the department of public works—we were called upon to answer, not through the medium of the aforesaid gentlemen in black gowns and white wigs, but our own proper selves, through the medium of our Engineer and our Secretary. The superior authorities having heard both sides, and inspected the plans originally proposed to them, and which they themselves had sanctioned—determined that we had executed the works according to the plan, and albeit that it was not, perhaps, the best plan for the interests of the navigation, we were authorised to complete it, and our works, which in fact, *had never been suspended*, were permitted to proceed. I therefore say, they *do manage these things better in France*. Here the misunderstanding would perhaps have cost us 1,000*l.*; there it did not cost us 1*s.* It is, perhaps, unnecessary for me to say more in reference to the progress in constructing the Paris and Rouen line. In a few months the traffic will be in course of development, when I doubt not that our most sanguine expectations will be realised. I now beg to draw your attention to the proposed line of railway from Rouen to Havre. The importance to the Paris and Rouen railway of such a line, is too apparent to render it necessary to detain you in describing it. Is the existence of the Grand Junction Railway important to that from Birmingham to London? No less so—but on account of particular local circumstances—more so, is that of the Havre line to the Paris and Rouen. The relative position of Paris, Rouen, and Havre, is in fact, without a parallel in this country. To form a just idea of the thing, so as to compare it with anything here, it is necessary that the mind should figure to itself the filling up, or the non-existence of the river Thames—that Liverpool is the port of London—that from London to Liverpool runs the river Mersey, a beautiful stream, but circuitous and difficult of navigation, operated upon by the tide for about only one-third of its distance; and that the town of Manchester is placed somewhere about Birmingham, so as to represent Rouen, which is the Manchester of France. I ask you, gentlemen, whether you think that a railroad under such circumstances would pay it promoters? or whether, as men of business, you would not desire to participate in the profits which must inevitably arise, if such a railroad were constructed at a moderate cost? I do not mean to compare the magnitude of the mercantile transactions of France with those of this more commercial country; but it must be borne in mind, that not only is Paris, a city of a million inhabitants, at one end of this line, but that a very large quantity of goods are landed at Havre, and sent through Paris to the far east of France. There is not a Hull on one side of the kingdom and a Liverpool on the other. Cotton is actually carted from Havre to the foot of the Swiss mountains, in carts which move in fleets as it were, along the road. In order, however, to form something like an estimate of quantity, I have noted down those of several leading articles of commerce. In the year 1841, the total tonnage of the vessels entering the port of Havre was 682,000 tons, and the tonnage of those which sailed was 719,000; together, 1,401,000 tons. There were landed at Havre in the same year 357,327 bales of cotton, which, I believe, would weigh upwards of 70,000 tons; of sugar, in hhds., sacks, and cases, upwards of 131,000, weighing perhaps nearly 70,000 tons more; upwards of 150,000 tierces, sacks, and other packages of coffee; 11,700 tons of dye-woods; upwards of 30,000 logs of mahogany; upwards of 300,000 skins of various sorts; 119,000 hides; 18,000 packages of tobacco; 265,000 plates of zinc; and an immense quantity and variety of other articles, all or most part of which have to pass towards, to, or through Paris. I should deem it an impertinent waste of your time to detain you by entering into the proof that where such a port, with such an amount of business, exists, there must, necessarily, be a large traffic between that port and the point where consumption is made of these articles; or, that where so many goods are constantly on the line of transit, there must, necessarily, be a large passengers traffic also. The number of those passengers, or the revenue they will yield, you will find stated in the prospectus. I rely on a revenue from passengers of upwards of 132,000*l.* per annum. But there are persons who, while they admit the existence of the traffic, yet profess to doubt whether the railway will obtain that traffic. The Seine, they say, is a beautiful river, passengers will prefer it to the railway, and by the river goods will be sent cheaper than you can carry them; to which some add, that even if you do get the passengers, your tariff is so low that it will have only a very small profit. I believe that those who so think are wrong. First, for the passengers. One steam-boat per day each way runs between Havre and Rouen during the summer months only. In order, however, that these boats may pass in safety the sands of Quillebeuf, it is necessary they should leave Havre as soon as the water brought by the young flood tide into the harbour is sufficiently deep to enable them to go out. These boats start frequently as early as 3 or 4 o'clock in the morning—they must not wait for an afternoon tide, for if they do, and they meet with any obstacle on the passage, the passengers are kept out all night. Again, Havre being a tidal harbour, sea-going vessels arriving in the offing, must wait until the flood tide is considerably advanced before they can enter, and the consequence is, that steam-boats arriving from England or other places beyond sea, cannot enter the harbour until the Rouen steam-boat has necessarily departed. Suppose, therefore, a passenger to arrive at Havre from Southampton, or any other place, at 9 o'clock in the morning, the Rouen boats will have started at 8, if he *will go* by the steam-boat, he must remain until 9 the next morning, whereas, if he chooses to go by the railway, he may remain two hours in Havre to refresh himself, and be in Paris at 6 o'clock to dinner. Can any one doubt which mode of conveyance will be preferred? Then, as to the goods; if the Seine is really so good a medium of transit, how happens it that upwards of 110,000 tons of goods per annum are transported between Paris and Havre *by land*, at an expense ranging from 2*l.* 8*s.* to 5*l.* per ton! It is clear, from this single circumstance, that the common road is a powerful competition with the river. The commonest goods sent by the river pay about 1¼*d.* per ton per mile, while the cotton pays an average of 20 francs per ton for transport from Havre to Rouen, which will be more than 3*d.* per ton per mile when taken by the more direct route of the railway. It will be seen that, in the prospectus, it is only assumed that we shall obtain from the river 100,000 tons per annum. I am thoroughly satisfied that we shall obtain that quantity, and that if we choose to adopt a scale of charge not greater than is charged on some railways in this neighbourhood, we may take nearly all the goods which now go by the Seine. I suppose no one will doubt our getting those which now go by land. And now as to the profit on the passengers:—Our tariff allows us to charge

12½ centimes per kilometre for 1st class passengers.
10 " " 2nd " "
7½ " " 3rd " "

which, rendered into English denominations, is as nearly as possible, rather less than 2*d.* per mile for 1st class passengers; rather more than 1½*d.* per mile for second-class; and 1¼*d.* for third-class. It is quite certain that in France passengers are carried at a cost to the Companies of ½*d.* per passenger per mile. If it is observed that this is cheaper than they are carried in England—I admit at once that it is so: but the reason why they are carried cheaper in France than in England, is, that a greater number of passengers are carried in each train. The Paris and Orleans train have averaged 153 passengers by each train from the 1st January to the present time. The average, on the most favoured line in England, is not more than 70, while in most cases the average ranges between 50 and 60. Now, I apprehend that the cost to the Company of carrying 150 passengers is very little more than that of carrying 50. Be that as it may, it is clear, from the accounts of the St. Germain, the Or-

Digitized by Google

leans, and other railways, that the total expense of carrying passengers is not exceeding ½d. per mile; and, assuming that all the Paris and Rouen passengers are second-class, and charged 1½d. per mile, it follows that they will leave a profit of 66 per cent. I therefore differ *in toto* with those who predict that we shall not have the traffic, or that, if we obtain it, it will not be profitable; and I beg of those entertaining such opinions to look at the facts more closely, and I am sure they will alter those opinions. Now let us see what is to be done with this profit when it is obtained. *It has to be divided over a share capital of* 800,000*l. only*; for, as has already been explained to you by the honourable Baronet, the extraneous aids which we receive reduce the share capital to that comparatively trifling amount. 40,000*l.* a-year will, therefore, pay 5 per cent. on the shares. Gentlemen, I will not detain you by attempting to prove what must be self-evident, namely, that nearly 60 miles of railway, through such an important line of country, must yield several times over such a sum. It was a saying of the Emperor Napoleon, that "the time would come when Paris, Rouen, and Havre would become one large town, of which the Seine would be the principal street." The conception was worthy of the master-mind which conceived it. Had he lived, however, until this time, he would have had occasion to vary one part of his prediction, and for the Seine have substituted the railway, which will now most certainly be made. (Applause.)

Mr. LOCKE said, that after the eloquent address of his friend nothing was wanting from him to assure the proprietors of the prosperous condition of the Paris and Rouen line. It was two years since they met in that room, when some of them were not so sanguine as he was of the result; but now they had obtained greater information, and he was not less sanguine now that he had got it. He was satisfied that the capital of the Company would be sufficient. There were, however, such things as administrative acts of Government, to which they were obliged to submit; therefore it behoved them to behave with becoming caution when they talked of capital; but judging from the past, he had not the slightest doubt that they would be able to execute this railway for the original estimate, and have some little money to spare. ("Hear, hear," and cheers.) Of the time he had no doubt whatever; the line would be ready for opening on the 1st of May. Indeed he had considered that question fully before he had written his Report, consequently he had nothing to do on that point but to refer the proprietors to that Report. It had been made after great consideration of the state of the works; and he had, in short, no doubt that the line would be ready for opening on the 1st of May. (Hear.) With regard to the Havre line, he could not speak of it with so much confidence as he had now spoken of the Paris and Rouen line; but he could speak of it with quite as much certainty as he could of the Paris and Rouen line two years ago. He thought the smaller capital was sufficient; but as they might have seen from his Report, he had thought it right to guard himself, and in guarding himself he guarded the proprietors, by wishing to have 200,000*l.* extra capital, to be employed in purchasing stock, in the event of the Paris and Rouen Railway Company declining to find the stock, or to work the line; it was a simple question whether it would not be for the interest of the two Companies to work together, and that the Paris and Rouen Company should find the stock for both. In that event this 200,000*l.* which he wished for would probably not be wanted; and this was the contingency to which he had alluded in his Report. In conclusion, he felt thankful to the Directors for the confidence placed in him; and the shareholders might rely that he would use all his energies for the success of the undertaking.

Sir J. EASTHOPE recollected that in the case of the Rouen line, it was to be only after the shareholders had contributed their funds that the Government advanced their loan. He inquired how that was with regard to the Havre line?

Mr. REED read the whole article of the law, which was to the effect, that when the Company had expended 160 000*l.*, then the Government was to begin to pay, by tenths, the sum they were to lend; and when the 160,000*l.* were expended, then the Government had to furnish 40,000*l.*, the Company put to it 40,000*l.*; and having expended that, they would go to the Government for another 40,000*l.*, and so on. This was as regarded the loan; as respected the gift, (8 millions of francs,) it was to be given to the Campany in proportion to the advance of the works. The gift and the works would go on *pari passu*.

Mr. J. HORNBY made an inquiry, to the effect, whether the 200,000*l.* was *given* to the Havre Company by the Paris and Rouen Company?

Mr. REED said, the Paris and Rouen Company had only, in fact, to find 40,000*l.*, the Government lending the other 160,000*l.*, at 3 per cent.; and the simple question was, whether, for the sake of saving 4,800*l.* a year interest, and 40,000*l.* cash, they would lose the Havre line. He thought there could not be a question about it.

Mr. LOCKE added, that it was not, in fact, a gift of money; but they were to contribute towards making the line through the town of Rouen, which would cost 400,000*l.*

The CHAIRMAN explained, that every one was aware of the difficulty there was in all railways in England as to making junctions in towns between railways from opposite directions, the one coming in upon one side, and another upon the other. The French Government very properly said, to the Paris and Rouen Company, in the first instance, "we must insist, if you make a line to Rouen, and if there is a line made from thence to Havre, that you bear a portion of the expense of making it through Rouen." Their portion of the expense was 200,000*l.* and towards this sum the French Government lent them (as had been before explained) 160,000*l.* at 3 per cent, and he was quite sure it would have been better for the English railways if the English Government had done the same.

Sir J. EASTHOPE asked, whether that was contemplated in the Paris and Rouen expenditure; and whether, in stating his confidence in the sufficiency of the capital, Mr. Reed had taken into his account this 40,000*l.*?

Mr. Reed said, his hope was, that the estimate would cover it; but he could not positively say it would

Mr. PARSONS begged to ask whether the amount put down for stock for the Paris and Rouen line would be sufficient also to work the Havre line?

Mr. LOCKE thought a few more engines and a few more carriages might be required, but nothing for the working establishment; and he thought mutual advantages would be derived from the Paris and Rouen Company working the Rouen and Havre line.

Mr. PARSONS said he had seen no particulars of the cost of the railway; but he trusted it was the intention of the Directors that the shareholders should have an opportunity of contrasting the actual cost with the estimate.

Mr. REED replied, that by law the accounts were obliged to be furnished at the end of the work.

Mr. LOCKE added that all the works were being done by contract; all the accounts were kept distinct, and it only required an order of the Directors to make them out in a detailed form.

Mr. PARSONS—To a half-yearly meeting?

Mr. REED—Yes, after the opening of the line.

Mr. PARSONS meant before the opening?

Mr. REED said that was not contemplated. There must be two half-yearly meetings held in France. Those held in England were not official meetings, but rather meetings of a section of the proprietors; and it was a matter of convenience as well as policy that these explanations should be periodically given. There was no express regulation, but it arose out of the nature of things.

Mr. PARSONS said, that as half the capital for this foreign railway would be held in England, the English shareholders should have an opportunity of asking the Directors any questions.

Mr. REED was sure the English shareholders had only to express a wish, and it would be attended to.

The CHAIRMAN said, in point of fact this was a French Railway, and therefore the meetings must be held in France. Although the English had taken one-half the capital, that did not make it an English railway, and he could not imagine that any influence of theirs would be sufficient to procure the holding of the official meetings in England.

Mr. PARSONS was speaking not of the official meetings of the Company, but of those meetings which were held merely for the convenience of the shareholders resident in England. The same, in fact, as the present meeting.

The CHAIRMAN thought it would be extremely important, whenever the railway was opened, that there should be meetings held in England previous to the half-yearly meetings in Paris. With regard to the accounts, they were kept as regularly as (perhaps more regularly than) any English Company's accounts. They were kept with the greatest possible minuteness. The Directors in France, indeed, considered it their duty to act almost as Secretaries rather than as Directors; they went through the whole detail of business themselves, and every order for money required the signatures of three Directors before it was paid.

Mr. REED stated, that with regard to the Havre line 2*l.* would be required as a deposit; and the next call would not be made till June, before which time the Paris and Rouen line would be opened. They had been enabled to extend the interval between calls from three to four months, in consequence of the aid of Government going on *pari passu* with the works.

Mr. PARSONS asked whether it was intended to consolidate the two Companies?

The CHAIRMAN said, that was a question he could not answer. He was quite of opinion that where Companies could be advantageously consolidated it ought to be done; but in this case there were upwards of 2,000 proprietors resident in France, and it would require the sanction of every individual, or a new Law, to effect an amalgamation with the Havre line; he, however, could not but hope that the two Companies would be consolidated hereafter. It was of importance that they should be with regard to the saving of working expenses; and as far as his influence went, he would assist in doing it.

Mr. PARSONS asked how the account for exchanges was kept?

The CHAIRMAN replied that the account was not kept with each individual, but with each share. Troublesome as it was, each share had a separate account kept of what was due to it. With those who held shares from the first, and paid *all* their calls in England, it was very simple.

Mr. REED said it was a troublesome business, but it was only proper that the parties to whom the share belonged should have their money.

Mr. PARSONS inquired whether the 2*l.* paid with regard to the Havre line limited the responsibility?

The CHAIRMAN replied, that first of all the French Government had not done in the present case as in the Paris and Rouen. In this latter they required 2*l.* to be paid to them for caution money: in the present case they had required only 1*l.* If the Havre Company did not go on with the line, that 1*l.* was liable to forfeiture; and, according to the law of France, the shareholders would be compellable to pay up the three first calls. Whether or not the law would be enforced he did not know; but he himself could not conceive of the probability of anything occurring to make it desirable not to go on.

After a few words on this subject, Mr. Chaplin was called upon for his opinion on the subject of the Havre line.

Mr. CHAPLIN said, he thought there was no doubt of its success. The inhabitants of Havre, whose interests were identified with the river Seine, thought so much of it that they consented to give 40,000*l.* toward it. They were, therefore, movers in it; and the other movers were the French Government, who saw at once the inefficiency of the Seine for the traffic between the places. This line, therefore, was not a speculative line of the proprietors of the Paris and Rouen Railway Company, but it had arisen from the necessities of the people of Havre and the French Government. He was aware of the effects of the rivers running parallel with the railways, but this was not to be feared between Havre and Rouen. As to the Paris and Rouen he was so confident in its results that he had not only retained but increased his interest in the Company; and he had the strongest faith in it. There could not be the shadow of a doubt of its drawing the passengers to it; neither could there be, he thought, the shadow of a doubt of its drawing the goods and traffic from the river. (Cheers.)

Sir JOHN EASTHOPE stated, that the people of Havre had exhibited the same confidence in the undertaking as Mr. Chaplin. They were under engagement to Mr. Lafitte to procure the subscription of one-half the whole capital to be subscribed in France for the undertaking, in addition to what they gave (namely, 40,000*l.*) out of their corporate funds. Now, if they had not imagined that the concern would yield an ample return they would not have undertaken to do all this. This, indeed, was the strongest evidence of their conviction of the utility and the propriety of the undertaking. Besides this, Messrs. Mackenzie and Brassey, the contractors, had sent in an application for no less than 700 shares.

A short discussion followed upon some minor points, at the end of which a resolution was moved by Mr. Theodore W. Rathbone, and seconded by Mr. George Grant, of Liverpool, "That this meeting, having heard the statements just made as to the projected extension line from Rouen to Havre (both as to its intrinsic merits and its bearing on the Paris and Rouen Railway), unanimously and strongly recommend all the proprietors of shares in the latter line to take shares also in the former; and that copies of the proceedings of this day be forwarded to each proprietor."

Moved by Mr. J. Windsor, and seconded by Mr. W. Hill, of Manchester, "That the thanks of the proprietors are justly due, and are now accordingly tendered to the Directors generally, and to the Chairman for his conduct in the chair to-day."

The meeting then separated.

THE PROPOSED PLYMOUTH & EXETER RAILWAY.

[From the *Devonport Telegraph*, October 1.]

An important public meeting was held at the Guildhall, Plymouth, this day (Friday) at noon, pursuant to a requisition addressed to the Mayor by the Provisional Directors, appointed at the meeting of the shareholders which took place a short time since. The object of the meeting was to receive a Report of the proceedings which have been taken, for the purpose of determining the line of the proposed railway.

G. Soltau, Esq., the Mayor of the borough, having been called to the chair,

T. Gill, Esq., M.P., addressed the meeting. He remarked that it would be worse than idle to descant on the advantages of railway communication; they had practically experienced them, but he would briefly put the meeting in possession of what he might term the history of the question. The speaker then read the resolutions framed at the public meeting held the 28th October, 1840, and the 24th November. The Provisional Directory, appointed at the public meeting, had proceeded to consider the character, practicability, and general contour of the lines, and to report on the advantages of each. They selected a gentleman of talent and integrity, Mr. Mc Neil, to report on each of the projected lines, and he had presented a most elaborate and valuable Report. The Directors at one time appeared to believe the line across Dartmoor would be preferable, but Mr. Mc Neil was inclined to believe the southern line superior to the other, and a branch line connecting the Plymouth with the Cornwall line might, with every facility, be effected. Mr. G. then alluded to the interview which he had had with the Chairman of the Great Western Railway, as stated by him at the recent meeting of the shareholders. The Provisional Directors felt that during the exertions which they had made in connection with this subject, there never was a time when the question appeared more advantageous and practicable both from the amount of floating capital in the money market and the security which they were now enabled to offer for a return on the sums which might be invested.

Charles Whiteford, Esq., the Secretary, presuming that most of the gentlemen present had seen the Report of the Directors, including much of Mr. Mc Neil's Report, which had appeared in the local papers, refrained from reading the whole of the voluminous Report, but extracted those portions which were likely to afford sufficient information to those present who might not have had an opportunity of reading the published document, and directed the attention of the meeting to the general features of the five projected lines. It is unnecessary again to insert the purport of the Report, which has been so recently before our readers.

Mr. Mc Neil recommended the entire rejection of Capt. Moorsom's line, and that the disposition and spirit of the landowners along the coast should be ascertained, that if any hostility on their part were shown, Mr. Rendel's Dartmoor line should be adopted; but if the landowners, on the contrary, felt inclined to favour and encourage the project, Mr. Rendel's southern line, from Plymouth to Newton, should be the one preferred. The terminus recommended was at a spot adjoining Lewis Jones's gate, on account of the expense of construction, the local features and commercial advantages of the town. The extension of the line to Devonport, &c., would be an object of after consideration.

W. Prance, Esq.—The first duty of the meeting was to express its sense of obligation to the Directors, but few railways, he thought, had ever been commenced when such a mass of information and valuable details had been collected. After a few observations as to the practicability of the project, he moved the first resolution.

The Secretary, in answer to a question from Mr. Collin, stated that Mr. Rendel's line, the estimate for which had been given, was a double line throughout.

E. St. Aubyn, Esq., asked a question with reference to the terminus.

Mr. Whiteford replied, that it was absolutely necessary to maintain the relation to the Tavistock-road, (and it was proposed to effect a tunnel under the Tavistock-road, 80 feet below its level). It was necessary to maintain the elevation, in order to extend the line to Devonport and through Cornwall, and hence the reason for the spot alluded to having been recommended as the terminus.

J. Burnell, Esq., in a short but excellent speech, in which he enforced the necessity for railway communication, moved the next resolution.

Wm. Moore, Esq., seconded the resolution with great cordiality, and, in reference to the terminus, remarked that, come wherever the railway would, it would benefit them all.

T. Gill, Esq., also made a few observations with reference to the terminus. He said there was no wish, and, indeed, it would be injudicious and wrong, to attempt to exclude the inhabitants of Stonehouse and Devonport from those advantages which the inhabitants of Plymouth were desirous of obtaining, nor in recommending the terminus, did they preclude the formation of branch lines. After a short discussion as to the propriety of printing Mr. M'Neil's Report, which the meeting considered unadvisable from its character and bulk, the resolution was put to the meeting and unanimously adopted.

W. Eales, Esq., moved the next resolution, which was seconded by Mr. W. Saunders.

Mr. Gill, in order to explain the meaning of the resolution to those to whom it might appear unintelligible, stated that a sum of money had been expended in 1836 and 1837 in taking surveys, with a view of carrying out the railway. 7,000*l.* or 8,000*l.* were thus expended, but the undertaking was not carried further than an attempt to pass a Bill through Parliament; and inasmuch as the Directors had found it necessary to avail themselves of the information thus obtained, it appeared to them but an act of justice to return to those who might be induced to take shares in the present undertaking such portions of the sums they subscribed as the shareholders might deem advisable. He would suppose that one of the shareholders in the undertaking had previously, in the way he had described, given one or two hundred pounds for the survey, such proportion of his subscription as the shareholders might consider expedient would be deducted from the amount of the calls that might be made on him.

The resolution, with a verbal alteration proposed by Dr. Cookworthy, was then adopted.

Ralph Cole, Esq., proposed a resolution, giving a qualified preference to the southern line, and distinguishing as the best of the southern lines from Newton to Exeter, that of Mr. Rendel, provided it be adequately supported by the landowners and local gentry. If, on the contrary, they failed to render reasonable and proportionate assistance, the northern line to be at once preferred.

Some discussion then ensued, in which Dr. Cookworthy, Col. Symons, D. Derry, Esq., &c., took part, after which the resolution was unanimously adopted. A Committee for the purpose of carrying out the resolutions and canvassing the town was next appointed, with power to add to their number. The thanks of the meeting were then voted to the Chairman, and the meeting broke up.

The following letter on the subject appears in the *Falmouth Packet* of Saturday last, addressed to the Editor:—

Sir,—The report of the Plymouth and Exeter Railway meeting, given by the *Plymouth and Devonport Journal* of the 15th instant, appears to contain some very remarkable statements, which, until they are explained a little more fully, I must call fallacies, and to some of which I will now advert.

Fallacy 1st.—By Mr. M'Neill's Report it appears, that if "Mr. Rendel's south line" be adopted, there is a "saving between Exeter and Plymouth of about five miles, and between Exeter and Falmouth a saving of three miles," as compared with the Cornish line laid down by Captain Moorsom. The fallacy here lies in the names of the places. By Captain Moorsom's Report it appears, that his line is 105½ miles in length from Exeter junction to Falmouth, and 52 miles from Exeter junction to Plymouth. By examining Mr. Rendel's lines it appears that from the same point of junction near Exeter his south line is 49½ miles to Plymouth, and 56½ miles more to St. Just, thus making 106 miles for the total distance for the mails to St. Just, as compared with 105½ miles for the same mails to Falmouth. But if Mr. Rendel's line be taken to Falmouth, without any disguise as to the term, then it appears that from Plymouth the distance would be 65½ miles, making altogether 115 miles for the mails to traverse, and thus the fallacy of "saving 3 miles" becomes a reality of losing 9½ miles.

Fallacy 2nd.—"Mr. Rendel's south line" is set down as producing a traffic of 215,762*l.* per annum, or about 88*l.* per mile per week. This places Mr. Rendel's line in a position equally flourishing with the Great Western, the South-Western, and the Manchester and Leeds Railways, each of which realises about the same amount; and it places this happy south line as second only to the Liverpool and Manchester and London and Birmingham, each of which realises a larger amount. Happy Mr. Rendel, to have made a discovery of this character! Happy men of Plymouth, to believe it! For our Cornish line, it appears Mr. Mc Neill gives us credit for 44*l.* per mile per week, including the Plymouth traffic, and it is satisfactory to find that there is no fallacy here, for our own calculations amounted to somewhat less.

Fallacy 3rd.—Mr. Rendel makes his traffic on a line over the wilds of Dartmoor amount to 130,075*l.* per annum, and this without any branch to Tavistock, five miles distant from the line, so that the *intermediate population* on this line, of 43 miles, would be 6,792 souls, as stated on Mr. Mc Neill's map. But on the Cornish line from Plymouth to Exeter, passing through Tavistock, Okehampton, and Crediton, and thus obtaining the traffic of an intermediate population of 19,792 souls—the terminal population being in both cases the same, Mr. Mc Neill, or rather the calculator of traffic, Mr. Cole (for we are told that Mr. Mc Neill repudiates the idea of his being answerable for these fallacies) makes the total traffic amount to 123,383*l.* per annum, or about 7,000*l.* per annum less than in the other case, where an additional population of 20,000, and a rich mining district, and a wealthy agricultural market are entirely omitted.

Fallacy 4th.—In the cost of working the north or Cornish line, Mr. Mc Neill appears to have run into some curious fallacy of his own, for he states the probable cost as being 85,404*l.* per annum. If we suppose that as many trains run between Plymouth and Exeter on this line as are now running between Birmingham and Liverpool, and that they are run at the average expense of the 20 principal railways now at work, we shall find that the expense annually comes to about 58,500*l.*; so that Mr. Mc Neill would seem to wish it to be believed, either that we must run half as many trains again as the Grand Junction Company do, or that we are to run our carriages at about 50 per cent. greater expense: and whichever of these fallacies may be selected, the explanation must be left to our more learned men of Plymouth.

I cannot, in truth, make head or tail of this Report; and until I am supplied with the "very voluminous portions," out of which the Editorial report is concocted, it is not likely that I shall be able to say more. Some curious points, however, incidentally appear in corroboration of the fairness with which the Report of the Cornwall County Committee has been drawn up, to which I may hereafter draw attention; and meanwhile recommend the Plymouthians to "look before they leap."

I am, Sir, your obedient servant,

AN ENGINEER.

Redruth, September 26, 1842.

EASTERN COUNTIES' RAILWAY COMPANY—ADJOURNED GENERAL MEETING.

THE adjourned general meeting of the proprietors of the Eastern Counties' Railway Company was held on Saturday last, at the Shoreditch station; HENRY BOSANQUET, Esq., in the chair.

The shareholders had been apprised, by circular, that another adjournment would be recommended, in order that they may have an opportunity of inspecting the line—the completion of which by the 1st instant (as originally contemplated) had been delayed by the wet weather. The attendance, therefore, was not numerous.

The CHAIRMAN, after a few introductory remarks, moved that the meeting be again adjourned to Friday, the 28th instant.

This was seconded by Mr. Edward Copland, and carried unanimously.

The CHAIRMAN said, he had great pleasure in stating—although it could not be embodied in the resolution just passed—that, if the weather continued at all favourable, the proprietors, as well those who were absent as those now present, would be invited by circular to inspect the line on the 27th instant—the day previous to the meeting. Even should the weather not enable the Engineer to finish the line by the 27th, the adjourned meeting for general business would be held on the 28th, as already stated.

The proprietors then separated.

NORTHERN AND EASTERN RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL general meeting of the proprietors of the Northern and Eastern Railway Company was held on Wednesday, at the London Tavern, Bishopsgate-street, "for the purpose [as stated in the notice convening it] of considering the subject of disposing of 3,136 forfeited shares, and also to authorise the Directors to borrow a sum of money not exceeding 155,110*l*." WILLIAM MARSHALL, Esq., M. P., Chairman of the Board of Directors, presided. There was a full attendance both of Directors and proprietors.

The SECRETARY (William Bourne, Esq.) having read the advertisement convening the meeting,

The CHAIRMAN said, it would perhaps be desirable before proceeding to the business for which the proprietors had been called together, to lay before them the proceedings which had been taken in the matter of the lease of the line, as proposed by Mr. Parker on behalf of certain gentlemen. The result of these proceedings had already been communicated by the copy of a resolution to which the Committee appointed at the last meeting had unanimously come, and which had been sent to every shareholder; but as no doubt they would like to hear something as to the details, he should first request the Secretary to read the minutes of the Company's sittings, reserving to himself the right of further adverting to the subject should it appear necessary. He would now only state that the Directors appointed to act in conjunction with the Committee of proprietors, were Mr. Roskell, Mr. Kennard, and himself. He himself had been unavoidably absent from town, but had written to say that if his presence were deemed necessary, he would at any time willingly attend, although he had taken it for granted that the preliminary investigation would be of comparatively minor importance. He mentioned this in order to account for his name not being on the minutes. Those Directors who were present would be able to give any further explanation that might be required.

The SECRETARY then read the minutes as follows, Mr. Sydney Bell first explaining that they were merely the jottings made by Mr. Roskell, and not a formal record of the Committee's proceedings:—

WEDNESDAY, 14TH SEPTEMBER, 1842.

Meeting of the Committee appointed to negociate with Mr. Parker for leasing the Northern and Eastern Railway.

PRESENT—John Roskell, Esq., Chairman; R. W. Kennard, Esq.; S. S. Bell, Esq.; Wm. Stobart, Esq.

Mr. Parker and Mr. Bidder on the part of the lessees, met the Committee, and submitted the following gentlemen's names as the parties proposing to become the lessees.

Robert Stephenson, Esq.; Francis Mills, Esq.; Lewis Cubitt, Esq.; John J. Bramah, Esq.

It was stated that Messrs. Grissell and Peto had also been parties to the measure till Monday, but had then retired.

It was also stated that application had been made to another party to join the four gentlemen before mentioned—that an answer would be given in the course of the week, and that if it should be in the affirmative, the lessees would be ready to prosecute the negociation immediately, but that if it should be otherwise, Mr. Parker was not prepared to state that they could proceed further.

It was then suggested on the part of the Committee that the lessees shall deposit half the receipts of the railway daily into the hands of trustees, as security for the due payment of the rent.

They propose to pay 5 per cent. upon the whole cost of the line, so that the shareholders shall receive 2½ per cent. half-yearly, supposing that the 26,000*l.* received for forfeited shares be not appropriated with the new issue of shares.

They also propose seven years as the term of the lease, and that an Act of Parliament shall be applied for to secure them that term, the cost of procuring which is to be added to the cost of the railway, on which interest is to be paid. The making of the Ware and Hertford branch is at present uncertain, but the Committee are led to expect that it will be carried out as already proposed.

That the stock shall be valued now and at the end of the lease at the market value.

The lessees are not prepared to give any security for the return of the railway and stock, or due performance of the covenants of the proposed lease.

It is suggested by the Committee that the 1,200 shares for making the Hertford and Ware branch shall be deposited in the hands of trustees for the due performance of said covenants. The lessees are willing to substitute the following for their first proposal. To pay 30,000*l.* for the first year, for the two following years 5 per cent. on the outlay; on the three following years 5½ per cent.; and the remaining two years 6 per cent.; this supposes seven years after the opening of the Hertford and Ware branch. That to determine the proper expenditure of the lessees a reference to be had at the end of 3, 5, and 7 years, and any extravagant or unnecessary charge for the same to be refunded.

The Directors, being anxious to carry out the wishes of the proprietors as expressed at the late general meeting, and at the same time to secure for them all the protection of which such an arrangement is susceptible, beg to offer the following observations to the Committee:—

The letter of Mr. Parker has led the proprietors to expect not only a well secured net interest of 5 per cent. upon their capital, but a further though undefined advantage by the moiety of all profits beyond the 5 per cent., and it is argued that as no prudent men would take upon themselves the risk of the guarantee of 5 per cent. without the certainty of a considerable advantage to themselves, they must calculate upon the profits so much exceeding 5 per cent. as to afford to the shareholders a corresponding benefit by the moiety of the excess.

Upon the first view this expectation appears reasonable, but the Directors wish to point out to the Committee that in order to secure this advantage to the proprietors very stringent conditions must be made with the lessees, who might otherwise either by salaries and allowances, either to themselves or their employés, or by additions to the working stock, for which they are to be paid in money at the end of the lease, so add to the working expenses of the line as to leave no apparent or divisable profits beyond the 5 per cent.

Supposing, however, that this difficulty can be met, or that the Committee should be of opinion that the well-secured net interest of 5 per cent. is all that the proprietors should expect, it will become their duty to see that the agreement makes provision, at the expense of the lessees, not only for such office and other expenses as will be necessary for the protection of the shareholders, and for the ordinary wear and tear of the railway and buildings, and also for that gradual wear of the rails and decay of the sleepers which will at some periods with the rails, and at no distant period with the sleepers, require their entire replacement, it will also be necessary to see that the Company is protected against all those losses from fire, or accident to life or limb, from their primary liability, to which the Company will never be released except by the actual sale of the line.

There are, no doubt, many other conditions which may suggest themselves to the Committee, in the progress of the negociations, as necessary to secure to the shareholders the advantages they expect from leasing the line, though the precise nature of these cannot be distinctly pointed out until it is determined for what period the lease is to be granted, and what parties or Companies are to be directly or indirectly interested in it.

If, in the progress of these negociations, the Committee should see any reason to doubt whether all the advantages expected by the proprietors are likely to be fully realised, the Directors trust that the Committee will, before they agree to abandon the interest of the Company in the line, make their estimate of the probable future expenses and revenue, if worked under their own superintendence; and the Directors are more anxious that should be done, because the passenger traffic of the line cannot be considered to be as yet fully developed; and the goods' traffic, which must be considerable, is yet untouched.

The Directors have of course their own opinions on this subject; but with the temper and obvious want of confidence manifested by the proprietors at the late meeting, they wish that this inquiry, if entered into, should be conducted entirely by the proprietors chosen by that meeting, though they will of course be happy to afford all the information in their power; and they have only further to add, that if the Committee should come to any conclusion adverse to the leasing, and should determine to continue the management in a Board of Directors, it is their intention, so soon as they are released from their present personal liabilities by the appropriation of the forfeited shares, to resign their trust into the hands of the proprietors, that they may determine upon such mode of management as they may think best, and place that management in the hands of those who they may think best entitled to their confidence.

Adjourned to Tuesday, at 12 o'clock.

(Signed) JOHN ROSKELL.

MONDAY, 19TH SEPTEMBER, 1842.

Meeting of the Committee to negociate for leasing the railway. Specially called.

PRESENT—John Roskell, Esq., Chairman; Richard Paterson, Esq.; Lewis Levy, Esq; S. S. Bell, Esq.; William Stobart, Esq.

The minutes of the 14th instant were read and confirmed.

It was moved by Mr. Paterson, seconded by Mr. Bell, and—

Resolved unanimously—"That the Committee will not agree to lease the railway without security given, either in a substantive form, or arranged by the covenants of the lease."

Adjourned to Tuesday, the 20th instant.

Original, signed by—

JOHN ROSKELL, RICHARD PATERSON, LEWIS LEVY, SIDNEY S. BELL, WILLIAM STOBART.

TUESDAY, 20TH SEPTEMBER, 1842.

Meeting of the Committee to negociate for leasing the railway.

PRESENT—John Roskell, Esq., Chairman; R. W. Kinnard, Esq.; R. Paterson, Esq.; S. S. Bell, Esq.; Lewis Levy, Esq.; William Stobart, Esq.

The minutes of the 19th instant were read and confirmed.

Mr. Parker and Mr. Bidder attended the Committee on behalf of the intended lessees.

Mr. Parker stated, that in consequence of the fifth party, to whom he had referred at his last meeting with the Committee, having refused to become a party to the proposed lease, he was sorry to say he had been instructed by the other persons concerned to inform the meeting that they could not go forwards with the proposed undertaking, and that the Committee must therefore consider the negociation at an end.

Mr. Paterson and Mr. Levy expressed some observations on the impropriety of the conduct of those for whom Mr. Parker had acted. Mr. Bell then said, that as a member of the Committee, he must observe that this Committee had no power to absolve Mr. Parker's clients from their offer, if the Company should resolve on holding them to it, and that it must not be understood from anything which had transpired to day, that the Committee was to be construed as in any way having released the parties on whose behalf the offer had been made.

The Committee then came to the following resolution, viz.:—

"As Mr. Parker has to-day communicated to this Committee that Mr. Robert Stephenson, Messrs. Grissell and Peto, Mr. Francis Mills, Mr. Lewis Cubitt, and Mr. John Jos. Bramah, the parties in whose behalf he made the offer communicated to this Company in his letter of the 29th July last, were not prepared to proceed further in the negociation, and that this Committee might therefore consider the negociation at an end; and as this Committee was appointed solely for the purpose of carrying out that negociation, and as the powers of this Committee are at an end,"

Resolved unanimously—"That its further meetings be discontinued, and that the Directors be requested to communicate this result to the proprietors, either by circular, or at a general meeting, as they shall consider most proper."

(Signed) JOHN ROSKELL.

Mr. ROSKELL (Deputy-Chairman) stated, that the resolution of the Directors embodied in the above, had been agreed to prior to the first meeting of the Committee.

Mr. VIZARD, in reference to Mr. Bell's protest as contained in the minutes, jocularly said, he feared that a Chancery suit to compel the parties to go on with the lease would not do much good. (Laughter.)

The CHAIRMAN said he was now ready to listen to any remark which the Committee might have to offer.

Mr. L. LEVY was not aware whether any other member of the Committee had anything to say, but for his own part he thought the whole business of

Digitized by Google

the lease one of the completest farces ever played off upon a public Company. (Hear, hear, hear.) He did not believe that anything serious had ever been intended; it was a mere clap-trap to produce an effect, and certainly it had produced the effect of sending the shares down to 20 per cent. discount. (Hear, hear, hear.) When an honourable proprietor, at the last meeting, spoke of "humbug," he (Mr. Levy) could not believe that any such term was applicable to the Northern and Eastern Railway, but now he believed that the whole scheme of leasing the line was mere humbug, and nothing else. (Loud applause.)

Mr. ROSKELL inquired if the honourable proprietor applied the word "humbug" to the proceedings of the lessees, or was it to those of the Directors? (Cries of "No! no!")

Mr. CRAWSHAY (late Chairman of the Board) wished to know if Mr. Levy applied the term to him, as he was the party who first brought the proposal before the proprietors at the general meeting.

Mr. LEVY had not mentioned any names. If the cap fitted any one, he might wear it. ("Hear, hear," and a laugh.) He was one of the members of the Committee, and looking at the mode in which the offer had been first put forward, and how it had been prosecuted, and then at its termination, he was, he would repeat, firmly convinced that the whole affair was complete humbug. (Hear, hear, hear.) How did it begin? Mr. Somebody made an offer to lease the railway, but the proprietors were not to know the names of the parties. Then, when the names were disclosed, the Committee were told that they were to have no security. (Hear, hear, hear.) Could any one suppose that men of business would entertain a proposal for leasing the line without proper security? (Hear, hear, hear.) The refusal to give security satisfied him that the whole affair was a farce, and he had said so repeatedly, both in the Committee and out of it. The honourable Chairman had no need to apologise for his absence from the Committee. Had he come from the country to attend the meetings of the Committee, he would only have been following the example of the King of France, who

"—— with fifty thousand men
Marched up a hill, and then marched down again."

("Hear, hear," and laughter.)

Mr. CRAWSHAY had thought Mr. Levy meant to apply the phrase "humbug" to what *he* had done in the matter.

Mr. LEVY was sorry the honourable gentleman had put the cap on. (Laughter.)

Mr. CRAWSHAY would soon put it off. When the proposal was put into his hand, on the morning of the meeting at which he made it public, one name had been mentioned to him as connected with the scheme, and upon the guarantee of that name he had brought the matter before the proprietors. When he stated that he referred to Mr. Hudson, of York, the best railway manager in the kingdom, as shown by the payments of the best dividends considering the length of the York and North Midland Railway, he was sure he would stand acquitted of any attempt to humbug the proprietors. (Hear, hear.) It was because he had been told that Mr. Hudson was at the head of the proposal to lease the Northern and Eastern Railway that he had read Mr. Parker's letter to the recent meeting; had he known the names as they had since appeared, he would never have read that letter.

Mr. BIDDER, C.E., thought the time was now come when he ought to explain the course taken by the lessees, in order to show that there was no "humbug" on their parts. He would state, at the outset, that the project for leasing the line originated with himself. His connection with the railway, as Engineer, was matter of notoriety. He had, however, been Engineer only as regarded the construction of the works, and in making some arrangements for the conduct of the traffic; for soon after the present Board took office, the duties, both of Engineer and Secretary, had been considerably restricted, and the control of many matters entrusted to a Manager. But although not employed in working the traffic of the railway, he had not been an inattentive or uninterested spectator of the result, for he himself held shares in the undertaking, and had, on the solicitation of one of the Directors, induced others to embark their money in it. Towards the end of May, soon after the opening of the line to Bishop Stortford, he had intimated to the Board, that as his duties were now at an end, with the exception of settling some accounts, he should wish his salary to cease in the month of June; but that he was satisfied the immense resources of the line had not as yet been *attempted*—for he might use so strong a word as that—to be developed to anything like the extent of which they were capable. (Hear, hear.) Accordingly it had occurred to him that a lease of the line might be so arranged as to prove beneficial to the individuals renting it, and to the proprietors whose property it was, and having mentioned the matter to Mr. Peto, who from his connection with the works was as well acquainted as himself with the merits of the railway, that gentleman had said, that if Mr. Robert Stephenson would join them, he would be one of the parties to the lease. Mr. Stephenson consented, and ultimately the other gentlemen to whom reference had been made. The proprietors would recollect, however, that it was distinctly stated in Mr. Parker's letter, that unless the lessees could have the cordial co-operation of the Directors, the matter had better be dropped. This had been stated by Mr. Parker in consequence of a letter received from Mr. Stephenson from Paris, an extract from which he would, with the permission of the meeting, now read. [The honourable proprietor here read the passage. It expressed the opinion of the writer that the lease might be made an excellent thing; but that the concurrence of the Directors was essential, and that, in fact, it was desirable the proposal should come from the Board in the first instance.] In reply to Mr. Parker's communication, a letter had been addressed to that gentleman by Mr. Marshall, the Chairman of the Directors, setting forth that, in his opinion, and the opinion of his colleagues, the proposal could not be entertained. (Strong marks of surprise.)

The CHAIRMAN did not think he had sent any such letter.

Mr. BIDDER said, the letter was in existence, and could be produced.

The CHAIRMAN again expressed his doubts.

Mr. GURDON inquired, if the letter said to have been sent by Mr. Marshall was a private, or an official, communication.

Mr. BIDDER said, it was in Mr. Marshall's handwriting, but there was no mark to show whether it was official or otherwise. *That*, however, was a matter of little consequence, for it proved at any rate that the lessees could not calculate on the co-operation of the Board, without which they did not hope to succeed.

The CHAIRMAN wished to know where the letter was.

Mr. BIDDER said, it was in the possession of Mr. Parker. He had expected that it would have been sent to him before the meeting.

Mr. VIZARD inquired its date.

Mr. BIDDER did not precisely recollect, but it was prior to the general meeting at which the scheme for leasing was laid before the proprietors. (Murmurs.)

Mr. KENNARD (a Director) thought Mr. Marshall's letter did not go so far as Mr. Bidder seemed to suppose. It merely, as far as he could call to mind, spoke of the lease in a doubtful way, and suggested difficulties with reference to the Ware branch and other matters.

Mr. BIDDER begged pardon, but he was quite certain that it went much further—that it expressed the opinion of Mr. Marshall that the lease could not be entertained, and stated that such also was the opinion of the Board. ("Hear, hear, hear," and murmurs.)

Mr. BELL inquired if the Company's letter-book were in the room.

The SECRETARY said it was not, nor did it contain a copy of Mr. Marshall's letter.

Mr. VIZARD did not see what good could arise from the production of the letter, unless it were intended thereon to found a motion for the impeachment of the Chairman. The negociation was now at an end.

Mr. H. G. WARD (a Director) said, it was clear the letter of Mr. Marshall did not prevent the negociation from being carried on. It had been broken off on entirely different grounds. Although he was of opinion that nothing ought to be kept back from the meetings of proprietors, he did not see that any good could be the result of bringing forward the letter.

It was intimated that a copy was at the Company's office. The Chairman however wished Mr. Bidder to send for the original, and after considerable delay, and a good deal of sharp discussion, Mr. Bidder wrote a note to Mr. Parker, and a messenger was dispatched for the letter. It was not, however, produced to the meeting.

Mr. BIDDER resumed—Having received such a letter from the Chairman, the intending lessees considered the matter at an end. The shareholders, however, having resolved that the scheme should be entertained, the lessees again entered upon the subject. The first meeting of the Committee was to take place on Tuesday, and it was not till 12 o'clock on the previous day (Monday), that in consequence solely of private circumstances, Messrs. Grissel and Peto declined embarking in the project. This of course caused considerable hesitation to the lessees, but they resolved to apply to a fifth party, whose answer they promised to communicate to the Committee at their next meeting. That answer was unfavourable, but nevertheless, the lessees resolved to go on. In the meantime he (Mr. Bidder) heard from authority, that an influential member of the Board had stated to Mr. Glyn, that the personal responsibility of the intending lessees would not be sufficient to satisfy the Directors, and that the gentleman alluded to requested Mr. Glyn to persuade Mr. Stephenson to withdraw from the project, so as to obviate the unpleasant necessity of rejecting the parties. He had at first merely heard from rumour the name of the member referred to, but Mr. Stephenson had since told him that it was Mr. Roskell. Notwithstanding this rumour, the parties had on Monday (the Committee meeting for the second time on Tuesday) resolved to execute the Hertford and Ware branch—had resolved to allow the 1,200 shares to remain as a guarantee—and further, had resolved to pay a half-year's dividend in advance. (Hear, hear, hear.) On Tuesday, however, Mr. Stephenson informed him (Mr. Bidder) that as Mr. Peto, upon whom he had relied so much for the management of the concern, had declined, it would interfere too much with his (Mr. Stephenson's) time to undertake it. Under these circumstances, Mr. Stephenson begged to retire, and more especially on account of the unpleasant rumour already referred to, Mr. Stephenson being of opinion, that if the responsibility of the parties were questioned, a stain would be cast upon their names. He thought he had said enough to convince the meeting that the intention of the lessees was *bona fide*. (Hear, hear, hear.) It was but right to state that no member of the Board had had anything at all to do with the proposed lease. It might be interesting to the shareholders to know what part he (Mr. Bidder) had taken in the business. His object was two-fold—namely, to show those who had entered into the railway on his recommendation that the undertaking was a good one; and secondly on personal grounds. He had told the parties that he could be backed to the extent of 40,000*l*., but they intimated that on no account could he be permitted to become a partner, as they wished him to manage the railway; and were he a partner, they would be saddled with him for the whole seven years, whether he performed his duty or not. He had then said, that if he undertook the management of the line two things were indispensable—first, that he should have the appointment and sole control of the officers; and next, that h

Digitized by Google

should be paid by a per-centage on the receipts, after deducting the rent and expenses of working. He thought this was sufficient to show that his views were sincere as to the yet undeveloped resources of the line. (Hear, hear, hear.) His opinions might be erroneous, for all human opinions were liable to error, but at 5 per cent. on the receipts, after paying the rent and cost of working, he had no doubt he should have received 2,000*l.* a year. (Much applause.)

Mr. LEVY said, one would suppose, from what had been stated by the honourable proprietor, that the parties were ready to pay down at once the money required for a security, whereas, in truth, they had been told at the first meeting of the Committee that no security at all could be given.

Mr. BIDDER said, this was not quite correct. Mr. Parker had said, at the first meeting, that he was not prepared with any deposit security, but of course there would be the personal responsibility of the lessees. Subsequently Mr. Bell had suggested that the shares be left as a guarantee, and Mr. Parker said he would consider of it. The lessees had, as already explained, agreed to this, but owing to the secession of Mr. Stephenson the matter had not been brought before the Committee.

Mr. STOBART (a member of the Committee) confirmed Mr. Bidder's statement as to what had passed at the meetings of the Committee on this subject.

Mr. BELL said, all that had transpired as to security had been little more than preliminary. They had never got so far as to say to the lessees, "Will you do so-and-so, aye or no?" In the course of the discussion at the Committee's meeting, Mr. Roskell had suggested that 10,000*l.* be deposited in the first instance, and 3,000*l.* a year added to it, which would secure at the end of the lease a fund of upwards of 31,000*l.* to guarantee the restoration of the line in proper condition. *That* had been refused by Mr. Parker, whereupon he believed Mr. Roskell had inquired, if the lessees were prepared with any security. If he recollected aright, the answer was "No." It had been intimated, however, that the lessees were prepared to take 1,200. shares, whereupon he had recommended that a clause should be inserted in the Act of Parliament, which it was proposed to apply for, to prevent the transfer of any of these shares until after the termination of the lease. Mr. Parker had said he would consider the proposition, when all at once Mr. Parker retired from the negotiation.

Mr. COOK said, it seemed to him that there had been a want of good faith on the part of those Directors who had been in communication with the intending lessees, and that the latter were now made the scape-goats. (Hear, hear, hear.) There had been, and now was, a disposition to rent the line, but the parties had been prevented in consequence of one of the Directors going to a banker, and asking him "What do you think of such a person?" The reply was, "Very highly." "But [it was then asked] will his responsibility stand a searching examination?" The answer was, "Oh, that is another thing," whereupon the person thus spoken of—namely, Mr. Mills—had refused to have anything further to do with the matter. He firmly believed that there was no wish on the part of the Board to lease the line, but quite the reverse; and was satisfied that in such a Board, neither the proprietors nor the public had, or could have, the smallest confidence. (Applause.) He knew there were highly respectable parties at the Board, but he regretted to find them mixed up with colleagues who were not worthy of confidence. (Hear, hear, hear,) He was sure that with a good Direction the undertaking would prove highly prosperous, and the sooner therefore the present Board retired from office the better. (Renewed applause.)

Mr. ROSKELL said, it was quite true he had spoken to Mr. Glyn, but it was an accidental and not a premeditated occurrence. After leaving the first meeting of the Committee he was passing down Ludgate-hill in an omnibus, when he saw Mr. Glyn, whereupon he alighted and walked with Mr. Glyn to Somerset House, thinking that he might thus be able to get some information. He had put down on paper a note of the conversation that took place, which note had been sent to Mr. Glyn for revision, and that gentleman had made some alterations and returned it, accompanied by a note, but as the note was marked "private and confidential," of course he could not make its contents public. He held, however, in his hand the memorandum of the conversation, with Mr. Glyn's alterations, and the Secretary should read it. He would just premise that he had intended the memorandum for publication in last week's *Railway Times*, but Mr. Glyn objected to having his name brought forward in print.

The SECRETARY then read as follows:—

"I will here advert to a report in circulation, that I had entreated of Mr. Glyn to use his endeavours to prevail upon Mr. Robert Stephenson to withdraw the proposition for leasing, and that they then withdrew.

"The plain truth is that I joined Mr. Glyn in his walk from the city to the west-end on the day of the first meeting of the Committee, 14th September, and having reason to believe that he was aware of the names of the parties making the offer, even if not of the terms offered, I thought I might with advantage communicate with him.

"I told him that we had just broke up from our first meeting; that their proposition was to give nothing but their personal security, and to make conditions that would place the railway funds to accumulate to a considerable amount in their hands at certain periods of the year. I had proposed that they should deposit in the hands of trustees 10,000*l.*, and add 3,000*l.* more to it each year, so that there should be a sum of 31,000*l.* deposited at the end of the lease to make good any depreciation in stock, buildings, &c., but all which they promptly repudiated.

"I stated it was *my own opinion*, that it would be very unwise to transfer 900,000*l.* of perishable property into hands whose interest lasted only for seven years, and that too, upon personal security.

"Mr. Glyn asked me if he should communicate my views to Mr. Parker, to which I answered that I should be very sorry to do anything that would divert them from taking the line on proper terms, but if they persisted in a refusal to give any but personal security, I should be happy to be the means of sparing them the pain of being refused, as it was my *own* opinion they would be."

Mr. BELL, who at an earlier stage of the proceedings had thrown out some hints as to personal matters, and expressed his unwillingness to enter into them unless originated by others, complained of having been treated discourteously by Mr. Roskell, but did not give the particulars. He then inquired as to the dates of certain Board meetings, and was answered that there had been meetings on the 14th and 21st of September, but no intermediate meeting. He also asked if there were any resolution of the Committee authorising Mr. Roskell to communicate with Mr. Glyn.

Mr. ROSKELL—Certainly not.

Mr. BELL—Did Mr. Roskell inform the Committee of what he had heard from Mr. Glyn?

Mr. ROSKELL—No.

Mr. BELL—Did Mr. Roskell inform Mr. Glyn of the suggestion for the deposit of the 1,200 shares?

Mr. ROSKELL said, he had done so, and with this remark, that as the parties had refused to put down 10,000*l.*, it was not likely they would consent to deposit 60,000*l.*, the amount of the shares.

Mr. BELL then went into a long history of the proceedings of the Committee, but stated nothing that had not previously been given. He was called to "order" by

Mr. MASTERMAN, jun. (a Director), who put it to the meeting whether, after they had heard the Report of the Committee, it was worth while to listen to a detail of impressions and counter-impressions of particular members. If so, their sittings would be just as long as those of the Committee. (Hear, hear, hear.)

The CHAIRMAN had been unwilling to interrupt the honourable proprietor, but he *did* think he was out of order.

This appeared to be the general impression of the meeting.

Mr. H. SMALE, as the party who had moved the appointment of the Committee, hoped the honourable proprietor would be allowed to proceed, when he had no doubt it would be shown that it was not from any distrust in the merits of the line that the plan for leasing was at an end.

Mr. BELL said, it might even now be renewed, as he would have proved had he been permitted to proceed. (Cries of "No, no," and some confusion.)

Mr. ROSKELL said, it was important to state, and he had authority for stating, that Mr. Glyn had used his utmost endeavours to dissuade Mr. Stephenson from the lease previous to the interview and conversation already referred to. (Hear, hear, hear.)

Mr. GURDON said, he had come 50 miles to attend the meeting, and from the circular he held in his hand he understood the subject for discussion was the re-issue of forfeited shares. Were they therefore "in order" in entering so much into other matters? (Hear, hear, hear.)

The CHAIRMAN said, he had stated on opening the business of the day, that before the share question was discussed, it might be desirable that some information should be given with respect to the negociation for leasing the line. This, he thought, was due to the late meeting. It was for the proprietors to say whether they had heard enough. [A VOICE—No.] He had purposely abstained from saying anything as to the contents of the letter referred to by Mr. Bidder, until the letter should be before the meeting, and he thought Mr. Bidder ought to have brought it with him.

Mr. BELL here called the Chairman to "order," claiming his own right to address the meeting, if this subject were to be continued. The meeting, however, very unequivocally expressed their opinion of the interruption, and Mr. Bell sat down.

The CHAIRMAN resumed—Mr. Parker had made the offer for a lease to him as Chairman, he having just entered upon that office. Being in the country at the time he had transmitted to the Secretary to be laid before the Board the letter of Mr. Parker, and his (the Chairman's) answer. These letters were laid before the Board at its meeting on the 3rd of August. and he found by the minutes (the honourable gentleman here referred to them) that it was resolved that "Mr. Marshall's answer be approved." For the reason already given, he would at present say nothing as to the contents of that letter. He had written likewise to Mr. Roskell, stating, that in his own opinion and that of his father, it would be expedient to lease the line, provided proper terms could be secured. It might be thought from what had been said at this meeting that Mr. Roskell was opposed to the leasing of the line, whereas he held in his hand numerous letters from that gentleman wherein he said, that on the whole he approved of the measure, but that it would be necessary to have good security. (Hear, hear, hear.) Mr. Roskell had further said that he should leave wholly to the Committee appointed at the late meeting the consideration and settlement of the terms of the lease, but that he should make it his own care to see that accurate and proper clauses were inserted in the Act of Parliament for the protection of the proprietors. (Hear, hear, hear.) They all knew that Mr. Roskell's knowledge of railway matters was very extensive. (Hear, hear, hear.)

Mr. VIZARD said, he was in favour of the lease, and he thought he had heard it stated that the negociation might be resumed. Was it so?

Mr. KENNARD—What says Mr. Bidder?

Mr. BIDDER could not take upon himself at that moment to give an answer.

Mr. VIZARD thought the Committee ought to be re-appointed.

After some further conversation, Mr. Bell insisting upon his right to proceed if the discussion were continued, the Chairman put it to the meeting

Digitized by Google

whether they had had enough of the matter, and almost unanimously it was answered in the affirmative. The matter therefore dropped.

The CHAIRMAN then brought forward the following scheme relative to the forfeited shares:—

Scheme for disposing of 3,136 forfeited shares of 50*l.* each, upon which calls to the amount of 45*l.* per share will be considered to have been paid, leaving 5*l.* per share to be still called.

The shares to be sold *pro rata* among such of the shareas may be willing to take the same at a discount of 5*l.* per share, which plan would allot about one share to every three now held. The sum of 5*l.* to be paid on allotment, and a further sum of 5*l.* to be paid on the 1st March, 1843. The remaining 30*l.* per share to be payable by half-yearly instalments of 5*l.* per share on the 1st January and the 1st July in every year, until the whole is paid. The first of such instalments to be payable on the 1st day of January, 1844, with power to the Directors to extend those periods, if the money should in the meantime be raised on loan. The shares to remain as security to the Company until all the instalments are paid.

In lieu of dividends upon these shares, the purchasers will be entitled to receive interest at the rate of 5*l.* per cent. per annum on the whole amount for the time being paid up, the discount of 5*l.* per share being considered as so much paid up. The first payment of interest after the rate of 5*s.* per share upon the 10*l.* then paid up, will be made when the dividend is declared for the current half-year.

The holders to have the option at any time of declaring their intention to receive for the future, in lieu of interest at 5 per cent., dividends payable after the same rate as other shareholders. Should any shareholders elect not to take the proportion of shares to which they would be entitled under this arrangement, on or before the 1st day of December next, then such shares to be divided *pro rata* among such of the shareholders as may be willing to take them, and so on until the whole numbers shall be disposed of.

Mr. VIZARD contended that this measure if adopted would depreciate the original shares—would in fact make the present 20 per cent. discount 40, because these new shares, being so much more favourable, would be eagerly sought after in the market to the neglect of the old.

It was answered that the honourable proprietor would thus have an opportunity of selling his new shares, but he rejoined that he did not speculate, having purchased for investment.

Mr. BELL argued, that no loss would be inflicted on the holders of original shares. He supported the scheme.

Mr. LEVY inquired if it were distinctly understood that only 10*l.* a share would be called up on the new shares.

The CHAIRMAN said, no more would be called up if the requisite sum could be obtained on loan, until the loan notes became due.

Mr. BAGSHAW (a Director) replied to Mr. Vizard, reminding the learned gentleman, that already these shares had been offered by tender, but that no adequate terms had been sent in. He reminded him further, that the proprietors themselves had recommended a *pro rata* distribution, and amid considerable applause, dilated upon the mischief which had resulted from so large a number of shares hanging as an incubus on the concern, the Directors having power to throw them on the market at any time, and thus swamp it. They had put off the re-issue till the last moment, and now the debts of the Company must be paid.

Mr. VIZARD referred to an opinion given at a former meeting by Mr. Maynard, the Company's Solicitor, to the effect that a sale *must* take place, and inquired if the Solicitor had changed his opinion.

Mr. MAYNARD explained, that his principal objection to anything but a sale had arisen from the fact, that the original possessor of a forfeited share was entitled to any surplus that might on the sale of such share remain, after paying up the arrears of calls and interest, and therefore, that such party had a right to have the property offered to the best bidder. That difficulty appeared to him to have been got rid of by the proposal which had been made to receive tenders, not one of which tenders had been such as to leave any surplus whatever for the original holder of a forfeited share, on which the highest amount, namely 5*l.*, had been paid. Under these circumstances, without going into refinements as to the construction of Acts of Parliament, he was opinion that a *pro rata* distribution, in other words a sale to themselves, might be resorted to.

Mr. VIZARD contended that a sale to themselves was no sale at all, and without giving a decided opinion, not having the Act before him, his impression certainly was, that if ever these new shares should reach a premium, the original possessor could lay claim to such premium.

Mr. COOK inquired if it were the opinion of the Board that the new shares would be taken up by the proprietors generally on the terms specified.

The CHAIRMAN said, he had not been present at the Board meeting at which the scheme was agreed to, and therefore could not answer the question, but no doubt some of his colleagues could.

Mr. COOK wished to know if it were to be understood that the Chairman of a Company like this had not made himself acquainted with a matter of so much importance.

The CHAIRMAN could only repeat the answer he had already given.

Some sharp words ensued between the honourable gentlemen as to the terms of the Chairman's answer.

Mr. ROSKELL thought there could be no doubt the new shares would be taken up, since they would realise interest at the rate of 10 per cent. for the first half-year, and 7½ per cent. afterwards.

Mr. COOK asked, if that were the opinion of the whole Board.

Capt. MANGLES (a Director) thought it intolerable that questions should be put as to the votes of individual members of the Board.

Mr. COOK said, he wished for no further answer than was conveyed in the complaint just made.

Mr. MERCIER said, the new shares were only loan-notes in disguise. The scheme could not hurt the holders of original shares, since the public in order to secure the new must purchase old.

Mr. GURDON, at some length, defended the scheme. The railway had cost, in round numbers, 850,000*l.*, of which amount about 500,000*l.* had been raised by shares, and 240,000*l.* more on bond, and they now wanted a further sum of 110,000*l.* which they must procure either from themselves or others. It was better to raise it themselves, and how was it to be raised except by some such tempting scheme as this, which would do justice alike to the large and the small holder? (Hear, hear, hear.)

Mr. JOHN WILLIAMS said, as the attacks—the very unfounded and unjust attacks—that had been made upon the line in the columns of the *Railway Times*, might prevent some parties from taking their proportion of the new shares, he begged to state that since the opening of the line throughout the receipts had amounted to 80,000*l.* This, he might be told, was in the best part of the year, but then it should be remembered that as yet they had carried no goods, coals, or cattle. If they reckoned 33,000*l.* for expenses of working, and 12,000*l.* for interest on bonds, which was more than sufficient, there would remain enough to allow of a dividend of 6 per cent. to the shareholders. He thought it monstrous that a journal like the *Railway Times*, professing to support railway interests, should contain such articles as the two leading articles of the last and previous week on the Northern and Eastern Railway.

Mr. BELL would state from authority that the scheme for leasing the line had not been given up from any doubt of the capabilities of the railway. The calculations of the intending lessees had shown a dividend of 14 per cent. (Laughter.) The opinion might be wrong, but such was the calculation.

The CHAIRMAN thought this a very strong argument against a lease of the line. (Hear, hear, hear.)

Mr. BELL thought so too. He had always opposed the lease, and that was the reason why he had been anxious to explain the course he had followed while on the Committee, lest it should be supposed that he had taken unfair means to defeat the scheme.

Mr. LEVY did not agree with Mr. Vizard that they should run after the intending lessees. They should put their own shoulders to the wheel, and with good Directors, good business-men, he was satisfied that the result would not disappoint their expectations. (Hear, hear, hear.) As to the new shares, he had no doubt they would have been readily taken up previous to the enactment of the lease farce; whether they would now be taken up remained to be seen. (Hear, hear.) He was glad Mr. Parker's clients had not got the line, especially if they were to receive 14 per cent.—(laughter)—he was glad they had shown the cloven foot at so early a stage. Let them keep the line to themselves, and get good Directors to attend to it. (Loud applause.)

Mr. VIZARD wished to know why the whole of the money now wanted could not be borrowed instead of only part of it.

The CHAIRMAN, after referring to Mr. Maynard's opinion as to the legality of the *pro rata* distribution, explained to Mr. Vizard, that no further loan could be raised without the tangible security of share capital.

After some further discussion,

Mr. Gurdon proposed, and Mr. Gilbertson seconded, a motion for the adoption of the Directors' scheme.

It was carried with but one dissentient—Mr. Vizard.

The CHAIRMAN then read a resolution authorising the Directors to borrow 155,110*l.*, or any part of that amount.

Mr. SMALE asked if that amount would not be more than enough.

The CHAIRMAN—No.

Mr. ROSKELL—Not enough.

Mr. SMALE said, he had put the question, because, although satisfied of the individual integrity of the Directors, he was unwilling to trust the Board with the expenditure of more money than was absolutely requisite. (Hear, hear.) He was satisfied that the sources of revenue to the line were not properly inquired into. (Hear, hear, hear.)

Mr. BAGSHAW hoped the honourable proprietor would recollect that hitherto the Directors had been the Company's bankers, and would be so for some time longer.

Mr. LEVY would like to know if the Directors had a fixed salary, and if so to what amount? He thought it unfair to require their services for nothing.

Mr. WARD was quite sure that after what had passed that day—after the remarks which it had pained him to hear relative to the Board—there was not one member of it who would condescend to accept sixpence for his services during the interregnum which must elapse before the arrangements were completed for the resignation of their trust. (Hear, hear, hear.) It was perhaps desirable that fresh blood should be infused into the management—perhaps a good deal of it—and no doubt the proprietors would be able to form a Board who would act better together than unfortunately had been the case with the present Board during the last few months. At the same time they ought not to forget that they were under great obligations to some of the Directors—and as he was not one of those, he could speak with more freedom on the subject—but for whose conduct in laying themselves under heavy personal liabilities, he was satisfied that at this moment the railway would not have extended beyond Waltham Cross. (Hear, hear, hear.) If a party at the Board had to a great extent been allowed to have their own way it was, he thought, no more than they had a right to, and for his own part he had told Mr. Crawshay while that gentleman acted as Chairman, that his (Mr. Ward's) vote was at his service on all occasions, for he felt that but for Mr. Crawshay the work would not have proceeded. (Applause.) As this was probably the last time that he should address them as a Director, perhaps he might say a few words further. As a resident in the district through which the line passed, he quite concurred with Mr. Bidder, that as yet they had not received half the traffic which they might receive, and which with due vigour they would receive. (Hear, hear, hear.) Every word uttered by Mr. Bidder on this subject, satisfied him that they ought not to lease the line, and that with energetic management, it would answer all their expecta-

Digitized by Google

ions. (Hear, hear, hear.) When Mr. Stephenson said it might be made an excellent thing, and when Mr. Bidder, with full candour, admitted that he had looked for a remuneration of 2,000*l.* per annum, by a per-centage on the receipt safter paying rent and all expenses, it was to him a most convincing proof that they ought to keep the undertaking in their own hands. (Much applause.) Let them ask Mr. Smale, let them ask any other resident on the line, and they would find that their resources were not by any means fully developed. (Hear, hear, hear.) Of course the proprietors would make their arrangements for a new Direction, but in any little disagreements that now took place, let them not forget the great risks which some members of the present Board had run for the good of the Company, and the disinterestedness of all of them. (Hear, hear.) For his own part he had never expected that Mr. Crawshay would remain permanently as a Director. He had come in as a monied man, no doubt with the very justifiable view of benefitting himself, and he had carried out the railway to completion. He had with a most wonderful devotion presided day after day, and every day, at the Board, and now the Company had no longer any claim on his valuable time. (Hear, hear, hear.) He would repeat that from his own melancholy experience of the concern, while he had the honour of acting as Chairman, he was satisfied that without Mr. Crawshay they could not have gone on with the railway. (Much applause.) It would now remain with the Directors to make arrangements for retiring, and no doubt a special meeting would be called to give the proprietors an opportunity of appointing their successors. (Renewed applause.)

Mr. GURDON then moved a resolution empowering the Directors to borrow the sum required.

Mr. FOSTER seconded it.

A good deal of conversation took place as to the rate of interest It was understood that it would not exceed 5 per cent. Mr. Gurdon, with reference to a remark which had been made as to borrowing on loan-notes for 3, 7, and 10 years, expressed a hope that the dates of the notes would be as short as possible, so as not to tie up the Company too long, as perhaps they might at the end of 3 years wish to convert their debts into shares, as the London and Birmingham Company had done. No formal motion was made, but it was understood that the Directors would, as far as practicable, attend to this point.

The resolution was then put and carried unanimously.

Mr. GILBERTSON hoped he might be favoured with some information as to the construction of the branch to Hertford, and the probability of an extension to Cambridge. The branch line would be of great benefit. At a previous special meeting he had been told that the matter would be discussed at the general meeting, but it did not appear that the subject had then been mooted.

The CHAIRMAN said, the short answer was, that the Company had not funds.

Mr. WARD believed the Hertford and Ware people had not much encouraged the line, not having, as he believed, taken a single share. ("Hear, hear, hear," and a laugh.)

Mr. GILBERTSON did not rest the desirableness of the branch line upon the accommodation it would afford to these parts, but upon the benefit it would produce to the shareholders. (Hear, hear, hear.)

The CHAIRMAN announced that the business of the day was at an end; whereupon,

Mr. GURDON proposed the best thanks of the meeting to the Chairman.

Mr. WILLIAMS hoped he might be allowed to second the motion. He was proceeding to laud the Directors—when, as the proprietors were retiring, Mr. Gurdon put the motion, and it was carried by acclamation.

The Chairman made a suitable acknowledgment, and the meeting broke up, after a sitting of upwards of two hours.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—I exceedingly regret to find that the allusion in my letter on the Blackwall Railway estimates, and to the Parliamentary and legal expenses, has been construed into a reflection on the highly respectable Solicitors of that Company.

I can assure you nothing was further from my intention, as I can personally bear testimony to the fact, that no officers of any Company have ever more strenuously exerted themselves to settle disputes in any way rather than by an appeal to law.

In short, I feel assured that, could they have exerted the power, the Blackwall Railway Company would not have expended three in place of thirty thousand pounds per mile in Parliamentary and legal expenses.

I remain, Sir, your most obedient servant,

GEO. P. BIDDER.

35½, Great George street, Westminster,
October 7, 1842.

SUNDAY TRAVELLING ON RAILWAYS—THE GLASGOW AND GREENOCK LINE.

[From the *Scotch Reformers' Gazette.*]

WE believe it is not very generally known that Railway Companies have not the exclusive right of carrying passengers and goods,—the legislature very properly confers that right upon everybody who may choose to become a trader on the railway, merely permitting the Railway Companies (but not in every Act) to become traders, in common with the rest of the community, the railway, in these respects, being the same as a turnpike road, open to every person upon payment of the toll, and open on every day of the week—Sunday and Saturday. In many instances the Railway Companies are not the carriers of goods, but in almost every instance they alone are the carriers of passengers, as no private trader could, on many accounts, compete with them in that traffic. As regards Sunday travelling, they merely decline it in their capacity of carriers, that is all they can do in the way of preventing it; as makers and conductors of the road, they are bound not only to have the road in order, and open to the community on Sunday for the carriage of passengers and goods, but to have the requisite servants on the road to attend the traders and ensure safety. But for the expense necessary to be incurred in engines, &c., the public have the remedy in their own hands against vexatious conduct of Railway Directors, who deny the public their right to travel on Sunday. We are, therefore, glad to learn that a pretty numerous party have it in contemplation, and we understand the arrangement is in a considerable state of forwardness, to take on lease an engine, &c., and to ply for passengers upon Sunday upon the Greenock Railway. Although the accommodation, in point of carriages, may be far short of the Railway Company's, it will be a great boon to the community, and we trust to see it instantly followed by the running of the steam-boats, for the benefit of the working part of the community; and that the Railway Directors will, ere long, see the necessity of doing what the public are entitled to have—the running on Sunday of the Railway Company's carriages.

This announcement, which we now make on competent authority, will go like a bomb-shell among the Saints in Greenock and other places. But it will be realised to a certainty, whether they will or no. And we hope in their projected arrangements the new Company will take into consideration the claims of Mr. Wallace, M.P., who is no way priest-ridden. He deserves to have assigned to him the *coupe* of the first Sunday train, because he stood up manfully in Parliament and out of it, for the running of these trains on the lines of road throughout Scotland, for the accommodation of the public. The honourable member for Greenock showed the true spirit of his name and character on this point, at the late general election, for if we mistake not the Tories of Greenock hounded him with their pious yells about the running of these very trains; and, therefore, the compliment we now suggest is eminently due to him, and we hope it will not be overlooked when the steam is fairly up.

PROPOSED RAILWAY BETWEEN LEEDS AND HARROGATE.

A NUMEROUS and influential meeting of gentlemen was held at the Victoria Rooms, Low Harrogate, on the 29th September to consider the best method of promoting the above undertaking. A statement was first made showing what would be the probable expense of a line of single rails between Leeds and Harrogate, and what would be the probable return to the shareholders. It was then submitted by a Knaresbro' gentleman that a railway from Knaresbro' to Bolton Percy could be constructed at a much less expense, and would be every way better than a direct line to Leeds.

A Committee of twelve gentlemen was ultimately appointed to solicit subscriptions to defray the expenses attending the necessary surveys, and to report to a subsequent meeting.

It appeared from the different statements that a railway from Harrogate to Leeds would cost about 200,000*l.*, whilst a railway from Harrogate to the Bolton Percy station of the York and North Midland Railway might be accomplished for about 90,000*l.* The promoters of the Leeds line urged that a return of 8 or 10 per cent. might be expected from that undertaking, but the promoters of the Bolton Percy line contended that their line would realise from 8 to 18 per cent. Sir William Ingleby, who attended the meeting and took a lively interest in the proceedings, remarked that if they would guarantee him 6½ per cent. for the Bolton Percy line, he would find all the money himself. The feeling of the meeting was decidedly in favour of the line to the Bolton Percystation.—*York. Gazette.*

RAILWAY TRAIN A THIRD OF A MILE IN LENGTH.

THE longest railway passenger train we ever heard of went along the Slamannan and contiguous lines on the day when her Majesty passed through Linlithgow. That town formed a convenient rendezvous for the inhabitants of the populous towns and villages in the upper ward of Lanarkshire, who accordingly availed themselves in great numbers of the facilities placed at their disposal by the Railway Companies. In the course of the morning, trains from Wishaw, Coatbridge, &c., arrived with crowds of passengers at Rawyards, where the Slamannan Company were provided with their own and the Garnkirk carriages, besides all the coal-waggons which were fitted with malleable iron wheels. The first train that started for the eastern terminus consisted of about 90 carriages, waggons, &c., full of people, hauled by two engines, and assisted up to the head of the Ballochney Railway by four additional engines. Two other trains, one of 40 carriages, succeeded at intervals in the forenoon; and the whole of the passengers were landed in safety at the east end by 12 o'clock, and were thus enabled to be in Linlithgow two hours before the royal party arrived. The Managers of the Slamannan, Ballochney, and Wishaw lines, then consulted as to the best method of getting the people home, and resolved, with the view of obviating all risk of collision by separate trains, to send all the passengers west in one train. The return train consisted of 110 carriages and waggons, which were filled by about 1,500 people. The train, which was about one-third of a mile in length, started at five o'clock, drawn by four engines, and propelled by one; and the passengers were all landed, without the slightest accident having occurred, at their respective stations in the course of the evening. We doubt very much whether a similar feat has ever been performed on any railway in the kingdom, although this is not a regular passenger line; and yet it is nothing to what might be achieved in a case of emergency by the London and Birmingham Railway Company, which has between 90 and 100 engines, and a proportionate number of carriages.—*Scottish Guardian.*

NOTES TO THE TRAFFIC TABLE,
(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

5. The total amount of stock on which dividends are payable is 750,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, as also the toll from the Manchester and Birmingham Company. The divisor employed to ascertain the daily receipts per mile is 121 (85+15+21.) The Company do not now carry goods to Manchester.

14. The receipts include those derived from the Cheltenham and Exeter lines: the former opened for 18 miles, and the latter for 45. The divisor employed to ascertain the daily receipts per mile is therefore 181½ (118½+18+45.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. At the last meeting no dividend was declared, the disposable balance from the previous six months' working being only 1,472*l.* 10s. 9d.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,826*l.*, and there was a balance from the previous half-year of 12,479*l.* Out of these two amounts combined, the dividend (after making certain deductions) was paid.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c., and subject to payments to the Grand Junction Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,950*l.* 15s. 5d. are the receipts after deduction omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 180*l.* 17s. 6d.; carriages, 34*l.* 5s. 0d.; dogs, 3*l.* 15s. 6d.; parcels, 238*l.* 2s. 1d.; cattle, 56*l.* 12s. 6d.; corn, 8*l.* 7s. 10d.; heavy goods, 608*l.* 16s. 0d.; coal and lime, 171*l.* 17s. 6d. —Total, 1,302*l.* 13s. 11d.

31. The amount of stock *created* is 3,000,000*l.*, on which dividends are payable; and the sum of 850,000*l.* is borrowed money at interest. The 3,000,000*l.*, however, is nominal, inasmuch as the shares were some of them issued at a discount, which reduced the actual amount to 2,589,500*l.*, viz.:—15,000 shares at 100*l.* = 1,500,000*l.*; 15,000 of 50*l.*, issued at 40*l.* = 600,000*l.*; 22,500 of 33*l.* 6s. 8d., issued at 21*l.* 13s. 4d. = 489,500*l.*; total 2,589,500*l.* The details of the receipts are as follows—Passengers, 3,095*l.* 17s. 8d.; carriages and horses, 348*l.* 15s. 10d.; parcels, 187*l.* 11s. 10d.; mails, 50*l.* 5s. 9d.; merchandise, 1,396*l.* 0s. 2d.; minerals, 306*l.* 18s. 3d.; cattle, 24*l.* 7s. 8d. — Total, 5,409*l.* 17s. 2d.; including North Midland proportion of Manchester and Leeds traffic, and amount received for Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 534,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The length stated includes branches.

39. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Investments in Railways.—We are constantly receiving applications for advice with respect to the sale or purchase of particular shares. We have repeatedly stated, that we are very unwilling to offer any opinion upon such points, and, indeed, our readers have the same data as ourselves whereby to form a judgment. Nevertheless, as they *will* have our opinion, we cannot refuse to give it. We wish them, however, to bear distinctly in mind, that we do not, in any instance, hold ourselves answerable for the event. The course we recommend to our correspondents, is simply what we ourselves would follow, were we buyers or sellers under the circumstances detailed by them respectively. With this caution, which we shall take care to keep before parties who apply to us on such subjects, we proceed to notice the applications of the week. We may just add, that the figures and letters have no reference whatever to our traffic list, or to the initials of any railway. We cannot notice questions where this rule is violated. In order that we may not be subjected to needless questions, we must have the name and address of every inquirer, although the answers may be given under a fictitious designation:—F. H. *By no means sell at present. We are quite satisfied that with fair play the line will do well. Will our correspondent give his sentiments on the obstructions now in the way of a more favourable result?*—Mr. G. H. L. *(Leeds). We would recommend our correspondent to wait. The shares will go lower. Let him consult another portion of this day's paper.* —An Old Subscriber. *The shares in Z cannot be much worse, and we think may be better. We would therefore advise a little further patience.*—S. *We think No 1 will remain nearly stationary during the winter. Even now the investment is very fair. No. 2 will not, in our opinion, improve during the next two months. No. 3 will, we think, maintain their price. For No. 4 wait a short time.*—Virex. *We must decline answering this correspondent, as he admits that he contemplates a sale in order to re-purchase at a greater discount. We will not encourage this sort of speculation. Our advice is for bona fide investors only.*—G. G. *(Huddersfield). Hold on in the first named railway. The shares of the other will fall.*—A. Z. *(Leicester). It would be madness to sell. We have every "confidence" in the calculations referred to.*—A C. R *Buy 5, sell 6; we would not recommend the others, except perhaps 2 at present prices.*—S. S. C. *We are very sorry to say that we think it "doomed still further to decline."*—A Scotch Reader. *Nos. 1, 2, 5, good.* —S. *As regards A. yes; B. no.*— S. E. *The security is undeniably good. The different rates of interest generally arise from the state of the money market, or the credit in which the Companies stand. Lending on bond secures a fixed interest, while, of course, share dividends are fluctuating and uncertain.*—Dubious *(Dublin). Keep both A. and B.*—X. X. *No. 1, a very excellent investment "for a couple of years, or longer." Have nothing to do with Nos 2 and 3. Nos. 4 and 5 are good, especially 5.*—Mr. S. *(Huddersfield) We do not think any of them will fall lower. Don't sell at present. No. 4, the loan is good, but have nothing to do with the shares.*—E. W. T. *Do not be alarmed; keep all*

Brighton Railway.—*F. is known, and may therefore save himself the trouble of penning encomiums on us or censures on the Directors of the railway. They are bad enough in all conscience, but they shall not, through our means, be assailed by him.*

A correspondent, whose letter appears in another column, expresses a hope that it will be inserted, because it is "in uniformity" with the expressed opinions of the Editor. He ought, if he knows anything at all of this journal, to be aware that difference of opinion is no bar to the publication of the remarks of correspondents.

F. H.—*We feel much obliged to our correspondent for his attention. He will find a notice elsewhere relative to his query.*

An Inquirer *is again thanked. It is scarcely worth while to allude any further to the matter.*

Northern and Eastern Railway.—*We had heard of the case alluded to by P. Z., and had proposed to make some remarks upon it, but after reading the account, which appears elsewhere, of the meeting, and seeing that the Directors are on the eve of retirement, our correspondent will probably concur with us in thinking that the matter may be allowed to stand over for the present.*

Great North of England Railway.—*We cannot notice the communication of* A Shareholder *(Topcliffe), unless we have his name and address.*

We do our best to answer the questions of our correspondents, but we must confess that at times they puzzle us, as witness the following:—"Liverpool, October 1, 1842 'Dear Sir,—You will oblige me with the answer to the following question, viz.:—which is the safest engine for the public, the 4 wheels or the 6 wheels? Yours, respectfully, a subscriber for some time, S. Moss."

We shall be glad to hear again from the correspondent (without a signature) whose letter on the Northern and Eastern Railway reached us yesterday. He must write earlier in the week, and enter more into details.

Chester and Birkenhead Railway.—*The gentleman who called recently at the office in Fleet-street relative to this concern is requested to call again.*

W. P. *(Gravesend) must procure the recommendation of some person having influence with a Director. Perhaps an advertisement would have the desired effect.*

"History and Mystery of the Exchequer Bills Forgery."—*A pamphlet under this title has been sent to us, but we have not found leisure to peruse it carefully. We have read enough, however, to recommend it to the attention of all who feel an interest in the characters of Mr. John Harman, the present Chairman, and of some of the early Directors of the London and Brighton Railway.*

A Subscriber *(Edinburgh) may rest assured that the facts are as we stated last week.*

Crito *could not have seen our last number when he wrote. We are obliged to him nevertheless.*

Diogenes *must not mind a little good humoured railery. We cannot suffer our space to be occupied with mere verbal disputes.*

Playfair.—*We have accepted the alternative.*

Broadbottom.—*Of course a shareholder is answerable solely to the extent of his shares. If Directors make contracts, and the capital of the Company becomes exhausted, the creditors must suffer. Look at the case of the West London line.*

Preston and Wyre Railway.—*The general meeting of the Company will be found reported in the* Railway Times *of May 7. This is all the information we can give M.*

Sheffield and Manchester Railway.—*We regret that we cannot find room to-day for the letter of* A Director, *in reply to Mr. Ironside. It shall, without fail, appear next week.*

Blackwall Railway.—*We have received an official communication relative to the letter given in our last from Mr. Bidder. Our space to-day is so occupied, and the statements now brought forward require so much consideration that we must defer the publication till next week, when probably we shall add some observations of our own. Several correspondents who have addressed us on this subject shall have attention as soon as possible. A short explanatory note from Mr. Bidder will be found in another column.*

Viator's *fourth letter is in type.*

A great number of communications which want of room will not permit us to specify are intended for insertion on the first opportunity. Several of them are in type.

THE RAILWAY JOURNALS.

The Stamp Returns for April, May, and June, just published by Order of the House of Commons, enable us to complete the Returns for the year ending the 30th of June last. The results, as affecting the railway journals, are as follows:—

RAILWAY TIMES	**146,374**
Railway Magazine	68,500
Majority in favour of the RAILWAY TIMES ..	**77,874**

from which are to be deducted 10,874 Supplement stamps used for double numbers, still leaving the ordinary circulation of the *Railway Times* just about double that of its contemporary.—*September* 17, 1842.

THE RAILWAY TIMES.

SATURDAY, OCTOBER 8, 1842.

A CIRCULAR addressed to the proprietors of the Midland Counties' Railway by Messrs. CROPPER and RATHBONE, the Liverpool Directors of the Company, will be found among our advertisements. Its object is to counteract the effects of another Circular issued by Mr. JAMES HEYWORTH, of Liverpool, soliciting proxies to enable him and his friends to carry a motion for the appointment of a Committee of Investigation.

We cannot concur either in the arguments adduced by the Liverpool Directors against the appointment of such Committee, or in their opinion as to the "mischievous consequences" likely to result therefrom. The cry of confidence in Directors has been raised so often, and in general raised most loudly when there have existed the strongest grounds for withdrawing or restricting it, that we look with strong suspicion upon every case where it is so frequently appealed to, as it is in this Circular of Mr. RATHBONE and his colleague. In fact, their whole argument, if argument it can be called, resolves itself into this: "You, the

Digitized by Google

shareholders, must, having once elected a Board of Directors, bestow upon them your entire confidence, leaving them perfectly free to settle salaries, fares, and 'other matters of detail,' without question and without complaint; or you must at once require their resignation, and reconstruct or modify the Board, without showing any reason for a change. You may have your suspicions—you may believe, that however good their intentions, however pure their official conduct, the Directors have neither ability nor experience sufficient fully to develop the resources of your railway—you may fancy that a thorough inquiry into the affairs of the Company, and the light which the local and general knowledge possessed by others could throw upon questions in dispute, might convince even the Directors of the impolicy of some of the plans to which they are attached—you may doubt—suspect—feel dissatisfied, and deeply anxious for reform, but 'unless you have *already* made up your minds that the present Board of Directors are unworthy of your confidence, and that you desire their resignation, no benefit, but the reverse, must be the result of a special meeting, called for the express purpose of taking the strongest measure, expressive of distrust, that proprietors can adopt towards a body of Directors, namely, the appointment of a Committee to supersede them in their duties.'"

Such, in substance, is the appeal made by Messrs. CROPPER and RATHBONE. Why, the very fact that a Committee of Investigation is sought for, shows that the proprietors have not "*already* made up their minds." If they had done so, and "desired the resignation" of the Board, we presume they would call for it in a tone not to be misunderstood; and certainly, if all the Directors be as anxious to retire from an arduous and anxious office as the writers of the Circular profess themselves to be, the slightest intimation on the part of the shareholders would suffice to bring about the resignation of the entire body.

We wish it to be understood very unequivocally that we do not seek to prejudge the case as between those who advocate and those who oppose the appointment of a Committee of Investigation. But we *do* say that, unless some better reasons than the Circular embodies can be adduced for dispensing with such an inquiry, the notorious fact that there is a large body of proprietors (for notwithstanding what is said and insinuated by the Directors and their partisans, there *is* A LARGE body) who are extremely dissatisfied with the mode in which the Midland Counties' Railway is now, and has for some time been managed, ought at once to induce a most searching examination. Why should it be opposed? If the Directors *deserve* the "entire confidence" which the Circular speaks of, the result of a minute and properly-conducted investigation will best serve to show in clearer colours their claims to this high distinction. If they have done nothing to check the development of the Company's resources, or to shake the confidence of the public in the pretensions of the line—if they have omitted nothing which could contribute to the important ends of "economy, efficiency, and regularity," to which Mr. RATHBONE and his friend allude, we have too high an opinion of the justice of the shareholders, and more than even *that*, the proprietors have too much regard for their own interests, to leave it for a moment to be supposed that they would desire to change their representatives from mere caprice, or to gratify the designs of a self-interested clique. No, no; all that the shareholders care about is the best management, by whomsoever administered, and nothing would more evince the consciousness which the Directors, we daresay, feel of having done their duty, than a ready, a cheerful, a *spontaneous* compliance with the proposal for a Committee of proprietors. The notion that if there be anything in the constitution of the Board, or in the arrangements of the Company, requiring remedy, such remedy will be discovered and applied by a Committee of Directors, alluded to in the letter of the Liverpool members needs, we should suppose, no refutation, save a reference to the unvarying experience of the past. "The pressure from without" is the only effectual stimulus to reform, when those who govern profit by the abuses of their position.

The Circular, upon which these few remarks are founded, came before us, for the first time, at so late an hour yesterday, that we have not been able to enter so fully into it as we could have wished. We shall, however, return to it hereafter, should circumstances render it requisite.

WE are glad to find that the remarks which we offered a few weeks back, on the conduct of the Post-office authorities in connection with the Sheffield and Rotherham Railway, have attracted very considerable attention. We have reason to believe that the particular instance then adverted to will be further investigated, and, it is to be hoped, a better system established. It is to be feared, however, that the Rotherham case is far from a solitary illustration of the little care taken to consult the convenience of the public by those who hold sway in St. Martin's-le Grand. What a pity it is that the hopes excited by the appointment of Lord LOWTHER to the responsible office of Postmaster-General should have been doomed to disappointment! The arrangement of the morning mails is extremely defective. On this point an intelligent correspondent, after enumerating the towns upon which the boon of a morning mail has been conferred, says:—

"Now it may be observed from this list that there are morning mail trains over *all the direct lines from London*, except the Midland Counties', North Midland, York and North Midland, and Great North of England lines. And though there is a morning mail to Leeds, yet as it goes round by Manchester, they might as well be without one, for any good it does them, as it does not get there till about *ten at night*, too late to deliver any letters, and the night mail train reaches Leeds in the morning at 20 minutes past 6. Why is Leeds to be put in the background *more* than any other great town; and what is more, why are such towns as Leicester, Nottingham, Derby, Sheffield, York, Hull, and all those great and important districts in the county of Durham, not to share in the advantages of a morning mail from London, as well as those places abovementioned? I believe the truth of the matter is, that Lord Lowther is very partial to the formation of a western line of railway down to Scotland, which no doubt would be very beneficial to the great property of the Lowthers in Westmorland and Cumberland; but, however advantageous such a line of railway *would be*, both to the noble Lord's family *and to the public*, why is the eastern side of the kingdom to suffer in consequence? The morning mail might, without the least difficulty, reach Leeds at the same time that it does Liverpool or Manchester, viz., at a quarter before seven in the evening, Leeds being six miles nearer London *by railway* than Liverpool. The bags might be sent down as far as Rugby by the Liverpool train, which leaves London at a quarter before ten, and then sent forward by a branch train; and if the night mail train can perform the journey from London to Leeds in *nine hours* and *a quarter* (which they do), out of which they stop 40 minutes at Derby, a day mail train might manage to do it in nine hours. I have often gone into calculations as to *the present* advantages of a Post-office communication with Scotland by the eastern route, and I am satisfied that if a morning mail were despatched for Scotland by that route, to go at the same rate as they do by Lancaster, it would get into Edinburgh *two hours and a half earlier* than it does *now*, viz., at *half-past eleven in the morning*, and be in Glasgow half-an-hour earlier than it is by the present arrangement."

We trust this matter will be further investigated.

While on the subject of Post-office management, we may state, that the opening of the Brighton Railway having interfered with the common-road mail coach, the Postmaster-General has settled that, from and after this day, the night mail shall be conveyed from London to Brighton in a cart! This extraordinary decision—the more extraordinary, inasmuch as the day mail has for some time been conveyed by railway—has very naturally excited the surprise and indignation of the inhabitants of Brighton; and accordingly, on Tuesday last, a memorial signed by 142 influential residents was forwarded to the Postmaster-General, urging that the cart would be a conveyance "neither safe nor respectable," and praying that arrangements may be entered into with the Railway Company for the transmission of the bags. Seeing that the Post-office people have the privilege of fixing their own times of arrival and departure, and of referring to arbitration the claims made by Railway Companies for the services performed, it is difficult to believe that there is not some sinister influence at work in the preference thus given in more instances than one to the cart, as opposed to the steam-carriage. Members of the legislature locally interested in such grievances, should make their complaints heard before Parliament.

THE special meeting of the Northern and Eastern Railway Company, on Wednesday last, brought to light some rather curious facts with respect to the proposed leasing of that line. For details we refer to the full report of the proceedings which we publish elsewhere. No one, who gives the smallest attention to these details, will fail to see how opposed certain members of the Board are to a plan which would take the concern from their own hands; and we think there are few who will not admit that the means taken to defeat the project of a lease are discreditable to their authors, whether as Directors of a public Company, or as private gentlemen. To go about town, dropping hints as to the pecuniary *status* of individuals every whit as respectable as any member of the Northern and Eastern Board—asking questions and noting down answers, before there was the smallest occasion for making inquiry at all in the matter, is conduct which we do not care to characterise.

And what shall be said of the straightforward, open, and honourable conduct of a Board who could bring before their constituents a proposal for securing to them what many of these constituents (whether justly or not is no matter) deem an essential benefit, and all the time to say not a word, give not the smallest room for a suspicion that they themselves had previously taken the most effectual means to strangle the proposal in its birth! The part which Mr. MARSHALL, of whom we have always heard a good account in contradistinction to some of his colleagues—the part,

Digitized by Google

we say, which Mr. MARSHALL took in this business requires further explanation. It is to be regretted that a stop was put to the discussion on Wednesday, although perhaps a public meeting is not exactly the best place for the full development and calm consideration of such matters. Our columns are at the service of all who are implicated or interested in the transaction.

Of the merits of the line itself, or of the proposed scheme for leasing it, we do not purpose now to speak. The parties represented by Mr. PARKER appear to have acted throughout with good faith, and certainly *their* opinion of the railway is sufficiently favourable. We are, moreover, spared the painful necessity of making any lengthened comments on the miserable mis-management under which the concern now labours. The Directors stand self-confessed a body of Incapables, and are preparing for a retreat. A good riddance it will be for the shareholders, although some two or three members of the present Board might with advantage be retained. We shall be glad to see the Northern and Eastern Railway have fair play, for whatever Mr. JOHN WILLIAMS may say or think, we entertain no feelings of ill-will (why should we?) to the undertaking. By the way, this Mr. WILLIAMS evinces in a very strange way his gratitude for the services the *Railway Times* has rendered him in his peculiar position. Be it so. We can bear with tolerable composure the attacks of men of more mental weight than Mr. JOHN WILLIAMS, and if the honourable gentleman be of opinion that, by carping at our strictures, he is doing an acceptable service to those who have been so indulgent to himself, even let him rail till his shares get beyond par, and he has had an opportunity of quitting a concern which he is so disinterestedly zealous in commending.

We again recommend the notice of the proceedings to the attention of the railway public. We shall resume the subject of this Company at an early opportunity.

A SECOND meeting has been held in Plymouth with reference to the proposed railway from that place to Exeter. The few particulars which we have been able to glean from the local journals of what transpired will be found in another page. We wish we could say, with truth, that there is the smallest prospect of the scheme being carried out. So far as the unanimous passing of resolutions goes, the Plymouthians appear to be energetic enough, as will be seen by reference to our advertising columns. We suspect, however, that their enthusiasm is not of a kind to make them dip deep into their pockets, and we once again assure them, that without *such* a demonstration all the speech-making and motion-passing in the world will not avail.

Under the circumstances, it is perhaps scarce worth while seriously to criticise the merits of Mr. RENDEL'S scheme, which it seems has been approved of by the people of Plymouth. We have reason to think, however, that whether as regards points of engineering or estimates of cost, it will not stand the test of inquiry. A writer in the *Falmouth Packet*, whose communication we append to the account of the Plymouth meeting, does something towards an exposition of the merits of the project, and of the statements by which it is sought to prop it up, but he does not go half far enough. He should grapple (and, as he appears to be well acquainted with the locality, we hope he *will* grapple) with essentials. Mr. M'NEIL'S Report may be "unintelligible and absurd," but the public ought to be made fully acquainted with the real merits of the project which he has been called upon to investigate.

Our principal reason, however, for reverting to the subject is, to correct some misapprehensions which prevail with respect to the previous meeting. We received, just too late for our last number, the following note from the honourable member for Plymouth:—

"*To the Editor of the Railway Times.*

"SIR,—In your last week's journal you notice a railway meeting held in this town on the 13th inst., and observe, 'that there must be some mistake in the statement attributed by the Chairman of the meeting to Mr. Russell, the Chairman of the Great Western.'

"I beg to request your attention to the paragraph (enclosed) contained in the same journal from which your information is derived, of the subsequent week, which explains the mistake you conclude had been made, from the inaccuracy of the reporter for that paper. I also enclose another report of the same meeting, from the *Herald*, which is more correct than the former.

"You will oblige me by noticing this inaccuracy, and its correction.

"I am, Sir, your obedient servant,

"Plymouth, Sept. 29, 1842." "THOMAS GILL."

The paragraph to which Mr. GILL refers is as follows:—

"In our report last week of the meeting of the Provisional Directors, by some unaccountable error the Chairman was represented to have said, that 'he had an intimation from the Earl of Devon and other shareholders, that it was impossible for them to attend, but that they were all favourable to the meeting.' Such a statement, we are informed, was not made. There is, also, an inaccuracy in the sentence which had reference to the Chairman's interview with Mr. Russell, of the Great Western Railway Company. It should have read, 'that the Great Western Railway Company would be disposed, if they approved of our line, to afford us every assistance in their power, and would take on lease the line as soon as completed, under a similar arrangement with that they had made with the Bristol and Exeter Railway Company, which he (Mr. Gill) understood yielded the latter Company from 5 to 6 per cent. per annum.'"

A most "unaccountable error," indeed, it was, which led the reporter to believe that the Chairman had alluded at all to the "Earl of DEVON and other shareholders" as being favourable to the objects of the meeting! The reporters have much to answer for; and as the reporter of the Plymouth paper has not thought fit to defend the accuracy of his record, *we* must not be too sceptical. It will, nevertheless, we think, be generally believed that the reporter was *not* in fault.

Then as to the contemplated arrangement with the Great Western Company, we cannot see that the explanation now tendered at all alters the bearing of the case. If Mr. RUSSELL the Chairman of the Great Western Company offered, or hinted at an offer of, any terms at all (however contingent) to the promoters of the Plymouth line, *as it now stands*, he took upon himself what we cannot think his railway constituents would approve. Perhaps, as in the *other* instance, the statement was meant to TELL, and nothing more. Without entering at all into the dispute as between Plymouth and Falmouth, we cannot but agree with our Falmouth contemporary, that the mooting of the question of a Plymouth Railway ought to incite the people of Cornwall to consider the position in which they would be placed should a railway from Plymouth to Exeter be constructed. "We are [says the *Packet*] unacquainted with any part of England that is so deeply interested in the accomplishment of a railway communication throughout—from the Land's End to Exeter, and thence with the whole of England, Scotland, and Wales—as is the county of Cornwall: and it would, we believe, be difficult to find any people so indifferent, not to say blind, to their own interests in this respect as Cornishmen. They are generally esteemed a 'cute sort of people, but while they cheerfully spend their money in 'trying a mine,' the result of which is wholly uncertain, they laugh at the idea of a railway through their county, the advantages of which are palpable to all, save themselves! There is not a class in Cornwall that would be excluded from the benefits which a railway would confer. The trader, the merchant, the manufacturer, the miner, the fisherman, the agriculturist, the landed proprietor, all would be gainers by a railway. They seem, however, stupidly indifferent to their own interest in this respect, and we leave them to the consequences of their own folly; earnestly beseeching them, nevertheless, to give the subject their earnest and serious consideration, and entreating them to vigorous action on the conviction of their minds, which, we feel assured, must be in favour of constructing a railway right through the county, without a moment's delay." To every word of this extract we cordially subscribe.

A CORRESPONDENT, who writes as if he himself had been engaged in the inquiry, assures us that the substance of the Report of the North Midland Railway Committee is known only to themselves, and to one or two of the Directors to whom it was sent, whence he leaves us to infer that the paragraph from the *Leeds Mercury*, upon which we commented last week, is not worthy of credence. It may be so; but, as in a very short time the Report itself will, we presume, be made public, it were a waste of time to dwell upon the probabilities of the case.

Our complaint was, that the Committee, let their finding be what it may, did not give themselves time fully to investigate the whole case, and consequently, that their decision must so far be hasty and incomplete. We are still of the same opinion. Our correspondent argues that as two of the members of the Committee have for two years held the post of Auditors, they must have gained great insight into the working of the concern, so as materially to assist their colleagues. He adds (with an allusion to our own craft), that "it is more than probable the members of this Committee, like the Editors of newspapers, have their private sources of information, and that they had from time to time, prior to their formation into a Committee, watched the working of the line generally, as well as the manner in which the respective officers of the Company performed their duties, so that it was merely left to them, when in Committee, to examine those officers individually, in order to ascertain how far their inferences were borne out by facts." The supposition is ingenious, but we rather think it bears out our previous surmise that the members of the Committee came resolved as to the result, and merely sought a colour for their decision from the examination of certain officers of the railway. We shall be agreeably disappointed to find that in their Report they have not contented themselves with *ex cathedra* conclusions, but have fully and fairly explained the grounds upon which such conclusions are based.

Our correspondent appears to suppose that

Digitized by Google

we are in "private communication with some of the Directors," and that, therefore, we are not friendly to the Committee. We beg to assure him most sincerely, that nothing could be further from the fact. What we have said, we have said without the smallest prompting from any person whatever. Nay, more, we are satisfied in our own mind, that the North Midland Railway has been most sadly mismanaged, and that very important savings might be effected, and improvements introduced. It was because we thought the summary course adopted by the Committee likely to defeat the attainment of this object that we offered the observations of last week. We think so still, and we do not stand alone in our judgment.

The correspondent already referred to, and of whose communication we have now given the substance, hints that the *Leeds Mercury*, from which we last week quoted, is indebted to some of the Directors for its information on the affairs of the North Midland Railway Company. How far this supposition is correct we cannot pretend to judge, but the following "explanation," which appears in the last number of that journal, certainly exhibits a most uncommon anxiety not to give offence to the powers that be:—

"THE NORTH MIDLAND RAILWAY INQUIRY.—The following sentence appeared in a paragraph of our last week's paper:—'We hear that the Committee were exceedingly dissatisfied with many branches of the expenditure and management, and recommended very extensive changes and reductions.' Some readers, we find, have supposed that this sentence expresses *our own* opinion, whereas it plainly says, that we had heard such to be the opinion of *the Committee*. We have formed no definite opinion of our own, and shall not do so till we see both the Report of the Committee and the reply of the Directors; and when these are before us, we shall endeavour, in common, we hope, with all the shareholders, to form an impartial judgment. We hear that the reductions proposed by the Committee are to the large amount of between 17,000*l*. to 18,000*l*. a-year, out of an expenditure (on the establishment, including wages and salaries of all kinds) of about 44,000*l*. a year."

THE *Scotch Reformers' Gazette*—a Glasgow journal to which we have frequently had the pleasure of paying a well-merited compliment for its anti-Agnewite exertions—mentions, in an article which we elsewhere transfer to our columns, that arrangements are in progress "to take on lease an engine, &c., and to ply for passengers on Sunday upon the Greenock Railway," for the purpose of supplying to the public that accommodation which the Directors, in the plenitude of their power, do not see fit to furnish.

Our contemporary is quite correct in stating, that other parties than the proprietors of a railway have the power, on payment of a certain specified toll, to run engines and carriages, whether on Sunday or Saturday, but we suspect he will find he is mistaken in supposing that the Directors are bound "to have the requisite servants on the road to attend the traders and ensure safety." The fact is, that the Directors are not obliged to furnish to strangers any accommodation in regard either of servants *or stations*—nay, not even to allow them a supply of water for the engines, except upon their own terms, which we need scarcely say an unwilling Management would at once render prohibitive. This defect in a law originally intended for the protection of the public has existed from the first, and no doubt would by this time have been remedied had it not been found, from experience, that it would be exceedingly dangerous to encourage the working of trains by second parties, however well their arrangements might be settled. This subject was very fully canvassed before a Parliamentary Committee prior to the introduction of the first general Railways' Regulation Bill; and, in fact, the failure of the precautions originally devised for the protection of the public, formed with many the strongest argument for giving to the Board of Trade the powers of supervision and control which they now possess.

We fear, therefore, that the scheme of the Glasgow people, to bring the pseudo-saints to a proper sense of their duty, will not succeed in practice. We are sorry for it; because, were the benefits of Sunday communication once extended to the districts through which the Greenock line, the Ayr line, and several minor lines pass, no body of Directors, how scrupulous soever, would thereafter venture to put their veto upon the every-day opening of the road.

After all, perhaps, no strong measure, such as that referred to by our St. Mungo friend, may be required. The experience of the Edinburgh and Glasgow Railway—preceded as that experience was, and followed as it has since been, by the signal defeat of the obstructive agitators—has done a great deal to dispel the prejudice (for it cannot be called principle) which heretofore influenced nine-tenths of those who once figured in the ranks of the Agnewites—has shown that Sunday trains and Sabbath desecration are not necessarily synonymous, and that if the strictly "righteous" can travel without peril to their soul's health by post-chaise on the common road, or by the ordinary conveyance on rivers and canals, so may the less rigidly virtuous avail themselves of the facilities offered by railways. We are persuaded, that if a bold effort were made at the next general meeting of proprietors in either of the Sunday-closed railways above referred to, no long time would elapse before Greenock and Ayr were, in respect of Sunday trains, placed on the same footing as the capital of Scotland, and the great towns and cities of the south.

A SHORT paragraph, which we copy from a provincial journal, discloses a very interesting fact. It appears that, at a recent meeting convened to consider the best means of carrying a railway to Harrogate, two routes were suggested. That by Bolton Percy was generally deemed the better of the two, whereupon Sir WILLIAM INGLEBY offered to find the whole of the money (amounting to about 90,000*l*.) necessary to construct it, provided 6½ per cent. interest were guaranteed to him. The rate proposed may be rather high—we are not sufficiently acquainted with the county to say what the traffic may be expected to be—but the fact that a gentleman of Sir WM. INGLEBY'S standing has made such an offer, ought to stimulate all connected with the scheme to renewed exertions.

A CONSIDERABLE portion of our space is this day occupied with the details of a meeting at Liverpool of parties concerned in the Paris and Rouen Railway. The particulars given by the various speakers, especially by Mr. REED, the Managing-Director (whose talents and energy while engaged on the South-Western Railway are known to all our readers), will be found very interesting. It would appear that the Rouen line is rapidly advancing to completion, and that the result is likely to answer the sanguine anticipations of its promoters. The principal object of the meeting, however, was to secure the support of the Paris and Rouen proprietors to a scheme for extending the line to Havre. Very flattering pictures were drawn of the merits of this latter project, but we have not as yet had an opportunity of determining how far they are likely to be found correct. We shall have something to say on Anglo-French railways in an early number.

IT will be seen from a report elsewhere, that the most vigorous exertions are being made in the prosecution of the Newcastle and Darlington Junction Railway. For all that has yet been done, the shareholders are mainly indebted to one man—Mr. HUDSON, of York, to whom Mr. CRAWSHAY paid so high a compliment at the Northern and Eastern meeting on Wednesday. We trust this new Railway Company will profit by the experience of their predecessors.

IN our last number we published a letter from the Directors of the Greenwich Railway, embodying their final refusal to entertain the question of a modified toll; and to-day we lay before the public the whole of the correspondence. We could add but little to the exposition contained in the letters of the Croydon Directors, even had not the subject been already discussed by us till it must have become wearisome. The Greenwich Directors seem to be beyond hope of amendment.

WE are sorry to find that the Manchester and Birmingham Railway Company again raised their first-class fares on Monday last. The result is, that a first-class passenger now pays one shilling more from London to Manchester than when he went round by way of Parkside, some 12 miles further! So much for competing lines! One train less a-day, and one shilling more for the passage, is all that the good folks of Manchester have gained by securing what they call "a line of their own," upon which about two millions sterling have been expended!

HOWEVER much the proprietors of the Lancaster and Preston Railway may benefit by the leasing of their line to the Lancaster Canal Company, it does not appear that the arrangement will contribute much to the advantage of the public. We understand that the cheap boat has been taken off the canal, and that the mode of communication in the district is now an unmitigated monopoly.

—o—

THE *Liverpool Standard*, in an article founded upon some recent remarks of ours with respect to the Great North of England Railway, and which remarks are headed with the somewhat equivocal title of "Morality of Railway Management," says:—"The public have long had cause to suspect that the means adopted to obtain the sanction of Parliament to a railway scheme were not of the most creditable description; and that the morality of Civil Engineers, Solicitors, Secretaries, and other parties engaged in the projection of these schemes, was not of the very highest character. That deceit and falsehood have been practised somewhere many a beggared shareholder has experienced, when the various glittering bubbles in which they have embarked their property have burst; when shares in which, on the faith of Parliamentary estimates, they have invested at high premiums have been

Digitized by Google

proved well nigh worthless, and having 'gone up like a rocket,' have at last 'come down like its stick.' In many instances, no doubt, the disappointment experienced has been the necessary result of too sanguine anticipations. In many instances projectors of promising schemes have deceived themselves; but we fear there are some in which an investigation would prove that the deception has been wilful, if not interested."

—o—

We are informed, that the number of persons conveyed on the Croydon Railway, during the three days of the fair, was 15,000, one-half of the number being conveyed to or from New Cross, whence the fares were considerably reduced.

—o—

The loss to the Blackwall Company this week from the raising of their fares, as compared with the corresponding period of last year, is upwards of 150*l.*, while the number of passengers has diminished by more than 20,000.

—o—

It will be seen from an advertisement in another page, that the Clarence Railway is about to be sold, by order of the Public Works' Loan Commissioners. What else could have been looked for from the way in which the affairs of the Company have been conducted? A correspondent suggests, that should any surplus monies, after satisfying the Commissioners, arise from the sale, the shareholders might appropriately purchase a butt of Malmsley, and therein doom the Directors to the fate which befel a Clarence of old.

—o—

A special train was dispatched from Euston Square on Saturday last, with the Judges for the Special Commision at Stafford. A similar train went on Wednesday with the Judges for Chester. It would appear, therefore, that travelling by railway is not now considered beneath the dignity of the profession.

—o—

It appears, from a notice in a local journal, that Captain W. S. Moorsom and Mr. Addison are at present engaged in surveying the proposed branch railway from Eckington to Evesham, Warwick, and Coventry.

RAILWAY OFFENCES AND OFFENDERS.

On monday last a boy named Weston, 14 years of age, was sent to prison for 14 days by Mr. Clive, the magistrate at Wandsworth police court, in default of paying a fine of 10s., inflicted for having thrown a stone at a train passing along the South-Western Railway. It appears that this wanton act is of frequent occurrence near Wimbledon. We observe from a letter in the *Morning Chronicle* of Thursday, from Mr. Martin, the able Engineer and Superintendent of the railway, in correction of an inaccurate report of the case which appeared in that journal, that the Directors are determined to prosecute such parties with the utmost rigour, and that one juvenile culprit is now undergoing three months' imprisonment for a similar offence, and another one month's punishment, the Gosport magistrates having taken into consideration the tender years of the latter. We understand that a few weeks ago, as a train was passing near Ditton, a lady was struck by a stone thrown by a boy. The Directors offered a reward of 20*l.*, and employed men out of uniform to watch in the neighbourhood several days, but in vain. Mr. Martin is of opinion, and we quite agree with him, that flagellation would be the most appropriate punishment for these mischievous youngsters.

At Glasgow yesterday week, before Mr. Skene, John M'Farlane, labourer, was convicted of climbing over the wall near Cowlairs, on the Edinburgh and Glasgow Railway, and trespassing on the railway. He was fined 2*l.*; failing payment, to be imprisoned 30 days, as a warning to all railway trespassers.

Total loss to the Greenwich Company in *five* weeks by their prohibitive toll.....				6,574½

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

Sir,—Can you inform me why the Directors of the above Company insist upon asking (I will not say charging, as they don't get it) 20*l.* for a monthly Pass to and from Brighton; can they be studying the interests of the proprietors in so doing? I think not. I know of more than one instance, and I dare say there are many, where 15*l.* would be given, and I believe has been offered and refused. The answer at the office is, "That is the fixed price, Sir, and we have no authority to reduce it, but if you think proper you can make a written application to the Directors;" but as nobody expects to make an impression upon that sapient Board, nobody writes.

The advantages to be derived from issuing periodical tickets, monthly or otherwise, appear to me immense. It is not the sale of the free Pass alone that I count upon, but the traffic that that said Pass would induce, in taking down one's family and connections, occasionally inviting a friend or two, and making Brighton familiar to many who had only known it before by name.

Now, Sir, as you have before "done the State some service," I do hope, if your views accord with mine, that you will occasionally touch upon the subject, as I have no doubt a little agitation will have the required effect.

I am Sir, yours, &c.,
A BRIGHTON SHAREHOLDER.

London, 29th September, 1842.

Robbery at the Railway Station, Derby.—On Wednesday evening, during the absence of the clerk, in the locomotive department of the North Midland Railway, the office was entered, and a desk robbed of a sum of money, the exact amount of which is not known, but it is believed to be from 60*l.* to 70*l.*—*Derby Mercury.*

THE TOLL QUESTION—THE LONDON BRIDGE RAILWAYS.

(official correspondence.)

To J. Y. Akerman, Esq., Secretary to the London and Greenwich Railway Company.

Sir,—I am desired to communicate to you for the information of your Board, that an agreement had been entered into between this Company and the South-Eastern Company for the commutation of the tolls payable by the latter to the former Company, upon a principle similar to that which the Directors of this Company had the honour to propose to the Directors of the Greenwich Company in my letter of the 6th October, 1840.

The Board of Directors of the Croydon Company venture to appeal to this arrangement as the strongest proof which can be afforded to the Directors of the Greenwich Company of the sincerity with which they then uttered their conviction that the plan proposed was calculated to be equally beneficial to a toll-receiving as to a toll-paying Company, and that their experience since that period has tended to confirm those convictions.

I am instructed likewise to express the regret of this Board that the two Companies, parties to the agreement alluded to, should have felt themselves precluded from comprehending in its application that portion of the South-Eastern traffic which is intended to pass over the Greenwich Railway until some satisfactory arrangement shall be made between the Greenwich Company and the Croydon and South-Eastern Companies with respect to that traffic, but the Directors do hope that means may yet be devised for extending to the Greenwich Railway Company the advantage of the large increase of traffic which is to be expected from the low rate of fares proposed to be charged by the Croydon and South-Eastern Companies.

I am, Sir, your very obedient servant,
(Signed) R. S. Young, Secretary.

London and Croydon Railway Company,
205, Tooley-street, August 12, 1842.

To J. Y. Akerman, Esq., Secretary to the London and Greenwich Railway Company.

Sir,—In transmitting the enclosed copy of resolutions passed by the Directors of the Croydon Railway Company this day, I am instructed particularly to express their anxious hope that this further effort on their part to promote the good of both Companies, may be received by the Directors of your Company in the same friendly spirit in which it is made.

I am, Sir, your very obedient servant,
(Signed) R. S. Young, Secretary.

London and Croydon Railway Company,
205, Tooley-street, September 26, 1842.

At a meeting of the Board of Directors held as above, it was Resolved—

"That this Board having maturely considered all the circumstances attending the traffic of this railway, and especially the experience of its working since the imposition of the toll of 4½d. per passenger, are decidedly of opinion that it cannot, if subjected to such toll, be carried on with profit to the Company at lower fares than those at present charged.

"That these fares are found by experience to be too high, and to diminish so considerably the travelling on the Croydon Railway as to render it clear to this Board that the traffic cannot be carried on at such fares without ultimate loss to this Company.

"That consequently this Company has not, nor cannot have under the operation of a 4½d. toll, any interest or inducement to carry on the traffic of the Croydon line.

"That such toll on the traffic to and from Croydon and the intermediate stations is less productive to the Greenwich Company than a toll of 3d. has previously been, as is shown by the statement below, and that the income derived from such toll is gradually diminishing, and must entirely cease on all traffic short of Croydon, if such toll be continued.

"That whilst the toll of 4½d. is thus injurious to

Digitized by Google

the interests of the proprietors of both Companies, this Board is impressed with the conviction that a system of tollage or payment in lieu of such tollage might be adopted which, whilst it would secure to the Greenwich Company a *larger* receipt from such traffic than they now enjoy, would at the same time enable the Croydon Company, with some prospect of ultimate advantage to themselves, not only to continue their present trains, but to afford further accommodation, and at lower fares.

"That under the circumstances this Board feel it incumbent on them (notwithstanding the repeated discouragements they have before experienced in similar endeavours) once more to approach the Greenwich Directors with a view to an arrangement."

Comparative Statement of Toll payable to the Greenwich Railway Company in respect of Passengers passing over that line to and from Croydon and the intermediate Stations, during the periods from May 10 to August 31, 1841 and 1842, being 85 days.

1841.			
Toll on 147,437 passengers at 3d.	£1,842	19	3
Ditto on 332,066¼ at 3d., being the total number for the year ending May 9, 1842	£4,150	16	7½
1842.			
Toll on 78,086 passengers at 4½d.	£1,464	2	3
Which taking the average for one year in the same proportion as the toll passengers for the given time in 1841 bear to the total number for the whole year, will give 196,225 toll passengers, or	3,297	10	11½
Difference	£853	5	8
Conveyed by Brighton Railway Company 9,083 at 4½d.	169	9	3
Or taking the average as above for 12 months	381	13	5

"Resolved—That a copy of the foregoing resolutions be transmitted to the Directors of the Greenwich Company with an intimation that the Board are willing to treat with the Greenwich Company either for a fixed sum *larger* than the present toll receipt from the Croydon traffic, in lieu of such toll, or for a toll which should bear a relative proportion to the fares charged by the Croydon Company, with a guarantee that such proportionate toll should produce *more* than the present toll received from Croydon traffic; or for a given portion of the net profit made from the Croydon traffic with a guarantee *to the like effect*, or upon any other system which, whilst it should secure to the Greenwich Company a larger receipt than the present toll produces, would at the same time enable the Croydon Company (with some prospect of a fair remuneration themselves) to try the experiment of lower fares and increased accommodation to the public on their railway.

To R. S. Young, Esq., Secretary to the London and Croydon Railway Company.

SIR,—The Board of Directors of the London and Greenwich Railway Company have desired me to acknowledge the receipt of your letter of the 12th ultimo, and also that of the 26th instant, the former intimating that the Croydon Railway Company had entered into an agreement with the South-Eastern Railway Company for a commutation of the tolls payable by the latter to the former Company, and the latter containing a copy of the resolutions of your Board relative to the toll payable to this Company.

In answer to these letters I am desired to inform you, that the Directors of this Company are still unanimously of opinion that, owing to the course adopted by the Croydon Company to prevent a fair development of the traffic, they cannot enter into any terms or compromise with respect to the toll fixed by Parliament after many days' discussion; and especially as they have good reasons for believing that more than nine-tenths of the proprietors of the Greenwich Railway would consider it a violation of the trust reposed in them.

There may be good grounds for Companies, carrying on their traffic *jointly*, entering into terms which are altogether inapplicable to the Greenwich Company. It appears to this Board that it must have been forgotten by the Croydon Company that when the agreement was entered into with them to take 3d., instead of 9d., per passenger, which the original Act empowered the Greenwich Company to take, that it was upon the full understanding that the passengers of the Croydon and other Companies should pass on the Greenwich line, *and that no means whatever would, after so great a reduction of toll, be resorted to, to divert from their line the anticipated traffic.* It should also be borne in mind that the mileage duty and parochial rates materially reduce the toll of 3d.

With respect to the additional toll of 1½d., the Directors of this Company beg to remind the Directors of the Croydon Company that the very large sum expended in making the additional works, was for the *exclusive use* of the Croydon Company, and others paying large tolls to them; that it was at the instigation of these Companies that Parliament fixed two penalties of 50*l.* each per day, payable by the Greenwich Company to them, in the event of such works not being erected within a limited time.

The toll of 1½d. was granted by Parliament in perpetuity, instead of ceasing, as was proposed by the Greenwich Company, on the repayment of the outlay.

The Greenwich Company having, therefore, widened the line, and appropriated their own reserved land, purchased and cleared at a great expense, and having raised, at an enormous sacrifice, a sum sufficient to accomplish the required works, *solely on the faith of the additional toll of* 1½d., the Directors consider it would be a gross injustice to those who subscribed the requisite capital, were they, in the present undeveloped state of the auxiliary traffic, to entertain the proposal of the Croydon Company for a reduction.

The Directors protest against this subject being called an existing "*dispute*" for Parliament, after the fullest investigation, settled the matter, a decision to which this Company have accordingly adhered.

In conclusion, the Greenwich Railway Directors take leave to remark, that the various propositions which they have received from the Croydon Company appear to be based on the assumption, that railway traffic may be profitably increased to an almost unlimited extent by the adoption of reduced fares; but the result of the experiments made, both by the Blackwall Railway Company, and by the Greenwich Railway Company, show a very different result.

I am, &c. &c.,

(Signed) J. Y. AKERMAN, Secretary.

London and Greenwich Railway Office,
London Terminus, Sept. 28, 1842.

To J. Y. Akerman, Esq., Secretary of the London and Greenwich Railway Company.

Sir,—In reply to your letter of the 28th ultimo, I am instructed to state, that the Directors of this Company regret to perceive the uncompromising tone of that letter, which appears to be intended to preclude the possibility of any present arrangement between the Companies. The Directors had hoped that time and experience had somewhat modified the views of your Board, as to the expediency of the extreme exercise of their rights, which rights have never been denied by this Company.

I may be allowed to state, that the whole object of this Board, in all their proposals for arrangement, has been to develope to its utmost extent the traffic of the Croydon line; not, indeed, for the exclusive advantage of one Company, but for the mutual benefit of both, which has been prevented solely by the course adopted by the Greenwich Company of insisting, most unwisely as the Directors of this Company think, upon the maximum toll which Parliament had unquestionably empowered them to demand.

That the *proprietors* of the Greenwich Company may have naturally imbibed a prejudice against any adjustment of the toll question which should appear to involve a reduction in the nominal amount of an impost, which they had been taught to believe would repay them for the "*enormous sacrifice*" which they had been advised to make, the Directors of this Company can well conceive, but they do not doubt, that the same confidence which these proprietors have been accustomed to repose in the Greenwich Board, would lead them to adopt, without hesitation, a different view of the subject, should the Directors of the Greenwich Company see fit to recommend a course which the Directors of this Company believe would prove more consonant with their true interests.

The agreement entered into between the South-Eastern and Croydon Companies, on the subject of toll, which formed the substance of my letter of the 12th August last, was one wholly irrespective of any locomotive or carrying arrangements. A similar agreement had been previously offered to the Brighton Company, with whom no such arrangements exist, and it is based on the principle frequently proposed to the Greenwich Company as the terms of a toll arrangement between them and the Croydon Company; that principle is a division between the two Companies of the fair charge (after deducting from such fare the cost of conveyance), in proportion to the distance travelled by the passenger on each railway respectively, and it contains an essential quality which appertains to no system of fixed toll, namely, that of granting to the carrying Company a perfect freedom in the development of the traffic at whatever fares may be best adapted to that end, and also of securing at the same time to the toll-receiving Company, a *full and fair share* of the traffic so developed. And the increasing experience of the Croydon Directors more and more confirms in their minds the soundness of this principle, as the only sure basis of every toll arrangement intended to be permanently advantageous to the parties mutually concerned.

The Croydon Company have not forgotten the circumstances under which the toll of 9d. per passenger, "which the original Act empowered the Greenwich Company to take," was reduced to one of 3d., that reduction having been the only inducement presented for a junction of the Croydon Railway; and all its anticipated "auxiliary traffic" with the Greenwich line, upon the full understanding, however, that for all such traffic, safe and sufficient means of transit should be furnished to London Bridge, and upon the ill-founded assumption that the toll agreed upon was compatible with a rate of fares which would allow of "a fair development" of the traffic of the Croydon Railway.

There can be no doubt that the sum expended in making the additional line was expended for the purpose of affording safe and sufficient means of transit to London Bridge for the traffic of the Croydon Company, and that of the other Companies using the Croydon line, but the Directors of the Greenwich Company seem to have forgotten that the whole aggregate benefit derivable from the passage of all this traffic over the Greenwich line, exclusively appertains to the Greenwich Company.

The Directors, however, have never admitted, and never can admit, that the expenditure in question affords to the Greenwich Company any ground for the claim of an additional toll, inasmuch as their only right to any toll whatever rested upon the original admission, that their railway was in all respects adequate to the purposes for which that toll should be paid.

With respect to the penalties for the non-completion of these works, it is clear they could only have been enforced if the Company, who had voluntarily undertaken to perform them within a period named by themselves, had failed in so doing, and they were therefore altogether inoffensive to parties sincerely intending to carry into effect that engagement.

The Directors of this Company are perfectly aware that Parliament has granted an additional toll of 1½d., in perpetuity, to the Greenwich Company; that is to say, *the power to charge an additional toll* of 1½d. upon all passengers passing over the Greenwich line; but they are not aware that Parliament has also granted, or indeed could grant, to the Greenwich Company any control over the number of passengers upon which such toll can be levied, that number being regulated by the disposition

Digitized by Google

of the public to pay a fare proportionate to the toll charged.

The Directors of the Greenwich Company having formed an exaggerated estimate of this inclination of the public, advised the expenditure of a large sum of money; but the Directors of this Company cannot perceive in what manner injustice would be done to the proprietors of the Greenwich Railway were the Directors of the Greenwich Company to assist in an attempt, on the part of the Directors of the Croydon Company, to counteract the evils which have resulted from this miscalculation, and to produce a larger income to the Greenwich Company than can possibly be obtained from an excessive rate of toll, by a process having no reference to, nor being in any way calculated to affect, the development of the "auxiliary traffic."

The Directors of this Company beg to state, that the word "dispute" had reference, not to the right accorded by Parliament, which they have always admitted, but to the *policy* of making the additional charge alluded to, which they apprehend it was never the intention, nor within the province, of Parliament to *settle*, and which, until amicably arranged, may fairly be called an "existing dispute."

The various propositions made by the Croydon Directors have undoubtedly been "based on the assumption" of an increased profit derivable from "the adoption of reduced fares;" but even should this assumption have been ill-founded, the Greenwich Company were guaranteed against the consequences of any misapprehensions on that head, in every proposal made by this Company; and whilst the Greenwich Company were thus protected against the possibility of loss, the public and both Companies would, in the event of success, have derived considerable benefit. Neither can the Directors of this Company admit, that "the result of the experiments, made both by the Blackwall Railway Company and by the Greenwich Railway Company, show a very different result."

It appears to the Directors of this Company that the Greenwich Directors have cautiously avoided applying themselves to the consideration of the propositions submitted to them by this Company, which were calculated to obtain for both Companies advantages perfectly incompatible with present arrangements.

Since then the auxiliary traffic, carried on by other parties and under different circumstances, can have nothing whatever to do with a toll arrangement for the short traffic of the Croydon line; and as no "course adopted by the Croydon Company" could be a sufficient justification for the refusal of offers advantageous to the proprietors of the Greenwich Railway, this Board would be glad to hear what other pretext can be afforded for the absolute refusal to entertain any one of the propositions which I had the honour to transmit to your Directors.

In the absence of any reason for such refusal, the Directors of this Company wish to place it upon record that they were prepared to offer in lieu of the present toll upon the short traffic between London and Croydon, the produce of which now amounts to about 3,000*l.* per annum, either a fixed sum of 5,000*l* per annum for five years, or a proportionate toll, with a guarantee that such toll should amount to at least 4,500*l.* per annum, or a certain given proportion of the *net* receipts of the Croydon Company derived from the short traffic, with a guarantee to the like effect, leaving to the arbitrament of any competent and impartial tribunal what such proportion shall be, and undertaking thereupon to put in practice the only means of developing the traffic by the adoption of lower fares, provided only an assurance be given that, when developed, no attempt can be made on the part of the Greenwich Company to re-impose a fixed prohibitory toll; and in the event of these propositions being refused, to recommend to their proprietors to lease the newly added portion of Greenwich Railway upon terms which would be amply remunerative to the proprietors of the Greenwich Railway for their outlay.

I have only to add, that should this correspondence be productive of no result, it is the intention of the Directors of this Company to make it public for the satisfaction of their proprietors, in order that they may see that no effort has been wanting on the part of the Directors to bring about an arrangement upon any practical terms—that upon which the Directors of the Greenwich Company insist, namely a fixed toll of 4½d. per passenger, being the only condition which absolutely prevents "a fair development of the traffic" so much desired by that Company, with any prospect of advantage to the Croydon Company.

I am, Sir, your very obedient servant,

(Signed) R. S. YOUNG, Secretary.

London and Croydon Railway Company,
205, Tooley-street, October 1, 1842.

THE TOLL QUESTION—GREENWICH AND CROYDON RAILWAYS.

To the Editor of the Railway Times.

SIR,—Referring to a communication in your last number on the "Toll Question," headed "Official Letter," and addressed by J. Y. Akerman, Esq., to R. S. Young, Esq., Secretaries respectively of the Greenwich and Croydon Railway Companies, but *unaccompanied* by the letters to which it purports to be a reply, I am forcibly impressed with the prestiges of the absolute wisdom which there is no doubt the concoctors of the said communication dreamt they were guided by in giving it out from their "Terminus" as a sort of "*Novum organum*" to the railway world, whereby sufficient light might be thrown upon the dull apprehensions of all managers of tributary railways regarding their true interests and duties.

In the absence of any knowledge of the propositions made by the Croydon Railway Company, I can only conclude that they were of that fair and liberal kind which has hitherto characterised their repeated efforts to bring about an equitable arrangement. The Greenwich Board having hitherto led their credulous proprietary into a belief of the astonishing efficacy of an *additional* 1½d. toll, and still endeavouring to keep up that notion, are it seems daring enough to assert their belief that "more than nine-tenths of their proprietors would consider it a violation of trust," if they were to accede to any new terms or compromise. Thus, having in the first instance blinded their constituents, they pretend that they must be bound by the prejudices they themselves have created!

The third paragraph of the "official letter," commencing "There may be good grounds, &c.," is such a tissue of puerile absurdities, intermixed with a due proportion of self-evident untruths regarding the "full understanding," &c., that it would be a waste of time further to allude to it.

The fourth paragraph may be disposed of by the single observation that the Croydon Company are liable even to a 3d. toll *only upon the condition that suitable and convenient* access to London Bridge is afforded them.

With reference to the fifth paragraph, it may be observed, that although Parliament granted an additional toll of 1½d., it *did not fix* the number of passengers which should be carried, nor the fares which should be charged by the Croydon Company—and to the sixth it may be replied that, resting "on the faith of an additional toll" is, *unless the public are willing to pay it*, leaning upon a broken reed.

The concluding observations of this "official letter" evince so profound an ignorance of the A B C of railway policy, that they discredit even those from whom they emanate. The result of raising the fares by the Blackwall Railway Company being a loss of 12*l.* during the past week, and a diminution of the number of passengers from 46,000 to 27,000, as compared with the corresponding week of last year, is a fitting commentary upon their sage allusions to the experience of the said Company.

Assuredly it is high time that the holders of *old shares*, especially in the Greenwich Railway, should bestir themselves, and not suffer their property—which is essentially a valuable one—to be utterly ruined by those who have brought it to its present deplorable condition. Let them arouse themselves, and shake off their Deputy-Chairman, to whom the proprietors of railways are indebted for the enunciation of the brilliant apothegm that "if an auxiliary railway (the Croydon) clears by its traffic in the year 27,000*l.* over the expenses, and has to pay to a trunk line (the Greenwich) 28,000*l.* as toll, it is nevertheless the duty of the former to carry on such traffic, depending upon the generosity of the latter to take the circumstances into consideration!!"

I am, Sir, your obedient servant,

EQUITY.

October 4, 1842.

AMALGAMATION OF ADJACENT LINES.

To the Editor of the Railway Times.

SIR,—Unfortunately I am a holder of Midland Counties' and Greenwich Railway shares, and know that *if* both those concerns were well managed we should be getting a fair dividend from each; in the first the proprietors have broke ground a little, but in the last both Directors and shareholders appear to me to be infatuated. You will therefore see, Sir, with what pleasure I must have read your suggestions respecting the junction of Birmingham and Derby, Midland Counties', and North Midland, and I think the remarks apply with equal force to the Brighton, Dover, Croydon, and Greenwich Companies—four Boards of Directors, four Secretaries, four Engineers, with the *et ceteras* attendant. It surely would be a great advantage to *all* if they could be placed under one Board of Direction; the saving and advantage are self-evident. Should it be impossible to effect this most desirable object, it would be well if the shareholders of each would see that some agreement be made; and if each Company would *consent to pay* and the others *consent to receive the fair proportion* earned on their line, it would be a great advantage gained to all, and put a stop to the disgraceful contest now carrying on between the Greenwich and Croydon Companies, to the great inconvenience of the public, and utter ruin of both concerns. If the Directors *cannot* or *will not* meet each other to settle the difference, surely such ought to retire from either Board, and make way for unprejudiced men; or if this fail, let each party call in the Chairman, say of the London and Birmingham and Eastern Counties Companies, let both parties state their case, and there cannot be a doubt their judgment would settle the matter fairly. The question is a narrow one, and any four chandler shopkeepers could easily settle it. What is it but to decide whether it be better for us (the Greenwich) to receive less than 4,000*l.* per year, or to accept terms by which we are guaranteed 6,000*l.*, and may receive much more. I do most sincerely hope, Sir, you will follow out your general hints by *practical suggestions* in all the last-named Companies, and thus you will be the means of saving from ruin the property embarked in all the Companies.

I am, Sir, your obedient servant,

A CONSTANT READER.

Leicester, September 27, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The last half-yearly Report shows, that the total amount expended upon this railway up to—

June 30, 1842, was.....	£6,435,671 9 3
Suppose an additional outlay of	64,328 10 9
Total amount.....	£6,500,000 0 0

But of this sum 300,000*l.* was borrowed on the loan notes of the Directors, to be repaid by the sale of the surplus land, buildings, stock, &c. When that sale shall be made, and the 300,000*l.* paid off, the total cost will be 6,200,000*l.*

However, to take an extreme estimate, suppose the total cost of the line, when completed, to be 6,500,000*l.* Of this sum there will be, in January, 1843—

Digitized by Google

In shares paid up	£3,325,000
Borrowed	3,175,000
Total	£6,500,000
The annual interest on the borrowed capital, at 5 per cent., will be	£158,750
The depreciation fund will absorb	20,000
The rent and tolls of branches, until further extensions	60,000
	238,750
Take the expenses of working the line and its branches at the same sum as for the last 12 months, although it *ought* to be much less	253,688
	492,438
A dividend of 5 per cent. on the capital paid on shares will take	166,250
Gross receipt to pay 5 per cent. dividend	£658,688
Each additional 1 per cent. of dividend will require	33,250
Gross receipts to pay 6 per cent. dividend	691,938
Add 1 per cent.	33,250
Gross receipts to pay 7 per cent. dividend	£725,188
Add 1 per cent.	33,250
Gross receipts to pay 8 per cent. dividend	£758,438

Therefore to pay a dividend of—

per cent., there must be an annual receipt of 658,688*l.*, or 12,667*l.* weekly.

per cent., there must be an annual receipt of 691,938*l.*, or 13,306*l.* weekly.

7 per cent., there must be an annual receipt of 725,188*l.*, or 13,945*l.* weekly.

8 per cent., there must be an annual receipt of 758,438*l.*, or 14,584*l.* weekly.

The first 12 months since the entire opening of the Great Western, with partial openings of its branches, and during a period of great commercial depression, have produced a gross receipt of 648,223*l.*, or an average weekly receipt of 12,466*l.*

If the second 12 months, or from June 30, 1842, to June 30, 1843, should yield an increase of 12 per cent. upon the first year's receipts, the average per week will be 13,960*l.*, the gross receipts 725,968*l.*, and the dividend 7 per cent.

The experience of railways in general renders this supposition somewhat more than probable.

It should be observed, too, that the Exeter branch is 12 miles longer than during the first year.

It will, I think, be universally admitted, that the above estimate of cost is *liberal*, and of revenue not excessive. Surely, then, the prospects of the Great Western Railway Company are *really* good.

I am, Sir, yours, &c., L.

P.S. Allow me to correct a misprint in my letter of last week. I estimated the receipts from October 30, to November 30, at 11,000*l* per week, but it is printed as 14,,000*l*.

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY COMPANY—GENERAL MEETING.

[From the *Yorkshire Gazette* of this day, Oct. 8.]

On Tuesday last, at 12 o'clock, the first general meeting of the shareholders of the Newcastle and Darlington Junction Railway was held in the Directors' room, Railway Station, York. The chair was taken by George Hudson, Esq., Chairman of the Board of Directors.

The Chairman—Gentlemen, I believe that we now constitute a legal meeting. I shall, therefore, call on the Secretary to read the advertisement calling the meeting, and after that we shall proceed to the business of the day.

The Secretary (Mr. Close) then read the advertisement.

The Chairman—Gentlemen, the advertisement which you have just heard read has been inserted in such newspapers as the Act directs. The first business of the meeting is to produce the registered list of shareholders, in order that we may have your sanction for affixing the seal of the Company thereto.—The seal was accordingly affixed.

The Chairman—I shall now call on the Secretary to read the Report.

The Secretary (Mr. Close) then read the following

REPORT.

The Report of the Directors of the Newcastle and Darlington Junction Railway Company, to the first general half-yearly meeting of the shareholders held at the railway station in the city of York, on Tuesday, the 4th day of October, 1842, pursuant to the directions of the Act of Parliament.

The Directors beg leave to submit the following statement of their receipts and disbursements up to this time, viz:—receipts on account of subscribed capital, being 3*l.* per share on 20,000 shares, 60,000*l.* Payments, amount of expenses incurred in obtaining the Act, as stated in former account, 5,301*l.* 8s. 8d.; iron rails, 3,511*l.* 11s. 7d.; engineers and surveyors, 637*l.*; late Secretary, one year's salary, office and travelling expenses, postage, and petty cash, 429*l.* 13s. 9d.; land, 4,000*l.*; balance in hand, 46,130*l.* 6s.; total, 60,000*l.*

The Directors recommend that the guaranteed interest on the paid-up capital shall be computed up to the 31st of October inst., and payable to the shareholders at any time after that day; and that the interest shall henceforth be payable half-yearly, and become due on the 30th of April and the 31st of October in each year.

The first duty of the Directors has been to commence negociations for the purchase of the land required for the line. They have succeeded in concluding a satisfactory agreement for a purchase of considerable magnitude, but in numerous instances in which their offers have not been accepted they have given notices of appealing to juries, and the first cases are appointed to be heard on the 17th inst.

The Directors have entered into contracts for the entire quantity of iron rails and chairs that will be wanted for the whole of the line. They were fortunate to do this at a moment when the price of iron was exceeding low, and consequently the purchase will be very advantageous to the Company.

The shareholders are aware that the line of that portion of the Great North of England Railway, which is to be transferred to this Company's was to a considerable extent laid out in such a manner as to render certain deviations of it extremely desirable, if not absolutely necessary; and that notices were, therefore, given of an application to Parliament during the ensuing session for powers to make the requisite deviations. It is, however, very satisfactory to the Directors to be able to state that the works of the line, as proposed to be deviated, are of so light a character, and will be so easy of construction, that the delay occasioned by applying to Parliament will not retard the final completion of the Junction line.

The Directors in conclusion beg to assure the shareholders that the several powers vested in the Company have been put in motion, and will be exercised as vigorously as the provisions of the Act of Incorporation will allow, and they entertain no doubt that within two years from this time the line will be opened, and that it will have been executed for a sum within the amount of the subscribed capital.

GEO. HUDSON, Chairman.

The Chairman—Gentlemen, you have heard the Report read. I don't know whether any gentleman has any question to put with reference to it—if there is I shall be very happy to give any information in my power. I am not aware that any paragraph in the Report requires explanation or observation on my part; but it will be a pleasure to me or to any other of the Directors, to communicate any information required to the best of our ability. (After a pause, and no person having risen to address the Chairman on the subject, Mr. Hudson proceeded.) As no person seems to require any further information at our hands, I shall have the pleasure of putting the Report to the meeting for its adoption. And in doing so I may perhaps be allowed to make one or two observations on matters which are very interesting to railway proprietors. The first observation which I shall make has reference to the concluding paragraph of the Report, in which we state our opinion that the Newcastle and Darlington Junction Railway will be completed within the subscribed capital of the Company. Gentlemen, I entertain so confident an opinion upon that subject that I have no hesitation in pledging myself to the fulfilment of that part of the Report. I am perfectly satisfied that unless there shall intervene some unforeseen difficulty—and keeping in view that we obtain the amended Bill, of which I have not the least doubt, for I cannot see where any opposition can arise to it—I am perfectly satisfied, I say, that this line can be constructed at a less cost than that expended in the formation of any line between the point from which we travel by this line and London. And I have not the smallest hesitation in saying that we shall be able to complete it within the subscribed capital of the Company. The next point to be considered is—(although the shareholders of this Company are guaranteed 6 per cent. on the money they lay out by several other Companies for a certain number of years)—whether, after the expiration of that time, the shareholders of this Company may look for an increase from 6 per cent., as at present guaranteed, or a decrease. Now, I have had many opportunities, since the opening of the north line, of seeing the traffic conveyed along that line and the other northern lines, and I am confidently of opinion that the traffic which will be conveyed along the Darlington and Newcastle Junction line will realise more than the 6 per cent. which has been guaranteed by the different Railway Companies. I am clearly of opinion that there will be a surplus over the 6 per cent. from the first opening of the line to the end of the 10 years. And at the end of the 10 years I think that we shall not fall back in the amount of our income, but that the increase will go on progressively. This line of railway is possessed of many advantages. It is in several respects similarly circumstanced to the York and North Midland. There are cross roads feeding it at all points, upon the line there is a larger population than there is on the York and North Midland Railway, and then the Newcastle and Darlington Junction can be made for less money. Therefore, I cannot see by any possibility why this line should not be equally productive with the York and North Midland Railway. If this should be the case, I am sure that the gentlemen who have embarked in the undertaking may and will feel very comfortable. But there is one thing which we should not forget, and that is the probable success of the western line. We have latterly seen the Report of a very eminent engineer—one who stands high, and deservedly so, in his profession—that gentleman makes a much more favourable Report as to the probable cost of forming a railway between Lancaster and Edinburgh than could have been anticipated. But it should be remembered that there was a consideration of some importance in the difference of the present prices of certain articles used in the construction of a railway. For instance, the variation in the price of iron between the time when our estimates were prepared and the time when we effected our contract for this line, will make a difference to us of 25,000*l.* or 26,000*l.* If the western line is carried beyond Lancaster, all have agreed that it must receive the assistance of Government. Now, if the western line requires two millions, I have no doubt that the eastern line will require only one million. The eastern line, therefore, stands fair for assistance from Government, as, whatever the western line may want, half the amount will satisfy us. If Government assistance is to be given we always stand well, even without any Parliamentary influence. We can do what the promoters of the western line wish to do; and recollect we can do it at a much less, indeed half the cost. When we have got to Newcastle, we have only about 115 miles to go to Edinburgh, but the route by the western line will be upwards of 200 miles. I do not know that I have any further observations to make, and, in conclusion, only wish that the Newcastle and Darlington Junction line may be as successful as the York and North Midland Railway. I have just been reminded of a subject on which information has been sought by shareholders at a distance—that is, whether the Stockton and Darlington Railway Company opposed this Company in Parliament; I must, therefore, state that we had a most determined opposition from the Stockton and Darlington Railway Company. They did not appear against us openly in the House of Commons, but it was understood that the Messrs. Hoppers, who opposed in the Commons, in fact represented the Company; but the Company itself opposed us in the House of Lords. There seem to be some contradictions in reference to this matter, which, however, when closely examined, are perfectly reconcileable—inasmuch as all that was said at the meeting now referred to was, that a person in that room was in London attending the Committee against the Bill. It appears that the gentleman referred to, namely, Mr. Pease, never did attend the Committee of the House of Lords. But the opposition of the Stockton and Darlington Railway Company, as a Company, was as determined as it possibly could be. But the Committee came to the decision that that Company had no right to appear as they did, and the House of Lords dismissed their petition. As to the difference between this Company and the Dean and Chapter of Durham, I may say that it is always an unpleasant thing to come into collision with so influential and important a body. The Dean and Chapter professed to be willing to meet this Company upon liberal terms, and I cannot but say that I think the professions they made, and the conduct which they subsequently exhibited, perfectly irreconcileable. We have offered them a fair price for their land. We have given to a large landowner (who would not part with his land without obtaining an adequate price for it), the same price which we have offered to the Dean and Chapter; and I think that the Dean and Chapter have not met us in a liberal spirit, and I certainly do regret their conduct. Without further observations I beg to move that the Report of the Directors which has just been read be adopted and circulated amongst the shareholders. Those who are in favour of the motion will please say "aye;" those of the contrary opinion will say "no."

—Hopkins, Esq., a Director of the Stockton and Darlington Railway, said—I am extremely sorry to find that any allusion has been made to the conduct of

Digitized by Google

the Stockton and Darlington Railway Company. As you very properly observed, Mr. Chairman, that question has been settled, but an impression may go abroad, perhaps, from the observations which you have made, that a regularly organised opposition of the Stockton and Darlington Railway Company to this Company had been brought forward. Now, I have the satisfaction and pleasure of saying that such was not the case. I have had the pleasure of sitting at the Stockton Board for the last 12 months, and the subject has never in any manner been brought forward before that body.

WILLIAM RICHARDSON, Esq., Solicitor to the Newcastle and Darlington Junction Company—I do not know what may be called an "organised opposition," but when a petition against this Company was presented from the Stockton and Darlington Company, and the seal of the Company was affixed to it, and when some gentlemen connected with the Company and their Engineeer were in attendance in the Committee-room, I confess that the opposition seems to me to have been an organised one, or else I am at a loss to know what you call an organised opposition.

After some further discussion on this point,

NICHOLAS WOOD, Esq., of Newcastle, said—I perfectly agree with you, Mr. Chairman, in the opinion which you have expressed as to the ultimate success of this undertaking, but I beg to state on the present occasion that there is a very anxious wish on the part of the inhabitants of Newcastle that the terminus of the railway should be in Newcastle in some shape or other. They think that Gateshead is not exactly the proper place for so great an undertaking to terminate. And they think that the throwing a bridge across the river Tyne might tend to accelerate the communication by railway into Scotland, I don't give any opinion as to where the bridge ought to be, or in what manner constructed. But I may take the liberty of mentioning that I have been solicited by several parties resident in Newcastle to bring the subject before this meeting. And I think it is a subject well worthy the consideration of the Directors of this undertaking. I don't wish to make any motion on the subject, my only object is to bring the matter before the meeting.

The CHAIRMAN—I perfectly agree with what has been said by Mr. Wood as to the propriety of doing all we can to facilitate the progress of railway communication to Scotland. But we have got considerable work in hand at present, and I should wish to get it disposed of before we enter upon any more. I should not like this Company to enter upon any more work at present. The erection of a bridge seems to me to be a question which is at present premature. I think we cannot do anything on that point until we see our way through the present line. I have no doubt, however, that the improvement referred to by Mr. Wood will follow.

N. WOOD, Esq. said, I did not mean, Mr. Chairman, that this Company should undertake this matter, only I thought they might probably take some steps towards co-operating with other parties, who are wishful to promote such a matter, if they think proper.

The resolution affirming the Report was then put from the Chair, and carried unanimously.

The CHAIRMAN—The next resolution is one of a routine character, relating to the appointment of a Secretary to the Company. The person whom I have the pleasure to propose is one whom I have known for a number of years, who is perfectly sufficient for the office; and who, from his abilities, his industry and energy, is capable of discharging its duties in a satisfactory manner to the shareholders. I move that Mr. John Close be appointed the Secretary of the Company at a salary of 150*l.* per annum. I believe that such a resolution as this is a novelty at Railway Companies' meetings. Hitherto the Secretaries were appointed by the Directors, but the new Bill of the Earl of Shaftesbury vests the appointment in the shareholders.

A SHAREHOLDER—Mr. Falconer has resigned, I suppose?

The CHAIRMAN—Yes, his bad health and other circumstances have induced him to give up the situation. Those who are of opinion that this resolution should pass will say "aye," those of the contrary opinion will say "no."—Carried unanimously.

The CHAIRMAN—The next business which we have to do is to proceed to the appointment of a Treasurer. In some Companies a large salary is attached to the office of Treasurer, but in this Company we propose to have a treasurer without any salary. In point of fact the bankers are Treasurers, but the Act requires that the appointment of Treasurer should take place. I know a Company in which they allow the Treasurer 600*l.* a year, but I think that is wrong. I propose Richard Nicholson, Esq., be appointed Treasurer. Those of that opinion will say "aye;" of the contrary, "no."—Carried unanimously.

The CHAIRMAN—The next resolution to be considered is the appointment of Auditors to the Company, and it is proposed that Sir John Simpson and George Dodsworth, Esq., be elected Auditors to the Company. Those who approve of that resolution will say "aye"—

A SHAREHOLDER—I think you don't mention the remuneration?

The CHAIRMAN—That will come afterwards. The Auditors will be appointed yearly. The resolution was carried unanimously.

The CHAIRMAN—The next thing is as to the remuneration of those gentlemen who have been elected Auditors. The duties of the office of Auditor will become more onerous than at present, and we propose that the sum of 40*l.* a year be the remuneration.

THOMAS PRICE, Esq—Does the Treasurer give security?

The CHAIRMAN—Yes, all the officers are required to give security, the Directors are responsible for that. But the appointment of Treasurer was merely a nominal appointment, made in compliance with the provisions of the Act. Those who are of opinion that 40*l.* per annum should be the remuneration given to the Auditors will say "aye."

THOMAS PRICE, Esq.—40*l.* for the Auditors?

A SHAREHOLDER—Yes, 20*l.* to each.

THOMAS PRICE, Esq.—It will be easily earned, I think.

The CHAIRMAN—I don't know; if the Auditors do their duty they have an onerous task to perform.

A SHAREHOLDER—They have a responsible and onerous duty to perform.

The resolution was then put from the chair, and carried unanimously.

The CHAIRMAN said—Then the seventh and last resolution which I have to submit to the meeting is one personally applicable to the Directors themselves. But as we intend to do our duty, we feel that we should not do it without receiving some remuneration. We have spent a great deal of time and labour in attending to the interests of this Company. And so far as I am concerned, I am anxious, even if there was no remuneration given to the Directors, that we should endeavour to make this railway an example to other Railway Companies, and to put a stop to the wasteful and reckless expenditure of money which takes place in some Companies. I move that the remuneration of the Directors be 1,000*l.* per annum, to commence from the 1st of January last. Our duties as Directors commenced on the 1st of September, 1841. Our duties have been laborious and irksome, and attended with a very great deal of anxiety, and I think that the sum proposed is not too great a remuneration. It is a personal matter, no doubt, but I put this resolution just as I would do any other, and always treat these things as matters of business. If any gentleman has any remark to make, I shall sit down, but if not I will put the resolution to the meeting. (After a pause, and no gentleman rising, the Chairman proceeded.) Those who approve of this resolution will say "aye,"—those of the contrary opinion will say "no."

The resolution was agreed to *nem. con.*

The CHAIRMAN—I believe we have now got through the routine business of the meeting. I may say that by our promptness in obtaining iron before a rise took place, we have effected a large saving to the Company. And I believe that in many other things we shall likewise be able to do so. I believe there is no further business to be brought before the meeting.

J. C. HOPKINS, Esq.—Will you allow me to ask one question, having reference to the calls to be made upon the shareholders? Some people have placed their money in banks under the idea that a call would be made periodically, and they wish to know what is the likelihood as to the times when these calls shall be made. They have invested their money under the idea that a call would be made, and that they would receive 6 per cent. for their money.

The CHAIRMAN—I believe the next call will not be made before the 1st of January, and after that calls will be made in regular succession until we shall have 10*l.* or 15*l.* paid upon each share. There is sometimes an objection to the payment of the interest upon calls, but in this Company the payment of interest becomes capital. It is not like taking it out of one pocket and paying it into another, because it becomes the capital of the Company. In some Companies this was not the case. The lessees will pay interest at 6 per cent. on the money expended.

J. C. HOPKINS, Esq.—I am very much obliged for the information—the statement of the Chairman is quite satisfactory.

The CHAIRMAN—There cannot, according to the Act, be more than one call in three months, and not more than 3*l.* at each call. If there is any other information desired, which I can give, I shall be very happy

No other question having been put,

T. PRICE, Esq. rose and said—There is one duty which I have to perform, when I hear that the business of the day is finished, and that is one which I have much pleasure in doing, namely, proposing a vote of thanks to the Chairman. I have not been much accustomed to attend the meetings of Railway Companies, but from the knowledge which I possess of such meetings I think the business of the Company has been transacted in a very satisfactory manner. I hope and trust that on many future occasions we shall have to return thanks to the Chairman for his attention to the interests of the Company. From his great practical knowledge and acquaintance with railway business I have no doubt that he has sifted well the probable success of the Company, and I feel satisfied that the result of the undertaking will bear out what the Chairman has suggested as to its probable success. The suggestion which has been thrown out by the gentlemen from Newcastle is worthy of consideration, but I believe with the Chairman, that it is the best way to keep to the right side of the hedge, and in this instance to keep to the right side of the river. I think Mr. Hudson has ably performed his duties as Chairman of the Company, and, therefore, beg leave to move that the thanks of the meeting be given to Mr. Hudson for the manner in which he has brought the matters of the Company before us.

WM. OLDFIELD, Esq. said—I wish to second the resolution, with this addition, that being greatly indebted as we all are to the abilities and energies of our Chairman—and I know he will perform his duties well—I hope that when the railway shall be ready for opening he may be possessed of all his present energies and the same health and strength. (Applause.)

ROBERT DAVIS, Esq., Deputy-Chairman, put the resolution to the meeting, when it was carried by acclamation.

The CHAIRMAN, in acknowledging the compliment, said—I am very much obliged to you. I have a very large interest in this undertaking—I never had so confident an opinion in any speculation into which I ever embarked as to its success; and I am quite satisfied that the success of the Company will equal any expectations that have been or are entertained of it. I thank you for the compliment you have paid me—and assure you that I shall employ all my energy and faculties in promoting the success of the Company—and shall endeavour to do something towards bringing Railway Companies into credit with the public. (Applause.) I beg to thank you most sincerely.

The meeting then broke up.

THE YORKSHIRE FIRE AND LIFE INSURANCE COMPANY, Established at York, 1824, and empowered by Act of Parliament.—CAPITAL, £500,000.

PLYMOUTH, DEVONPORT AND EXETER RAILWAY.

At a Meeting of the Inhabitants of the Town and Borough of Plymouth and its vicinity, convened by the Right Worshipful the Mayor, and held at the Guildhall of the said Borough, on Friday, the 30th day of September, 1842, to receive a Report of the proceedings which have been taken for the purpose of determining the line of the proposed Railway,

GEORGE WILLIAM SOLTAU, the Right Worshipful the Mayor of Plymouth, having taken chair,

Mr. Charles Whiteford, the Secretary to the Company, having read the Report of the Provisional Directors—

Resolved—On the motion of William Prance, Esq., seconded by James King, Esq.—That this meeting is highly gratified at learning from the Report now read, that the long projected measure of extending railway communication from Exeter to these towns, whilst fraught with the most important benefits to the locality, may be regarded as a practicable, safe, and remunerating undertaking; and that the best thanks of the inhabitants are eminently due to the gentlemen forming the Provisional Directory, for the zeal and ability with which they have conducted the investigation entrusted to them, and for their valuable Report.

Resolved—On the motion of John Burnell, Esq., seconded by William Moore, Esq.—That the undertaking is entitled to the best and most energetic support of the inhabitants, and that it is expedient to adopt measures for carrying the same into immediate execution; and that it be a recommendation from this meeting to the promoters of the railway to give extended publicity to the Report now read; to invite additional subscriptions to the share list, and to proceed otherwise as they may deem advisable in actively promoting the undertaking.

Resolved—On the motion of William Eales, Esq., seconded by William Saunders, Esq.—That, inasmuch as a large portion of the information affording the materials for the Report now read has been obtained by the expenditure of monies subscribed on former occasions for prosecuting the intended railway, this meeting is pleased to find that the Provisional Directors have it in contemplation to advise the shareholders to make a proportionate allowance to parties willing to take shares in the present undertaking, in respect of any sums they may have previously contributed. And that it be a recommendation from this meeting to the Company to give effect in their financial arrangements to this equitable principle

Resolved—On the motion of Ralph Cole, Esq., seconded by Samuel Derry, Esq., supported by John Rundle, Esq., M.P.—That this meeting cordially agrees in the view expressed in the Report, that of the several lines projected, the line designated as Mr. Rendel's Southern line is preferable to either of the others, and that which it is the most expedient to adopt, provided it be adequately supported by the landowners and the inhabitants of the district through which it is intended to pass, and that it is advisable to take immediate measures for ascertaining the disposition of those parties towards the undertaking; it being understood that in the event of its not being properly supported by them, the recommendation of Mr. Macneill, in favour of the Dartmoor line, will be adopted.

Resolved—On the motion of Samuel Derry, Esq., seconded by the Rev. John Hatchard—That a Committee be now appointed for the purpose of obtaining additional shares to be taken by the inhabitants, and that such Committee do consist of the following gentlemen:—

Mr. Samuel Derry	Mr. E. Nettleton
Mr. P. E. Rowe	Mr. Luscombe
Mr. W. Acland	Mr. H. M Westcott

With power to add to their number.

G. W. SOLTAU, Chairman.

The Mayor having quitted the chair,

Resolved—That the best thanks of this meeting be given to him, for his courtesy in convening the meeting, and for his able conduct in the chair.

J. C. COOKWORTHY.

WEST LONDON RAILWAY, (LATE BIRMINGHAM, BRISTOL, AND THAMES JUNCTION RAILWAY)

NOTICE is hereby given, That a Special General Meeting of the West London Railway Company will be held at the Company's Offices, No. 11, Abchurch-lane, in the City of London, on Friday, the 21st day of October instant, at One o'Clock precisely, to create or ratify the creation of such and so many new Shares of £20 each, bearing respectively such Annual Interest for such time and with such respective preference and propriety over the present shares in the undertaking as the proprietors shall at such meeting think proper, and also to fix the price at which such shares shall respectively be issued, the amount of calls upon such shares, and the time or times when the same shall be paid, and to give certain orders and authorities to the Directors of the Company in that respect, and for other purposes.

ROBERT GUNTER, Chairman.

Offices, 11, Abchurch-lane, October 5, 1842.

TO COAL OR STEAM-BOAT PROPRIETORS, ENGINEERS, &c. &c.

A Gentleman, having several very powerful new Locomotive Engines for Sale, 13-inch cylinder, 6 wheels; Copper Fire-Boxes (extra size), to burn coals, 4 feet 8½ inch gauge, is desirous of Letting them to Hire, either in Collieries, Steam-boats, or making them applicable to any purpose for which they can be used, (the Railway Directors having decided not to use coal, for which the engines were specially built).

For further particulars apply at the Patentee's Office for the Consumption of Smoke, No. 12, Upper Stamford-street, London.

N.B. A very liberal allowance will be made to Engineers, or other persons who can sell or bring them into use.

Afternoon ..... 6, 7½, 9.	Afternoon..... 5¼, 7, 8¼.

The Stockport Trains stop at Rushford and Levenshulme to take up or set down Passengers, when required.

Private Carriages and Horses cannot be booked unless they are at the station 15 minutes before the time specified in the Time Table. Carriage Trucks and Horse Boxes are kept at the principal stations; but to prevent disappointment, it is requisite that one day's previous notice be given at the station where required.

The Company will only hold themselves responsible for Luggage when it is booked and paid for according to its value; but they strongly recommend passengers to have their name and destination, in all cases, legibly marked thereon

Fees are not permitted to be taken by any of the Company's servants.—The Company do not allow Smoking in the Carriages or on the Stations.

Manchester, 29th September, 1842.

MIDLAND COUNTIES' RAILWAY.—TO THE LANCASHIRE PROPRIETORS.—Gentlemen,—A Circular has been addressed to you by Mr. James Heyworth of Liverpool, inclosing a Proxy, which he suggests your filling up in favour of himself and his friends, Mr. Ormerod and Mr Highfield, with the object of obtaining the appointment of a Committee of Proprietors to investigate the affairs of the Company, and an expression of your opinion relative to the Salaries and Wages of the Officers and Servants, the rates of Passenger fares, and other questions of great delicacy and difficulty.

Having been induced at the urgent request of those by whom the Company was established, and of whom the Lancashire Proprietors formed a very large proportion, to act from its origin as two of the Directors, and having so long enjoyed their confidence, and represented you, as we conceive, at the Board, we feel it to be our duty to state to you plainly our opinion of the mischievous consequences that will result to your interests from sanctioning the objects of Mr. Heyworth and his friends, and the course by which, in our judgment, those interests will be best consulted.

Without a Board of Directors in whom you can place entire confidence, to determine, from time to time, such questions as those of Salaries, Fares, and other matters of detail, it is altogether impossible that you should ever secure either economy, efficiency, or regularity, in the management of such an undertaking as a Railway. If the present Board of Directors do not possess, as well as deserve, that confidence, it is not only your right but your duty to require their resignation, and either to form an entirely new Board, or to introduce such new Directors as would, in your opinion, give greater efficiency and energy to the management. It has already been frequently urged upon those who have appeared dissatisfied with the present management, to mention the names of *any* others in whom the general body of Proprietors could feel greater confidence, with an assurance that there were Directors, ourselves for instance, most anxious to see their places better filled, and to resign their seats whenever such an object could be accomplished. *Mr. Heyworth's brother* was, at the request of his firm, put on the Direction some years ago, as a large Proprietor desirous of being in that situation, and we are not aware of any suggestion with which *he* has favoured the Board not having met with prompt attention; and when we ourselves lately found that there were two Proprietors (Mr. Ellis and Mr. Waters, of Leicester) willing to be elected, who united integrity and business habits with experience in Railway management, and who not only appeared to possess the peculiar confidence of the dissatisfied portion of the Shareholders, but were understood to take strong views as to the practicability of a further reduction of Salaries and Expenses, we immediately proposed to our colleagues that they should be placed upon the Board, which was at once agreed to; and Mr. Ellis and Mr. Waters were accordingly elected at the last General Meeting; and at the very next Meeting of the Directors a Committee of five, including those two gentlemen, was appointed for the special purpose of investigating the subjects to which Mr. Heyworth has called attention, of effecting every possible reduction of expenditure consistent with the real and permanent interests of the undertaking, and of endeavouring to secure for the Proprietors the full benefit of the present depressed prices of everything. Before the result of this proceeding can be ascertained, and accurately reported to the Shareholders, some time *must* of course elapse, and unless you have already made up your minds that the present Board of Directors are unworthy of your confidence, and that you desire their resignation, no benefit, but the reverse, must be the result of a Special Meeting, called for the express purpose of taking the strongest measure, expressive of distrust, that proprietors can adopt towards a body of Directors, namely, the appointment of a Committee to supersede them in their duties.

Whether the present Board has deserved your confidence or not, is a question which may now be easily decided by those who will take the trouble of looking a little beyond the mere amount of present dividend, and of comparing, not the per centage of profit on a traffic reduced as it has been by circumstances which no Directors can control, but the actual rate of cost in locomotive power, maintenance of way, and the other expenses of a Railway, with the corresponding expenses on other lines which are considered to be well and economically managed. This question was fully gone into at the last General Meeting of the Proprietors, and in reply to Mr. Heyworth's written speech (which is given at length in the report inadvertently copied into the *Railway Times*, though the statements made in reply are either omitted or inaccurately inserted) the *particulars* of the expenses on the lines cited as instances of economical management (especially the London and Birmingham and the North Union) were detailed, and it was shewn that *both in the construction and working* of this railway and all its machinery, the experience of other lines *had been carefully applied*, that the rates of expense in the items of power and maintenance of way were considerably lower than on most lines similarly circumstanced, that if the salaries and wages, already lower than on many lines, admitted of reduction, the only safe course for effecting this object was to introduce upon the Board, as proposed by themselves, any such experienced and trustworthy Proprietors as felt confidence that it was practicable; that the question of fares was, in like manner, one to be determined, upon a full investigation of all the circumstances, by Directors so chosen; and Mr. Heyworth and his friends were called upon to point out a *single* thing which the lines they mentioned had done and which the Midland Counties had not, and they were informed, as is the fact, that in every instance in which the experience of the other lines with which *we* are connected, had suggested anything of value, it was promptly made known to our colleagues and uniformly acted upon by them, and the meeting was told that whilst the Board would continue to exert themselves to the utmost to reduce the expenses and improve the dividends, and would cordially receive any suggestions in furtherance of this object, they *would not pledge* themselves to the *extent* of reduction, or risk, holding out delusive expectations of sudden improvement in the dividends, to gain temporary objects, and enable speculators to sell their Shares. After a day spent in discussion, the General Meeting was at length divided upon a proposition to turn out of the Direction two of the present Board, Mr. Douglas Fox, their able and valuable, as well as *sole* representative at so important a place as Derby, and Mr. Horsfall, —two of the old Board, Mr. Garnett of Manchester, and Mr. Evans, having already made way for Mr. Ellis and Mr. Waters, and *our* offer of resignation, and that of another Director, Mr. Heyrick, having been rejected; and this course was urged on no intelligible ground, but that of making a change of *some* kind, *without reference to its tendency*, and showing a bad feeling towards those who have worked so long and so hard in the Company's service, and as regards ourselves without any other possible motive or object than that of promoting the general interests of the Company. The votes on this proposition (782 for, and 2335 against, those secured by Messrs. Heyworth and Co., 468 actually *not being given on either side*) are, most unfairly, *not stated* in the report referred to in Mr. Heyworth's circular, but it *is* stated that the majority for the re-election of Mr. Fox and Mr. Horsfall, "was principally owing to the large number of proxies possessed by one individual, Mr. Rathbone;" the truth being that there was a majority of upwards of five hundred votes, *independently of those proxies;* and although there certainly were upwards of a thousand proxies placed in our hands by Proprietors, not a single individual was ever asked, *by either of us*, for his proxy, and we had not even secured the proxies of some of our own nearest connexions, whilst the opposite party had long been busily engaged in canvassing the Proprietors for all the proxy votes they could obtain.

With yourselves therefore it must now rest, whether to support Mr. Heyworth's proposition, and thus supersede the Board of Directors in the discharge of its legitimate functions, or to accomplish, *through that Board* (modified as you may from time to time think fit) the objects which we are all alike interested and anxious to attain. For our own parts we should be particularly glad to retire, and to be relieved from duties involving a great deal of anxious responsibility, frequent and troublesome correspondence, and, at times, very inconvenient absence from our homes; and whilst nothing but a uniform good understanding between our colleagues and ourselves, and our confidence in them, would have induced us to continue so long in the Direction, we never can consent, on any consideration, to remain in the situation of Directors, one hour longer than the Board of which we are members retains your confidence, or be parties to a proposition so unfair as that of Mr. Heyworth towards those upon whom the burden of the management rests.

EDWARD CROPPER,
THEODORE W. RATHBONE.

OCTOBER 6TH, 1842.

N.B. As we trust you will, if the proposed Meeting is held, either attend in person, or place your proxy in the hands of some one who will represent your opinion, and as *it is the latest dated proxy which gives authority over all preceding ones*, a blank form is enclosed, for use if needful.

CLARENCE RAILWAY.—MESSRS. SHUTTLEWORTH AND SONS are authorised by the Public Works Loan Commissioners, to bring to Sale by Public Auction at the Mart, in London, in the month of November ensuing, that valuable and important undertaking THE CLARENCE RAILWAY, in the County of Durham, which has been completed at an expense of many Hundred Thousand Pounds, extending from the River Tees, at Port Clarence, to Sim Pasture, in the parish of Heighington, in length Sixteen Miles or thereabouts, with a certain Branch therefrom to Stockton, in length Three Miles or thereabouts; and, also, another Branch leading out of the main line at Stillington Moor House, towards Durham, to a place called Coxoe, in length about Nine Miles, with two other branch Railways leading out of the said last mentioned Branch, called respectively the Chelton Branch, and the Byers Green Branch, all in the County of Durham, with all the Houses, Offices, Buildings, Staiths, and Works thereon erected and built;—and all Tolls, Receipts and Profits accruing by virtue of the Acts of Parliament relating to the Clarence Railway Company, and all profit, benefit, and advantage to be derived from Haulage, Wharfage, Shipping, or other dues, or otherwise, from the said undertaking.

More descriptive Advertisements are preparing and will shortly appear, and printed Particulars had in due time of Messrs. Barnes, Winter, and Bernard, Solicitors to the Commissioners, No. 2, Great Winchester Street; at the Office of the Public Works Loan Commissioners, South Sea House, London; of Mr. Child the Superintendent, at the Railway Offices, Stockton; at the Mart; and of Messrs. Shuttleworth and Sons, No. 28, Poultry, London.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.—NOTICE—Scrip-Holders are reminded that the Fourth Instalment of £5 per Share on the New Shares created in pursuance of the resolutions passed at a special meeting of the Proprietors of this Company held on the 28th of April last, will fall due on Friday the 21st instant, and that unless the same be paid on that day, or with interest within 14 days afterwards, to any of the undermentioned Bankers, forfeiture of every share which shall after such latter period be in default will ensue:—

London—Messrs. Glyn and Co., 67, Lombard-street.
Liverpool—Messrs. Moss and Co.; Messrs. Barned and Co.
Manchester—Messrs. Jones, Loyd, and Co.
Leeds—Messrs. Beckett and Co.
York—The Union Banking Company.
Dover—Messrs. Latham and Co.; the National Provincial Bank of England.
Ashford—Messrs Jemmett and Co.
Cranbrook—Messrs. Wilmshurst and Co.
Tunbridge and Tunbridge Wells—Messrs. Beeching & Son.
The Country Branches of the London and County Banking Company.

By order, JOHN WHITEHEAD, Secretary.
10, Coleman-street, October 8th, 1842.

SPLENDID STOCK OF PHILOSOPHICAL APPARATUS.—To be Sold by Private Contract, the splendid Collection of Models and Philosophical Apparatus belonging to the Royal Victoria Gallery for the Encouragement of Practical Science, Exchange-street, Manchester. The whole of this Collection of Models and Apparatus has been constructed by the most skilful Machinists, and on the largest possible scale; it embraces a complete series of Instruments for the Illustration of Experimental Philosophy, and is altogether well adapted for a College or any other Public Educational Establishment. The Collection may be viewed any day from Ten in the morning till Five in the afternoon, at the Gallery, Exchange-street; and further particulars may be obtained on application to Mr. S. E. Cottam, Public Accountant, 28, Brazennose-street, Manchester.

This day is published, in a thick octavo volume, price 15s., in cloth, the Second Edition, greatly enlarged, of

THE GENERAL THEORY AND SOLUTION OF EQUATIONS OF THE HIGHER ORDERS—wherein it is attempted to bring the methods of Horner Budan, Sturm, and Fourier, especially the latter, nearer to perfection, as respects their practical application to advanced Equations; with many original researches and improvements in various parts of the science; By J. R. YOUNG, Prof. of Math. in Belfast College.

Also lately published, as an Introduction to the above, and Sequel to the Algebra,
THE ANALYSIS OF CUBIC AND BIQUADRATIC EQUATIONS. 12mo. cloth, 6s.

Souter and Law, 131, Fleet-street.

MR. HALL'S "SMOKE-CONSUMING" PATENT.

Liverpool, September 23.

To W. Y. Calster and Samuel Crompton, Esqs., Honorary Secretaries to the Manchester Association for the Prevention of Smoke.

GENTLEMEN,—In continuation of my remarks on Mr. Hall's two letters to you, I have to observe, that the question between us, as to piracy, under his patents of 1836 and 1841, and mine of 1839, has two distinct bearings; first as to land and marine boilers, and second as to locomotives. As to the first no question is raised, inasmuch as, both in mode and principle, we are directly opposed to each other. His takes great pains to heat the air—mine, on the contrary, takes it as cold, and as direct from the atmosphere, as possible; his introduces the air *so heated (and none other)* in masses, and through long apertures; the main feature of my patent, on the other hand, is to introduce the cold air by numerous small jets, on the Argand burner principle. By his the heated air is introduced to the front part of the furnace, over the door, and to no other part—by mine, to the gases beyond the bridge and furnace.

Secondly, as to locomotives. Here the case is different; and I assert that his mode of introducing air, under his patent of 1841, is an infringement of mine of 1839, and is not covered by his of 1836—his own two patents being, in this respect, directly opposed to each other. By that of 1836, Mr. Hall admits *hot* air, and hot air exclusively—after a complicated process, namely, heating it in a casing round the chimney, then in a casing round the boiler, and lastly, in a casing round the fire box—*from* which casing, and *from which alone*, it is introduced to the furnace or fire-box. Subsequently to 1839 (doubtless from having read my "Treatise on Combustion)," he appears to have discovered the fundamental errors into which both he and Mr. Coad before him had fallen, as to the temperature of the air to be admitted, the quantity required, and the mode of introduction. In fact, so great are these errors, that there is not a single feature of his patent of 1836 that is available, or that ever could be reduced to successful practice; if otherwise, his proofs must be easy of access—let him produce them. To correct these errors was manifestly, then, the direct object of his second patent in 1841; if not, the whole will be at once set at rest by his saying what his object was, and in what it differs from that of 1836. This is the true touchstone, and by this the public will judge him. This nails him to the counter, for, if his patent of 1836 were good, and I am to be charged as its imitator, I ask, why has he altered it, or amended it, in 1841, by approaching towards mine? By his second patent (as to locomotives), in taking the air, not from the three heating cases, or any of them, but direct from the atmosphere, and as cold as he can get it, he at once throws overboard his whole system of hot air, and his patent of 1836 along with it. Again, by his second patent, he introduces, not a small quantity of air, but the required large quantity, as shown in my Treatise to be absolutely necessary. In fact, it was physically impossible, under his first patent, to introduce into locomotives burning coal even one thousandth part of such quantity as Nature demands and Chemistry points out. Now, in all these changes he has departed from his first patent of 1836, and approximated to mine of 1839.

Mr. Hall says—"Although I *prefer hot* air, I do not confine myself to it." Indeed! but I tell him both the law and his own specification *will* so confine him, and without any regard to what he "prefers." He has, in fact, no option—he cannot make a patent law for himself; as he has made his bed, so he must lay on it. His claim is exclusively for a peculiar mode of heating the air, and then of applying this air, *so heated*, by small apertures in locomotives, and by large ones in land boilers; and, further, as his specification expressly states, for a *combination* of these *heating* and *applying* processes—well knowing that his mode of heating was a direct piracy of Coad's, and that it was on the *combination* alone that his claim rested (see his specification in the *Repertory* for May, 1837). Out of this record he cannot travel. Again, he adds, *naively* enough, "I use *hot* air when I can get it *conveniently*, but when I cannot, I submit to the *disadvantage* of using *cold* air."—(*Advantage*—he would have said, but that it would at once have exposed the trick). Now, as Mr. Hall's mode of suiting his own *convenience* may be rather an *inconvenience* to others, by infringing on their rights, the law will protect them, and even take the liberty of restricting his *convenience* within the limits of his own specification, though it be somewhat unkind towards him.

Again, he says—"I consider the heating the air like an indorsement on a bill of exchange, but never looked on it as the bill itself." This, certainly, is original. What Mr. Hall, however, "*considers*," is, fortunately, not the law of the land, and he may find that his *indorsement* of my claim of 1839 on his patent of 1836 will no more be recognized by patent law than his indorsement of my name on his bill of exchange, without my authority, would be by mercantile law. And, further, as an indorsement may sometimes be the only valuable part of a bill of exchange, so may this indorsement of my patent be the only valuable part of his of 1841. However, whether this "indorsement" theory be a sample of his law, his logic, or his chemistry, it is below comment. Mr. Hall would have the law his own way, and would persuade himself that, because he has, by his patent of 1836, introduced the *hot* air by tubes, from his heated casing round the fire box in locomotives, he may, to remedy such error, introduce cold air by tubes, without the use of such casing—thus virtually exchanging every part, principle, and condition of the one patent for others that were more useful or applicable. In Mr. Hall's conception it would still be the same gun, though he had changed the old lock, stock, and barrel for more efficient ones. Let him, however, look a little into the lately-adjudged cases of "Crane and Price," in relation to the use of hot air with anthracite, and the arguments in reference to Neilson's hot air patent, and he may, perhaps, see a little clearer in this matter.

In speaking of the application of his patent to the *Star* engine at Liverpool, Mr. Hall says—"When I took a trip with Mr. Edward Woods, in July, on the engine in question (the *Star*), the apparatus acted perfectly, and the smoke was consumed effectually." I here beg to retort Mr. Hall's own words—"This is wholly untrue!" Besides, here is an unwarrantable liberty taken with Mr. Woods' name, as that gentleman is thus cunningly linked in as a witness of the *assumed* fact of "perfect working" and "consuming the smoke effectually;" while the fact, it was notorious to all but Mr. Hall, was the reverse. This implied inference of Mr. Woods' assent is, then, not only unjustifiable as regards that gentleman, but operates as a deception on the public.

Mr. Hall goes on to say—"And now let me ask Mr. Williams how far he has succeeded in the attempts he made to burn smoke some time ago, by applying his apparatus to a locomotive engine and to a marine engine? I am informed they were complete failures; if that were not the case, perhaps Mr. Williams will inform us where the above engines can now be seen in operation." To questions so courteously put, Mr. Hall shall have direct answers.

First, as to locomotives.—I must myself ask Mr. Hall "where they can now be seen?" His informant can, surely, give some information, for I am unable to do so, as I have never applied my apparatus to such, and certainly I never have attempted to utter an impossibility, or committed so unchemical a blunder, as that of endeavouring "to burn smoke;" and, for the reasons given by me in the *Mining Journal* of the 22d January last. I have already made some successful improvements in effecting the combustion of the carbonic oxide produced from *coke*, but, as to the burning the hydro carbon gases (the coal gas) in locomotive furnaces, the obstacles are so numerous, and the difficulties of satisfying the several conditions which Nature demands are so great, that I have little hope of ever seeing it done. To those, however, who know not, or care not to inquire after those complex conditions, or the possibility of supplying them in the confined space, and under the peculiar circumstances of locomotives, these difficulties are to be overcome, *per saltem*, by the force of their genius, and without trouble, as even Nature herself must yield sooner than refute the "practice" of these patentees.

Second, as to my success with "*marine* boilers."—Mr. Hall, overlooking the numerous instances in which the principle is applied to land boilers, concerning which he asks no question, and one of which he must have seen at the stationary-engine where he was operating with the *Star*, I have to state, that he may see the principle applied to eight of the steam-vessels belonging to the Dublin Company, two of which are their mail contract packets, and that I am proceeding with the rest, where the boilers admit of its introduction. I may also here mention, that a person of the name of Joseph Williams, under colour of being the agent for a patent furnace (that of Mr. Kurtz), although of an entirely different character, has surreptitiously applied my patent to one of the Admiralty steamers—the *Urgent*, and with considerable success and economy.

Mr. Hall observes—"I will only mention one instance of our coming in competition, as a criterion of our respective successes. Mr. Williams tried his scientific abilities on two thirty-horse boilers, at the engine of the Manchester and Birmingham station, Store-street, Manchester. I was allowed to take his apparatus away from one of them, and to apply mine in lieu of it. Which of the two answers the best may be ascertained by inspecting their respective operations." One is here at a loss how to characterise the erroneous insinuations here conveyed—the suppression of facts, the superiority he assumes, and the unwarrantable liberty he takes with those who allowed him the opportunity of showing his furnace in action; I can only say, *they did not know Mr. Hall.* The facts are, that his furnace was allowed to be placed beside mine, even before the brickwork of the flues and large chimney shaft were dry; that there has been no test of my furnace, and, of course, no inferiority ascertained; that to this hour no comparative test has been made; and, further, that it is even impossible to test mine, fairly and impartially, until his be removed, inasmuch as he has introduced into the flue, which is common to both furnaces, his numerous cold iron tubes, by which he seeks to heat the air for his furnace, and which, by choking up the chamber, both checks and cools the draught from my furnace when in action. The following letter, however, will set this matter right before the public:—

Manchester and Birmingham Railway,
Engineer's Office, Manchester, Sept. 23, 1842.

Dear Sir,—Your agent, Mr. Dircks, having applied to me to furnish a statement of the circumstances which led to the introduction of Mr. Samuel Hall's patent furnace to one of the boilers of the stationary-engine which works the hoisting-machine at the terminus of the Manchester and Birmingham Railway, I beg to acquaint you that they were to the following effect:—There are two cylindrical boilers, each 26 feet long and 6 feet diameter, to both of which your Argand furnaces were applied at the time of their erection, and only a few days prior to the meeting of the British Association in this town in June last. Mr. Hall, who was very anxious to have his patent hot air apparatus applied to one of the boilers, solicited permission of the Board of Directors to remove yours and introduce his. The Board of Directors refused their permission. Mr. Hall then applied to the "Anti-Smoke Association" in Manchester, requesting them to use their influence with the Board of Directors to obtain permission to apply his apparatus to *one* of the boilers, in order that it might be exhibited during the meeting of the Association; and, in consequence of being earnestly solicited by some influential gentlemen to do so, they at last, rather reluctantly, consented, upon the condition that Mr. Hall should do it at his own cost, and be paid for it, if it succeeded, at a price which he had before specified; and, further, that the question as to whether the plan succeeded or not should be decided by me. It was stated to me, by Mr. Hall, that the introduction of his furnace to *one* boiler would not in any way interfere with the independent working of the adjoining boiler to which your furnace is applied; and, with that understanding, Mr. Hall removed your furnace from one boiler and applied his own. Whilst Mr. Hall was making the alteration, your agent wrote a letter to me, complaining that Mr. Hall's tubes, being placed in the flue, which is common to both boilers, would be injurious to the draught, and would prevent the proper working of the other furnace. The furnaces are now in this state, and I am of opinion that Mr. Hall's tubes have materially affected and injured the draught of the other furnace on your plan. No comparison of the consumption of fuel has been made, and I consider that it cannot be fairly made on these boilers, by reason of the one interfering with the working of the other.

I am, dear Sir, yours, &c.,
C. W. Williams, Esq. GEO. W. BUCK.

This plain statement of facts will sufficiently counteract the inferences intended to be conveyed by Mr. Hall's misrepresentations. I shall conclude my observations on this subject in my next.

I am, further, your obedient,
C. W. WILLIAMS.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,
ROBERT FLETCHER, Secretary.
Office, Exchange Buildings, Bristol, May 30, 1842.

PARIS AND ROUEN RAILWAY.—Offices of the Company, 52, Rue Basse du Rempart, Paris.—By the seventh article of the Statutes of the Company, the Tenth and last Call of the Capital will be due and payable on 12th October, 1842. The Shareholders are requested to pay the said Call of £2 per Share on or before that day to either of the undermentioned Bankers:—
London—Messrs. Stone, Martin, and Stone.
Liverpool—Messrs. Moss and Co.
Paris—Messrs. Jacques, Laffitte, and Co.; Messrs. C. Laffitte, Blount, and Co.

ADOLPHE THIBAUDEAU, Secretary.

N.B.—Interest will be charged at the rate of 5 per cent. per annum on all payments not made on or before the 12th instant.

Paris, 1st October, 1842.

YARMOUTH AND NORWICH RAILWAY.—FIRST CALL OF £3 PER SHARE.—NOTICE is hereby given, That, in pursuance of a Resolution of the Board of Directors, the Proprietors of Shares in this Company are hereby required to pay a First Instalment of £3 on each of their respective Shares, on or before the 15th October now next ensuing, to any of the undermentioned Bankers. Interest, at £5 per cent. per annum, will be charged on all such sums as remain unpaid after the day above appointed:—
London—Messrs. Glyn and Co.
Great Yarmouth—Sir E. Lacon and Co.
Norwich—Messrs. Harvey and Hudsons.

G. STEPHENSON, Chairman.
By order,
H. PATTESON, Secretary.
Office, Warneford-court, Throgmorton-street, London, September 15, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.
Manchester, April 27, 1842.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride, Fleet-street, Middlesex.—Saturday, October 8, 1842.

The Railway Times.

" Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 250. Vol. V.—No. 42.] SATURDAY, OCTOBER 15, 1842. [Price 6d.

CLARENCE RAILWAY COMPANY.—The Exchequer Loan Commissioners having entered into possession of the above railway, and having advertised the same for sale by Public Auction in the course of next month, unless a proportion of the money advanced by Government, amounting with interest to about £155,000, be repaid early in November next—

The Directors of the Company are desirous of raising the money so required, by the issue of 16,000 New Scrip Shares (or Loan Notes) of £10 each, bearing interest at the rate of 6 per cent. per annum, the payment of such dividend to be guaranted to the Subscribers out of the profits of the Company, before any other whatever; the amount subscribed to be subject to repayment at or after the expiration of 7 or 10 years. The interest to commence from the day of payment, and an Act of Parliament will be applied for to ratify the arrangement.

Of the amount to be subscribed, 50 per cent. is required to be paid within the first week of November, 25 per cent. in the month of July, 1843, and the remaining 25 per cent. in the month of January, 1844, unless parties prefer paying the amount sooner.

The present revenue of the Company shows a clear profit of upwards of £12,000 per annum, with an undoubted prospect of large increase, which will be made over as security for the payment of the interest on the money to be raised.

The Exchequer Loan Commissioners will, upon the receipt of the amount due to them, assign the security they now hold to the Trustees of the Company, and which will be held by such Trustees for the benefit of the parties making the new advances. The money received of the new Subscribers will in the first instance be paid into the Bank of England in the names of three Trustees, who are already appointed by the Company, to hold the same until the necessary amount is subscribed, and in case a sufficient sum is not subscribed in time to effect the above purpose, the Trustees will return the money so received within the month of November next.

The above claim having come unexpectedly on the Company, they are obliged to be prompt in their measures. One-half the amount has been raised during the present week among such shareholders as are now in London; a meeting is to be held to-morrow by the country Shareholders, at Stockton, who will undoubtedly take up a considerable portion of the remaining Shares, but as from deaths and other casualties there will inevitably be a certain number undisposed of, it has been considered expedient to offer them to the public, who are therefore invited to apply for them on or before Friday, the 21st instant, at the Office of the Company, No. 80, Old Broad-street, (either by letter or personally) where the Secretary may be seen every day during the hours of business, who will furnish every necessary information regarding the accuracy of the above statement.

CHARLES BENSON, Secretary.

No. 80, Old Broad-street, 14th October, 1842.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.—Notice—Scrip-Holders are reminded that the Fourth Instalment of £5 per Share on the New Shares created in pursuance of the resolutions passed at a special meeting of the Proprietors of this Company held on the 28th of April last, will fall due on Friday the 21st instant, and that unless the same be paid on that day, or with interest within 14 days afterwards, to any of the undermentioned Bankers, forfeiture of every share which shall after such latter period be in default will ensue:—

London—Messrs. Glyn and Co., 67, Lombard-street.
Liverpool—Messrs. Moss and Co.; Messrs. Barned and Co.
Manchester—Messrs. Jones, Loyd, and Co.
Leeds—Messrs. Beckett and Co.
York—The Union Banking Company.
Dover—Messrs. Latham and Co.; the National Provincial Bank of England.
Ashford—Messrs. Jemmett and Co.
Cranbrook—Messrs. Wilmshurst and Co.
Tunbridge and Tunbridge Wells—Messrs. Beeching & Son.
The Country Branches of the London and County Banking Company.

By order,
JOHN WHITEHEAD, Secretary.

10, Coleman-street, October 8th, 1842.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For farther Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

LIVERPOOL AND MANCHESTER RAILWAY.—The Directors are prepared to receive proposals for the Loan of Money in sums of not less than £1,000, for a term of Five or Seven years at the present option of the lender. Application to be made to the Treasurer of the Company.

HENRY BOOTH, Treasurer.

Railway Office, Lime-street, Liverpool,
10th October, 1842.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,
ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—TO RAILWAY CONTRACTORS AND OTHERS.—The Directors of this Railway are ready to receive Tenders for the execution of the whole of the works necessary for the formation of that portion of their line extending from Rainton to Shincliffe, and the Branch to Durham, together about eight and a quarter miles, including the construction of Three Timber Viaducts over the Shincliffe, Sherburn, and Cassop Becks.

Plans, sections, and specifications of the works may be seen at the Office of the Company at the Railway Station, York, and at the Office of Mr. Thomas E. Harrison, South Shields, on and after Monday, the 24th of October instant. Sealed Tenders addressed to the Secretary must be delivered at the Company's Office at York on Wednesday, the 9th day of November, before One o'Clock. The Directors will meet at their Office, in York, on Thursday, the Tenth of November, at Twelve o'Clock at Noon, to let the Contracts, when parties who have previously sent in Tenders or persons duly authorised by them are requested to attend.

The Directors do not bind themselves to accept the Lowest Tenders.

GEORGE HUDSON, Chairman.

RUSSIAN STEEL IRON—C C N D.—The undersigned having been appointed sole Agents for the Messrs. de Demidoff, in England, the above mark of Iron can only be obtained through them, at

18, HIGH-STREET, HULL, and
29, AUSTIN FRIARS, LONDON.

At Liverpool, they have appointed Messrs. Carne and Telo; and at Bristol, Messrs. P. Maze and Son, their Agents.

The undersigned particularly request all buyers of the C C N D to make their purchases through them, or through their Agents, which will effectually put a stop to a fraud which is extensively practised by unprincipled parties selling a loose, roaky, inferior Iron, with a counterfeit mark of the C C N D, by which Manufacturers have been grossly imposed upon, and the old, favourite, genuine mark, unjustly discredited.

ANTHONY AND GRAHAM.

29, Austin Friars, 7th September, 1842.

EDINBURGH AND GLASGOW RAILWAY COMPANY.

[*From the Glasgow Chronicle.*]

Sheriff Small Debt Court, Glasgow, October 6.—The report of this case will be better understood after a perusal of the following correspondence between Mr. Murray and Mr. Wright, the Secretary to the railway, previous to the action being brought:—

Mr. Murray to Mr. Wright.

"28, Miller-street, Sept. 14, 1842.

"Sir,—I called at the office of the Edinburgh and Glasgow Railway Company on Monday forenoon, and made inquiry of Mr. Stewart as to the trains for Stirling the following morning. He informed me that there would be carriages to meet the 6 o'clock train at Castlecary, but that there would be none to meet the usual train at 7 o'clock. I accordingly paid for four seats by the first-class carriages, and inside of coach from Castlecary to Stirling, and I was told to call for the tickets in the evening. I thought, notwithstanding, that it might be possible to arrange for having carriages to meet the 7 o'clock train, in terms of the usual advertisements, particularly as no notice to the contrary was given to the public. I therefore called upon you on the subject; but you assured me that, in consequence of the arrangements which had been made for carrying forward the passengers by the 6 o'clock train, it would be impossible to secure carriages to meet the 7 o'clock train. Accordingly I called in the evening and got the tickets for the four seats I had paid for in the forenoon.

"Yesterday morning I came to the station with some ladies *ten* minutes before 6 o'clock. I was surprised to find both the gates in Dundas-street and North Queen-street locked; and although I waited nearly five minutes, and called out repeatedly, there was none of the Company's servants present to open the gate, or give any explanation of the cause of its being shut. I however got admittance through a new building erecting, and reached the carriages *five* minutes before 6 o'clock by the railway clock. The carriages were then all filled, and an additional carriage was attached, which, however, was also filled in an instant, without our being able to obtain seats. Mr. Stewart, to whom I applied, assured me that more carriages would be attached to the train, and my friends and I would be taken by it. To our surprise and mortification, however, the train was despatched, and we were left to find our way the best we could. I may mention that this train did not leave till 20 minutes after 6, and we were thus kept waiting 25 minutes before it started. Upon inquiry of the young man in charge of despatching the trains, he stated that Mr. Stuart had gone with the train to Castlecary, and we must just wait for the next train. From what Mr. Stewart and you stated the preceding day, I knew it to be useless to wait for it, as we could not be forwarded from Castlecary. Accordingly, I intimated to the clerk receiving the money for the first-class tickets, that I should be obliged to take a post-chaise. He said I might do as I chose. I then went to go out, but was interrupted by the gates being all locked. The policeman refused to let us out, and I applied again to this clerk, who stated that he had nothing to do with our getting out; that we might apply to Mr. Stewart. I told him Mr. Stewart had gone to Castlecary, and he answered he had nothing further to say. This person was very insolent. I was kept with my friends a quarter of an hour, and could find no one having any charge, or who would give instructions for our getting out. At last the policeman did open the gate *for us*; but refused to say by whose authority he had done so.

"I certainly never have witnessed greater mismanagement, nor experienced such treatment, by the servants of any other public Company.

"In conclusion, I beg to state that I procured a carriage from Mr. Walker to go to Stirling, the account for which is as under:—

Hire, at 1s. 3d. per mile	£1	13	9
Post-boy, 7s. 6d., his expenses 3s. 6d.....	0	11	0
Horses' feeding, &c., 7s. 6d., tolls 5s.....	0	12	6
Total	£2	17	3

"And which I request you will order payment of. And I shall expect an answer by to-morrow at 11 o'clock.

"I am, Sir, your most obedient servant,

"David Murray.

"H. G. Wright, Esq., Secretary, Edinburgh and Glasgow Railway Company."

Mr. Wright to Mr. Murray.

"Edinburgh and Glasgow Railway Company, Head Office, North Queen-street, Glasgow, 14th September, 1842.

"Sir,—I beg to acknowledge the receipt of your letter of this date, which I will lay before the first meeting of Directors. Meantime I am making inquiry into the circumstances stated.

"I am, Sir, your most obedient servant,

"H. G. Wright.

"David Murray, Esq., 28, Miller-street."

Mr. Wright to Mr. Murray.

"Edinburgh and Glasgow Railway Company, Head Office, North Queen-street, Glasgow, 23rd September, 1842.

"Sir,—Referring to my letter to you of 14th instant, I now beg to state that the matters contained in your letter of that date have been minutely inquired into, and reported to the Directors, by whom I am desired to reply to your letter.

"With respect to the closing of the gates before 6 o'clock on the morning in question, this became necessary as a measure of protection, in consequence of the great pressure of the crowd upon those who were in and near the booking offices. As soon, however, as the offices were clear, the gates were again opened.

"The reason why the gatekeeper was unable to open the gates when you wished to go out was, that the crowd without would have forced their way in before the offices were clear. A few minutes' delay was thus unavoidable.

"With regard to your complaint that the first-class booking-clerk was insolent to you, the Directors have called upon him to give a statement in writing of what took place. This he has done, and I beg to inclose his statement for your perusal. You will observe that he concludes by saying, that, from his attention being taken from his immediate business, and the interruption thus caused, 'he spoke rapidly, but not angrily nor insolently.'*

"The Directors trust that there was no intention to say anything uncivil, or in any way offensive to you, it being their anxious desire that every person travelling by the railway should meet with the utmost civility and attention. On such an occasion, however, as the one in question, some little allowance must be made for the excited state in which the clerks must naturally be placed.

"With regard to the complaint that you were unable to obtain first-class seats by the 6 o'clock train, the Directors have evidence to show that a number of seats were unoccupied for fully a quarter of an hour after you were on the platform; and that when the train started at 20 minutes past 6 there were actually vacant seats in a carriage near the end of the train. As there was thus accommodation offered, though possibly not *in one compartment of a carriage*, for your whole party, which indeed could not be looked for on such an occasion, the Directors do not conceive that you have any claim against them for the recovery of the expenses of posting to Stirling, and must accordingly decline paying it. At the same time they regret much the trouble and inconvenience to which you mention that you were subjected.

"I may add, that I see from the clerk's letter he informed you that you would be forwarded by the next train (a special one between 6 and 7 o'clock), but unfortunately you appear to have disregarded this intimation. Your four coach seats were reserved till this second train arrived at Castlecary.

"I am, Sir, your most obedient servant,

"H. G. Wright, Secretary.

"David Murray, Esq."

In consequence of the refusal to pay the chaise hire, Mr. Murray summoned the Company, and the case came on, in the Small Debt Court, on Thursday last, before Sheriff Skene. Mr. Murray stated, in substance, as contained in his letter; and Mr. Wright, the Secretary of the Railway Company, replied by reiterating the statements contained in his letter. The following witnesses were then called by Mr. Murray:—

Mr. William Lang, who stated, in effect, that he accompanied Mr. Murray to the Railway Office on Monday, the 12th September, who applied to Mr. Stewart, the Superintendent, in order, if possible, to arrange for going to Stirling by the 7 o'clock train on the following morning, instead of the one at 6 o'clock, the hour advertised by the Railway Company for taking passengers by a special train. Mr. Stewart stated it would be impossible to have carriages at Castlecary for the 7 o'clock train, as they would be all required for the 6 o'clock one. Then went to Mr. Wright, the Secretary, to ascertain whether he could not so far alter the arrangements as to secure seats by the 7 o'clock train; but after some conversation, Mr. Wright stated it to be impossible. Met Mr. Murray with some ladies the following morning about five minutes before 6 o'clock. Mr. Murray inquired whether there was room in the carriages, but was told they were full. However, went along with Mr. Murray and carefully examined all the first-class carriages, and found that every seat was occupied. Mr. Murray inquired of Mr. Stewart, who was on the platform beside the carriages, whether additional carriages would be attached to the train. Mr. Stewart replied, certainly, and that he need be under no apprehension, as they had plenty more carriages they could put on. In a few minutes thereafter an additional carriage was attached, but it was filled in an instant, and the rush was so great that neither Mr. Murray, the ladies, nor witness, could get into it. Mr. Murray repeated his application to the servants of the Company, but no further carriage was put on, and the train was despatched, leaving him and his friends, and witness, and several other persons who were desirous of going by that train. Mr. Stewart followed the train into the tunnel, and it was stated that he had gone by it to Castlecary. Mr. Murray then proceeded to the clerk in charge of the first-class booking office, and mentioned the circumstance of his not having been able to get away, and that he must take a chaise. The clerk said he might go by the 7 o'clock train. Mr. Murray replied that he knew very well he could not get to Stirling by it, and the clerk answered he might do as he chose. Mr. Murray then went to go out, but found the gates all locked, and the policeman refused to unlock them without instructions. Mr. Murray applied to the clerk at the first-class booking office to give orders for the gate being opened—he stated Mr. Stewart would give orders; and upon his being told that that person had gone to Castlecary, he said he had nothing to do with the matter, as it was not his department. At this time the clerk was quite disengaged. Mr. Murray remained about 20 minutes before he could get out, although he made repeated applications, and at last the policeman opened a gate, but refused to say by whose instructions he had done so. The conduct of the servants of the railway during the time Mr. Murray and his friends were detained was insolent, and most disgraceful to a public Company.

Examined by Mr. Wright.—Mr. Lang stated he was perfectly sure there were no empty seats in any of the first-class carriages after Mr. Murray came to the platform, as he had examined every carriage more than once, both with Mr. Murray, and by himself.

Mr. W. F. Kirkland gave evidence to the effect that, on the morning in question, he went to the railway station, accompanied by his sister, with a view of going to Stirling by the 6 o'clock train. He saw Mr. Murray and his friends on the platform, endeavouring to get into the carriages, but without success, there being no room in any of the first-class carriages. He saw him also make application to the railway servants for accommodation. The witness and his sister were likewise unable to find room, though he looked along the entire line. An additional carriage was afterwards attached, into which he and his sister endeavoured to get, but without being able to do so. He afterwards succeeded in getting his sister into a carriage, in the place of a child, who was taken upon a person's knee, but did not get a seat for himself. Witness was perfectly positive that no room could be obtained in the first-class carriages which left with the train at 20 minutes past 6.

Mr. Daniel M'Farlane was at the station on the morning in question, and saw Mr. Murray and his friends exhibiting great anxiety to get into the train at 6 o'clock; but they could not get places. Saw Mr. Murray make application to one of the servants of the Railway Company, a person who was taking an active part in the management; but the application was not successful, and the train went off, leaving Mr. Murray and his friends behind.

This ended the case for the pursuer.

Mr. Wright called the following witnesses on the part of the Railway Company.

Mr. Stewart, Superintendent of the Glasgow station, gave evidence to the effect, that, on the morning in question, trains were started one after the other, just as fast as they were filled. A train left at half-past 5, and another about 5 minutes before 6, and a third at 20 minutes after 6, by which he went; another left before 7 o'clock. He was not applied to by Mr. Murray that morning to procure seats for him or his friends. Is aware that additional carriages were put to the trains that morning, after they had been placed; but cannot say how many, as he was chiefly at his duties within doors. When he went away to Castlecary two clerks were left behind to take the charge. Is aware that a train left after 20 minutes past 6, and before 7 o'clock, because he saw it pass Castlecary; and knew from the hour at which it passed that it must have left somewhere about the time referred to. Cannot recollect now at what hour it passed Castlecary.

At the request of Mr. Murray, Mr. Kirkland was here again examined by the Sheriff, and stated, that after the train at 20 minutes past 6, no train left the station till about half-past 7. He remained in the station during the whole of the time which intervened, and was certain that none started. He left with the train at half-past 7, and proceeded to Castlecary, where he came out of the carriage to ascertain if he could be taken on to Stirling, but found that he could not. He then went to Linlithgow.

Mr. Parsell, who has the charge of the first-class booking-place, was next examined. He recollected Mr. Murray coming to him on the morning in question, and stating that he wished to get out. Witness said he could not let him out, as he was so very busy at the time. Mr. Murray's statement was, that he had taken places for Stirling, and witness replied that he would be forwarded by the next train. He informed Mr. Murray that he might get away by the next train to Castlecary, but did not tell him that he could get to Stirling by that train, as he did not know whether he could or not.

Mr. Gordon, the next witness, was one of the guards, who deposed that he saw Mr. Murray and some ladies, on the morning referred to, at the station before the train started he went along it to clear all the

* The general tenor of the statement will be seen by the Report of the clerk's evidence.—Ed. *G. C.* [*We* should like to see the statement itself.—Ed R. T.]

Digitized by Google

doors, and found that there were several empty places in the first-class carriages—perhaps seven or eight here and there. Application was made to him to get places for four by a gentleman; but he told him that the places could only be got singly, as it was not to be expected that the people in the carriages would exchange their seats to accommodate them. He could not say that the person who made this application to him belonged to Mr. Murray's party. After the train was placed two additional first-class carriages were attached, and instantly filled. There were no empty places in the last carriage when the train started. Saw Mr. Murray standing, but as he made no application to him he did not know he wished to go by the train, and therefore did not point out the empty places to him. Does not consider it his duty to tell people who are standing by that there are empty places in the carriages, as he is not to know whether they are going by the railway or not. A good many people—certainly 20—were on the platform at the time, but he had no reason to believe that these were going by the train, as it was too much the practice for people to go into the station who did not go by the railway.

Mr. Middleman, another guard, deposed, that he could not say whether there were any places in the first-class carriages forward, or not; but was quite certain that there were three empty places in the last carriage. He was left to take charge of the train behind, and was quite certain there were three empty places in the last carriage.

This finished the evidence.

Mr. Murray argued, that the testimony of the guards was quite contradictory, inasmuch as Gordon swore that, while there were seven or eight unoccupied seats throughout the train, he was quite sure the *last* carriage was full; and Middleman did not know whether there were unoccupied seats in any of the carriages except the *last* one, and he was sure there were three empty seats in it. He also argued that, looking to the evidence, and contrasting it with that of Messrs. Lang and Kirkland, who had both tickets to go by the train, and who declared that, after using every possible exertion for a period of 25 minutes, and examining every carriage for a seat, they were left behind, and that Mr. Kirkland was obliged to allow his sister to go in the train by herself, he thought there could be no doubt entertained that the evidence was in his favour.

The Sheriff said, he could not look upon the evidence of the guards as altogether contradictory, inasmuch as they might not refer to the same carriage—it being quite possible that what was the last carriage, when seen by one, might not be the last when seen by the other.

Mr. Murray said, it was quite impossible but that they must have referred to the same carriage, as the one guard gave up the charge to the other, and no change could have taken place in the position of the carriages without the knowledge of the last guard.

The Sheriff held, however, that the evidence of the guards was fatal to the claim. He certainly thought, after hearing his evidence, that Mr. Murray had made out his case; but the evidence of the guards, that there was room in the carriages, had altered the appearance of the case, and he must decide against him.

Mr. Murray begged to remind his Lordship that there was only one witness to the fact that there was room in the carriages; and the evidence of this one witness was contradicted by the gentlemen whom he had brought forward. As to there being room in the last carriage, the two guards flatly contradicted each other, and therefore the evidence on that point went for nothing.

The Sheriff, however, adhered to his decision.

RAILWAYS AND THEIR MANAGEMENT.

The *John Bull* appears to object to the term which we applied to him last week. We assure our clever contemporary that we did not mean to use the term offensively, but merely to warn our readers of his bias. We think the following article from the number of last Saturday, albeit it contains a good deal of sound sense, fully justifies us in offering the caution alluded to:—

"The *Railway Times* having designated the *John Bull* an 'anti-railway journal,' we wish it to be clearly understood that our opposition is chiefly directed against the fraudulent system of the past and present management of these smoky, dirty, and and noisy means of conveyance; and how can any independent journal sanction a system which permits charges to the public of 70,000,000*l.* for works and land which, under honest management, and contracted for in the usual manner, would not cost 30,000,000*l.* Will any man be bold enough to assert that if Lord Petre, who obtained 100,000*l.* from the Managers of the Eastern Counties' Railway for land comparatively not worth as many pence, had been dealing with gentlemen of his own county—he would have attempted such an extortion? Would Major Payne, or the late Mr. Sanford, have presumed to demand a twentieth part of the 50,000*l.* they obtained from the *respectable* Managers of the Brighton line if they had been dealing with local trustees? We answer, certainly not. Neither would the notorious jobbing, past and present, in contracts for railway works and land, be permitted, nor would such a system of gross fraud have been established under any other than the late Whig-radical Government, which caused the return to Parliament of a set of needy members, who united with the concoctors of railway schemes in effecting their magnificent purposes.

"Now, the plain matter of fact is, that the wrong description of persons has been employed in all the principal departments. Needy adventurers have been made the acting Directors, instead of country gentlemen locally connected with the respective districts—London solicitors, instead of those locally connected and consequently acquainted with the landowners with whom they had to deal for land, and whose support, instead of opposition, was required in Parliament to avoid the enormous expenditure created in opposing a set of men who could never obtain their confidence. Engineers, equally strangers in the district, the most elevated amongst them as ignorant of road-making as they were of the application of materials on the line they were pretending to construct, took the place of respectable local surveyors. The Secretaries, ignorant of the nature of the accounts they had to keep, in fact, not one of them competent to keep the accounts of a parish road, much less a railway, and the rest of the clerks equally incompetent; for, notwithstanding the great respectability of many persons so employed, they are, in almost every instance, unqualified for the duties they have undertaken.

"Such is the description of persons who have had the control and expenditure of seventy millions sterling, obtained from the savings and earnings of many thousand industrious families, and now charged as a debt on the most important highways of the country, disappointing the hopes of a large majority of those who were led to believe they would receive a fair return for their investments, and, in many instances, fixing the public with double charges for the conveyance of passengers and merchandise. Under such circumstances, it behoves her Majesty's Government to put a stop to the evil, and to establish a similar indirect control over the funds of Railway Companies to that exercised by the Poor Law Commissioners with regard the large sums collected for the relief of the poor, by extending the powers of the Railway Board for the protection of the shareholders and the public."

NORTH MIDLAND RAILWAY—THE COMMITTEE OF INVESTIGATION.

[From the *Leeds Mercury*.]

The annual amount of salaries and wages paid by this Company, according to the number of servants employed on the 10th of August, is something more than 40,610*l.* Out of this sum, the Committee which lately sat to examine into the position of the Company recommend reductions amounting to 17,788*l.* We understand, however, that the Directors had already made or given notice of reductions amounting to between 5,000*l.* and 6,000*l.* At the Board of Directors held on Wednesday last, at Derby, the Report of the Committee was read and considered; and the Directors resolved to apply to the Committee for the particulars of the reductions proposed, so as to enable them to judge how far they would be, in the opinion of the Directors, wise and practicable. The Report of the Committee proposes reductions in the various departments, but without stating the number of servants and the amount of wages which they think adequate. For example, in the locomotive department the Committee propose reductions to the amount of about 9,600*l.* a-year out of about 19,000*l.*; in the coaching and stations department they propose reductions to the amount of 4,600*l.*; in the Secretary's, Superintendent's, Engineer's, and Audit offices, they propose consolidations and reductions to a great extent. The Directors ask for detailed statements of the establishment which the Committee recommend, and these details will no doubt be furnished by the Committee; after which the Directors will consider them, and will probably submit them with their own remarks to the shareholders; and, having done this, they will call a special general meeting of the shareholders to determine on the whole matter. The Committee state that they have not examined into the goods department, owing to Mr. Robins, the newly-appointed manager of that department, having only just arrived at the sphere of his duty. But they intimate an opinion that much may be done to extend the goods traffic. They also recommend a revision of the charges made to carriers for the transport of goods, and of the fares for passengers. The Committee (we believe) did not inquire into the cost of coke, coal, &c., for working the locomotive engines; but they suppose that a saving may be effected there. We have heard that there is an extraordinary disproportion between the charges made by the Company to the carriers for the conveyance of goods, and the charges which those carriers make to their customers. We may finally state that the Committee strongly urge the necessity of immediately settling the unsettled and disputed claims upon the Company, and the matters in controversy with other Railway Companies. It would be very unjust to the Directors if it were not borne in mind, that for the original cost of construction the North Midland Railway, as well as for the establishment of officers and servants at first provided, the Board of Directors formerly sitting in London was mainly answerable. It is evident that a very extravagant outlay took place; and we take upon ourselves to assert that the Leeds Directors objected on several distinct occasions to the outlay authorised in London. The establishment of officers and servants was formed on the scale of the London and Birmingham Railway—a railway of more than three times the traffic. Since that time the present Directors have effected very great reductions, often at a great expense of feeling, because it involved the dismission of many servants to whom no blame could be imputed, and who had no other situations to go to. However, it is now evidently the duty of the Directors to exercise all the economy that can be exercised consistently with pruduce; and it will be for them and the Committee to lay their views respectively before the shareholders, who will be the ultimate court of appeal. We offer no opinion whatever till the whole case is before the public. There can, however, be no doubt that very great reductions of expenditure, and we hope also an increase of traffic, will be brought about on this line.

Warehouse Building—Extraordinary Dispatch.—On the 4th of July last, a contract was made by Mr. David Bellhouse, of Manchester, with the Leeds and Manchester Railway Company, to erect a warehouse at Rochdale (of stone), 271 feet long, 48 feet wide, and 3 stories high. On 24th July every stone now in the building was unquarried; yet, strange to say, on Thursday last all the principals of the roof were in their places. Perhaps a similar feat is not on record.—*Liverpool Standard.*

DURHAM AND SUNDERLAND RAILWAY COMPANY—GENERAL MEETING.

[From the *Northern Times*, October 7.]

The annual meeting of this Company took place at the Commission Room, Exchange-buildings, on Friday last, 30th ult., and was numerously attended.

Christopher Bramwell, Esq., the Chairman of the Company, presided on the occasion, and in opening the busine-s of the meeting, said, he was most happy to announce to the shareholders at large, that although the Company had felt, in common with all other public Companies, the extreme and unprecedented depression of the times, their revenue had been quite as much as could have been reasonably expected. He thought, however, he should best discharge his duty by leaving the Report to speak for itself, and he would, therefore, at once call upon the Secretary to read it.

Mr. Tiplady, one of the Secretaries, then read the Report.

From the Report and accounts, which have been circulated, it appeared the revenue during the last half-year had been: for leading and shipping coals, 11,897*l.* 3s. 5d.; passengers, 2,840*l.* 8s. 3d.; merchandise, 772*l.* 2s. 2d.; ballast, 119*l.* 16s. 4d.; wharfage of timber, 13*l.* 11s. 2d.; rents of property, 328*l.* 6s. 5d.; making, with the balance of profits from last year's accounts, 19,185*l.* 11s. 9d. The expenditure of working the railway, salaries, way-leave, rents, &c., had been 12,002*l.* 6s. 6d.; leaving a balance of profits on the half-year, of 7,183*l.* 5s. 3d.; which, after deducting 3,716*l.* 1s. 8d.; the half-year's interest on the debt owing by the Company, left a balance of undivided profits of 3,467*l.* 3s. 7d.

The Report referred to the depressed state of trade, as having temporarily affected the shipment of coals; and that a large sum for wire-ropes, purchased during the half-year, had been included in the expenditure, and that a considerable saving had been effected generally in the working department. It also set forth that there was a small decrease in the revenue from passengers, which arose not from a less number of passengers, but from a reduction of the fares, which the Directors had thought it right to make. It also set forth that by the advance of the 36,000*l.* recently made by the shareholders, and then in course of collection, the whole debt of the Company would be borrowed only at 5 per cent., except the scrip which was received by the shareholders. It concluded by recommending, from the improved position of the Company, a dividend of 10s. per share, which would leave half the profits in hand to go to the liquidation of the debt.

The Chairman then asked if the shareholders desired to make any inquiry, as the Directors would be happy to afford every possible information. No observation being made,

Ralph Carr, Esq., in a brief address, moved that the Report be received and adopted, which being seconded by Thos. Parker, Esq., was carried unanimously.

The Chairman then announced that the Directors who went out of office were Mr. Bell and Mr. White, who were eligible for re-election; and Capt. Bowlby, a valuable Director, of whose services he lamented to say the Company had been deprived by death.

Mr. Bell and Mr. White were unanimously re-elected, and Mr. Thomas Hunter chosen in the place of Capt. Bowlby.

Wm. Bell, Esq., then moved, in pursuance of the recommendation contained in the Directors' Report, that a dividend of 10s. per share on all the shares in the undertaking, should be declared payable on the 1st of December next, amounting to 1,650*l.*, being less than one-half of the balance of the accumulated profits in the hands of the Company.

George Spark, Esq., seconded the motion.

The Chairman, before putting the resolution, stated that he was sure it would be most gratifying to the proprietors to observe by the Report that considerable savings had been effected in the working departments of the railway; the wire ropes, especially, had been found to answer, and to be likely to contribute still further to this happy result; and it was further exceedingly pleasant to see that the whole of the debt of the Company was now only at 5 per cent. interest, except the scrip certificates, which were almost entirely in the hands of the shareholders themselves. The motion was carried unanimously.

Edward Backhouse, Esq., said they must not forget to pay a tribute of respect and gratitude to the special Committee for their indefatigable efforts to promote the prosperity of this railway. They had given up much time and taken a vast deal of trouble in the affairs, and deserved the best thanks of the Company. He should, therefore, move the thanks of the meeting to those gentlemen (Messrs. Jonassohn and Wright), with a request for the continuation of their services,

Ralph Carr, Esq., cordially seconded the resolution, which was passed amidst much applause.

David Jonassohn, Esq., rose to thank the Company for the high compliment paid to Mr. Wright and himself; he was glad they had been enabled to contribute to the improved position of the undertaking, which he was, notwithstanding the late severe alteration of commercial prosperity, as convinced as ever would prove a lucrative investment for the shareholders. He should continue, in conjunction with Mr. Wright, to afford them every assistance in his power.

J. J. Wright, Esq., could not refrain from adding the expression of his obligations to the Company for the handsome notice they had taken of the services rendered by their special Committee, and of congratulating the shareholders at large on that which he hoped would be the commencement of the prosperity of the undertaking, he meant the declaration of a dividend; for, however small it might be, it had been declared on a safe principle—that of only dividing one-half the profits in hand. This principle he hoped to see every year acted upon, by which not only would the shareholders receive some return for the capital invested, but the other half profits would provide a sinking fund for the gradual reduction of the debt of the Company. It would be well if all railways acted upon this principle. The times had undoubtedly prevented the revenue, during the last year, being so large as might reasonably have been anticipated, but still they had more than kept their ground; and the new collieries at Elvet, and the higher end of the line, with a return of better times, would soon realise the best hopes of the Company, which, he had no doubt, in course of time would take its place amongst the most prosperous and beneficial undertakings in the country. He felt the trade and prosperity of the port were deeply interwoven with the success of the railway, and nothing could afford him higher gratification than to render it every service in his power. (Applause).

Hew Singers, Esq., then moved that the Report be printed, and distributed amongst the shareholders.

Joseph Andrews, Esq., thought it would be an unnecessary expense, as the accounts were regularly printed and sent to each shareholder.

The Chairman observed, that the motion should be confined to the Report at each annual meeting, and the parties having consented to that alteration, the resolution was adopted.

The Chairman then stated that the Auditors should be re-appointed, and as Mr. Rahn had discharged that duty for several years most ably, he hoped he would permit the meeting to re-elect him.

Mr. Rahn said he had held the office so long, they had better select some other gentleman; but he ultimately consented to serve the office again.

David Junassohn, Esq., remarked, that before the meeting separated, there was a vote of thanks it would be great injustice to omit—he meant their cordial thanks to the Directors, for their valuable services. No man could do more than they had done to extricate the railway from its difficulties. Their duties had been most arduous, and the Company owed them infinite obligations. Before he put the motion he would remark that he had no doubt the commencement of the dividend would be followed up with certainty and increased amount every time they met in that room. The shareholders had waited long for a return, and had made advances amongst themselves at great personal inconvenience, but they would, in the end, be amply repaid. The savings of working had been extensive, and would be still further diminished; and the revenue could not fail to proceed annually to increase, until ample returns would be afforded. He considered their prospects bright, and was sure they would all join in thanking the Directors for their constant and zealous services.

Wm. Bell, Esq., could not do otherwise than correct one expression made use of by Mr. Jonassohn, when he spoke of the difficulties of the Company, for there was scarcely a Railway Company in the country in less debt than that undertaking. It was true there had been no dividend for two years, but that arose from extending their railway far beyond the original length, and not providing sufficient capital to make that extension.

J. J. Wright, Esq., agreeing with Mr. Bell, said that Mr. Jonassohn only alluded to the want of a dividend, and not to the position of the Company, of which no man had more sanguine hopes than Mr. Jonassohn entertained, and had on every occasion expressed. He most willingly bore his testimony to that given by Mr. Jonassohn, of the able and unwearied services of the Directors, and was happy in seconding the motion of thanks which had been so properly proposed by his colleague.

The motion was carried amidst much applause, and the Chairman expressed the thanks of himself and brother Directors. Thus ended one of the most agreeable meetings ever held by this Company; and it was truly gratifying to observe, not only the harmony that prevailed, but the improved and promising condition of an undertaking, the success of which we have ever regarded as of vital importance to the trade, prosperity, and position of the port of Sunderland.

Engineering Science.—The tunnel on the line of the Sheffield and Manchester Railway will be 3 miles in length, upwards of 600 feet below the surface or summit of the hill at its greatest height, and in rock formation throughout its entire length. The works were projected and commenced upwards of two years ago, under the direction of Charles Vignoles, Esq. Fives shafts were opened, at about half a mile distant from each other, for the purpose of proving the formation, of facilitating the driftways, and ultimately of ventilating the tunnel. Whilst these were in progress, the driftways were carried on from each side, or face of the mountain; the distance or length driven, on the eastern side, extending to nearly 1,000 yards, and from the next shaft 180 yards. The junction between these two portions of the driftway was effected on the 17th September; and the levels, when checked, on a tie-bench, at the point of meeting, had varied but nine decimals, or one inch nearly, and the range was within less than two inches of being geometrically true. When it is considered that this has been attained whilst driving upwards of half a mile through hard rock formation, it must be admitted to be highly creditable to the parties engaged in directing it.—*Dublin Evening Post.*

—o—

Rating the Great Western Railway.—Two parishes in the neighbourhood of Reading, viz. Pangbourne and Tilehurst, having rated the railway at a great advance, in consequence of the recent decision in the Mitcheldever case, the Company gave notice of appeal. The two cases have, however, been settled amicably by an assessment at the rate of 600*l.* per mile being agreed to by the parishes. We understand that in the parish of Corsham the Company were assessed at 1,450*l.* per mile, but the magistrates in petty sessions reduced it to 900*l.* per mile, at which it now remains.—*Berkshire Chronicle.*

CLARENCE RAILWAY.

A MEETING of the proprietors of the Clarence Railway Company was held on Wednesday, at the George and Vulture Tavern, Cornhill; HENRY BLANSHARD, Esq., in the chair.

The CHAIRMAN opened the business by dilating, in a speech evidently "cut and dry," on the merits of the railway, and on the advantages which would result from carrying out the scheme of new shares proposed by the Directors.

At its conclusion Mr. Rowley suggested that the press be excluded, as it was not desirable that their financial affairs should be made public.

The CHAIRMAN enforced this argument, and stated, that the Stockton and Darlington Company were anxious to get acquainted with their proceedings, and to gain possession of their railway. The honourable gentleman professed himself as in general friendly to the admission of the press—the best proof of which is, that from the meetings of some three or four Companies, of which he is a Director, the press is invariably excluded.

As the motion of Mr. Rowley was carried, we decline giving publicity to the Chairman's eulogistic address, which was evidently delivered for the purpose of being reported. It appeared, however, from what he said, that the Loan Commissioners are in friendly possession of the line, for the purpose of defeating the plans of certain creditors, who, by a legal process peculiar to Durham, were about to put themselves in a position to seize upon the railway.

The proposition of the Directors was to create new shares, guaranteeing the payment of 6 per cent. upon the amount paid up. We think it would be highly expedient, before more money is advanced, that some reform should take place in the body of Directors. Even in the trifling matter of this meeting, the slovenly mode in which business is conducted was very apparent. The meeting was called at 11 for 12 o'clock, but at half-past 12 o'clock there was neither Secretary nor Director present, and no provision had been made for seats to any but the Directors and a very few others.

We congratulate Mr. Rowley in having *at last* become sensible of the merits of the Directors. It is not long since he was among the foremost to question—certainly their ability, and, as it seemed, their integrity likewise.

A friend, who was present at the meeting, has favoured us with a sketch of what transpired on the occasion, but as we do not choose directly or indirectly to encourage the "hole and corner" system, we beg to decline the publication of his notes. This mode of transacting business with closed doors is *prima facie* evidence of "something rotten."

An advertisement relative to the new shares will be found in our front page.

CHESTER AND BIRKENHEAD RAILWAY.—A meeting of the shareholders in this undertaking was held yesterday, at 12 o'clock, at the Clarendon Rooms. Only seven shareholders were present, as the meeting was only convened *pro forma*, in compliance with the Act of Parliament. No business was transacted, and the meeting was adjourned to the 9th February next.—*Liverpool Standard* of Tuesday.

—o—

An accident occurred on the Paris and St. Germain's Railway on Friday week, when a collision took place between the two trains, when one passenger had his thigh fractured, and several others received severe contusions. The Paris train was greatly shattered.

RAILWAY MANAGEMENT.

LETTER IV.

To the Editor of the Railway Times.

SIR,—I now take up the thread of these letters with the risks to which the interests of Railway Companies are exposed, both while their lines are in progress of construction and in the prosecution of their traffic.

Recent disclosures have very clearly elucidated the risks to which Railway Companies are exposed while their lines are forming; and the singular omission to adopt any safeguards where the hazards were so obvious has excited general surprise. But, in censuring such want of foresight on the part of Directors, it would be unfair to overlook the intractability of Engineers when they fancy their professional dignity to be at all involved; and some of them have deemed it would derogate from that dignity to admit of an efficient check on the expenditure of money of which they had the control. In addition to this, all know how very low in the estimation of these gentlemen stand good systems of accounts and audit, as compared with well-executed plans and sections, or with some startling display of professional dexterity, although it may happen that the vaunted performance is less a triumph of skill than the triumph of a persevering and lavish expenditure of hard sovereigns, to overcome difficulties which might have been foreseen, and ought never to have been encountered.

Another obstacle which Directors have met with in their efforts to furnish satisfactory accounts, is the proverbial dilatoriness of lawyers in coming to a final settlement with a client who may be worth preserving. In such cases these gentlemen dole out their information on the homeopathic principle, taking especial care that their patients are never cured by too large a doze.

I should be sorry to impute this reserve to a professional manœuvre, but it is one of the obstructions with which Directors have had to contend.

It is, however, one of the first duties of Directors to keep, in despite of all difficulties, the accounts of their expenditure in a clear and satisfactory form, and protect the interests of those they represent against all risks.

The risks against which they have to guard while the line is in course of formation are—1st, too lavish payments for land and compensation, to avoid litigation and buy off opposition; 2ndly, the too ready adoption of theoretical improvements and innovations; 3rdly, the non-execution of works by contractors in perfect accordance with the stipulations of their contracts; 4thly, paying contractors for works done by them, but not under contract, without due examination and measurement; 5thly, in cases where the Company hire men, paying for more men than were employed, or for more time than they were engaged—or in case of piece-work, for more work than was done; 6thly, favouritism shown to tradesmen or manufacturers in giving orders for materials without competition—in other words, jobbing; 7thly, the unauthorised or fraudulent sale of materials; and lastly, the payment of claims on account, without obtaining legal acknowledgements. The precautions which such risks naturally suggest must be so obvious to every man of business, that the surprise is how it ever happened that these precautions were not taken.

As regards the risk first enumerated, the safeguards are to be found solely in the knowledge and judgment of Directors, and their advisers. That a sound discretion has been frequently exercised in compromising exorbitant demands there can be no doubt; but there are cases on record in which it is questionable if it would not have been wiser, rather than have submitted to extortion to have appealed to the sense of justice of a jury, or to the patriotism of the legislature—low as the standard of their patriotism is when the private interest of influential members is concerned.

The duty which the second risk adverted to above imposes on Directors is more clear and defined. They should have the most convincing proof of the utility, practicability, and necessity of any innovation on established practice and principles before they give it their sanction, and should be doubly on their guard if the Engineer they employ be of an aspiring mind and ardent temperament—in short, a man of that mental constitution which it is usual to honour with the name of genius. The writer should be sorry if he were misunderstood. No one has a more profound respect for true genius than he has. None sympathises more keenly with its lofty aspirations, its bold conceptions, and its noble thirst for honourable fame—nor can any one hold in higher admiration the mental Hercules when, tearing to shreds the bonds of tyrant custom, and laughing to scorn the predictions of envious mediocrity, he starts on a brilliant career of improvement, leaving a luminous track behind, to spread in time over the face of the earth, and to secure through future ages the gratitude and veneration of an ameliorated world. But, for one who achieves this magnificent destiny, thousands fail, and involve countless supporters in their ruin. It is wise, therefore, to be cautious, lest the vagaries of a disordered fancy, or a diseased craving for originality, be mistaken for the promptings of practical genius. Experiments in the construction of railways to be of any use must be on a grand scale, and if unsuccessful, or productive of no adequate benefit, the loss that ensues must be both great and irreparable. Let Directors, therefore, be on their guard against the contagious enthusiasm of a too ardent Engineer, lest, while constructing an enduring monument to his own daring genius, he may not also be commemorating their gullibility and indiscretion.

To guard against the 3rd and 4th risks mentioned above is the province of the Engineers. It is their especial duty to enforce the strict execution of all works in terms of contract. They should take care that the stipulated quantity of earth is removed from cuttings; that the stipulated breadth of base is given to embankments, that the requisite drainage is executed, and the proper depth of ballast laid on the road; and they should also keep a vigilant eye on the quality of the materials used in the construction of tunnels, bridges, culverts, and other works. If Directors never authorised the payment of money until a detailed account of the quantity, measurement and price of the work to be paid for had been produced, duly certified by the superintending engineer, it would give them some assurance that the works in progress were subjected to a regular examination. It will frequently happen, as in the event of a contractor becoming bankrupt, that the Companies have to employ a large number of workmen directly. It is usual in such cases to divide the men into gangs, placing an overlooker and timekeeper over each. Before paying the wages of these labourers, each overlooker should be required to send a pay-sheet, with the name, the time, and the wages of each man inserted, to the Treasurer weekly; and a person wholly unconnected with the engineer's department should be sent to pay the wages, first addressing such inquiries to each individual as should test the accuracy of the pay-sheet. Had precautions of the nature here recommended always been taken, we should soon hear fewer complaints of works having been left incomplete, and fewer instances of the accumulation of snug fortunes by persons in very subordinate situations.

While constructing railways much valuable property is of necessity left in exposed situations, and in the custody of persons who, if subjected to no check, may easily abuse their trust. By dividing the line into districts, placing a fit person in charge of the property in each, and by keeping accurate accounts of the consumption, and taking stock frequently, unauthorised sales and fraudulent abstraction of materials might be prevented.

It only remains to recommend that, when land or other property is bought, the lawyers should be required to deposit all conveyances and other deeds in the hands of the Company's Secretary when executed, accompanied by an account of the expenses, and all the information connected with the property which it is right the Company should possess.

Had the arrangements here sketched, or others

Digitized by Google

similar to them, been adopted by Railway Boards previous to the commencement of their operations, not only would large savings have accrued, but the display of angry feelings so frequently excited at half-yearly meetings by the production of unsatisfactory accounts would have been prevented. If proprietors would not have always gone away contented, they would at least have separated without recrimination.

The Directors of future Companies should take warning by past events. It will not be in their power to plead inexperience in justification of their sins of omission or commission. The rocks and shoals on which the prospects of other Companies were wrecked are now clearly defined, and if they would avoid similar catastrophes they must shun them. If resistance be offered to their measures by their servants, a determined Board will find the means of subduing the refractory and stimulating the negligent. Those who kick against the laws should by the laws be kicked out of office, and no doubt such an illustration of the force of reaction would have a sedative effect on the turbulent, and brighten their perception of the duty of obedience.

This letter has extended to so great a length that I must postpone the consideration of the second portion of the subject until next week, but before concluding I shall make a few remarks on what I have seen made the subject of angry comment; I mean the money expended by Railway Companies on works of pure ornament and decoration. Considering that it is wise and patriotic to foster a high-toned and liberal spirit of nationality, and that one principal means of cherishing so elevated a feeling is the embellishing our native land with noble monuments of art, I think great and prosperous Railway Companies cannot expend a part of their surplus funds in a manner more to their honour than by giving to their great undertakings a character of splendour as well as of utility. But, before doing so, they should have an assurance of prosperity with a well-founded hope of its continuance. The shareholder whose money has passed from him with slender hopes of ever getting it back, may well be excused if, when he sees magnificent piles of hewn stones where plain brick houses might have served, he should express discontent that what should have followed as a result has been done in anticipation of a success never likely to be realised.

I am, Sir, &c.,

VIATOR.

RAILWAY MANAGEMENT.

To the Editor of the Railway Times.

Sir,—Is the present system upon which the management of railway affairs is conducted sound, and such as it might and ought to be? This is a question which I have often put to myself, and have long since come to the determination that so long as the system exists, so long will I refrain from investing any money in railway shares. When once a man has committed his money to the care of Directors, under the present arrangement it is quite a chance how much he may ever see of it again. Directors have an enormous power over the expenditure—a power they ought not to possess—a comparatively irresponsible power; and hence the now repeated cry for Committees of Inquiry. Why not, then, prevent this, and put temptation out of their way, and give that confidence to the public which would so raise every railway in general estimation? Why not have three or five paid officers to conduct the business of the Company, whose power shall be limited; and let them report to frequent general meetings of the proprietors how their affairs are going on; and let each meeting name five or seven of their body as a Committee to inspect the accounts and vouchers for the last quarter, and let that Committee report to the next general meeting whether those accounts were right or wrong? Let your paid officers, also, at each general meeting, ask for instructions upon any point of consequence, which they afterwards can carry into effect. Proprietors then would know, from time to time, how they stand, and would have the control over their own affairs. This is done in many instances. At present the affairs of the Company are wholly managed by a few Directors, from half-year to half-year; and the only information the proprietors receive is a statement that they, the Directors, have received and paid so much money. As to the farce of an Auditor, why, we know very well that if Directors are inclined to feather their own nests, they will not allow the Auditor to lie in an unfeathered one. Do Auditors in all cases see receipts and vouchers, or do they merely take care that the accounts are properly cast? How was this on our Brighton line; for I have heard that there are many, many receipts not forthcoming?

I am, Sir, yours, &c.,

AN INHABITANT OF BRIGHTON.

RAILWAY "MONOPOLY" AND THE PUBLIC.

To the Editor of the Railway Times.

Sir,—Your correspondent, "P. Z.," is evidently a member of the school of weeping philosophers. He measures wisdom by the length of the face and the solemnity of the gait. Laughter and drollery are grave offences in his eyes. Merriment disturbs the solemn march of his stately lucubrations. If the coy maiden "Truth" were only to be won by a lover whose gravity was of a forty-parson power, he would have no rivalry to dread. The *Charivari* charges the British with destroying their enemies in China and Affghanistan by laughter. The subdued spirit of "P. Z." would revolt from such an enormity, yet there is some risk of his solemn antics keeping his opponents in a state of perpetual cachinnation. "Examiner," whose bile by the way seems to have been less roused than that of his lugubrious coadjutor, kindly cautions me against calling hard names. I am not conscious of having done so; but, with his permission, I shall transfer the rebuke to his officious ally, who richly deserves it. "Examiner" cannot feel much flattered by the patronising airs of his self-elected defender. Having annihilated me by the terrors of his majestic frown and god-like nod, "P. Z." follows up his thunder with a flourish of trumpets, proclaiming the value of the service he had rendered, an office which would have been better left to the gratitude of the person to whose rescue he had come.

My risibility being extinguished by the clouded brow of "P. Z.," "Examiner" discovers that I am blinded to the truth by a thick veil of railway shares. I wish he were right; but unfortunately a web of gossamer would obstruct more of the light of Heaven from my eyes than does the said veil of shares; and their whole value, if ground down to an impalpable powder, would not affect the vision of an animalcule. If blinded at all, it must be by the keen points of "Examiner's" wit, or the dazzling splendour of "P. Z.'s" intellectual panoply.

"P. Z." takes up my illustration, and has, I admit, improved it. But the improvement does not in the least affect the position occupied by "Examiner." To do so, we must assume that the possessor of the new pump made pledges which he does not redeem, and obtained powers which he abuses, on conditions which he does not fulfil; and that the legislature would in consequence be justified in forcibly depriving him of his property for a compensation to be fixed by certain arbitrary rules, compounded of what one man might think the property should have cost, with what another might assume to be a fair rate of profit.

But how stands the case with Railway Companies? A number of wealthy and respectable gentlemen present themselves to the legislature, stating that a mode of locomotion has been discovered far superior to all the existing modes, and that they are prepared, at their own expense and risk, to bring the new mode into operation, if invested with the necessary powers. The legislature institutes a strict inquiry, and being convinced of the truth of the representations, grants the powers asked, on these conditions—that the railway shall run in a prescribed direction—that ample compensation shall be made to the owners of the land over which it is carried—that a certain impost shall be paid to the State, and that the charges to the public shall not exceed certain rates. What is this but a contract between the legislature and these gentlemen, equally binding on both, so long as the latter conform to its stipulations? Have either of your correspondents proved, or attempted to prove, that Railway Companies have not fulfilled to the letter all the conditions on which their Acts were obtained? It was promised that the new mode of conveyance would be superior to the old, in punctuality, in economy, in expedition, and in safety. Is there one of these promises which has not been fully realised? Have not the lines been carried in the prescribed direction? Has not double, quadruple, and not unfrequently centuple, its value been paid for the land taken? Is the Government duty ever in arrear? Is there a Railway Company whose fares exceed the legal rate, and are there not many whose fares are lower? Are not the recommendations of the Board of Trade invariably acquiesced in? Although many lines have cost double the estimate on which the rates of toll were fixed, is there one instance of a Company applying to the legislature to have the rates raised? In what respect then have Railway Companies failed to acquit themselves of all their obligations to the State and to the public?

But admitting that they had failed, would the Government be therefore justified in compelling them to relinquish their property for a compensation having no reference to its market value, or its original cost? I know it to be a maxim of our constitution that the legislature is omnipotent. If a majority of its members can be got to pass a measure, the Monarch to sanction it, and the Executive to enforce it, there is no injustice which may not be perpetrated. The French Government was in former times said to be a despotism tempered by songs, but it is the boast of Britons that their Government is a despotism tempered by justice. If the legislature deemed it just to give full compensation to the slave-owners, who were the hard taskmasters and oppressors of their fellow-men, because the law in monstrous violation of natural rights had recognised these men as property, how much more ought it to give ample compensation to the proprietors of railways, who may be regarded as benefactors to their country, if it should ever become necessary for the public good to transfer their property to the State!

But I deny most strenuously that Railway Companies have done anything to vitiate their contracts, or create a necessity for so extreme a measure—a measure which nothing but the grossest mismanagement, and the most flagrant and contumacious violations of their engagements to the public, could justify.

I do not wish to misrepresent my opponents, but it seems to me that they would think it no injustice to rob the minority for the benefit of the majority. "Examiner" has as good as admitted this, for he asserts that railways being exclusively designed for the benefit of the public, the interests and right of the proprietors should be regarded as mere contingencies, and kept wholly subservient to other considerations—the said rights, be it remembered, having, after mature deliberation, been defined and guaranteed by the legislature. If a superior mode of travelling were discovered, it would be no valid objection to its adoption that railway interests would suffer, but it is quite a different thing to go to shareholders and say, "the public wish to travel for less than you now charge, you must therefore make up your minds to part with your property for less than its value." "Examiner" ought to know that a private wrong can never in the large sense of the word be a public good.

But if the State did take possession of the railways, paying the Companies an amount of compensation which left no ground of complaint, it must, to do so, borrow the money, and the interest would have to be raised by taxes imposed on the nation at large; so that the sedentary portion of the public would have to pay new imposts in order

Digitized by Google

that the locomotive portion might enjoy the luxury of movement at a less cost. Would there be no injustice in this? But it may be said that this interest might be included in the fares fixed by Government. In that case the fares must be raised above those now charged, for not a few lines are barely able to meet their outlay, while the number yielding a remunerating profit is very small. Where then would be the benefit?

One word as to the odium sought to be cast on railways by calling them monopolies. Monopolies, in the strict sense of the word, I take to be certain rights and privileges granted to one or more individuals for no other object than their own exclusive benefit, and which rights and privileges it is illegal to infringe. Is this definition at all applicable to the condition of Railway Companies? Have not railways been classed, with the invention of printing and the steam-engine, as boons to mankind? Is there one of them secured against the competition of rival lines, or permitted to make unlimited charges, or independent of public opinion? But it is said, if not legal they are virtual monopolies. If so, it is the result of circumstances which render it impossible that they could be otherwise, and though this may be a good reason for vigilance on the part of the public and the Government, it forms not just grounds for the wholesale confiscation which your correspondent seems to think justifiable.

I now leave these remarks to the tender mercies of my opponents, hoping that "P. Z.'s" horror at what he is pleased to call my facetiousness may, not prevent him from giving due consideration to my arguments.

I am, Sir, yours, &c.

N. O. E.

P.S.—When the foregoing was penned I had not "Examiner's" second letter before me. I now see that he disclaims having proposed to take possession of railways, but the arguments I have used are as conclusive against such such an interference with the management of railways as would diminish the value of the property as against a compulsory sale to the State. If any body of men can persuade themselves that it would be for their own advantage and the public good to construct a railway to compete with an existing line, and can induce the legislature to take a similar view of their proposal, I certainly know of no right, real or implied, which would be violated by such a measure, but in no other way would it be just to interfere with established Companies, so long as they faithfully execute all the stipulations of their contracts. It is not enough that your correspondents assert that the engagements are not performed, and fling the vexed question of high and low fares at the heads of their opponents. Let them prove their assertions.

RAILWAY "MONOPOLY" AND THE PUBLIC.

To the Editor of the Railway Times.

SIR,—The disputants whose letters bear the above title seem very much in earnest, but they do not all appear to have a very clear conception of what they would be at. If "Examiner" merely means that no existing Railway Company has such a right to the monopoly of its line of communication as would render it unjust in the legislature to sanction the construction of a competing railway, no one will, I presume, dispute his position; but if he maintain that because, in the nature of things, rival lines cannot be formed, the legislature would be justified in compelling existing Companies, directly or indirectly, to make such concessions as would place the public in the position in which it is assumed it might be placed were competition to exist, then I affirm he advocates a proceeding which would be grossly unjust.

Among the inducements which led capitalists to form themselves into Companies for the construction of railways, no doubt a prominent one was the improbability of competition; and there can be no question that the legislature, when defining the maximum rates of toll to be charged, took this improbability into its consideration. Would it be just then to turn round on the few Companies whose undertakings have been crowned with success, and deprive them, no matter by what process, or whether the interference with their management be direct or indirect, of any assumed benefit they may derive from being, which everybody from the first expected they would be, virtual monopolies of a mitigated description, their charges limited by the State, and their operations controlled by public opinion?

Another correspondent, "P. Z.," while lecturing an opponent makes some remarks, not in the best taste, on the subject of high and low fares. This may be a very fit subject for the consideration of Directors, but its settlement by legislative interference, so long as the fares charged are below the legal limit, would be absolutely tyrannical.

No rights should be more sacred than the rights of property. Any meddling with them can be justified only by an overwhelming necessity, or by the utter impossibility of arriving at some great national object in any other way. Neither of your correspondents has proved that such a necessity now exists, or ever can exist, while railways are managed as they now are.

I am, Sir, yours, &c.,

JUSTUS.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I have no wish to dispute with "J. S." on the prospects of this line. My statements are confined to the questionable manner in which the funds have been disposed of by the Managers; they having charged two millions and a half for works and land not worth one. If "J. S." be not a speculator in shares, or a private friend of the Directors, he will unite with me in demanding explanation, and in enforcing a return of all monies not satisfactorily accounted for.

With respect to the stability of the earthworks, which are the most important, I take it for granted he does not understand them, or he would join me in condemning them as the worst that can be imagined for the formation of a railway; and the accounts rendered prove them of an extraordinary, extravagant, and questionable character as to cost. I hope that, after this notice, "J. S." will either give as clear reasons as I have, or remain silent—instead of attempting to divert the attention of shareholders from that which most interests them, viz., the investigation of their expenditure. If "J. S." wishes to uphold the Directors for their clever management of the traffic, he must first remove three or four of the coaches and vans from the turnpike-road. But if the traffic yielded a return of 20 per cent., this would be no excuse for the deficiency in value for the amount charged to the shareholders. I am, Sir, yours, &c.

A SHAREHOLDER.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—At the present time, when money is worth only 2 per cent. per annum, shares in the best railways, the Birmingham line for instance, may be bought to yield 5 to 5½ per cent.—a striking proof this of the lamentable extent to which public confidence has been shaken in railways as investments. Can this state of matters be wondered at when we consider the late disclosures? An opinion is rapidly gaining ground that the amount of dividends actually made from time to time forms no criterion whatever to judge of the real merits of any given line, and so it is in some cases. Take for instance the Manchester and Leeds line, on which the gross receipts for the year ending June last amounted to only 226,000*l.*, which sum according to my calculation will only afford a dividend at the rate of 4 per cent. for the year; yet dividends have been paid of 5½ and 6 per cent., being 5¾ per cent. for the year. This has been accomplished by taking 6,000*l.* from the reserve fund (in my opinion most unwarrantably), allowing nothing whatever for depreciation of stock during the first six months of this present year, for which at least 5,000*l.* should have been laid aside, and by the very extraordinary expedient of debiting part of the interest on loans to capital account, and this too on a line opened throughout 18 months ago. It is true that the Halifax and Extension branches have not yet come into operation, but what of that? Too much is expected from the opening of these branches in my opinion, as witness the paltry receipts derived from the Oldham branch.

The revenue for the year ought to have been disbursed as follows:—

Gross revenue		£226,000
Working expenses	£85,000	
Depreciation of working stock	10,000	
Interest on loans	75,000	
Leaving for a 4 per cent. dividend	56,000	
		£226,000

It would have been easy to have given my calculations in a much more minute form, but I have done so in round numbers, in order to economise your valuable space and my own time. I have the last Report of the Leeds line now before me, and am well aware that part of the loans contracted for have been done at the low rate of 4½ per cent., and I am aware too that 10 per cent. is payable on the quarter shares; but my calculation is sufficiently minute for my purpose, which is to show the shareholders that, though they are receiving nearly 6 per cent. per annum, they are making only 4 per cent.; yet the shares are at par! What is their intrinsic value, if to a buyer they ought to yield 5½ per cent.? Why just 50*l.* in place of 70*l.*, their present price in the market.

In conclusion, Sir, let me beg of you to impress on Railway Directors the duty they owe to the public, to declare only such an amount of dividend as the net profits for the year will afford. They will thus prevent many innocent families from being ruined by injudicious investments in railway stock—a species of property which has proved the ruin of hundreds of families, more particularly in Lancashire.

I am, Sir, your obedient servant,

HAUD CAPTUS OCULIS.

October 6th, 1842.

RAILWAY ESTIMATES—VIADUCTS.

To the Editor of the Railway Times.

SIR,—Viaducts are structures upon which there yet appears to be a great difference of opinion (if we may judge from the variety now in existence), both as to the material of which they ought to be composed, as well as to the sizes and dimensions of their arches, in all cases of course with a professed view to the utmost economy. In some instances no doubt local circumstances require a departure from any regularly defined or prescribed rule which ought to govern the Engineer in determining his design, but where none such interfere to make any exception, of which I could name many instances now upon record, either a mistaken desire on the part of the Engineer to outstrip his predecessor, or some less laudable cause, resulting from an ignorance of the most proper and suitable edifice to be employed, has too often led to the adoption of very expensive structures comparatively, and far exceeding in cost what the circumstance of the case demanded, and at the same time in no way accomplishing the only object probably in view, of making a more than ordinary display, ending in a clumsy and unsightly edifice; for arches in architecture have their proper proportions defined by well-digested rules, and their awkwardness is made apparent just in the same degree as their departure from such rules is practised.—There are no structures connected with railways in my opinion so susceptible of being made a fixed law in the design as that of the viaduct; in many instances, indeed most, they happen to fall where no law or local circumstance occurs to govern their form in any way, and are therefore entirely left to the Engineer's skill to design after his own fancy, and may be justly so, to his practical knowledge of what is best suited under all circumstances, and if we had not these exceptions to refer to, our comparison of such matters would be more ideal than

Digitized by Google

real. Happily, however, for the age we live in, we have many good examples before us as well as many bad, and in my observations in reference more particularly to the formation of viaducts, of which it would seem some of a very formidable character are encountered upon the present projected lines to Scotland—such as are, I conceive, of themselves likely to determine which of the rival lines is the most eligible to adopt—and where they are likely to form so essential an element in the estimates, it is the more particularly necessary that their magnitude in point of expense should be made the basis of the most sound and practical investigation; and I do think this is more immediately necessary on account of the various reports which are so industriously circulated in reference to those particular works and their comparative cheapness.

If these structures are now to be overcome as easy in point of expense as some of the statements wish us to believe, then I say the railway public have hitherto been made to pay through the nose tremendously by those very men whose names are appended (whether by authority or not is another matter) to those reports, so calculated to decoy and mislead, however well they may be fortified by such appendages, as the most unquestionable security for the due performance, &c. &c. &c.

These we know full well are by no means new in practice, though of no real effective value when it comes to the push. Our best security then, I should conceive, would be a reference to those works which have been executed, the nearest resembling in height (because it is this which determines the size) those likely to be encountered on our lines to Scotland.

I have found the nearest approximation to the comparative costs of these structures to be ascertainable by a very simple process, within the reach of every one conversant with figures.

The many examples which I quote of executed works in various parts of the country, and under the superintendence of various Engineers, are obtained from the most authentic and unquestionable data; and if any of those gentlemen whose works I may here enumerate, find that my representation of such as come under their own observation is not substantially correct, I hope, if they deign to notice it at all, they will do so without the slightest semblance of equivocation, and in a spirit calculated to assist, rather than thwart, the only object I have in view—of imparting to those interested the most useful information in the most plain and simple manner. It is by a strict review of the past we shall be best able to improve upon the future. To proceed then with reference to the Weaver viaduct on the Grand Junction Railway, the first of any consequence worthy of notice. This bold design was conceived by the master-mind of George Stephenson, Esq., foremost in surmounting every obstacle, however formidable, which nature in her roughest attitudes may have planted in the way of those unrivalled improvements, and in thus opening the way for the still more extensive development of that system, for the consummate perfection of which the world is at this day so much indebted to him. This unrivalled structure is built of stone upon piled foundations, and consists of 20 segmental arches, each of 60 feet span, and of a clear height of 60 feet above the navigable river underneath. Its extreme length is 1,484 feet; its mean height, from the foundations to the top of the parapets, is 84 feet, and its mean width above the ground is 30 feet; the cube of those dimensions produces 138,507 yards. The cost has been 53,103*l.*, which is equal to 7s. 8d. per cubic yard; hence, may not similar structures be estimated by cubing the area which they are intended to fill up, and valuing at the same rate for the cubic yard as the above? Let us, therefore, test this calculation by a comparison with other works of a similar character.

We find a very good example of a plain substantial brick and stone structure at Stockport, on the Manchester and Birmingham Railway, consisting of 26 semicircular arches, 22 of which are each of 63 feet span; its extreme length is 1,792 feet; its mean height 90 feet, and its width 32 feet: producing a total of 191,147 cubic yards. The cost of this structure has been 72,700*l.*, which is equal to 7s. 7d. per cube yard. How clearly this demonstrates, as far as we have yet gone, the infallibility of the simple method I have adopted. It may be asked how these two structures agree so nearly in cost according to their relative dimensions, the former being built entirely of stone, and the latter principally of brick, which it is well known is a much cheaper material. On inquiring into these reasons, I find them to be on account of the lightness of the former, as compared with the latter, which the adoption of stone would warrant its being made; its piers, for instance, are only as 8 to 60, while in the latter they are as 10 to 63; most of the piers are also piled at a much less cost than solid masonry could have been executed for to the same depth.

Upon the same line with the Stockport viaduct we find another of exactly similar dimensions as regards the arches and piers; it crosses the Dane Valley, and consists of 23 semicircular arches, each of 63 feet span. Its length is 1,717 feet; its mean height 88 feet 3 inches, and its width 31 feet: producing a total of 173,973 cube yard. The cost of this structure has been 54,000*l.* only, equal to 6s. 3d. per cube yard.

The comparative cheapness of this bridge is partly accounted for by its being built almost entirely of brick, and partly on account of its having been built by the same contractor who built the Stockport viaduct, and by a judicious arrangement of the design in the first instance. The extensive carpentry required in the execution of the former was made available in the latter, without any alteration. On another part of this line we find another bridge of considerable dimensions, though far less pretending in this respect than any I have yet named; it carries the railway over the Bollin, and consists of 11 semicircular arches, each of 49 feet span, built principally of brick with very little stone; its length is 630 feet, mean height 73 feet, and the width 28 feet; producing a total of 47,693 cube yards. The cost has been 14,360*l.*, which is equal to 6s. per cube yard. This structure is built upon a curve, and will vie with any for the beauty of its outline, and the unpretending, yet commanding simplicity of its details, as well as in its comparative amount of cost.

From this line, every work of which bears such incontestible proofs of the accuracy of the method which I have endeavoured to explain, we proceed to another in a different part of the country. I find upon the Midland Counties' a viaduct across the Avon Valley, near Rugby; it consists of 11 semi-eliptical arches, each of 50 feet span, built almost entirely of brick, I may say wholly of brick, for it has less stone in its composition than any structure of the kind that I know of; its length is 720 feet, mean height 51 feet, and breadth 30½ feet; producing 41,480 cube yards: its cost has been 15,259*l.*, which is equal to 7s. 4½d. per cube yard. This amount is considerable, seeing that the structure is almost wholly divested of stone ornament, and this is accounted for by a very considerable excess of brickwork in the haunches of the arches, which their peculiar form always requires. The span of the openings is also too great for the height of the structure—another source of considerable excess.

Upon a neighbouring line to the last mentioned, namely, the Derby and Birmingham, there is a viaduct over the Anker Valley at Tamworth, which ought to bear comparison with any of those yet named, but in consequence of some local interests predominating, an excess of expenditure had been incurred, which, under any other circumstance, could not have been justified. This structure consists of 19 arches, each 30 feet span, and one oblique arch over the turnpike-road of 60 feet span. Its extreme length is 817 feet, mean height 45 feet, and width 31 feet, producing 42,212 cube yards; the cost has been 17,625*l.*, which is equal to 8s. 4d. per cube yard. This fine structure, excepting the arches, is entirely built of stone, and for the reason already assigned, profuse in its ornament; added to which, some of the foundations where the [illegible] been encountered have been necessarily very expensive—hence the excess of cost.

Upon this same line there is another structure of considerable importance entirely of timber, which carries the railway across the Tame and Trent rivers; its height above the water is inconsiderable, hence its openings are only 20 feet span. Its length is 1,286 feet, mean height 33 feet, and width 29 feet; producing 44,366 cube yards: its cost has been 15,944*l.*, which is equal to 7s. 2d. per cube yard. No better proof can be adduced of the impolicy of adopting timber in structures of this kind, except as in this particular instance where expensive coffer damming is saved.

Another proof of this I shall now refer to, having before me the full particulars and details of a very considerable timber structure, carried upon stone piers, just being completed upon the Paris and Rouen Railway, which carries the line across two branches of the Seine at Bezons. The stone piers are raised upon artificial foundations brought up to the water level by means of concrete inclosed within a sheeting of oak piles driven as close as possible, and secured by means of iron straps and bolts. The first part of this bridge consists of 6 arches, each 30 metres span, and in their form flat segments, also oblique on the plan; the length of this part is 736 feet, height 48 feet, width 36 feet. The second part consists of 4 arches of similar form and dimensions to the above; the extreme length of which is 502 feet, mean height 46 feet, width 36 feet, producing together 77,893 cube yards; the cost as contracted for has been 34,195*l.*, which is equal to 8s. 9d. per cube yard, a sum exceeding any yet named.

I shall now refer to, I believe, the largest timber structure executed for railway purposes in this country, one I believe generally quoted as an example of skill and economy, better known, I believe, by the cognomen of Green's laminated bridge, on the Newcastle and North Shields Railway. It consists of seven arches, varying from 115 to 128 feet span, and is called the Willington Dean Viaduct. The piers are of stone, and two of the foundations stand upon bearing piles. Its length is 1,050 feet, mean height 73 feet, and width 24 feet; producing 68,133 cube yards: its cost I understand to have been 24,000*l.*, which is equal to about 7s. 1d. per cube yard. I believe it is also said of this bridge that for 7,000*l.* more it would have been built entirely of stone, and in this I fully concur, and see no reason whatever for adopting so perishable an article as timber for the upper works, the lower parts having already been composed of stone.

Sufficient, I think, has now been said to show how a very fair approximate value of such structures can be obtained, and sufficient also to show that nothing is saved by substituting timber for bricks, excepting in such cases as the Tame and Trent on the Derby and Birmingham Railway, where excessive coffer damming is saved.

I could have wished to have added a few more to the list, particularly some upon the Great Western Railway. I have not been able to obtain information sufficiently correct to be relied upon. I find, however, I have got one important work on the Great Western—the Wharncliffe Viaduct at Hanwell as originally constructed, with eight semi-eliptical arches, each 70 feet span, built principally of brick, with some stone. The length of this bridge is 895 feet; mean height 83½ feet, and width 35 feet; producing 91,737 cube yards. The cost has been 55,000*l.*, which is equal to no less a sum than 12s. per cube yard. This is very considerable as compared with the cost of those works so nearly resembling it on the Manchester and Birmingham line; indeed every work of the kind upon the Great Western of which I have got any particulars, appears altogether so excessive, that I refrain from remarking any further upon them for fear of having been misled; the only one belonging to this line upon the particulars of which I could rely, is that which I have just given, and probably may be taken as a fair specimen of the remainder.

Digitized by Google

The Maidenhead bridge may, however, be made an exception, the cost of which I do not pretend to know. Those who may happen to be in this secret may compare it with its dimensions, which are as follows:—Length 768 feet; mean height 57 feet; width 33 feet; producing a total of 53,504 cube yards. It consists of two main arches, each of 128 feet span, two arches each of 21 feet span, and six arches of 28 feet span; and if we take this bridge to be of the same value per cube yard as we know that at Hanwell to be, its cost would be about 32,000*l.*, a sum very far short, I apprehend, of what it has really been, probably less than half; and this entirely in consequence of its unusual and equally unnecessary large dimensions, which no circumstance whatever connected with it in any way can justify. Upon the unfortunate Brighton line there is a bridge of considerable dimensions, the particulars of which I have not been able to ascertain. It is built of plain brick, excepting the parapets, which are composed of magnesian limestone of very elaborate design and exquisite workmanship. Besides this there is another structure built entirely of stone, and of very large dimensions on the Edinburgh and Glasgow Railway, the particulars of which would have been an acquisition to the list. I have not, however, been able to procure them, it is possible some party may be induced to supply them.

To render a comparison more easy I subjoin a table detailing the particulars of the various structures already referred to, and if any of your miscellaneous correspondents can add to it what may tend to confirm the point at which it aims, of determining the cost which structures of the kind ought not to exceed, I conceive an object of no small importance will be gained in the future construction of works of the same kind. I conceive also that the expediency of substituting timber for a more durable material will thereby be brought to a more definite determination, and that the now too oft repeated assertion of adopting timber with a view to economy, will be capable of being more generally appreciated in its proper light.

Yours, truly,

October 8, 1842. VINCIT VERITAS.

TABLE—*Showing the Comparative Cost.*

Name of Railway.	Description of Bridge, &c.	Length.	Height.	Width.	Contents in cube yards.	Amount of cost.	Equals per c. yd.	Remarks.
		Feet.	Feet.	Feet.		£	s. d.	
Grand Junction	Dutton viaduct, built of stone, 20 arches, 60 feet span	1,484	84	30	138,507	53,103	7 8	Entirely of stone.
Manchester and Birmingham..	Stockport viaduct 22 arches, 63 ft. span	1,792	90	32	191,147	72,700	7 7	Brick and stone.
Manchester and Birmingham..	Dane viaduct, 23 arches, 63 ft. span	1,717	88½	31	173,973	54,000	6 3	Principally brick.
Manchester and Birmingham..	River Bollin viaduct 11 arches 49 feet span	630	64	28	41,813	14,360	6 0	Brick.

RAILWAYS IN SCOTLAND.

To the Editor of the Railway Times.

SIR,—My last letter referred to an amalgamation of the south-eastern group of railways, leading out of London; my present is for the purpose of suggesting some beneficial changes in the management of a few railways on this side of the Tweed, so as to improve their present rather unpromising prospects.

DUNDEE AND ARBROATH AND ARBROATH AND FORFAR.

These are two railways of equal length and nearly similar cost, burdened and obstructed by two different Boards of Management, where one alone would be much more efficient. Neither of them paid any dividend this last year; and in order that they may pay any for the future, they ought to be conjoined, and worked as one line. In this way they would lessen their expenses, and improve their arrangements, by getting rid of that petty jealousy so prevalent in the provinces. The price of the shares would here oppose little obstacle to such an arrangement, as I believe they are much on a par, and both considerably under it.

EDINBURGH AND DALKEITH AND LEITH BRANCH.

These two lines have both proved very bad concerns to their shareholders. The first has paid 5 per cent. on one-half of its capital, and barely bank interest on the other. The last, though it has been opened upwards of five years, has never paid a *plack*, having done little more than pay its expenses. Sanguine expectations were at one time entertained of it by the *quidnuncs*, which can only be realised when the collieries come into the hands of tenants instead of landlords, who will look to quantity alone for yielding a profit; but the question remains—can nothing be done at present to improve their gloomy prospects? I have no hesitation in suggesting that both lines should be let to the coalmasters at a certain fixed interest on the capital for a limited number of years. This would most materially benefit the shareholders, and at the same time prove beneficial to the coalmasters—for they have only to double the quantity of coals they bring along the line, in order to reduce the charge of dues one-half. At present the amount would increase with the quantity. It is also for the mutual advantage of the main line and coalmasters that they arrange this immediately, as Edinburgh will very shortly be rendered independent of the Dalkeith collieries altogether, by the additional supply that will ere long be brought from the west by the Union Canal and Glasgow Railway. The only outlet then for the Dalkeith coals will be by the branch to Leith and the sea.

EDINBURGH LEITH AND NEWHAVEN.

This line at present resembles an oyster, having neither head nor tail, and there are only two ways of raising it from its present slough of despond—either by extending the Chain Pier at its northern terminus, so as to render it accessible at all times of the tide to steamers, or to form a connection with Granton Pier, where, in addition to the 300,000 passengers that now pass along it, there are freestone from the Duke's quarry, and coals from the opposite coast, sufficient to yield a remunerating return. The public would see their *drift* better in this way than in wasting money on a *cloaca maxima*. If the old maxim hold good, of "a fair *field* and no favour," they must ultimately triumph.

EDINBURGH AND GLASGOW.

If I could foresee the capital required to complete this line, I should feel sanguine of its even yet answering the hopes of its original supporters. But for this purpose it is essential that it have a communication with the Firth of Forth, and a more central terminus, both for goods and passengers, at the north bridge. An arrangement also should be effected with the Canal Company, by which the goods' traffic may yield a remuneration to both Companies, instead of the public reaping all the profit as at present.

GLASGOW AND AYR AND GREENOCK.

These are two noted specimens on this side of the Border, of Engineers' estimates being of equal value with dicers' oaths. The traffic, unfortunately, has not yielded a proportionate excess. In regard to the Ayrshire its revenue must be derived principally from minerals, and this it will be a work of time to develop, though ultimately it may become a profitable line. The Greenock Railway had a large traffic ready made, and only requiring to be transferred. This has proved a more difficult task than was at first imagined. Notwithstanding the dulness of trade, and the miserably low fares, this line is deriving within a trifle of its former weekly revenue. But it ought to do a great deal more. It has always appeared to me a most extraordinary thing to see the large steamers to and from Liverpool, Dublin, and Belfast, still dragging their slow length along, up and down the Clyde, at such enormous tear and wear and loss of time, when by starting from Greenock they could leave always at the same hour, and that the most convenient of the day, and save both the most tedious and most deteriorating part of the voyage, by entering into an arrangement with the Railway Company to carry goods and passengers at a remunerating rate to both. It is absolutely necessary to excavate additional traffic somewhere. I do not see also why the offshoots from Paisley should be under two sets of Managers, and the line from Paisley to Glasgow be so judiciously managed under one. Why not make a joint line out of both? Another thing is obvious—the canal from Glasgow to Paisley ought either to be bought up and filled up, or leased, so as to destroy one very annoying competition.

I have little doubt the above hints may prove of some use to the majority of those interested, and with this hope I shall not transgress further on your space at present.

I am, Sir, your obedient servant,

SOLOMON.

Edinburgh, October 4, 1842.

AMALGAMATION OF ADJACENT RAILWAYS.

To the Editor of the Railway Times.

SIR,—The remarks in the last number or two of your valuable paper on the amalgamation of adjacent lines of railway, reminds me of a correspondence carried on some years since in your paper, to which I have just been referring, and find in that of the 16th November, 1839, a plan propounded by Mr. F. Roberts, Deputy-Chairman of the Croydon Company, the features of which appear to meet the case. What has Mr. Roberts been about, as he was then promised support if he prosecuted his scheme, or what has occurred that no apparent approach has been made to so desirable an end?

I am, Sir, your very obedient servant,

A LANCASHIRE PROPRIETOR.

11th October, 1842

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—I feel much gratification in communicating through the medium of your paper with "the very small and naturally disappointed proprietors of Leicester," on the improved position in which they are about to be placed, by the very judicious appointment of a Committee of Inquiry into the affairs of this Company, composed of Messrs. Waters and Ellis, gentlemen in whom the proprietors have the greatest confidence, who have since their recent appointment as Directors commenced their arduous labours of retrenchment, and a Report of a very extensive reduction of expenditure will, I believe, as promptly as possible be laid before the proprietors. Under the guidance of gentlemen of integrity and business habits as they are acknowledged and known to be, the shareholders may rely with the fullest confidence, that what they undertake to do will be done well, and effectively, and the permanent interests of this undertaking placed upon a more firm basis. I most earnestly recommend our valued friend, James Heyworth of Liverpool, Esq., the founder of these inquiries, to postpone for a short time the calling of his promised meeting, until the Report of Messrs. W. E. and Co. shall be laid before the proprietors. Should their Report not turn out as satisfactory as contemplated, I should then urge that gentleman to press the calling of a special general meeting immediately, and appoint a Committee of Inquiry, but on no account whatever can I recommend such a step being taken before it is known what is intended to be done by those gentlemen. I wish to call the attention of such of the shareholders who purpose not to attend the meeting about to be called, to the forwarding of their proxies, and particularly request that the *date* of the meeting may be inserted in the body of all proxies, before they are delivered in, to be used for that meeting *only*, and renewed *on every fresh occasion*. By this mode of proceeding, no other proxies can possibly be made contrary to the wish of the proprietors; the best interests of the Company will thereby be secured, and the necessity which some time occurs of withdrawing those proxies, obviated.

Printed circulars from two of the Directors have been forwarded, addressed "to the Lancashire Proprietors." Proxies *only* for the very small disappointed shareholders of Leicester. Although very small, they know how to appreciate such conduct.

The Lancashire proprietors will perceive also, from the printed circular, what two obedient servants the Directors signing it are.

A DISSATISFIED SHAREHOLDER.

ASSESSMENT OF RAILWAYS.

To the Editor of the Railway Times.

SIR,—I have been appointed to value the property in a neighbouring parish, for the purpose of assessing the same to the relief of the poor, and through that parish a railway passes. I feel a difficulty in dealing with that species of property, and should not consider myself justified in setting down a value at random, and such as I could not support upon principle.

In many instances valuers have estimated the cost of construction of a railway, and calculating 4 or 5 per cent. upon the amount, have made that the basis of their valuation. This is eccentric, and away from the rule of law; for the rule is, to assess a railway at what it would let for as a whole, and divide the rent amongst the parishes, according to the *earnings* of the railway in each parish respectively; whereas, upon the other principle, a large sum may have been laid out in the construction, and yet the railway may not earn a shilling—on the other hand it may pay 10 or 12 per cent.

I have said according to the *earnings*—meaning, thereby, according to the *net* receipts taken in respect of the conveyance of passengers, cattle, and goods, along the railway through any given parish. It must be the *net* receipts, because a great deal of traffic may pass through a parish of great extent, where the repairs may, from locality or other reasons, be very small, and consequently the *earnings* great; whereas through another parish the receipts may be relatively less, and the repairs greater, leaving, it may be, the railway in that parish not assessable at all. Under these circumstances I have endeavoured to form out a system or scheme to meet the case as well as I can, and venture to forward it to you for publication, in the hope that before I act upon it I may have the benefit of any correction or improvement which you, Sir, or your correspondents, may think it worth while to bestow upon it.

If a form of assessment could be once settled, it would be very advantageous to overseers, and save, perhaps, many appeals.

I am, Sir, yours, &c.,

CHARLES PENFOLD, Surveyor.

Croydon.

ASSESSMENT OF RAILWAYS.

The Court of Queen's Bench having laid down a rule of law upon this subject, it is necessary to draw out a system or scheme, in order to meet such principle of assessing railways to the relief of the poor.

Lord Denman has said, that any Railway Company is to be assessed at such a sum as a solvent tenant would give for the use of the whole concern, including the right of conveying passengers, cattle, and goods, as well as receiving the toll which the particular Act authorises to be taken, he paying all outgoings necessary for the working and keeping the same in repair.

This sort of property being a newly-created one, and no experience existing as to the value of it, it is necessary, in order to ascertain its annual value, to receive information from the Company in some particular manner. That manner may be as follows:—

An account should be kept, having—

A column for the *gross receipts* in respect of the fare (including the toll) for passengers, cattle, and goods, passing along the line through *each* parish respectively, as well as any toll that may be taken exclusive of carriage.

A column for the *expenses* proper to the line through each parish respectively:

A column for the *net receipts* in each parish, or the expenses proper to each parish, deducted from the gross receipts in each parish:

A column showing the proportion which the net receipts in each parish bear to the total net receipts:

A column containing the sum at which the railway is to be assessed in each parish: and

A column containing the sum at which the stations are to be assessed by the parishes in which they are situated:

The two first columns being added up, deduct the expenses from the receipts, and a total *net receipt* is ascertained.

The expenses which are common to the whole line, such as occur at the stations, and without which the concern could not be carried on, and are of general use to the railway through all the parishes, must be deducted from the total net receipts as ascertained above.

This being done, a sum for a tenant's risk and profits is to be subtracted, which will leave the *net rent* for the *whole line*.

From this net rent the annual value of each of the stations and buildings (included in the letting) is to be taken, and the parishes respectively in which they are situated will assess the Railway Company irrespectively of the railway itself. The sum left will then be divided amongst all the parishes in such proportions as are indicated in column 4, previously determined upon, and will be according to the *earnings* of the railway in each parish respectively.

The column for the gross receipts is to be filled up, upon the principle of giving to each parish such a proportion of the gross annual receipts taken for passengers, cattle, and goods, between one given station and another, as the length of railway in that parish bears to the whole length of railway for which the receipts are taken, and can be ascertained by adopting the following form:—

TABLE.

From what station.	To what station.	Gross annual receipt for all passengers, cattle & goods, and tolls from other parties.	Total length of railway used for the fare.	Length through the parish of A.	Decimals showing the proportion of the gross receipt this parish has earned.	Sum this parish has earned of the gross receipt.	Parish of B.	Decimals, &c.	Sum, &c.	Parish of C.	Decimals, &c.	Sum, &c.	Parish of D.	Decimals, &c.	Sum, &c.	Parish of E.	Decimals, &c.	Sum, &c.	Parish of F.	Decimals, &c.	Sum, &c.
			ch.	ch.		£ dec.	ch.		£ dec.			£ dec.			£ dec.			£ dec.			£ dec.
1	2	500	86	6	06976	34.88	80	93023	465.12												
	3	500	290	6	0206	10.30	153	52711	263.55	131	4520	226.55									
	4	1000	362	6	01657	16.57	153	42265	422.65	203	56077	560.77									
	5	1000	451	6	01334	13.34	153	33924	339·24	222	49223	492.23	23	05099	50.99	47	10421	104.21			
	6	1000	524	6	0114	11.40	153	2920	292.	222	4230	423.	23	044	44.	80	153	153.	40	0763	76.29
	7	10000	681	6	0088	88.00	153	22466	2246.60	222	32599	3259.90	23	03377	337.70	80	11747	1174.70	197	28928	2892.80
		14000				174.69			4029.16			4962 45			432 69			1431.91			3969 10

The same operation being worked out through the whole line, and *vice versâ* from the 7th station to the 1st, the respective columns being added up, a gross receipt is obtained to place in column 1 of the following form of assessment:—

The *expenses* to be charged against each parish, and which are to appear in column 2, are to consist of—

Maintenance of way.

Digitized by Google

Locomotive power and carriages.
Police necessary on that part of the line.
Mileage duty.
Rates and taxes.

The amount of cost of maintenance of way can be separately ascertained in each parish, consisting of inspector, platelayers, labourers, and such materials as may be required.

The item for locomotive power and carriages can also be ascertained, consisting of salaries and wages to those employed, articles necessary to be used, such as coke, oil, grease, &c., repairing engines, &c., upon the *whole line*, and then such a proportion thereof can be charged to each parish as the traffic through that parish bears to the whole traffic, or the receipts to the whole receipts as per col. 1.

The expense of police, according to the fact in each parish; mileage duty according to the traffic or receipts in each parish; rates and taxes according to the fact.

N.B. No charge for Management or Direction, that being contained in the sum allowed to the tenant. (For which see Form.) No charge for interest paid to bondholders, that charge having nothing to do with the working of the line, but should be paid out of the rent, in the same way as a dividend to the proprietors.

Form for Assessing a Railway.

	1	2	3	4	5	6
Name of parish.	Gross receipts in each parish.	Expenses in each parish.	Net receipts in each parish.	Proportion of the net rent which each parish has earned.	Amount at which each parish is to assess the railway.	Amount at which the parishes in which they are situated are to assess the stations and buildings.

		1,000 Deduct annual value of stations and buildings (included in the letting) in parish A, which that parish is to assess the Railway Company.				
		100 Ditto ..... D.				
	2,100	1,000 Ditto ..... G.				
	19,900	Sum left to be apportioned between all the parishes according to their net receipts or earnings, as per col. 4.				

SUNDAY TRAVELLING ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—If the Sabbath question be not worn threadbare, I will, with your permission, state the whole matter in a few words.

The Sabbath is a Jewish, not a Christian, institution. The Founder of Christianity wrought many of his works on the Sabbath-day, for the purpose of showing that the Sabbath was made for man, and that it is lawful to do good on the Sabbath-day. The advantage of setting one day apart as a day of rest from worldly business, and a day to be more particularly devoted to religious worship, is obvious, but a stern adherence to this when works of great utility to man are in question, is precisely that "hardness of heart" which excited the indignation of the great Founder of Christianity. Some of our Scotch neighbours think themselves bound by the Scriptures to oppose travelling by railway on the Sabbath-day in any circumstances. Now the same command (for I repeat it is a Jewish ordinance) would compel them to make three voyages to Jerusalem in the course of every year, and to offer sacrifices, through the hands of a Levitical priesthood (on this point there can be no doubt), of bulls and goats, heifers, and turtle-doves, without number.

If, as St. Paul affirms, the law be the schoolmaster to bring us to Christ, Christians are surely free from one and all of the observances appointed by the law; and if under the law a man might do good on the Sabbath-day, the same cannot be sinful under the Gospel.

The 14th chapter of St. Paul's Epistle to the Romans contains some useful information on this point, particularly the 5th verse.

I am, Sir, yours, &c.,
CHRISTIAN.

SOUTH-EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—If there be truth in the letter of your correspondent, signed "Idem," in your last publication, it will certainly be wise to sell South Eastern shares as soon as possible at present prices; but after reading the comments upon the prospects of this line in your leading article a week or two ago, I cannot give credence to all he advances; for I do *not* believe that you would for a moment lend yourself to assist "jobbers" in giving a fictitious consequence to the line, "to entrap the unsuspecting public." I should be glad, however, to be informed what prospect there is of a railway being made from Calais or from Boulogne, to unite with the Belgian Railways, and how long it is likely to be before such line will be made?

Paris, which "Idem" calls the "sheet anchor" of the concern, I am willing to fling overboard, and reckon nothing for traffic to Paris. Let the other routes take the whole of it; still, with Belgium, Germany, and the north of France, I shall be perfectly easy concerning the prospects of the South-Eastern Railway.

You would very much oblige me if you would take the trouble to answer the said communication of your correspondent "Idem;" for after all there are bold assertions in it, which, if correct, are a sufficient reason to induce many holders to dispose of their shares at the present prices, and most probably to their really serious loss.

I am, Sir, yours, truly,
A SUBSCRIBER FOR FIVE YEARS TO THE "RAILWAY TIMES."

October 3, 1842.

[We are not to be held responsible for the opinions of our correspondents. We disagreed in an especial manner with "Idem," but did not feel ourselves at liberty to reject a statement temperately expressed. Our columns are open to a reply.—ED. R. T.]

SOUTH-EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—* * * Before I conclude the subject of the Croydon fares, I cannot help saying that I think it would be fair to give the Croydon travellers down the line the benefit of their not costing the Company any toll, which those from New Cross do, and therefore to make the amount of toll the difference between the fares from those two places, instead of, as at present, making the fares exactly the same. And now, that I may not appear to be always finding fault with the only Company which has determined to give the low-fare system a fair trial, I must beg leave to congratulate them upon the steady increase of their weekly returns; an increase be it observed, achieved in spite of the season at Tunbridge Wells being nearly at an end, and in spite also of wet and gloomy weather having taken the place of clear skies and sunshine. This, and the fact of the Brighton receipts having (notwithstanding the autumn season at Brighton) fallen off during the same period, together with the fact that the first week's experiment of high fares on the Blackwall has ended in a loss of 200*l.*, will, I should hope, make some impression upon the proprietors of the high-fare railways. I say upon the proprietors, because it is perfectly hopeless to expect that anything in the shape of an argument will produce any effect upon the sages who have seats in the Directions, and who oftentimes gravely bring forward the excessive cost of making their railway as a reason for high fares!—not being able to see that, the railway *being once made*, their only object ought to be to get the greatest possible amount of income clear of *working* expenses; and how they can contrive to bring the prime cost of the railways into this calculation passes my comprehension.

Before I conclude this letter, I should like to throw out a suggestion upon the "*vexata quæstio*" of Directors travelling free upon the railways. It appears to me that every Director should have the right of applying *at* any station for a free ticket *to* any other station, and that the clerk of every station should keep a list of all such tickets supplied by him, with the names of the parties to whom he supplied them, and the dates when they were applied for.

This list should be printed in the report given to the proprietors, who would by it be enabled to give a pretty shrewd guess as to who were using their privileges really for the benefit of their railway. It would then be seen who stopped at out-of-the-way country stations, where perhaps important works might be going on, and who merely rode by to transact the business of the Company, much more agreeably, in some more pleasant locality.

As the Directors are always *supposed* to be travelling on the Company's business when they travel free, I think the shareholders have as much right to know when they do so, as they have to know who were present at the various meetings of the Board—which they certainly ought to know, whether they do or not. I am, Sir, yours, &c.

BETA.

[The above was accidentally omitted last week. As the complaint which occupied the two first paragraphs has been remedied, we now omit that part of the letter.—ED. R. T.]

LONDON AND BRIGHTON RAILWAY.—Great is the change already effected by the railway in the appearance and condition of Brighton. With the exception of the coaches running to the provincial towns, and two or three which are still kept on the road to London, for the purpose of accommodating those places, such as Horsham and East Grinstead, which lie wide of the railway, coaching is all up; the only vehicles to be met with in the streets are, as in London, cabs, flys, and omnibuses; and a thriving trade they seem to carry on. These omnibuses are found, both by inhabitants and visitors, extremely convenient and economical vehicles. Throughout the day they are to be met with in every part of the town; and although their principal object is to convey passengers to and from the terminus, other parties also find their use highly advantageous. Nor is this the only aspect in which the town has assumed more of a London dress since the opening of the railway. The crowded and bustling appearance of the streets during the past summer must have struck every one by the contrast which it has afforded to that season in former years. Of the extent to which Brighton has been benefitted by the railway no very accurate estimate can perhaps be formed; but the traffic returns, showing that between 4,000*l.* and 5,000*l.* is spent weekly in travelling to and from the town, indicates that the money expended here by railway passengers must, indeed, be immense. Mr. Faithfull remarked, at a meeting of the Commissioners held a few weeks ago, that there never was a time in Brighton when the demand for property was so great as at present. What will it be next year, when the Paris and Rouen line is opened?—*Brighton Gazette.*

RAILWAY ROBBERY.—Last week the Aylesbury Railway station was broken open, and a portion of the day's earnings, amounting to between 15*l.* and 16*l.* abstracted from the desk.

NOTES TO THE TRAFFIC TABLE,
(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

5. The total amount of stock on which dividends are payable is 750,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, as also the toll from the Manchester and Birmingham Company. The divisor employed to ascertain the daily receipts per mile is 121 (85+15+21.) The Company do not now carry goods to Manchester.

14. The receipts include those derived from the Cheltenham and Exeter lines; the former opened for 18 miles, and the latter for 45. The divisor employed to ascertain the daily receipts per mile is therefore 181½ (118½+18+45.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. At the last meeting no dividend was declared, the disposable balance from the previous six months' working being only 1,472*l.* 10s. 9d.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,326*l.*, and there was a balance from the previous half-year of 12,479*l.* Out of these two amounts combined, the dividend (after making certain deductions) was paid.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c., and subject to payments to the Grand Junction Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 5,009*l.* 11s. 11d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 46*l.* 14s. 0d.; carriages, 58*l.* 5s. 0d.; dogs, 3*l.* 11s. 0d.; parcels, 227*l.* 7s. 0d.; cattle, 47*l.* 1s. 6d.; corn, 8*l.* 0s. 5d.; heavy goods, 516*l.* 2s. 0d.; coal and lime, 180*l.* 15s. 0d. —Total, 1,087*l.* 15s. 11d.

31. The amount of stock *created* is 3,000,000*l.*, on which dividends are payable; and the sum of 850,000*l.* is borrowed money at interest. The 3,000,000*l.*, however, is nominal, inasmuch as the shares were some of them issued at a discount, which reduced the actual amount to 2,589,500*l.*, viz.:—15,000 shares at 100*l.* = 1,500,000*l.*; 15,000 of 50*l.*, issued at 40*l.* = 600,000*l.*; 22,500 of 33*l.* 6s. 8d., issued at 21*l.* 13s. 4d. = 489,500*l.*; total 2,589,500*l.* The details of the receipts are as follows—Passengers, 2,548*l.* 17s. 8d.; carriages and horses, 186*l.* 13s. 5d.; parcels, 180*l.* 3s. 7d.; mails, 50*l.* 5s. 9d.; merchandise, 1,368*l.* 16s. 7d.; minerals, 300*l.* 5s. 11d.; cattle, 72*l.* 18s. 2d. — Total, 4,707*l.* 1s. 1d.; including North Midland proportion of Manchester and Leeds traffic, and amount received for Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The length stated includes branches.

39. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Investments in Railways.—We are constantly receiving applications for advice with respect to the sale or purchase of particular shares. We have repeatedly stated, that we are very unwilling to offer any opinion upon such points, and, indeed, our readers have the same data as ourselves whereby to form a judgment. Nevertheless, as they *will* have our opinion, we cannot refuse to give it. We wish them, however, to bear distinctly in mind, that we do not, in any instance, hold ourselves answerable for the event. The course we recommend to our correspondents, is simply what we ourselves would follow, were we buyers or sellers under the circumstances detailed by them respectively. With this caution, which we shall take care to keep before parties who apply to us on such subjects, we proceed to notice the applications of the week. We may just add, that the figures and letters have no reference whatever to our traffic list, or to the initials of any railway. We cannot notice questions where this rule is violated. In order that we may not be subjected to needless questions, we must have the name and address of every inquirer, although the answers may be given under a fictitious designation:—A. B. *None of them very good at present prices. Nos.* 3 *and* 5 *best.*—Z. Z. *No.* 1 *is most promising; buy now. No.* 2 *will not rise during the winter. No.* 3, *do not sell.*—I. W. T. *We think not; at least not much lower.*—E. T. *Nos.* 2 *and* 4, *good at present prices. Be cautious as to No.* 1, *and have nothing to do with No.* 3.—A Subscriber *(Birmingham). If* 5 *per cent. will satisfy you, buy No.* 1. *No.* 2 *we would not recommend. There is "cause for the panic."*—Mr. E. C. *We think there is a good prospect of progressive improvement in A. The extent we cannot of course tell. B also will pay at present prices*—A C. R. *must use his own discretion; we have already expressed an opinion, and see no reason to deviate from it.*—A Glasgow Subscriber. *Do not sell No.* 1 *or No.* 3; *No.* 2 *will, we think, go considerably lower; No.* 4 *will not maintain a higher rate of dividend than* 5 *per cent.*—S. H. *All good as investments, especially* 2 *and* 3. *We should think* 2 *"the preferable one."*—J. W. S. *We do* not *deem the prospects of No.* 1 *"good." It will not, as far as we can judge, continue to pay the dividend specified. This will answer the other questions on the subject of this railway. As regards No.* 2, *we think the investment good, but the shares will go lower. We think* 5 *per cent. may be reckoned upon.*—X. P. *No.* 2, *good; the others very indifferent.*—Folio. *The dividend will, we make no doubt, be larger for the current half year than it was last*—L. S. D. *You are quite safe.*—Y Z. *It is impossible to say what may be the relative position of the two lines "next spring," but we think No.* 1 *will fall, and No.* 2 *rise. If* compelled *to sell* NOW, *of course No.* 1 *would answer the purpose best.*

If the writer of three letters (the last from Dublin) signed A Proprietor of the North Midland Railway, *will favour the party addressed with the means of reply, he will feel much obliged.*

An Unfortunate Shareholder.—*Why not speak out and tell all you know relative to the ejected member? We do not like such vague generalities as your present letter contains. Strike at individual delinquents boldly and fearlessly.*

Nexitis *must be more explicit.*

Nameless *is thanked.*

A Holder of upwards of 50 Shares—*The "comparative statement" shall be furnished in due time, but at present it would only tend to mislead. In the course of a couple of months we hope to be able to give it Will our correspondent remind us of his present application?*

An Inhabitant of Brighton.—*The pamphlet is published by Messrs. Smith and Elder, of Cornhill.*

Watch *shall be inquired into.*

A Shopkeeper *(Surely) should apply to the Directors.*

TRAFFIC OMITTED.

Glasgow, Paisley, Kilmarnock and Ayr Railway—*For the week ending September* 24—*Receipt from passengers (number of passengers* 16,775), 755*l.* 7s. 6d.; *goods and parcels,* 295*l.* 10s.; *horses and carriages,* 12*l.* 16s. 4d.; *total,* 1,068*l.* 13s. 6d.

Dundee and Arbroath Railway.—*Week ending September* 25.—*Receipt from passengers (number of passengers,* 4,464½), 178*l.* 19s. 11½d.; *goods,* 56*l.* 17s. 4½d.; *parcels,* 12*l.* 8s. 4d.; *total,* 248*l.* 5s. 8d.

THE RAILWAY JOURNALS.

The Stamp Returns for April, May, and June, just published by Order of the House of Commons, enable us to complete the Returns for the year ending the 30th of June last. The results, as affecting the railway journals, are as follows:—

RAILWAY TIMES.....	**146,374**
Railway Magazine	68,500
Majority in favour of the RAILWAY TIMES ..	**77,874**

from which are to be deducted 10,874 Supplement stamps used for double numbers, still leaving the ordinary circulation of the *Railway Times* just about double that of its contemporary.—*September* 17, 1842.

THE RAILWAY TIMES.

SATURDAY, OCTOBER 15, 1842.

We should deeply regret if the few remarks which we offered last week, upon the Circular addressed to the shareholders of the Midland Counties' Railway by Messrs. CROPPER and RATHBONE, the two members of the Board resident in Liverpool, were at all misunderstood, or that, as a correspondent informs us is the case, they should be regarded by any of the proprietors as prejudging the matters at issue. Equally should we regret to find that one word we had written in that article had been misconstrued, as regards Mr. CROPPER or his colleague. Every one in the railway world is well acquainted with the talents and excellent business qualities of these gentlemen, and it was far from our intention to throw the least slur upon them; nor can we at all wonder that in their position they should endeavour to bring before the shareholders a clear understanding of their real situation, in the expectation that it will lead them to concur in the Directors continuing in the management of the undertaking without the investigation, for the present at any rate, of a special Committee. Their motives cannot be questioned. They cannot seek to stifle inquiry, but only to defer it until further facts are elicited by the Directors themselves, and laid before the proprietors. They must be practically acquainted with undertakings which the bad management of Directors would have brought to the ground, if Committees of shareholders had not stepped in to their relief and salvation. For the principle of strict investigation we must, therefore, ever contend, conscious that good management need never fear it, and that bad management it will detect and otherthrow; and we do not abate one iota of our opinions, as expressed in our last week's paper.

Since then, however, Mr. HEYWORTH'S Circular to the shareholders has reached us, and is in the following words:—

"Liverpool, September, 27, 1842.

"SIR,—I beg leave to refer you to the proceedings of the Midland Counties' Railway proprietors at their half-yearly meeting, held at Derby on the 13th ultimo, which were reported in the *Railway Times* of the 20th August.

"The Directors were on that occasion informed,

Digitized by Google

that if they did not make some satisfactory Report to the proprietors, indicating their determination to adopt *a more rigid system of economy in the management of the affairs of the Company*, and also, *if expedient, to make a small addition to the fares*, in order to secure to the shareholders a fair remuneration for the capital they have invested, that a special general meeting of the proprietors would be convened to attain that desirable object. The Directors not having made a Report, it is suggested to the proprietors to prepare for a special meeting, which I and my friends intend to convene; and to those proprietors who cannot personally attend, it is recommended that their proxies should be forthwith given to such person as they have confidence in, to be especially used for the purpose of appointing a Committee of proprietors from the body of shareholders, with full power to investigate into the affairs of the Company, in order to obtain that information which will furnish the means of establishing a more strict system of economy, correct abuses if they exist, and to take such other steps as will conduce to the development of the resources and improved prosperity of a railway which has so much disappointed the reasonable expectations of the shareholders.

"Proxies are in the course of signature here, in favour of John Ormerod, George Highfield, and myself. The three names are inserted in the proxy, to provide against the contingency of the unavoidable absence of any of the individuals named.

"Should you be pleased to give your proxy to them, they will be happy to receive it, or should you prefer giving it to any other party entertaining their views, I shall be equally gratified.

"Enclosed you have a blank proxy to be filled up, or otherwise, as may be most agreeable to yourself.

"I remain, Sir, very respectfully, your most obedient servant,

"JAMES HEYWORTH."

No fault can be found with the moderate tenor of this document; but as it contains all the charges which it may be reasonably supposed Mr. HEYWORTH, and those who think with him have against the Directors of the Railway Board in question, the objections of Mr. CROPPER and Mr. RATHBONE, to the formation of a Select Committee of Investigation, are better grounded than we had anticipated.

From the length and violence of discussion at the last general meeting of the shareholders, and from the recriminatory correspondence which has since appeared in our paper, we were led to suppose that the mismanagement was grievous and extensive; that it existed upon very many points, and that all attempts to ameliorate the condition of matters had been resisted by the Directors, and especially by those who held numerous proxies from the shareholders. Our suppositions seem to have been somewhat erroneous, because the two points upon which alone Mr. HEYWORTH calls for investigation, or alteration, are practically the reduction of salaries and the increase of fares. It becomes a serious question whether a Committee of Inquiry is the best tribunal for judging and determining as to either of these matters. In regard to the reduction of salaries, doubtless Directors who have been long associated with officers and appreciate their value are lothe to use the pruning-knife, and cut down their means of subsistence and comfort; and this duty which at times it becomes indispensable to perform, in despite of all private feelings to the contrary, can probably be best effected by a special Committee of the shareholders. At the same time, another mode of arriving at just and proper arrangements in reference to such reductions can be arrived at, which is by placing new Directors on a Board of Management, pledged to carry into effect every possible reasonable retrenchment. From the Circular of Messrs. CROPPER and RATHBONE it would appear that two new Directors of this very useful kind were placed on the Board at the last general meeting by the unanimous votes of the shareholders, and that a Report from them may shortly be expected, or rather from a Select Committee of which they form active and zealous members.

Should this Committee do their duty to the shareholders, which is to be expected, and should the recommendations of their Report, when made, be acted upon, there is reason to hope that every step of practical economy that can be put in force will be undertaken. Thus the shareholders would, upon one of the two points mentioned by Mr. HEYWORTH in his bill of indictment, get all that they desire, without interfering with the Directors' management; and there can be no question that this is more desirable than a proceeding which is so expensive and opprobrious as a Committee sitting in judgment upon the Board of Directors, as being Incapables, or worse. The shareholders probably will still be inclined to wait, therefore, for a Report from the Directors, and to give the opportunity to the new brooms, to show how clean they can sweep, before they run into the irritating contest of attempting to force a Committee of shareholders to superintend the operations and discussions of gentlemen at present engaged in doing their best to fulfil the well-known wishes and objects of the discontented proprietors, so far as is just and practicable. No one, probably, is more open to good advice than Mr. HEYWORTH, and we strongly recommend his waiting for the Report of the new Directors, and when it reaches the shareholders, if it be unsatisfactory, let him attack it and its authors and abettors, with all the effectiveness that he can command.

As regards Mr. HEYWORTH'S wish to have a special Committee appointed in order to raise the fares, we consider it mischievous, and must condemn it. The fixing of fares, and the maintenance of particular fares, are difficult questions, of which Directors thoroughly and intimately acquainted with the daily traffic, and assisted by competent officers, know more, and can form sounder conclusions, than it is possible for any select Committee of shareholders to do, who sit for a few weeks only, and have a multitude of other matters to discuss and adjust. In settling fares there can be no corruption, no double dealing, no private interests to serve. The fixing of the rates must be made upon a deep and intimate knowledge of all the facts that can bear upon the subject, and with an extensive experience of the practice of all other railways, and with the workings of their traffic under different systems of charge for passenger carriage. The qualifications therefore, requisite in order to form a sound opinion as to what fares to fix—whether to maintain them unaltered, or to raise them or reduce them—are likely to be found quite as perfect in a Board of Directors as in any Committee of shareholders; and looking at the constitution of the Midland Counties' Board, it would appear to be perfectly competent to arrive at an accurate conclusion without further advice or assistance. Mr. HEYWORTH'S desire to raise the fares inclines us *prima facie* not to place much reliance upon his judgment on such a subject, for he evidently has settled in his own mind that higher fares will increase the revenue, while *we* think that an increased charge would with certainty produce the contrary result.

Suffering as the shareholders are under bitter disappointment that the Midland Counties' Railway is not a better concern, we think they will not improve its prosperity by making its convenience less from increased fares; and in reference to economy and retrenchment we trust that the dissatisfied proprietors will find in the forthcoming result of the labours of the new Directors, and some of their colleagues, that every possible saving will be pointed out and effected, consistent with the efficiency of the establishment for transacting its business. If the shareholders should in this be disappointed they can then lift up their heavy complaints, and let them fall again on the heads of the offending Directors, who must be crushed by their weight into compliance with the appointment of a Committee. We need scarcely add that in that case they shall have our most energetic assistance.

MAGISTRATES and juries are generally suspected of a leaning to the side of individuals, as against public bodies such as Railway Companies, in matters that come under their decision. This certainly cannot be said with truth of Sheriff SKENE, of the Glasgow "Small Debt Court," or Court of Requests, as respects his judgment in the case of *Murray v. the Edinburgh and Glasgow Railway Company*, of which we give a notice in another page. The amount sued for was scarcely worth the trouble which the application must have cost the plaintiff, but as trifles often indicate the character of arrangements, whether private or public, we are glad that Mr. MURRAY brought his complaint before a legal tribunal. He has failed it is true in obtaining the verdict of the Sheriff, but we have little doubt the decision of the public will be in his favour.

The facts of the case are briefly these. On the occasion of her Majesty's visit to Scotland, the traffic upon the Edinburgh and Glasgow Railway was for a time so great that it was with much difficulty, and only by the dispatch of extra trains, that accommodation could be supplied to the crowds who thronged to the various points of royal attraction. On a certain day Mr. MURRAY went to the Company's offices and engaged and paid for four first-class seats to the Castlecary station by railway, and thence to Stirling by common road. This was for the 6 o'clock train, it having been intimated to Mr. MURRAY that it would be impossible to secure coach seats to Stirling if he went, as he was anxious to do, by the 7 o'clock train. Accordingly, at 10 minutes to 6 o'clock, Mr. MURRAY and his party reached the Glasgow station, and found the gates closed, but ultimately gained admission to the platform full 25 minutes before the train which was behind time started. There was a great rush of passengers, and an additional carriage having been attached, it was immediately filled. Under these circumstances Mr. MURRAY, fearing that he should not get a seat, applied to Mr. STEWART, the Superintendent of the station, who assured him that more carriages should be put on; but ultimately the train went off, and Mr. MURRAY, his friends, and it would seem other persons also, were left behind. After being subjected to the insolence of some of the underlings (the Superintendent having gone forward with the train), Mr. MURRAY, knowing from what had originally been stated to him, that, even if he waited for the next train, he should not be able to get on from Castlecary to Stirling, posted direct to the latter place, and now called

Digitized by Google

upon the Railway Company to repay him the amount expended, namely, 2*l.* 17s. 3d. The defence set up by the Railway Company was in effect, that there *were* vacant seats in the carriages when the 6 o'clock train was dispatched.

Now we beg our readers to note particularly the evidence upon which the fact of seats or no seats rests. We have first the testimony of Mr. MURRAY himself, that there were no seats. Then comes the evidence of Mr. LANG, who accompanied Mr. MURRAY to the station, and who "carefully examined all the first-class carriages, and found that *every* seat was occupied." Next Mr. KIRKLAND and Mr. M'FARLANE, gentlemen wholly unconnected with Mr. MURRAY, and one at least of whom was himself disappointed, deposed to the same fact. To meet this, what is the evidence? It is scarcely credible that nothing whatever should be adduced, save the assertion of two guards, one of whom positively swears that there was room in the carriages forward, but "no empty places in the last carriage," while the other as positively swears, and is equally "certain that there were three empty places in the last carriage!" "The Sheriff held, however, that the evidence of the guards was fatal to the claim. He certainly thought, after hearing his evidence, that Mr. MURRAY had made out his case, but the evidence of the guards, that there was room in the carriages, had altered the appearance of the case, and he must decide against him!" We had thought the decisions of English Courts of Requests unsurpassable in point of absurdity and injustice; but it seems that Sheriff SKENE, of the Glasgow "Small Debt Court," labours hard to rival the Commissioners of the south. It is monstrous that the testimony of parties so directly interested in the decision as were these servants of the Railway Company, and so flatly contradicting each other, should be preferred to that of gentlemen who had no personal interest in the matter, and whose evidence is clear and consistent.

Of the insolence offered to Mr. MURRAY by the inferior officers of the Railway Company, it is needless to say more than that the Directors would do well to look sharply after their servants, and not suffer their Secretary to insult gentlemen by telling them that the accused give a different version of the conduct imputed to them, and leaving it to be understood that the word of the party implicated is preferred to that of the individual aggrieved. Mr. MURRAY says distinctly of a certain servant, "this person was *very* insolent," and again — "I certainly have never witnessed greater mismanagement, nor experienced such treatment by the servants of any other public Company." Mr. LANG says, "the conduct of the servants of the railway, during the time Mr. MURRAY and his friends were detained, was insolent, and most disgraceful to a public Company." And yet, because the person so pointedly charged assures the Secretary that he "spoke rapidly, but not angrily nor insolently," the Directors appear to have taken no further notice of the matter. Will they allow us to say, that this is not the best mode of attracting the public to their line. The authority of officers ought to be upheld against the pettishness, or caprice, or causeless fault-finding of passengers; but nothing can tend more to bring that authority into contempt, or more defeat the object for which it is delegated, than the appearance of a desire on the part of their superiors to justify its exercise, whenever or however called into action. The officers of the Edinburgh and Glasgow Railway would seem peculiarly to require supervision. We have already alluded to the conflicting evidence of the two guards, and of the same character is the assertion of STEWART, the Superintendent, that "he was *not* applied to by Mr. MURRAY that morning to procure seats for him and his friends," although the testimony on the other side is so conclusive, not only that STEWART was applied to, but that he promised to attend to the application.

We are very sorry, indeed, that the Managers of the Railway Company should have suffered such a case as this to be brought into court. Under the peculiar circumstances of the case, every allowance would have been extended to them by the public for any imperfection in their arrangements, but it was neither necessary nor prudent to trumpet forth these imperfections to the world, and in doing so to inflict still further inconvenience and loss upon a gentleman who, from no fault of his own, had already suffered considerably. Of the decision of the Sheriff we will not speak. We presume that his judgment was given conscientiously, although in our opinion it is in direct opposition to the evidence, and to all the probabilities of the case. It is to be hoped that the investigation will be productive of good, in calling the attention of the Directors to the mode in which the business of the Company is managed; and if they are wise, they will at once see that the causes of complaint are removed. The whole case gives evidence that there is very great room for improvement; we shall rejoice to find that it is carried into effect.

THE special general meeting of the Northern and Eastern Railway Company on Wednesday week appears to have excited more than ordinary interest, if we may judge from the great number of letters which have reached us on the subject. The resignation of the Board seems to give general satisfaction. The day of *their* destiny is over—their race is run—their glass is out. Never had a body of men apparently a better *prestige*—the ball was at their foot, the game was in their hands, and for a time they played it boldly and well—but their end was not as their beginning, and they have "fallen from their high estate." Weakness, and vacillation, and tyranny, took the place of strong consistent government, and their real power crumbled to pieces, almost harmless of any attack from *without*, so powerful were the elements of dissolution *within*.

We have before adverted to some of the causes that led to this consummation, and have no wish to renew our strictures. We gave the Directors, now moribund, our zealous support, so long as their measures seemed to us to deserve it. We refrained from remark perhaps too long, from the effect of old association, and were unfeignedly sorry when stern duty compelled us to expose their mismanagement. The blow, it would appear, has been too well aimed; they already reel and stagger under it; they in fact now hold office only until their successors are appointed, for the event on which their tenure depends may almost be considered as already accomplished, and then they retire in a body! Peace be with them!

We have acknowledged their past merits, yet it must be confessed that nothing in life became them so well as will the manner of leaving it. We were glad to see Mr. WARD again called into action, even on such an occasion. In former days we were wont to admire his tact, frankness, and gentlemanly bearing, when presiding over the meeting of this Company. His surrender of the Chair at the time he did was perhaps necessary from the exigencies of the concern, but we have understood there was no great courtesy shown about it by those who were then the arbiters of fate, although these same parties are now glad to avail themselves of Mr. WARD's well-known talent. They actually *press* him into the service, and, with that generosity which is an essential of his character, he buckles on his armour, and gallantly covers their retreat—let us hope without scaith to himself.

But Mr. WARD'S speech has more than a personal bearing. He was put forward by the Directors as their mouth-piece, and what he said may therefore be fairly considered their manifesto frankly declared, not in the dark, as his co-Directors heard and acquiesced. Let us therefore examine it.

First—No salary is to be paid to the Board during the interregnum. So far so well, and of course this includes *Managing*, as well as *mere* Directors, for they are equally members of the Board.

Second—An infusion of new blood—"perhaps a good deal of it"—is desirable, and no doubt the proprietors can perform the operation effectually—aye, even (if necessary) to the substitution of a new body entirely.

Third—"A party at the Board had, to a great extent, been allowed to have their own way"—an important admission *from authority*, although the fact was well enough known to the public before; but then, of what use were Directors, save for the sake of satisfying the Act? and indeed exercising patronage, and perchance receiving pay? Better, in our mind, have a simple Dictator, *avowedly*, at once. Surely this Company has been in Parliament often enough to have had such a reform in its constitution thoroughly legalised.

Fourth—Mr. CRAWSHAY'S merits are lauded to the skies, but "he had come in as a monied man, with the very justifiable view of benefitting himself." No question he did, and the view was justifiable, although the mode of effecting it may not be capable of justification. We have always acknowledged Mr. CRAWSHAY'S use to the Company "as a monied man," and we do not stop now to inquire whether any *other* "monied man," desirous of "benefitting himself," might not equally have served the purpose. But Mr. CRAWSHAY is responsible beyond this. He was during his incumbency the moving spirit of the concern, and is therefore answerable to the shareholders for the *result* of his stewardship, and that result is the miserable state into which, under his control, this once promising undertaking has fallen. In other words, Mr. CRAWSHAY was, from his vast pecuniary means, and his reputation as a *millionaire*, admirably fitted to rescue the concern from the bankruptcy in which it was involved, and for this we say emphatically, he is entitled to, and we know he has received, the gratitude of the proprietors to the full measure of all moderate desire. But his management of the railway in *work*—for he "was allowed to have his own way"—is quite another affair, as the Company appear to know full well, without our further insisting on it. Enough however of this speech, too remarkable, we are sorry to say, among railway productions, for honesty of admission and apparent straightforwardness of purpose. The general position of the Company we shall hereafter have an opportunity of noticing.

We cannot conclude, however, without re-

Digitized by Google

questing the particular attention of our readers to a correspondence which appears in another column between Mr. MILLS, one of the intending lessees, and Mr. KENNARD, a Director, with reference to a statement made at the meeting by Mr. COOK. We think the disclosures there made more than justify the strong language which we used last week respecting the conduct of certain parties towards the lessees. A very grave imputation rests upon *somebody*—in fact nothing short of having fabricated statements to answer their own purposes. The innocent parties implicated will of course not allow the matter to rest in its present state. *Somebody* has given currency to a deliberate falsehood—*who is it?*

The following is a copy of the letter respecting which so much was said at the meeting, but which was not forthcoming on that occasion. It will be recollected that, as explained by the honourable gentleman himself, it was the spontaneous effusion of Mr. MARSHALL, although afterwards "approved" by the Board. We beg especial attention to the *date*:—

"Edge Grove, Watford, August 1, 1842.

"Sir,—I have sent your letter to be laid before the Board on Wednesday.

"It is not the intention of the Directors to finish the railway to Hertford and Ware at present, which *would prevent our acceding to your proposal.*

"Of course you must be aware that it would be necessary to have the sanction of a special meeting of proprietors to any lease of the railway, which could not be made by the Directors alone.

(Signed) "W. MARSHALL.

"C. Parker, Esq."

We shall look with no little curiosity for the further development of the *plot* of Mr. LEVY'S "farce."

A FEW weeks ago we suggested the propriety of amalgamating into one strong Company the Midland Counties', North Midland, and Birmingham and Derby Railways, and we are happy to find that the hint has attracted considerable attention. Since that time it has been put to us, whether it would not be much better for the proprietors of these lines, and much more conducive to the convenience of the public, that the Midland Counties' and Birmingham and Derby lines should be leased to the London and Birmingham Company, and the North Midland to the York and North Midland. We know not how such a proposition would be received by the Directors and shareholders of the Companies thus proposed as lessees, but assuredly the scheme would benefit every other party. The success of the London and Birmingham and York and North Midland Managements is universally acknowledged. That *something* must be done to rescue these three undertakings from their present position is daily becoming more apparent; and if the question be only met in good faith, and with earnestness of purpose, we make no doubt that the *best* scheme will speedily be devised. For the sake of the long-suffering shareholders, we sincerely trust it may.

IN another part of our present number will be found an official notice of Mr. BIDDER'S recent letter on the engineering estimates of the Blackwall Railway. We had intended saying a few words on the topic adverted to in the Directors' reply, and upon other topics touched upon in Mr. BIDDER'S letter, but until the subject has been further discussed by the parties themselves, we shall simply take care to allow them full opportunity of laying their case before the shareholders and the public.

A MEETING of the West London Railway Board was held yesterday, for the purpose of electing three new Directors, so that there are now five new members who, we trust, will infuse fresh vigour into the Management. One of the old Directors has sent in his resignation; if some of his colleagues were to follow his example it would be all the better for the concern. Another meeting of the proprietors is to be held on Friday next, when we hope the new shares will be fairly set afloat. If the holders of original shares are so blind to their own interest as to hold back, we trust no further time will be lost in offering the stock to the public. The attractions which they offer are so great that we cannot believe the new shares will long remain unappropriated.

SOME particulars, apparently from authority, will be found in another column, extracted from the *Leeds Mercury*, with reference to the late Committee of Investigation on the North Midland Railway. We had hoped to give to-day the Report of the Committee in full, but have been disappointed of obtaining a copy. We rather wonder that the Committee have not ere now sent forth an authenticated copy. We ourselves have received several statements purporting to be extracts from the Report, but think it better not to publish them while there is a chance of getting the entire document. For the same reason we defer further comment upon the labours of the Committee and its probable results.

THERE appears to be no end to the stupid blunderings or interested partialities of the Post-office authorities. From all parts of the kingdom complaints are heard, and we cannot perform a more acceptable service to the public than by bringing instances of neglect and inefficiency prominently forward, so as to attract the notice of those who can *compel* a reform. Were there but an isolated case here and there, one might charitably attribute it to oversight, but no such plea can be urged in extenuation of so wide-spread a system of trifling with the accommodation of the public as now prevails.

It appears from the Glasgow journals that previous to the opening of the Edinburgh and Glasgow Railway a mail left the respective cities at 6 a. m., half-past 12 p. m., and in the evening. Since the opening of the railway, when trains are started from each end at 5, 6, 7, 9, and 11 a. m., and 3, 5, and 7 p. m., only one mail—at 11 a. m—is conveyed by railway. Although a train starts at the very hour at which the mails were formerly transmitted by coach, no bag is despatched till 11 a. m.; and then no other despatch occurs till half-past 9 p. m., when the vehicle employed is a gig! The Chamber of Commerce in Edinburgh is very properly taking this matter up.

Paisley would seem to be in a worse position than even Glasgow. The *Renfrewshire Reformer* says:—

"Before the opening of the Edinburgh Railway, for instance, the public had the benefit of a forenoon communication from Glasgow and the west of Scotland to Edinburgh, and another in the evening. Since the opening of the railway, however—since the mail bags could be conveyed to Edinburgh for as many shillings as it formerly cost pounds, and during any two hours of the day that is thought proper, this privilege has been withdrawn, and the evening mail, and a morning mail before business hours, is all the opportunity now enjoyed. Indeed, properly speaking, we have at this time nothing better than one mail in the 24 hours, because people in business writing in the evening can have nothing to add: they can do little but sleep from the hour at which the one mail is despatched till the hour for the despatch of the other arrives.

"This interruption of the communication with Edinburgh is not the only disadvantage felt from the introduction of the railways. For a time the afternoon post to the West of Paisley was put off altogether, and it has only been partially resumed since. There is now no Sunday mail from Paisley to Ayrshire. The trains do not run, and the Post-office authorities, with some degree of reason, have not engaged horses for one day in seven. Mark, then, the consequence. The last mail for Ayrshire is made up in Paisley at 4 p. m. on Saturday. Letters or papers posted from that hour till 9 p. m. reach London—a distance of 500 miles—by 5 on Monday morning; but a letter or paper posted after 4 on Saturday at Paisley, does not reach Ardrossan, Saltcoats, or any of the adjoining places, a distance of only 24 miles—till when, let the reader suppose? Why, not till Monday night! and to places in the neighbourhood the delivery does not take place till Tuesday morning; and this, let it be remembered, though the quarter of Ayrshire referred to contains business towns and a large population, amongst the rest Ardrossan, one of the most fashionable watering-places in the country."

The *Northern Times*, a paper published in Sunderland, says, in its number of yesterday week—

"The mail bags to and from this town, Newcastle, and South Shields, were yesterday conveyed, for the first time, on the Brandling Junction Railway. * * * It appears that, after all the efforts and remonstrances that have been made with the Post-office and Treasury authorities, the advantage of a morning mail from London is not to be restored to this district, the plea being the great additional expense that would be incurred. The only boon that the inhabitants of Sunderland are to receive at present is, that the evening mail from London is to be accelerated half an hour. The port of Sunderland, and the counties of Northumberland and Durham, are in a worse position in regard to their Post-office arrangements and facilities than any other commercial district in the kingdom."

We referred last week to a memorial which had been presented to the Postmaster-General by the inhabitants of Brighton, praying that the night mail to and from London might not be transmitted in a gig, while a railway was in full operation between the two places. Lord LOWTHER has acknowledged its receipt, and promised to "take it into consideration." The Lords of the Treasury should be memorialised.

THE following distinguished personages have left the commodious station at New Cross, from the 5th to the 14th October instant:—*For Dover*—Prince George of Cambridge; Lord Shelbourne; Prince Frederick of Mecklenburg; Lady Anglesea; Lord Torrington; Prince and Princess Doria Pamphilia; the Prussian Ambassador; Sir James Kemp; Lord Ernest Bruce; Lord and Lady Cadogan. *For Brighton*—Lord and Lady Lyndhurst; Lord Liverpool.

—o—

LAST week's loss to the Blackwall Company by the raising of their fares was 122*l.*, the number of passengers being 24,057, as compared with 41,091 in the corresponding week of 1841.

—o—

A CORRESPONDENT of the *Staffordshire Examiner* says:—"On my return from a recent cattle fair in Westmorland, I had occasion to require the service of the Grand Junction Railway of the voluntary

Digitized by Google

accommodation afforded to the public, by whose Directors I have seen some notice in your journal. At the Warrington station, I wished to procure six carriages for the conveyance of some of my beasts. I was, however, informed that they could not be conveyed, except during the night; and the clerk was rather resolute. I remonstrated rather strongly; and assured the gentleman that if I paid 10*l.* for the conveyance of my cattle, I demanded that courtesy and accommodation which every customer had a right to claim from those he patronizes. Second thoughts seemed best, and a good 'rating' induced him to accede to my wish. I understand that it is usual to show this disregard of the interests of my fraternity."

—o—

AMONGST the various matters introduced incidentally at the last meeting of the British Association, was the subject of the propriety of adopting a uniform scale of time along the different lines of railway in the kingdom, by the adoption of the time of the Royal Observatory at Greenwich. It was considered that this would probably lead to the adoption of a uniform rate of time throughout the United Kingdom. Some curious observations were adduced by Mr. Dent, from which it appeared that the difference of longitude causes a very considerable deviation of time even in counties, being the results of 91 chronometrical measurements. The counties east of Greenwich in which time is fast, are Cambridge, Essex, Norfolk, Suffolk and Sussex, whilst in all the other counties lying to the west the time is of course slower. In Middlesex the variation from Greenwich time at St. Paul's is 23 seconds slower, at St. James's church, Piccadilly, 32″.3; and at Hampton Court 1′ 20″. In Kent the time at Dover is 5′ 16″ too fast; and at Tunbridge Wells 1′ 1″. In Lancashire the time at Manchester is 9′ slow; at Liverpool 11′ 30″; and Lancaster 11′ 20″. In Lincolnshire the time at Louth is the same as that of the Royal Observatory at Greenwich, being in the same parallel of longitude; whilst at Lincoln the clock is 2′ 4″ too slow. In Hampshire the time at Southampton is 5′ 36″ slower than at Greenwich; and at Portsmouth it is 4′ 24″. At Brighton it is 32″ too fast, and at Hastings 2′ 30″. In Westmoreland the clock at Appleby is 10′, and at Kendal 11′ faster than the London time. At Chester it is 11′ 32″; and at Macclesfield 8½′; whilst the variation at Falmouth is 20′ 12″; and at Truro 20′ 6″ also too slow. At Northampton the clock is 3′ 36″ too slow; and at Peterborough 58″; at Shrewsbury 10′ 56″; Oswestry 12′ 8″; Warwick 6′ 20″; Birmingham 7′ 23″; and Coventry 6′ 1″. In Yorkshire, at Beverley it is 1′ 42″; York 4′ 24′; and Leeds 6′ 4″. In North Wales, at Holyhead 18′ 36″, and Bangor 16′ 14″; and in South Wales, at Cardigan 18′ 40″, and Carmarthen 17′ 16″. At Edinburgh the clock is 12′ 43″, and Dublin 25′ 31″ too slow; whilst at Paris it is 9′ 21″ too fast.

—o—

A FEW years since 94 coaches used to pass through St. Albans daily. On Saturday last, the Leeds *Express*, formerly called the *Sleepy Leeds*, which has been on the road upwards of 100 years, ceased running, it being no longer a profitable speculation; and it is said, another (out of the four remaining) is likely soon to follow the example.

—o—

A CORRESPONDENT of the *Bristol Journal* gives some calculations to show, that while the receipts upon the entire Great Western Railway and its tributaries have decreased, those on the Bristol and Exeter portion have increased. He says—

"The weekly returns exhibited in London show the following particulars:—

"Total number of passengers conveyed upon the entire Great Western line, in the week ending			Receipts at Taunton.		
	28th Aug.	36,104	£1,009	4	4
Ditto	4th Sept.	35,589	1,070	17	11
Ditto	11th „	34,191	1,224	10	6
Ditto	18th „	37,089	1,148	9	10
Ditto	25th „	35,203	997	6	7
Ditto	2nd Oct.	34,180	1,189	0	5

"Between the first and last of these six weeks there is a *diminution* of 2,724 passengers conveyed upon the entire line; but there is an *increase* of 179*l.* 16s. 1d. in the receipts at Taunton, exclusively of the sum received at that place for merchandise, which cannot be ascertained from the published returns.

"The last week includes the additional traffic arising from the cheap Michaelmas treat, which the Directors so kindly *consented* to grant to the public, and which would doubtless have been far more productive if they had kindly *consented* to extend the indulgence to Taunton, instead of excluding the Bristol and Exeter line.

"The number of passengers conveyed was 1,000 *less* than in the preceeding week; but the receipts at Taunton were 192*l. more.*

"It is also rather a curious circumstance, that the *increase* on the receipts upon the entire line, and the *increase* between Bristol and Taunton, were almost exactly the same; the former being 392*l* 15s. 11d., and the latter 392*l.* 12s. 10d.

"It is to be regretted that the Great Western Company do not publish the details of traffic upon the Bristol and Exeter line. It is manifest, that they would be very satisfactory to the proprietors in both undertakings; as it must be gratifying to both landlord and tenant to find that the *increase* in the traffic between Bristol and Taunton counterveils in so great a degree the falling off on the upper portion of the Great Western line, and affords such palpable evidence of the advantages to be expected when the railway is open to Exeter."

We quite agree with the concluding paragraph. It is but justice to all parties that the details of traffic on the main line and tributaries should be kept distinct.

LONDON AND DOVER RAILWAY.

Traffic Receipts for the Week ending October 11, 1842—*the Sixth Week of the Low Fares.*

Date.	First-Class.	Second-Class.	Third-Class.	Total.	Amount.		
Oct. 5.. .	238	608	303	1,149¼	£206	8	6

Carriages, horses, parcels, &c.					147	2	7
					£1,541	19	3

The following is the return of the numbers who embarked and disembarked at New Cross during the same period:—

WEEK—5th October to 11th October, inclusive.

	1st.	2nd.	3rd.	Total.
Number of passengers booked *at* New Cross station from the 5th October to 11th October, inclusive.....	79	231	374	684
Number of passengers booked *to* New Cross station from the 5th October to the 11th October, inclusive	146	232½	523½	902
Total				1,586
Add total to the 4th October, from last week's *Railway Times*.....				6,574½
Total loss to the Greenwich Company in *six* weeks by their prohibitive toll				8,160½

LONDON AND BIRMINGHAM RAILWAY.

[From a Correspondent.]

Passenger Traffic for the three Years ended 30th June, 1842.

Half years ended	Average number of miles travelled	Average amount paid.	Second class fare.	Excess per cent. over second-class fare.	Loss by decrease of excess over second-class fare.
		s. d.	s. d.	£ s. d.	£ s. d.
31st Dec. 1839	*65 $\frac{271}{1000}$	14 11	13 8½	12 1 0¼	....
„ „ 1840	65,700	14 10½	13 4½	10 17 0¼	3516 15 2½
„ „ 1841	65,700	14 5½	13 4½	8 2 8½	11734 6 11½
30th June, 1840	66,097	15 3½	13 5½	13 8 11½	....
„ „ 1841	66,041	14 10	13 5½	10 2 11½	8869 8 6½
„ „ 1842	64,811	14 2½	13 2¼	7 13 8	15238 1 1½
..	Aver. 65,605	..	..	..	39178 11 9½
	I.	II.	III.	IV.	V.

I have calculated in decimals in the following manner:—

Columns I. and II. show the average number of miles travelled, and the amount paid by each passenger.

Column III. second-class fare. If for 62½ miles (Blisworth station) I pay 12s. 9d. (average day and night fare to Blisworth), what shall I pay for 65 $\frac{271}{1000}$ &c, miles?

Column IV. shows the amount per cent. paid over the second-class fare.

Column V. December, 1840, 1841, as compared with December, 1839; June, 1841, 1842, as compared with June, 1840.

During these three years the receipts have been 1,625,827*l.* 15s. 1d.; number of passengers, 2,204,164; the number of miles travelled, 144,591,671.

The difference charged between the first and second classes ranges from 40 to 50 per cent., whilst the difference received has never exceeded 13½ per cent., and for the last half-year was as low as 7½ per cent. During the last two years there is a decrease in the excess over the second-class fare of nearly 40,000*l.*, and should it continue for three years longer the loss to the Company will not be far short of 100,000*l.* more.

It appears to me, that the difference charged between the first and second classes is much too great. Eighteen years' experience has shown, that the most beneficial charge in steam navigation is an increase of 25 per cent. on the second-cabin fare. And when we consider that there is a much greater difference in the first and second cabins than in the first and second classes on railways—that a person may be upon his voyage at sea as many days as he is hours travelling by railway, I do think that the charge ought to be less by land than sea.

NORTHERN AND EASTERN RAILWAY—THE LEASING SCHEME.

THE following correspondence needs no introduction from us. It sufficiently explains itself:—

"3, New-street, Spring Gardens, October 12, 1842.

"Sir,—I read in the *Railway Times* of last week that Mr. Cook made use of the following words in reference to the late discussion of the Northern and Eastern Railway proprietors as to leasing their line:—

"Mr. Cook—'There had been, and now was, a disposition to rent the line, but the parties had been prevented in consequence of one of the Directors going to a banker and asking him—What do you think of such a person? The reply was—Very highly; but it was then asked—Will his responsibility stand a searching examination? The answer was—Oh, that is another matter; whereupon the person then spoken of—Mr. Mills—had refused to have anything further to do with the matter.'

"As Mr. Glyn, the banker alluded to, denies that any such conversation, or any reference about any individual ever took place, and as Mr. Cook has given you for his authority, may I request that you will favour me with the source whence you derived

Digitized by Google

information, which is false in every member of the paragraph.

"I have the honour to be your obedient servant,

"F. MILLS.

"R. W. Kennard, Esq., Director of the Northern and Eastern Railway."

"67, Upper Thames-street, Oct. 12, 1842.

"Sir,—I have to acknowledge your note just received; I will see Mr. Cook on the subject.

"Mr. Cook must have mistaken anything I may have said to him, for I made no such communication, or anything like it, as that you refer to. I shall not be in town to-morrow, but on Friday I will not fail to see him.

"I have the honour to be, Sir, your obedient servant,

"R. W. KENNARD."

LONDON AND BLACKWALL RAILWAY.

We stated last week that an official notice of Mr. Bidder's letter, which appeared in our paper of the 1st inst., had been sent to us for publication. We have since received, in lieu of that communication, the following "Statement as to Engineering Estimates of Cost of Construction, and Annual Working Expenses:"—

When Mr. G. Stephenson and Mr. Bidder were, in the year 1837, requested by the Directors to report as to the best mode of working this railway, and to point out any improvements which might occur to them in the construction thereof, the following course was taken by the Railway Company:—a plan and section of Sir John Rennie's line, together with the levels of the ground, and a series of borings taken at intervals along the site of the railway, were furnished to those gentlemen. In addition to these papers, a carefully revised estimate in detail, of the cost of the engineering works of this line, was also sent to Mr. Bidder. *The amount of that estimate was* 322,842*l.* 16s. 1d. including therein 10,000*l.* for contingencies, and 10,000*l.* for the depot at the Brunswick Wharf.

Messrs. Stephenson and Bidder made their report, dated the 6th January, 1838, in which they divided their remarks on the relative merits of stationary and locomotive systems, as applied to this railway, under the three following heads; viz., first, "relative speed,"—second, "relative working expenses and primary cost of establishment,"—and third, "relative cost of construction of viaduct and railway required by the respective systems."

Under the first head of "relative speed," the Report states as follows:—

"As an abstract question, each system can give any velocity which the public wants can demand. In the present instance, we have assumed, that it is essential that the trip from Blackwall to London should be performed in 12 minutes, and that the trips should be repeated every quarter-of-an-hour, from each end. By the stationary engine system, with engines of 250-horse power at the minories, and of 200-horse power at Blackwall, this can be accomplished with a train of 130 tons gross load, or with a train of 1,000 passengers; and this load might be materially increased, without prolonging the journey more than one or two minutes at most."

Under the second head, "relative working expenses and primary cost of establishment," the Report proceeds as follows:—

"With a view to determine this important question, we have made use of the experience afforded by railways in operation wherever such information is available; and though there is not any railway strictly analogous to the London and Blackwall, we have applied the results of such experience, allowing for variation of circumstances, and the peculiarities of the case under consideration. The calculations made upon these data have satisfactorily proved, that the annual expense of maintaining and repairing the locomotive engines required for this line and keeping them at work, would amount to 28,000*l.* per annum; whilst the stationary engines would be worked and maintained for 11,000*l.*, to which must be added 1,000*l.* per annum for replacing the ropes. To uphold the railway and to keep the permanent way in repair for the use of stationary engines, would cost 1,500*l.* per annum less than if locomotive engines were used, making a total difference in favour of stationary engines of 12,500*l.* per annum. To establish the stationary engines with the requisite buildings and duplicates, would require 25,000*l.*; and to purchase ten powerful locomotive engines, with the requisite water stations, repairing sheds, &c., would cost 20,000*l.* To which latter sum should be added the expense of erecting the hoisting machinery at the West India Docks: and the annual cost of working the same should also be added to the difference in favour of the stationary engine system, under the head of working expenses."

Under the third division "relative cost of constructing of viaduct and railway, required by the respective systems," the Report states, that:—

"A saving of at least 16 feet in the width of the viaduct would be effected by the use of stationary engines. The saving thus attained by narrowing the width of the viaduct, and lowering it as far as the powers of your Act of Parliament permit, would amount to 150,000*l.*; to which, if the before-mentioned thoroughfares are permitted to be slightly raised,* would be added 23,000*l.*; *making a total saving of* 173,000*l.*, exclusive of that effected in the cost of the property to be purchased."

Confiding in the correctness of the views taken by these gentlemen, the Directors appointed Messrs. Stephenson and Bidder, Engineers to the railway: they proceeded to carry out the works entrusted to them; and in February, 1839, made a Report to the Directors of the state of the works up to that time.

The Report in question is dated 25th February, 1839, and was prepared for the information of the proprietors at their half-yearly meeting, on the 28th of that month.

Mr. Bidder states in his letter, that neither he nor Mr. Stephenson *were in any way identified with the original estimates for the construction of the works.* The Directors now hear this for the first time, and with much surprise, inasmuch as the Engineers having reported that a saving would be made from a given estimate, it was taken for granted that the correctness of that estimate had been fully ascertained. The Directors do not feel however in this case, called upon to discuss so obvious a proposition, as the Report which had been drawn up *after* all the contracts had been let removes all doubt upon the subject.

The following is a copy of the Report:—

"Gentlemen,—The whole of the works on your line of railway being now contracted for, with the condition that the execution shall be completed by the end of the present year, it affords us great satisfaction to report, that looking to the progress which has been made by Messrs. Webb since the 1st of October, when they commenced their contract, and to the character and resources of the gentlemen who have contracted for the remaining portion of the line, we see not the least reason to fear that your expectations will be disappointed in respect of these engagements."

"On taking into account the united amount of these contracts, and adding thereto the cost of the permanent way not included in them, we feel ourselves justified in stating our conviction that the anticipated saving to be effected by the alteration of the width and levels of this railway, will be fully borne out by the result."

"The respective parties who are under engagements to furnish the engines for the working of the line, are actively employed in their construction; at the same time they are also preparing the large drum and spur wheels for winding the rope. We deemed it desirable to delay to the latest period (consistently with the early completion of the works), the specification necessary for the construction of this portion of the machinery, in order that we might avail ourselves of every improvement which a continued and careful consideration of the subject could suggest."

"We have unqualified satisfaction in being able to state, after going into extensive detail on the subject of working by stationary engines, which we have had an opportunity of doing in the course of various inquiries and calculations, that the annual cost of working by the proposed system will be less by some thousands per annum than the amount assumed in our first Report to you. We have now sufficient ground to satisfy our minds that the annual cost of working your line will not exceed 8,000*l.* per annum."

"The foundations for nearly one-half of the whole viaduct are now actually completed, and the piers are most of them finished to the springing height; many of the arches are completed, and the centres removed, and we calculate that from this time seven arches will be turned weekly in Messrs. Webb's contract, and in the other contracts in the same proportion."

"The work, it must be borne in mind, has hitherto been done during the least favourable time of the year, and under one contractor only; but when the energies of two other contractors, with ample resources, shall come into operation, the works will be so accelerated as to leave no doubt of their being successfully terminated by the time specified."

"We are, Gentlemen,

"Your very obedient servants,

(Signed) "G. Stephenson,

"G. P. Bidder.

"London, February 25, 1839."

The Company having determined to extend the railway from the Minories to Frenchurch-street, if they should be authorised by Parliament so to do, applied in the session of 1839 for an Act for that purpose. Mr. Bidder was examined as a witness in support of the Bill; and in his evidence on the 22nd of April stated as follows:—

"The works for the [old] line are contracted for, the execution of the viaduct and the line of railway. The cost of those works, with the permanent road and the engine-house at the two ends of the line, and the station at the Minories will be 180,000*l.* to which I have added 20,000*l.* for contingencies; not that for any of those purposes I consider at present a shilling of that money will be required."

"The net estimate of the construction of the viaduct, and the permanent road from the Minories to Fenchurch-street, is 32,500*l.* And then there is in addition to that, 6,840*l.* for contingencies that may be required; because, in constructing stations at two points, you may construct double the area in one place by itself, at less cost than you can construct the same area in two detached portions, and 6,840*l.* is the amount of contingencies to meet such a circumstance as that."

In his cross examination on the following day, the 23rd of April, the following questions were put by counsel, and answers given by Mr. Bidder, with regard to the engines.

"Have you made any estimate or calculation for stationary engines?"—"No, there are no engines to be used there" [meaning on the extension line].

"Have you on either?"—"No, in neither."

"How is that—you have not done that?"—"When I made the Report to this Company, in conjunction with Mr. Stephenson, for the purpose of using stationary power instead of locomotive power, it was stated that the working expenses would be 12,000*l.* a year, and that the cost of the engines with their houses would be 25,000*l.*; of this 12,000*l.* a year, there is 10,750*l.* per annum for the fuel consumed, for tallow and oil, for the wear and tear of the engines, and for the attendance of the enginemen and firemen, and so on. When we came to take into consideration the contracting for the engines, the subject was again considered, and it appeared from calculation, that by having

* The thoroughfares which had been previously mentioned by Mr. Bidder in his Report were raised, as he suggested; and it may here be remarked that the width of the railway was further reduced from 29 feet to 26 feet.

Digitized by Google

engines of much larger power, and by availing ourselves of the principle which is used in Cornwall with great effect and economy—the expansive principle—we should save a great amount of fuel, and although the engines might cost more money, yet that the gross annual outlay would be lessened; the consequence is, that our power instead of being two 250's in London, are now two 440's; and our power at Blackwall, instead of being two 200's are two 280's, and the effect of this is, that although we are spending 10,000*l.* more in engine power, we shall save more than 3,000*l.* a year in the working of the engines, both in the fuel and the wear and tear of the engines, and at the same time have at our command a much larger power; so that those engines, like the carriages, are part of the current expenses."

The railway has been constructed in every respect under the advice and superintendence of the engineers; and the manner of working it is that recommended by them; they have in everything been consulted, and their advice acted upon, as well as to the number of hands employed as in every other particular.

According to the statement of Messrs. Stephenson and Bidder, the cost of the construction of the railway from the Minories to Blackwall, as reduced by the promised saving of 173,000*l.*, was to be 149,842*l.*; and adding thereto the sum of 39,340*l.*, (*the amount of* Mr. Bidder's *own estimate*) for the extension to Fenchurch-street, the total cost for constructing the whole line of railway, would have been 189,182*l.*; but instead of these expectations having been realised, the cost has in fact been 324,936*l.*, exclusively of engines, machinery, well, and tanks, electrical telegraph, repairs to houses, rope, covering of Minories station, and such other matters as upon the utmost latitude of principle can be considered either of an experimental character, or as not contemplated or included in the original estimates, however necessary they may have been for working the railway. Those extras have cost the sum of 100,710*l.*

Instead of 25,000*l.* as originally estimated by Messrs. Stephenson and Bidder, or even 35,000*l.* as subsequently stated by Mr. Bidder in his evidence before Parliament, the engine-houses and stationary engines with their duplicates, have cost upwards of 88,000*l.*

Instead of the annual cost of working the line not exceeding 8,000*l.* per annum, as estimated by Messrs. Stephenson and Bidder in their Report of the 25th of February, 1839, they in fact amount to 13,213*l.* per annum, exclusively of those expenses which are incidental or common to both the stationary and locomotive systems, and exclusively of 3,100*l.*, the annual interest on the sum of 62,000*l.*, which Mr. Bidder, in his statement, has transferred from capital to revenue.

JOHN F. KENNELL, Secretary, *pro tem.*

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

Sir,—May I ask the favour of your insertion of the following correction to three of the items of general expenditure of the London and Blackwall Railway Company which I accidentally discovered yesterday in looking over my rough draft. They are not, however, material, as they have no relation to the engineering estimates, and do not at all affect the conclusions to be drawn from my statement:—

	General expenditure per letter of the 24th ult.	General expenditure corrected.
Work	£415,000	£413,000
Property	470,000	470,000
Carriages	36,000	21,000
Salaries, &c.	25,000	34,000
Parliament., &c.	111,600	111,600
Interest	48,000	33,000
	1,105,600	1,084,600

The error in the amount charged to carriages arose from my having added the correct amount, viz., 21,000*l.* to the sum charged to work, viz., 415,000*l.*, and thus getting 436,000*l.*, intending to combine them, as indeed they ought, if engines, &c., are to be included under the head of work.

The error in the sum charged to interest arose from the balance, viz., 15,484*l.*, being added, and the error in salaries is due to the omission of the sum charged to office expenses, viz., 8,938*l.*

I remain, Sir, your most obedient servant,

GEO. P. BIDDER.

October 11, 1842.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

Sir,—I am largely interested in the Blackwall Railway, and quite agree with your correspondent, "Observer," in thinking that our fellow shareholders are taking the surest possible method to depreciate the value of their joint property, not merely as regards its price on the Stock Exchange (for which I, for one, care not much), but with reference to it as a permanent investment. I was not in town, therefore not at the last meeting, but I could not help deploring the avidity with which (from the report in your columns) some of the shareholders seemed to cavil at every trifle, and all, save a few, appeared rather to join in browbeating the Directors than in supporting them. It was in my mind truly pitiful to hear those accused of inattention to the interests of the Company, from having issued pasteboard instead of paper tickets, who had actually advanced, from their own pockets, not less than 30,000*l.* to secure steam-boats for the railway, and who out of every 8d. they expend, part with 1d. of their own—it having at a former meeting been reported that they hold collectively one-eighth of the whole concern. Now, although much chagrined by the announcement of no dividend, and startled at several matters connected with the Report, I was determined to inquire and judge for myself; and, therefore, on returning to town I went straightway to the office, saw the Secretary, and had an interview with a Director, both of whom very patiently went over the accounts with me, and gave me every information I could desire. The result is a conviction that a grievous misapprehension exists in the minds of the shareholders, as to many of the most important points connected with the railway, and that if they would only take the same method of arriving at the true state of the case that I have done, they would cease to bawl "*stinking fish.*"

In the first place, I find that the steam-boats provided by the Directors have been the making of the railway, so far as securing a revenue which does a good deal more than defray the expense of working it, interest on borrowed money, Government duty, and the parochial rates and taxes—leaving whatever additional income may be obtained to go clear into the pockets of the shareholders. In proof of this assertion I need only state, that before these boats were put on the station, not a single steam-boat touched at the Brunswick pier, or plyed between it and Gravesend, whereas, twenty-one passages *to* Gravesend, and twenty-seven *from* it were made daily during the late season; in addition to which the Directors have worked boats of their own, to and from Greenwich, which, plying every quarter of an hour throughout the day, carried no fewer than 145,000 passengers during the season, and have thereby established a traffic for the railway formerly unthought of. Now, if instead of pecking at the Directors about their boats, the shareholders saw their own interest, they would assist them in establishing more; whereas they seem bent on playing the game of all the opposing steam-boat owners and wharfingers, who most heartily wish the railway and its wharf at *Old Nick*. That the traffic of the railway may, aye and *will*, be doubled, no one can doubt who is acquainted with the fact, that for every steamer that stops at the Brunswick pier, at least *ten* pass up. It requires time to get rid of old connections, and to throw off old habits and prejudices; and considering the short period the railway has been open, more has been done in that way than I, for one, expected.

I likewise find that, although the expenses of the line are heavy from the great many intermediate stations, still they are susceptible of considerable diminution, which no doubt will take place as soon as the working of the line comes to be perfectly understood, and by that time the stations will become productive in proportion as they are numerous. At present there are nine stations, each requiring separate carriages, conductors, porters, and money-takers, but each contributing (and likely to contribute still more, now that the expenses are covered) to the general receipt; moreover the Directors have relinquished (for the present at all events) their salaries, and I trust will never resume them, seeing that with the very large stake in the undertaking that they are said to have, so pitiful an allowance ought to be beneath their acceptance.

On the whole I am satisfied that we have no cause to despond, and that with a good understanding between the shareholders and the Directors, the undertaking will yet pay well. It ought to be remembered that it has been in operation but two years, *and two of the worst we ever had;* the first as to weather, and the last as to trade and money, and this is proved by the fact, that the receipts of every railway in the kingdom have been less this year than last, except the Blackwall. Nevertheless, we have carried in each year 2,000,000 of passengers, and have commenced a third by carrying in its first two months not fewer than 665,000! Why, therefore, despond? I quite differ with your friend "Observer," as to raising the fares: I think it a most judicious measure, although perhaps adopted too late in the season, and that too in a season that has broken up sooner than any upon record.

Yours, &c., A. B. C.

Regent street, September, 26, 1842.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

Sir,—The present depressed state of the share-market presents a most singular contrast with what was taking place in the month of last December, but still more so with what happened in the months of April and May last. In the periods referred to there was what is usually called "*life*" in the market for shares, but now all seems gloom and despondency. To what is this great change to be attributed? It is chiefly, in our opinion, to the miserable results of the last half-yearly meetings of most of the railways, especially to those of the Birmingham and Derby, the Birmingham and Gloucester, the Midland Counties', and lastly, the North Midland, from all of which railways no more than 5$\frac{1}{16}$ *per cent. per annum* were obtained!

If it be true that "'tis always darkest near the dawn," then may it be hoped that we are on the eve of a brighter day; for nothing can be "*darker*" than the immediate prospects of railways generally, just at this time.

But our specific reason for now addressing you is to call attention to the low price of shares in the Edinburgh and Glasgow Railway, an undertaking that, as far as we can judge, bids fair to rank amongst those lines which have turned out the most profitable in the kingdom. Why should these shares, then, be at so low an ebb at this period, standing at 3 discount? Nothing that we can imagine will justify such a price, except the general odium that attaches to railway stock at this particular crisis. Already have the passengers amounted to double the Parliamentary estimates (*before the Queen's visit*); already have the Directors proved to their constituents how cheaply the line has been worked (not more than about 600*l.* a week, although a distance of 46 miles); already have the receipts exceeded the expectations of the public; yet, with all these advantages *in esse*, and those *in posse*, the price of the shares stands still at 47*l.*; but it seems to us a matter of certainty, as far as certainties go in these matters, that a more auspicious period has never yet occurred than the present in which to embark capital in this road. To prove our assertion, we beg leave to subjoin a calculation of "facts and figures," by which it must clearly appear that no less than 5$\frac{1}{2}$ per cent. per annum may be fully reckoned upon this half-year,

Digitized by Google

although more than 6 per cent. will, most assuredly, be made; and unless we are much deceived by the "Report of the Directors," made for the first four months of the working of the line, in which the "maintenance of way" was brought in as a charge against the revenue of the railway (quite an unusual thing in these early accounts), we are fully persuaded that no railway offers so tempting a prospect for investment as the Edinburgh and Glasgow. Some parties are fearful of a very diminished traffic on this road during the winter months, but does it comport with common sense to suppose that many people will be found to avail themselves of a cold ride of six hours by the canal boats, when they can go by the railway in 2½ hours? Again, should the winter prove a severe one, so as to impede the navigation of the canal, what an immense addition to the traffic, by the road, would such a season occasion!

It is now nearly seven years since we have been in the share-market, and we do not hesitate to state as our firm conviction, that whoever buys shares in the Edinburgh and Glasgow Railway at the present reduced rates, will never repent of their purchases, through whomsoever those purchases may be made.

To our friends we would at once say, lose not a moment, for such a favourable one will, in all likelihood, never again occur.

Pertinently may it be asked, if such be really the prospects of this railway, how is it that the Scotch themselves do not freely purchase the shares at these low rates? One reason may be certainly assigned for this singular apathy, and that is "*the scarcity of money amongst the manufacturers*" at this time, from whom there is no demand for investments. Another reason, equally valid, is that the Scotch have seen so much money lost in English railways, that their usual caution has run into timidity, and prevented their touching this stock until it has passed through that stage of danger to which all new undertakings, in their eyes, are liable. As soon as they see that this railway has gone through all the chances of danger, *as an investment*, we believe that purchasers will be found in Scotland, who will then more freely give 56*l.* for the shares, than such purchasers would now give 46*l.*

Such are our notions on this question, which agitates the minds of many in this town and various other places.

Apologising for thus intruding on your columns, we beg to subscribe ourselves,

Yours, respectfully,
R. B. WATSON & Co., Sharebrokers.

7, Bond-street, Leeds, Oct. 3, 1842.

Actual amount received up to September 24, 1842, or 13 weeks		£36,397
To make up a sum that is required to pay 5½ per cent., equals		18,203
Total		£54,600
So that for the next 13 weeks the receipts need only be 1,400*l.* per week, to divide 5½ per cent., thus:—		
Supposed amount of receipts to be		£54,600
Which is 2,100*l.* per week, we must deduct interest	£9,500	
Expenses supposed 650*l.* per week, just 33½ per cent.	16,900	
		26,400
Net proceeds		£28,200
Which amounts on 18,000 shares at 5½ per cent. to	24,750	
Ditto, on 18,000 quarter shares at 5½ per cent.	2,100	
		26,850
For reserved fund		£1,350

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—Feeling a lively interest in the prosperity of this splendid railway, I would beg leave, with your kind permission, and trusting, if this be accorded, that the suggestion will meet the eyes of those gentlemen who alone have power to apply a remedy, to remark upon the uncomfortable accommodation provided for the second-class passengers. The reason for persisting in keeping these carriages open from side to side is obvious enough, viz., to compel those who are inclined to use them to have recourse to the first class. But is it not just as probable that many who now take the third-class would prefer the second class, were these latter made as comfortable as they might be at a very small expense? It is universally said by all who have tried both, that the second-class carriages are colder than the third, owing to the draft of air to which the former are exposed, while in the latter you are merely in the open air, with the wind generally either in your face or at your back. I came from Falkirk to Edinburgh in a second-class carriage in July, having been fourteen days from home, travelling by land and water, and never had occasion to use my great coat until I entered this carriage; and if cold was at all felt in July, how will it be possible to endure it in the winter months?

If the Directors are afraid of the effect upon the first class if these second-class carriages were made too comfortable, these fears, in my opinion, are altogether groundless. There is enough of aristocratic feeling in Scotland to induce almost every one to take the best and most genteel conveyance which his circumstances enable him to command; and I feel confident, that were this done, many more passengers would be drawn from the third to the second class than from the first class to the second. I think it would increase the total number of passengers; but even if it had not this effect, it would tend to raise the average weekly amount from the present number, which is only a little more than 2s. 6d. each, except during the Queen's visit, when from obvious causes it was considerably more. I think this change would operate in this way in favour of the Company to the extent of not less than 100*l.* per week.

Why not also provide seats for the third-class passengers? Surely they also are entitled to be treated like human beings, not like cattle in a pen.

I beg leave to subscribe myself, with much respect, the Edinburgh and Glasgow Railway Company's

WELL-WISHER.

Edinburgh, Oct. 10, 1842.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—I have been particularly struck with the extreme accuracy of the statement, given in your paper of the 1st instant, of the receipts, expenditure, and probable dividend of this line. The writer, after putting down the sum already drawn for traffic, assumes that the average receipts for the remainder of the half-year will amount to 2,000*l.* per week; and after calculating the expenditure at a larger sum than was required proportionally for the previous four months, and deducting interest on loans at 5 per cent. (a part of which is only chargeable at 4 per cent.), he shows a clear dividend of 6 per cent., and a surplus of 2,512*l.*

The part of this statement which at first sight appears problematical, is the sum assumed as the average weekly drawings for the 13 remaining weeks; but a little reflection will show, that such an assumption is well founded. It is known to those acquainted with the locality, that the city of Edinburgh is at present quite deserted of inhabitants, and that nothing is more unfashionable than to be known to be in town. The month of September, and until near the end of October, is a period when those who can afford it, both in Glasgow and Edinburgh, are enjoying themselves in the country, or at the sea-coast, and during which comparatively little business is transacted. The law courts, on which Edinburgh so much depends, do not sit until November, and the legal profession are consequently "abroad." The receipts at the Edinburgh end of the line are at present *greatly less* than those at the Glasgow end, but these will soon improve. That the meeting of the law courts, and the return of people to town, will cause an increase in the passenger traffic on this line there can be no doubt whatever. Neither will the winter traffic fall off in proportion to almost any other line, as the family connection existing, and every day extending, between the two cities, gives rise to continual travelling, and the business transacted is greater during winter than summer.

In addition to this it may be observed, that notwithstanding the competition with the canal, the goods' traffic is now rapidly on the increase.

The sum from goods, which is this week 483*l.*, was last week only 387*l.*; and from what I know of the line, I make bold to affirm that the goods' traffic will reach 800*l.* per week before the winter is over.

Besides an increase in general goods, the conveyance of mineral has commenced, and will form no inconsiderable item in the weeks' accounts.

If my brother-shareholders, instead of throwing away their properity, will wait a few weeks, I am convinced that they will find all that I have stated fully realised, and that the calculation made in your paper of the 1st instant (whoever be the author) will be borne out by facts. I know that time-bargains, to deliver the stock at 46*l.* by the end of this month, have been made to a large extent, and that the sellers are astir to procure a fall; but if the shareholders look to their own interest, they will not allow their property to slip out of their fingers at the present depreciation.

I am, Sir, your most obedient servant,
INVESTOR.

Glasgow, October 10, 1842.

THE TOLL QUESTION—GREENWICH AND CROYDON RAILWAYS.

To the Editor of the Railway Times.

SIR,—In referring to the various offers made by the Croydon Company for commuting the toll of *fourpence-halfpenny per passenger*, payable to the Greenwich Company by virtue of the Act of Parliament authorising the enlargement of the railway for the use of the Croydon, and other Companies using the Croydon Railway, I cannot help concluding that our Directors were very unwise in neglecting that of 6,000*l.* per annum for a limited period, (five years) in lieu of toll on the *short traffic carried on by the Croydon Company*.

As I understand that offer as having nothing to do with the traffic brought by the Brighton and Dover Companies (not even in respect of any Croydon passengers which those Companies might carry), I am at a loss to know by what means we can ever expect to obtain a sum equal to that so offered by the Croydon Company, except by their exertions.

In order to obtain for us the like sum of 6,000*l.* a-year on this short traffic, the Brighton and Dover Companies (if it be conducted by them) must annually carry between London and Croydon 320,000 short passengers, and on all such they must, I believe, pay to the Croydon Company a toll of 1s. a passenger, amounting to 16,000*l.* If it were possible, therefore, for these Companies to procure so large a number of passengers at fares (for I hold that whatever dispute may exist as to the expediency of high or low fares, the *price* has nevertheless a great deal to do with regulating the *numbers*) —at fares, I say, which would yield them a profit, after paying these tolls to the Croydon Company and ourselves, I do not see that we should be any better off than we should have been if the offer of 6,000*l.* had been accepted: and the Croydon Company would be considerable gainers by receiving 16,000*l.* in the shape of toll on this short traffic, instead of carrying their passengers at a questionable profit, if not at an absolute loss. I really begin to suspect that the Croydon people have gone more thoroughly than our Directors have thought it needful to do, into a calculation as to what probability there is of the long lines conducting the short traffic so as to give that result, and by that calculation have assured themselves that no such numbers can be obtained at fares which would remunerate these Companies, and yield either 16,000*l.* to themselves, or 6,000*l.* to us, or they would instantly pocket the money and the affront together, and leave our Directors to find out their blunder by slow experience. I am confirmed in this suspicion from the recollec-

Digitized by Google

tion of what took place at the meeting of our Company *held* for the purpose of providing the capital for widening the railway, when Mr. Entwistle assured us that, by means of the additional toll, we should get 9,000*l.* from the Croydon short traffic alone, and 9,000*l.* more from the traffic of each of the longer lines, making in all 27,000*l.* per annum. A sad error was made somewhere; probably in supposing that the same number of passengers would be found to travel at high fares as at low fares—or, at least, that if high fares would not bring them, low fares would be resorted to by the Croydon Company, despite the loss which an additional toll might entail. It cannot be denied that the whole estimate has been unsoundly made, for *high fares* on short lines *do not* bring the same numbers as *low fares*; witness the Blackwall Railway, since the fares were raised, nearly half the passengers have disappeared. Look again at the Croydon Railway, where the advance on fares has likewise driven half the passengers away; so that instead of the promised 9,000*l.* a year from the short traffic of that line, little more than 3,000*l.* comes into our coffers. Surely, Sir, since the Act of Parliament does not either make people travel at high fares, or compel the other Companies to bring the public over our railway at low fares, it would be well for our Directors to see what amicable arrangement they can make with our old customers, to carry on a business which might be mutually productive, and not attempt to obstruct the Croydon traffic by a strict adherence to a course which has hitherto proved so unsuccessful and injurious.

I am, Sir, yours, &c.

LIVE AND LET LIVE.

THE CROYDON RAILWAY.

To the Editor of the Railway Times.

SIR,—Being a holder of between 200 and 300 Croydon shares, and interested in no other railway, I have been led to look somewhat closely at our present position in reference to the question at issue with the Greenwich Company, and am quite at a loss to account for the policy of our Directors in continuing to run the Croydon trains, whilst the traffic return made at the last half-yearly meeting shows, that all the benefit arising therefrom is enjoyed exclusively by the Greenwich Company, whereas if all the railway passengers from Croydon, and one or two of the intermediate stations, say Sydenham and Penge, were carried by the Brighton and Dover trains, the Croydon Company must necessarily derive their proportion of toll from the traffic, as settled by agreement with those Companies, and by the Greenwich Act of Parliament, according to which, for every 4½d. received by the Greenwich Company on a Croydon passenger, the Croydon Company itself would receive 1s., and on passengers from Penge and Sydenham about 8d. or 9d., which at the diminished tollage of about 3,000*l.* a year, now paid to the Greenwich Company, would yield to the Croydon Company about 7,000*l.* annually, sufficient to pay all their expenses.

The examples of the Birmingham, Great Western, and South-Western, prove that short traffic is no despicable source of revenue, and that by an arrangement of trains running a distance from London equivalent to that of Redhill, it may be conducted without interfering with the long traffic of the line, and rather tend to increase it by collecting passengers at all the minor stations, and conveying them to the principal stations, where they would wait the arrival of the non-stopping trains. Thus, for instance, if a stopping train started from Redhill ten minutes after the arrival of a quick train from Brighton, it would take all the Brighton passengers wishing to stop short of London, and the quick train would proceed without any delay. The same arrangement would of course apply to the Dover Company.

I am, Sir, yours, &c.

C. R. S.

October 12, 1842.

MANCHESTER AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

SIR,—In your publication of Saturday last you stated "that the Manchester and Birmingham Railway Company have again raised their first-class fares, and that a first-class passenger now pays 1s. more from London to Manchester, than when he went round by way of Parkside." This is a mistake which I beg leave to correct; the fare is exactly what it was before the opening of this line; and the journey is performed in three quarters of an hour less time than formerly. In reference to your remark of there being "one train less a day," I have to observe, that the train which used to leave Birmingham for Manchester at a quarter past 7 o'clock in the evening, did not appear requisite for the accommodation of the public, as the average number of passengers daily by that train from Birmingham, and the stations on the Grand Junction line, to Manchester, and the intermediate stations on the Manchester and Birmingham line, inclusive, did not amount to four; and for the local traffic between Crewe and Manchester the train was found inconveniently late. I leave you, therefore, to say whether the Company were not justified in discontinuing the train; and also, whether their time-bill, which was advertised in your paper of Saturday last, does not evince a desire to accommodate the public.

I am Sir, yours, &c.

E. J. CLEATHER.

Manager's Office, Manchester, October, 12, 1842.

[We have before us a bill of the Grand Junction Railway, in which the fares from Manchester to London are stated thus:—*Day trains*, 2*l.* 11s., *night trains*, 2*l.* 13s. 6d. The fares by the Manchester and Birmingham Railway now are, *day trains*, 2*l.* 13s., *night trains*, 2*l.* 15s. 6d., thus making a difference of 2s. instead of 1s. The Grand Junction bill is, it is true, of an old date, but *that* does not affect our argument as to the effect of competing lines, since it is well known that the Grand Junction have for some time been preparing for the partial abstraction of their business. The other points adduced by Captain Cleather, we shall probably notice when we have more leisure, the gallant Captain's note having reached us at a late period of the week.—ED. R. T.]

MANCHESTER AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

SIR,—It really is not fair in you to state, that the Manchester and Birmingham Railway is of no use to this town.

The fares are not higher than they were by the Grand Junction. They are the same, and they must always be regulated by the Grand Junction fares, which have lately been considerably raised. There is a saving of time (which is of some importance) in the journey to Birmingham of three quarters of an hour; the station is a much more convenient one than the old one, and the carriages are the most comfortable I have ever been in.

The Postmaster-General refuses to send the mails this way, for what reason I know not. I wish you would ask him. That the railway will never pay I am well aware; but that is the shareholder's affair. It is, however, much better for the public that their money should be lost in a railway than in a bank.

Can you tell me why this Company have both a Manager at 1,000*l.* a year, and a Treasurer at 600*l.* The former may be, and probably is, necessary; but the latter ought to be dispensed with. Mr. Hudson, the Chairman of the York and North Midland, is an experienced man, and his suggestion is worth consideration.

I do not object to a well-paid Manager, but I cannot think that a second highly paid officer is at all necessary.

I have the honour to be your obedient servant,

MANCUNIENSIS.

Manchester, Oct. 10, 1842.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent, Mr. Ironside, whose letter appeared in your journal of the 24th ultimo, seems to have expected some explanation from the Directors of this Company, respecting the charge made against them, at the late general meeting, of trafficing in shares; but it surpasses my comprehension how or why he should require them to take further notice of it. An opportunity was then afforded him to move for powers to enable him to ascertain the truth of the allegation; and he cannot expect the Directors to take further cognizance of a subject which, notwithstanding their silence respecting it on that occasion, was evidently distasteful to the meeting. He says, the Directors refused to give the names of the defaulters; but this is a disingenuous and gratuitous assertion, for the report of that meeting, in the *Sheffield Independent*, proves that they would have consented to this most extraordinary request if the shareholders had sanctioned it by a majority. In protesting, however, against the inference that the hesitation of the Directors arose from any other cause than an unanimous feeling of the impropriety of such a request, your correspondent may be assured that the publication would not have facilitated his object if a motion to that effect had been carried. It is true that, as he states, the names of some defaulters were published on a previous occasion; but it was most inadvertently done, and was justly complained of as a very painful and unnecessary exposure: and as it would not, in this instance, have furnished any such evidence as Mr. Ironside is seeking for, he will perhaps now conclude that the precedent which he quotes was here "more honoured in the breach than the observance."

I am sure this gentleman does not expect his friends to be cajoled into an acquiescence with his very logical conclusion, that because some of the Directors deemed the charge applicable to themselves, the remainder of the Board, who did not start up with a similar disclaimer, were consequently dumb-founded with guilt. A section of the Board was absent on that occasion; but Mr. Ironside's irresistible demonstration of the criminality of those who were present, ought to be equally conclusive against those who were absent, and they, of course, must also "die and make no sign."

But perhaps the insinuation, that the "other 12 members are tainted," is to be understood as a mere ruse to extract some answer from them on the subject. My confession, then, shall go thus far, that as the shareholders virtually refused to entertain a discussion respecting a charge of so vague and indefinite a character, that no individual exculpation ought to have been made by any member of the Board; I was silent under this conviction, because I foresaw the invidious inference that might possibly attach to some Directors, and which Mr. Ironside has realised, whose silence might arise from contempt of the charge, or ignorance of its nature and object; although, and with reverence be it spoken, I felt that the purity of the Board was happily not wholly enshrined in my four colleagues who proclaimed their innocence.

Should Mr. Ironside again address you, he will perhaps tell us what is to be understood of the charge of trafficing in shares. Does he mean that a Director is to be restrained from buying and selling shares, which any proprietor may daily practise with perfect immunity from censure?

I have never held less nor more than four to five times the amount of the legal qualification as a Director of the Company; but I maintain, that I had a perfect right to reduce that interest to a minimum criterion, at any period during my position

Digitized by Google

at the Board; and if my pecuniary means had not enabled me to meet the frequent and heavy calls which the Company have been compelled to make, I shall, at least, have the sanction of all prudent men in saying, that it would have been my duty to do it. And I cannot perceive that it would have impaired either my competency or efficiency for the duties of the office; for the private history of railways will show, that not the large and wealthy shareholder, but the active, intelligent, and energetic Director, has rendered the most important service to these and similar undertakings.

Perhaps your correspondent means, that the Directors have been buying and selling shares for the mere purposes of gain. I do not seek into the private affairs of others, but from the little knowledge that I possess of any dealings in these matters by other members of the Board, I venture to assure your correspondent that "the tainted 12" may look with as much indifference as I do upon his threatened "*exposé*."

I am, Sir, yours, &c.,

A DIRECTOR.

Sheffield, October 4, 1842.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

Sir,—Can you or any of your numerous readers inform me what is *the precise nature of the security* on which Government have lent the Sheffield Company 50,000*l.*?

Some friends of mine have had thoughts of taking a portion of this Company's mortgage bonds, but they feel apprehensive (should anything unfortunately occurs) lest Government should have stipulated for a *priority of claim* over the mortgagees or other creditors, as is usually found to be the case wherever the Crown is concerned.

A straightforward answer to this *vital* question, would much oblige

A BROKER.

October 13, 1842.

NORTH MIDLAND AND SOUTH-WESTERN RAILWAYS.

To the Editor of the Railway Times.

Sir,—Hearing that the Committee appointed to report "on the present prospects and future management of the North Midland Railway" have concluded their labours, and recommended many alterations in the conducting of the traffic, I trust when the special general meeting to take their Report into consideration shall be called by the Directors, that they will not previously have canvassed for proxies to be used at such meeting, but leave the proprietors who may be present to take their own course after hearing the discussions which will arise on the various subjects brought before them.

I for one hail this special Committee as an omen of good, and only regret that one was not appointed during the construction of the line, as I am quite of opinion with Mr. Carr of Sheffield, who spoke at the last half-yearly meeting, that had such been the case, at the least one million sterling might have been saved; and were the railway now to be commenced, it might be as well constructed for 2,000,000*l.* as for the 3,300,000*l.* which have already been expended upon it; and indeed who can doubt it, after examining the construction account, where the sum of 58,000*l.* stands as the item for "engineering," nearly 11,000*l.* for "surveying," upwards of 29,000*l.* for "law charges for general purposes," besides 4,458*l.* for "Parliamentary and law charges;" "office charges previous to opening the line," 8,460*l.*, "miscellaneous charges," 10,415*l.*, and what has not been customary in other lines, 8,222*l.* for "waggons, trucks, &c. for contractors." All these items are since the Act was obtained, but previously the sum of 41,349*l.* (what a feed for the Parliamentary locusts!) had been expended.

As to the larger items belonging to the construction account, by a comparison with the "South Western," which is longer by 5 miles, with a metropolitan terminus and station, and where the quantity of earthwork, construction of bridges, culverts, &c., varies little from the North Midland, I find the following sums in excess over the Southampton line on the North Midland, and also in the item of "engines," notwithstanding the traffic is nearly double on the former to that of the latter railway. In instituting this comparison of the two lines, it should also be borne in mind, that owing to the financial difficulties encountered by the South-Western Company, it was by no means in a position to ensure so low tenders for the various contracts it had to let as the North Midland Company, where the Directors had only to make calls, and the proprietors, full of confidence in the future success of their railway, always willingly responded. Were the cost of the Gosport Branch of the South-Western included, the comparison would appear still more against the North Midland—

	South Western.	North Midland.
Land and compensation, including law charges and valuing.....	£291,871	.....
Ditto, ditto, not including law charges amounting to 33,458*l*...	.....	£381,393
Construction of way and works ..	1,174,251	1,708,477
Rails, chairs, sleepers, &c.	217,849	361,083
Stations	167,077	370,011
Engines	104,911	176,786
Surveying and engineering.....	32,887	68,841
Expenses in obtaining all Acts of Parliament	41,965	.....
Ditto before the first Act was obtained	.....	41,349

Now, whoever will carefully look over the above items, may soon convince himself that at least one million of money might have been saved. As to the confession of the Chairman at the last meeting, that there were still (now upwards of two years after the full opening of the line) eight contracts uncompleted, and a serious pecuniary difference between the Company and the contractors, these facts appear to me to reflect anything but credit upon the Directors, and show the loose manner in which the contracts have been managed, either professionally by the Engineer, or legally by the law agents of the Company; and is it not notorious, according to the Chairman's own showing, that it is to the interest of both these parties to keep these things open as long as possible? It is well known that very many thousands extra were added to the contracts at the Leeds end of the line, to ensure their completion by the 1st January, 1840; and yet, although they were not finished until the end of June, the additional sums were paid to the contractors; indeed the reckless manner in which the money of the shareholders has been squandered is a subject too sickening and disgusting now to pursue further. A few words, however, as to the expense of working and maintaining the line; for, after the Chairman's confession at the last meeting, that "the Directors could not make traffic" (a confession it would have been well to have kept in view during the construction of the railway), when the scapegoat about "badness of trade" made use of at former meetings would answer no longer, the consideration of these points is of some moment to the proprietors now; and although the opinion expressed by a Shareholder, that 20,000*l.* per annum might be saved in these two branches of expenditure appeared to be met only with derision and "much laughter" by some of the shareholders (who had, perhaps, purchased their property at one-half its original cost), I am quite inclined to agree with him, and have no doubt the line might be worked quite as efficiently as at present for 1,500*l.* a week, which would be a saving of 20,000*l.* to 25,000*l.* per annum upon the present cost of working the traffic and maintaining the way, and even then it would be far higher in proportion than many lines—for instance, the Birmingham and Derby, which is 48½ miles in length, and worked and maintained for 673*l.* per week; and it would not surprise me, as the shareholders are now becoming more alive to their own interests, to see as great a reformation brought about in the North Midland Railway as would realise to the proprietors from the net profit of their traffic 5 per cent. per annum.

Yours, &c.,

A RAILWAY REFORMER.

GREAT NORTH OF ENGLAND RAILWAY.

To the Editor of the Railway Times.

"If this is the way to support the prosperity of railways, then permit me to say, perish railways, and live justice and truth immutable."—*Joseph Pease.*

Sir,—Such are the words made use of by Mr. Joseph Pease, in a letter that he addressed to a "Friend" last March, on the subject of taking part of a surplus fund to "eke out" the dividend then made by the Directors of the Manchester and Leeds Railway. At the time I read that letter I affixed a mark in the margin of the *Railway Times* where it appeared, thinking that I should have occasion at a future period to refer to this sentence, which so strongly brought to my mind the memorable words of Mirabeau, uttered by him on a much more exciting occasion, when he said, "Perish the Colonies, rather than one iota of our Liberty."

That time, I consider, has now arrived. In the last two numbers of the *Railway Times* have appeared two letters from Mr. Storey, the late Engineer of the Great North of England Railway, occasioned by certain remarks made by some of the Directors at the half-yearly meeting which recently took place, reflecting on the character of Mr. Storey. Whoever has seen those letters, and most of those who take notice of what is passing in the railway world have most likely already done so, must be at once grieved and surprised to find such gross tricks practised by Directors, as well as by Engineers, in their estimates of the cost of railways, by which not only Parliament but the public are completely at fault. In no instance that has come to my knowledge, and I have been a close and constant observer of what has passed in the railway world during the past six years, has there been a more flagrant case of this kind than that of the Great North of England Railway. It appears that in coming before a Parliamentary Committee, Mr. Storey was "instructed" to exclude certain items in the estimate of that part of the railway that passed through the county of Durham, and "*everything but the bare line*" of railway through the county of York!

"Can such things be," as Shakspeare says, "without our special wonder?" What! leave out, in the cost of a railway, stations, and what is commonly called the "plant," besides a host of other things that might be named. No wonder that the state of the share-market should be as it now is, when such practices as these prevailed in the origin of railways. It would also seem that the Directors of the Great North of England have not much improved up to a very late period, if one may judge from the violent fall that has occurred in the value of their shares. It is only about four months ago that these shares stood at 85*l.* in the market; now they are quoted at 50*l.* to 55*l.*, and hardly a buyer to be found. Why, it may be asked, were these shares so high as 85, and now so low as 55? Simply because a dividend of 5 per cent. was declared last February (there was also one of 5 per cent. in August, 1841, upon the then amount of shares), and now another of only 2½ was made at the last meeting in August, although the receipts of the road equalled 31,000*l.* against 33,000*l.* last autumn. Can it be for a moment doubted, that if the last dividend of 2½ per cent. be a fair one, the previous dividend must have been the reverse? It would be an interesting fact to know who took advantage of the high price of the shares that prevailed in the spring and summer, and who are the parties that are suffering from the low price which prevails this autumn. Surely "*no widows' or orphans' trust-money*," about which Mr. Pease expressed so much anxiety in his letter last March, has been invested in this railway! From the amount of the receipts last autumn the expenses that were deducted appeared so small that I considered them, at the time, quite incredible,

Digitized by Google

and stated so to certain parties; and now, not content with deducting much heavier expenses this last half-year, the Directors take an enormous sum from the receipts to form a reserve fund, so *that the dividend is only just half* of what it was last February. For doing such things as these there must be some adequate motive. It cannot be said these are accidental "circumstances, over which the Directors have no control," and I leave you to judge what those motives are.

But what has all this to do, you may natually observe, with what I first set out in this letter, and especially with the extract that I made from the letter of Mr. Pease? Why simply this, that no one could have thought an individual who had written such a letter as Mr. P. did last March, deprecating in such strong terms the practice, by no means uncommon in railway management, of taking part of a surplus fund to support a dividend, would be found in company with a body of Directors like those of the Great North of England.

It must not be forgotten that when the Great North of England was projected in 1836, it was intended that the line should go to Newcastle from York, and the estimates of 1,000,000*l.* in shares, and one-third more in debentures, were supposed to be sufficient to carry the road thus far. But what has turned out to be the fact? Why about this very sum will be expended in going no further than Darlington, from York, *only about two-thirds the distance.*

But the main object of the chief promoters of the railway has been obtained; they have got a capital outlet for their coals to York and other places on the line, and some parties are "kind enough to say," that it is of no moment to them if the railway does, or does not, pay, as what they will gain by the extended sale of their coal will much more than compensate for any loss that can possibly arise from a diminished price of the shares.

It is useless to pursue this subject any further, but I cannot conclude without expressing my satisfaction at what is likely to be brought about in the reformation of the management of railways, generally speaking, by the Committee that has lately finished its labours on the North Midland, if what I have heard only prove true. This Committee, I am quite satisfied, will be the rough pioneer to many reforms in the management of railways, and when its works come before the railway public, they will be hailed with delight by many shareholders, who are at this time chewing the cud of bitter disappointment at their investments of railway property.

A LOOKER-ON.

Leeds, September 30, 1842.

P.S.—A friend of mine has just pointed out to me a very singular charge made for the "Direction," during the past half-year, viz., 268*l.* put down to the construction account, and 250*l.* to the revenue account. Surely an explanation of these items is required.

MANCHESTER AND BIRMINGHAM RAILWAY.

It affords us much pleasure to see the new arrangements, and reduced fares, on this interesting line of railway, traversing, as it does, the important section of this country which is the theatre of our labours, and connecting, as it does, directly and indirectly, all the main lines of railway in the kingdom, the three towns of Macclesfield, Stockport, and Congleton, with the prosperity of which our own is so intimately connected.

From what we had witnessed of the passenger traffic between Stockport and Manchester—very great in amount, considering the gradually increasing depression of the times—since its opening in 1840, and from the beautiful and singularly interesting character of the district between the former town and Crewe, we looked forward to the day of its opening to the latter place with considerable anxiety. We imagined that, from the length of time which the other railways terminating at Manchester had been open, the railway excursionists of that town had become familiar with every object of interest within the range of pleasure parties travelling on them; and that, therefore, this line opening up, as it would do, an entirely new and far more attractive view of rural scenery, would meet with a degree of patronage surpassing that bestowed by parties merely in quest of health and recreation, upon any other in this part of England. We are, however, very sorry to say that, in this respect, we have hitherto been grievously disappointed.

When the extension of the line from Stockport to Sandbach took place, the restriction of the passengers between these places to two classes of carriages, and the advance in third-class fares between the former town and Manchester, inclined us much to the opinion that an opportunity of diverting to this line a very considerable amount of traffic was lost, at least for the passing season; and that no material improvement in its business would take place until the Company should afford more extended accommodation, by running third-class carriages along the whole line at fares proportioned to those which for two years had not only secured all who used to go by coach, but converted almost every one accustomed to travel on foot between Manchester and Stockport, into regular railway passengers.

The reduction of fares, and the running of third-class carriages to Birmingham, seem to give great satisfaction. To the people of Stockport and Manchester, who can now travel between those towns for sixpence as usual, it will be a great boon. The advance in price had caused much bad temper, which will now give way to better feeling, and a great increase of traffic on that part of the line will be the immediate result.

No doubt the alteration will attract to this charmingly picturesque artery of communication a considerable addition of ordinary business passengers; and should we, happily, be blessed in the course of the winter with a revival of commercial prosperity, so as to afford to the industrious inhabitants of this populous district the means of that rational recreation and enjoyment which they both deserve and require, we hope, with the dawn of spring, to see swarms of our tradesmen and artificers availing themselves of this cheap and rapid means of inhaling the pure air, and viewing the rural beauties of Cheshire.

The charge from Manchester to this town is 2s.; from Stockport, 6 miles nearer, it is 2s. 6d.; and parties from the latter place cannot be booked beyond Chelford; and this is felt by many, in both this borough and Stockport, as a great hardship. Cannot this inconvenience be remedied? The smallest parcels from Manchester to Stockport are charged 6d., although a passenger and his 50 lbs. of luggage are only charged the same sum. The parcels used to be 4d., and the present charge is much complained of, and the business in this department must be diminished by it.—*Macclesfield Chronicle.*

NEWPORT AND NANTYGLO RAILWAY COMPANY, MONMOUTHSHIRE.-PROSPECTUS.

This Company is projected for the purpose of making a direct, cheap, and convenient Railroad, for the conveyance of the produce of an extensive and populous mineral district, situate near Newport, in the county of Monmouth, from the respective places of mining, manufacturing, and commercial operations, to the port of shipment; and also for the purpose of promoting, by these means, a more extended traffic, and intercourse of passengers and goods, between the said port and the several towns and places through and to which the said railway is intended to pass or lead. The railway will commence at a convenient spot, near the extensive Ironworks of Messrs. J. and C. Bailey, at Nantyglo, in the county of Monmouth, and will pass through the Ironworks of Messrs. Brewer and Co., at Coalbrook Vale—the iron, smelting, and foundry-works of the Cwm Celyn and Blaina Company—the extensive and important mineral districts of the Ebbw and Cwm Tillery Valleys—the Llanhilleth Mountain, by tunnel, and the Cwm Nant Ddu Valley—communicating with the Ironworks of the Varteg Company—the British Iron Company, and the Pentwyn and Golynos Company—thence to the town of Pontypool and the iron and tin works of C. H. Leigh, Esq.—the Blaendare Coal Works—the Cwmbran Coal and Lime Works—the Stourbridge Fire Clay Company's Works, and the Coal Works of Mr. Hanson, near Llanderval, to the wharfs and floating-dock at Newport. The inconvenience and expense to the freighters of the present defective means of communication by canals and tramroads are so well known, and have been so often and so loudly complained of, that no vindication or apology for the present undertaking is required from its promoters. The surface of the land through which the railway will pass is comparatively of trifling value, and the line itself will be attended with few, if any, engineering difficulties. It has been calculated by persons of experience, that the whole railway, with its necessary appendages, may be completed at an expense not exceeding £240,000; and the return on the traffic, arising from the conveyance of passengers and of the mineral and mining operations now in action or in immediate progress, will yield, at very moderate rates of tonnage, an income, to be divided amongst the subscribers, of at least 10 per cent. on their capital, after payment of all charges for making the line and keeping the same in repair. An Act of Parliament will be applied for in the next session to incorporate the subscribers as a Company, with all usual and necessary powers for carrying its objects into effect, and for the proper conduct and regulation of its concerns. The affairs of the Company will be conducted by a Committee of Shareholders, the members of which will be supplied and chosen from time to time, according to the provisions of the Act of Parliament. An annual general meeting will be held at Newport in the month of January in each year, the day of meeting to be fixed from time to time by the Committee. The first of such annual general meetings to be held in the month of January, 1844. The capital of £240,000 will be raised in 2,400 shares of £100 each, £5 per share to be paid at the time of subscribing, into the bank of Messrs. Bailey and Co., or to one of the branches of the Monmouthshire and Glamorganshire Bank. The remainder of the subscriptions will be called for by the Committee at two months' notice, in sums of not more than £10 per share at any one time. The Committee will have power to declare forfeited all shares upon which the calls shall not be duly paid, according to notice sent to each subscriber by the general post. All persons who may wish to take shares in the above undertaking are invited, on or before the 1st of November next, to make their applications, addressed to R. J. Blewitt, Esq., M.P., the Chairman of the Provisional Committee of the Newport and Nantyglo Railway, Newport, Monmouthshire.—Newport, October 1.

MORTGAGES.—WANTED, on MORTGAGE of the TOLLS and WORKS of the MANCHESTER AND BIRMINGHAM RAILWAY, EIGHTY THOUSAND POUNDS, in Sums of not less than £500 each, at 4½ per cent. Interest payable half-yearly, either in London or Manchester.

The Railway is completed, and was opened throughout for Traffic on the 10th of last month.

Mortgages will be granted for the undermentioned periods and amounts respectively:—

For the period ending 25th Dec.,	1844 ..	£30,000
Do.	do.	„	1845 ..	30,000
Do.	do.	„	1846 ..	20,000

For further particulars apply at the Company's offices, in Manchester; or at the office of Messrs. Slater and Heelis, Princess-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, September 19, 1842.

THE ELEVENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects or excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

HORNE & CHAPLIN, Proprietors and Agents.

CONTRACT FOR IRON BRIDGES.—The Liverpool and Manchester Railway Company are prepared to receive Tenders of Contract for the providing and Erecting of Sundry Iron Bridges, in conformity with Plans and Specification, which are now ready for inspection at the Company's Office, Lime street, Liverpool.

One of the said Bridges to be erected over the River Irwell, and others over sundry Streets in Manchester and Salford; the whole to be in one Contract.

Sealed Tenders addressed to the Treasurer, and endorsed "Tender for Contract," must be delivered at the said office, or sent by post so as to arrive there, on or before Monday the 31st October instant,

By order of the Directors,
HENRY BOOTH, Treasurer.

Railway Office, Lime-street, Liverpool,
10th October, 1842.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to August. Price 1s., in cloth.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand with a Map of London. Price 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bognor, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by ARTHUR FREELING.

"A work in which the elegant and the useful are eminently combined."

London: Ackerman, Strand; *Railway Times* Office, Tilt & Bogue, and Bell & Wood, Fleet-St.; and all Booksellers.

GUARANTEE SOCIETY.—Established by Act of Parliament.—To afford Security to Bankers, Merchants, Commercial and Trading Communities in general, is the *first* object of this society; to relieve relatives and friends from painful obligations and responsibilities the *second*.

The experience of the first year (during which the Society has been eminently successful) already numbers amongst its Patrons the principal Bankers, Merchants, and Public Institutions in the Metropolis and provincial districts, and by providing Guarantee for their integrity, has secured a competency for several hundred individuals:—

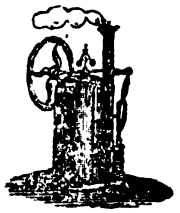
DIRECTORS.

Thomas Attree, Esq.	Lieut.-Col. Prosser,
James Colquhoun, Esq.	James Row, Esq.
William Croft, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. E. Shuttleworth, Esq
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col. Moody, R. E.	B. G. Windus, Esq.
G. Palmer, Esq.	

Standing Counsel—R. Ryder Dean, Esq.

Solicitors—Messrs. W. and S. Cotton, 76, Basinghall-street.

This Society presents to the public (and particularly to Bondsmen) the following advantages:—



1. No individual need hereafter incur the responsibility of becoming security for the *integrity* of another.
2. Individuals who are already surety for the *fidelity* of others, may immediately protect themselves from loss by insuring with the Society.
3. The expense and painful obligation of obtaining approved sureties, or of replacing them when removed by death or otherwise, will be altogether obviated.
4. All risks attending *irresponsible* sureties will be removed.
5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, or being desirous of holding, Confidential and Responsible Situations, the Guarantee Society presents immediate Facilities, where, for a moderate Premium, Surety for Integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, 28, Poultry, London.

By Order,
THOMAS DODGSON, Secretary.

PATENT PORTABLE STEAM-ENGINE, OR FACILITATOR.—NATHAN GOUGH, Engineer and Machine Designer, 46, Water-street, Manchester, respectfully calls the attention of Builders, Contractors, Excavators, Masons, Joiners, proprietors of Stone Delphs, Coal, Metal, and other Mines, to the following advantages possessed by his Patent Portable Steam-Engines, or Facilitators, over all others. They are from three to eight horses' power, and are a complete machine, being connected and fitted up with every requisite before leaving the manufactory, so that they can be set to work immediately on arriving at their destination, and the purchaser can also ascertain his whole outlay beforehand. They can be fixed on wheels to move from place to place, without disconnecting their machinery. They are very durable, easily managed, made of the best materials and workmanship, each being fitted up with a metallic piston, governor, force-pump, water-regulator, heating chamber, &c. &c. They consume less fuel than any other description of engine, which, added to their portability, renders them particularly well adapted for working where fuel is scarce or expensive.

These Engines have been employed in raising building materials for erecting the Manchester and Birmingham Railway Station; in pumping water and raising earth for the excavation of the Junction Canal; in deepening the River at Manchester, and in making the North Midland, the Midland Counties', Southampton, and other Railways; and also at the Chorley Tunnel, the New Houses of Parliament, London, and the Victoria Bridge, Manchester, where they may be seen at Work.

The following are a few of the many purposes for which these Engines will be found serviceable:—

Hoisting Materials for Buildings, Stones in Quarries—Grinding Mortar, or Clay for Bricks—Pumping Water out of the Foundations of Bridge Piers, River Walls, &c—Raising Water for Gentlemen's Mansions or Public Institutions—Drawing Materials up Inclined Planes—Raising Earthwork for Railways and Canals—Drawing Waggons (in the place of Children), Pumping Water, and Ventilating at the bottom of Coal Pits, &c. &c.

Engines and Pumps let out for Hire.

TO ENGINEERS, CONTRACTORS, &c.—A Gentleman, of middle age, and of active habits, wishes for an Engagement on any Railway, or other Engineering work. He has had many years' practical experience on works of Drainage, Canals, Harbours, Docks, and Railways, would make himself useful in taking Levels, and preparing Sections or Calculations, and is particularly qualified to superintend workmen. He can be well recommended, and requires but a moderate salary. Has no objection to go abroad.

Address, pre-paid, A. B., *Railway Times* Office, 122, Fleet-street, London.

MR. HALL'S "SMOKE-CONSUMING" PATENT.

Dublin, October 5.

To W. Y. Caister and Samuel Crompton, Esqs., Honorary Secretaries to the Manchester Association for the Prevention of Smoke.

GENTLEMEN,—Having been in the interior of Ireland, I have but this day, on my return to Dublin, seen Mr. Hall's second advertisement letter in the *Mining Journal* of the 1st instant; by this we are let a little further into the secret of Mr. Hall's patents, and the bearings of which, on each other, it is not easy to unravel. It now appears that Mr. Hall has *three* patents—all referrible to "smoke burning"—namely, June 24, 1836, July 30, 1838, and January 14, 1841. I confess I was, in common with the public, ignorant of the existence of this alleged *intermediate* patent of 1838, by which it appears I should have denominated that of 1841 as the *third*, rather than the *second*. Mr. Hall, however, is the last person who should have noticed this, as it is entirely attributable to himself, as I shall show by the following extract from his specification of 1841. In that specification, Mr. Hall stated as follows—and I appeal to all reading it whether the public, as well as myself, would not be justified in considering this patent of 1841 as "the *second*"—it being the one which directly, and in Mr. Hall's own words, introduced the very "improvements" on that of 1836 now adopted in the *Star* and other locomotives, and denominated by me as an infringement on mine of 1839. The words in Mr. Hall's specification of 1841, are as follow:—"Now, know ye, that I, Samuel Hall, do hereby declare, that the nature of my inventions, and the manner in which the same are to be performed, are fully described and ascertained in and by the following description thereof, that is to say, the objects of my inventions are *improvements upon, and additions to*, my methods and apparatus for more "perfectly effecting the combustion of fuel and smoke, *as described in the specification of my patent of 24th June*, 1836."

Who is there, I ask, after such a preamble, that would not consider this patent of 1841 as really the *second*, and as being avowedly the direct improvement on the *first*—that of 1836? and the more so as I do not find a single allusion in that specification to any *intermediate* one of 1838. How then was I or the public to know of the existence of such intermediate one, for he does not inform us whether it was ever published or not, but merely adds, as a proof of its existence, "I refer you to the Enrolment Office." He studiously keeps out of light the existence of any other patents than the two of 1836 and 1841, and then charges unfairness in not knowing what, as far as we are told, is only to be known by going to the Enrolment Office. I leave the public to say where the unfairness is. Surely it would have been more straightforward to have stated what is now implied—that this patent of 1841 is an improvement of that of 1838, and not of that of 1836. Had he done so, the public would not have been led astray, as I have been myself. If, then, we have been led into error, in considering this patent of 1841 as his *second*, instead of his *third*, I ask—Whose fault is it? The answer must be—Mr. Hall's alone.

But further, this specification all through refers to that of 1836 alone, and in describing the sixth improvement, he says—"The sixth improvement consists in taking the heat for heating atmospheric air from *other* situations, and by *other means* than those specified *in my said recited patent*"—viz., that of 1836, the only one recited. I again ask—What are the public, for whom these specifications are framed, to consider, but that this of 1841 was in reality the *second*, as being that which directly, and in the most precise terms, amended and improved the first—that of 1836? Nothing has been said of that of 1838, or of any other. And who can still say that *another intermediate* one may not be in existence, and that there may be, in fact, four, or even a greater number? But, after all, what matters it whether we call it the *second* or the *third*—the question is not altered by any such error?

As many of the observations in Mr. Hall's letter in the last *Mining Journal* (the 1st October) are directly answered by my second letter, inserted in the same Journal, I need not repeat them. I particularly refer, however, to two points in my last, viz., the justification of my statement as regards the failure of the *Star* locomotive, and which he had so flatly contradicted; and next, the circumstances connected with Mr. Hall's furnaces being permitted to be erected at the Manchester and Birmingham Railway. Mr. Buck's letter is sufficient on that head. Mr. Hall observes—"Our disputes are not of a scientific nature." I beg to tell him they are of no other nature, for as to any difference as to facts or dates, or the wording of his patents, these will soon regulate themselves. The questions really between us are scientific, and of real importance to the public as involving points of considerable interest, and of none other will I "dispute" with Mr. Hall; of these, however, in due time—our real dispute is only on the threshold. Mr. Hall says he never threatened me; will he be good enough to say what is meant by his Solicitor's two letters? I here, however, replied to Mr. Hall himself, and have allowed him to lithograph my reply, if he does not, perhaps I may. Mr. Hall speaks of my "foul aspersions on his character;" he knows I never wrote a line respecting him until, in self-defence, I replied to his abusive letter addressed to you, gentlemen. For the present,

I am, your obedient servant,
C. W. WILLIAMS.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride, Fleet-street, Middlesex.—Saturday, October 15, 1842.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 251. Vol. V.—No. 43.] SATURDAY, OCTOBER 22, 1842. [Price 6d.

MIDLAND COUNTIES' RAILWAY.—*To the Directors of the Midland Counties' Railway Company.*—Gentlemen,—We whose names are hereunto, and to four counterparts hereof of the same tenor and date subscribed, being proprietors of shares in the said Company, holding in the aggregate One Thousand Shares and upwards in the said undertaking, (upon which Shares all Calls actually made have been paid and satisfied), considering that it is needful and proper, for the permanent interests of the Company, and for the due and more economical conduct of their affairs, that full inquiry and examination should be forthwith instituted by a Committee of Shareholders not being Directors of the said Company (who should thereafter report their judgment and opinion to the Shareholders at large), with reference not only to the past, present, and probable future expenditure of the funds of the Company (both in capital and income account), but also with reference to the rates of fares and freights charged and proper to be charged by the Company, for the carriage of passengers and goods, and to their other sources of income (whether at present available to their full extent or not) and to the general management of the Company's affairs, do respectfully require you to call a Special General Meeting of the Proprietors of the said Company, for the purpose of considering and determining as to the appointment of such a Committee of Shareholders as aforesaid, for the purposes aforesaid, or any of them, and of coming to all needful and proper resolutions, making all needful and proper orders, and giving all needful and proper powers and authorities with reference thereto, and for the more effectually carrying out our views, opinions, and wishes, as herein expressed or referred to.

Dated this 13th day of October, 1842.

J. F. Bell, Esq., Secretary, Midland Counties' Railway, Leicester.

Sir,—Herewith you will receive a Requisition for a Special General Meeting of the Proprietors, to be laid before the Directors without delay.

In order to prevent the possibility of the great inconvenience to which the proprietors would be put if, when they met, they were prevented from coming to a decision on the important subjects involved in this Requisition, by some formal or technical objection to it, I have to request that the Directors will have the goodness, before convening the meeting, to ascertain from the Company's Law Clerk whether any such objection can be taken.

If it can, my duty to my brother Shareholders will require me to substitute for the present Requisition another which shall be free from objection, and undeniably formal and sufficient.

As to *the time* of the proposed meeting I need say nothing, feeling assured that the Directors will, equally with myself, see the expediency of obtaining at the earliest practicable and convenient moment, the decision of the Proprietors on the important points to be submitted to them.

As to *the place* of meeting, however, I venture to suggest, and respectfully to request, that, as Derby will be by far the most convenient place for the vast majority of the Proprietors, the Meeting may be held there.

I have the honour to be your obedient servant,

JAMES HEYWORTH.

Liverpool, 20th October, 1842.

TO RAILWAY AND OTHER PUBLIC COMPANIES.—The Advertiser, who has had considerable experience, and who for the last seven years has filled a most important and responsible post on one of the principal railways, is desirous of an engagement with a Railway or other Public Company, where business-like habits and a thorough knowledge of the routine of each branch of the office will be found advantageous.

Any Company in want of a practical man of business will find the Advertiser a great acquisition. No objection to go abroad.

Address, post free, to X. Y. D., *Railway Times* Office, Fleet-street, London.

IN A SHARE-BROKER'S OFFICE, IN THE NORTH OF ENGLAND, WANTED a Gentleman of active, business habits, who wishes to be initiated in the business of a Share Broker; to remain 6 or 12 months, as may be agreed upon. None but Principals need apply. Address, "Demidoff," *Railway Times* Office, London.

20th October, 1842.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For farther Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

LIVERPOOL AND MANCHESTER RAILWAY.—The Directors are prepared to receive proposals for the Loan of Money in sums of not less than £1,000, for a term of Five or Seven years at the present option of the lender. Application to be made to the Treasurer of the Company.

HENRY BOOTH, Treasurer.

Railway Office, Lime-street, Liverpool,
10th October, 1842.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,

ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,

JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—TO RAILWAY CONTRACTORS AND OTHERS.—The Directors of this Railway are ready to receive Tenders for the execution of the whole of the works necessary for the formation of that portion of their line extending from Rainton to Shincliffe, and the Branch to Durham, together about eight and a quarter miles, including the construction of Three Timber Viaducts over the Shincliffe, Sherburn, and Cassop Becks.

Plans, sections, and specifications of the works may be seen at the Office of the Company at the Railway Station, York, and at the Office of Mr. Thomas E. Harrison, South Shields, on and after Monday, the 24th of October instant. Sealed Tenders addressed to the Secretary must be delivered at the Company's Office at York on Wednesday, the 9th day of November, before One o'Clock. The Directors will meet at their Office, in York, on Thursday, the Tenth of November, at Twelve o'Clock at Noon, to let the Contracts, when parties who have previously sent in Tenders or persons duly authorised by them are requested to attend.

The Directors do not bind themselves to accept the Lowest Tenders.

GEORGE HUDSON, Chairman.

RUSSIAN STEEL IRON—C C N D.—The undersigned having been appointed sole Agents for the Messrs. de Demidoff, in England, the above Make of Iron can only be obtained through them, at

18, HIGH-STREET, HULL, and
29, AUSTIN FRIARS, LONDON.

At Liverpool, they have appointed Messrs. Carne and Telo; and at Bristol, Messrs. P. Maze and Son, their Agents.

The undersigned particularly request all buyers of the C C N D to make their purchases through them, or through their Agents, which will effectually put a stop to a fraud which is extensively practised by unprincipled parties selling a loose, roaky, inferior Iron, with a counterfeit mark of the C C N D, by which Manufacturers have been grossly imposed upon, and the old, favourite, genuine mark, unjustly discredited.

ANTHONY AND GRAHAM.

29, Austin Friars, 7th September, 1842.

LIABILITY OF RAILWAY COMPANIES FOR THE LUGGAGE OF PASSENGERS.

[From the *Glasgow Constitutional*, October 15].

Bryden v. *The Glasgow, Paisley, Kilmarnock, and Ayr Railway Company.*—The pursuer was a passenger from Paisley in one of the railway trains to Monkton on the 24th July last, and delivered to one of the Company's guards or servants, a box, containing wearing apparel, &c., and which had her name attached thereto. When the train arrived at Monkton the box could not be found; and it is still amissing. In these circumstances she raised an action before the Sheriff Court of Ayrshire, for the value of the contents of the box. The Company pleaded in defence:—1. A denial that the pursuer delivered to any of their servants the box in dispute. 2. That even though the luggage had been received by the defenders' servants, yet, as it was not booked and paid for by the pursuer, the defenders would not be responsible for its loss. In support of this plea, the defenders founded on the following clause in their bye-laws, which have received the sanction of the Board of Trade. The clause is in these terms:—"The charge made for passengers does not extend to luggage. The Company will not, in any case, be answerable for luggage, unless the passenger to whom the same belongs shall have booked and paid for it. On booking, a ticket will be given to the owner, and a corresponding ticket affixed to the luggage; and the luggage will only be delivered to the party producing such ticket. No charge will be made for luggage *bona fide* belonging to a passenger, and not exceeding 60 lbs. in weight; but a charge will be made of one penny per pound above that weight. The attention of passengers is directed to the legal notices exhibited in the booking-offices, and to clause 10 of the Company's Act of Incorporation, limiting the Company's responsibility for luggage or goods booked by any of their carriages."

In reply, the pursuer offered to prove—

1. That she was a passenger, and delivered her luggage to the defenders' servants.

2. That it is a general rule and practice with the defenders, that they will not allow travellers to take charge of, and look after, their luggage during the journey; that they will not allow passengers to take their luggage into the same carriage with themselves, so that each may look after his own; on the contrary, each passenger's luggage is handed in charge of the Company's servants and guards, who stow it upon a particular truck or carriage, which is under their eye during the journey, thereby taking from the passenger all opportunity of looking after his luggage, and taking upon themselves the entire charge of, and responsibility for, the same; and she pleaded that under the edict *nautæ caupones stabularii*, and at common law, the defenders were responsible for the due and safe conveyance of the luggage of passengers travelling by their railway, and liable for its loss; and that such responsibility was not limited by their Act of Incorporation or bye-laws. The record being closed, this interlocutor was pronounced:—

Ayr, 21st December, 1841.

The Sheriff-Substitute having considered this process, with the writings produced, before answer, allows the pursuer a proof of her averments that she was a passenger in one of the defenders' railway carriages at the time libelled, and that she gave in charge to one of the defenders' servants or guards, at the Paisley station-house, the box libelled, and which went amissing; allows her also a proof of her averments (replies page 18) as to the way and manner passengers' luggage is attended to by the defenders' servants along the line; allows the defenders a conjunct reprobation; assigns ——— for the proof, and grants diligence against witnesses and havers.

(Signed) WILL. EATON.

The defenders lodged a reclaiming petition, the desire of which was refused; and having appealed the case for the opinion of the Sheriff, he, on the 8th February last, adhered to his Substitute's interlocutor, adding the following note:—

Note.—It appears to the Sheriff that, although the separate points to be proved might have been more articulately stated, yet the proof allowed will, in all probability, sufficiently bring out the important question of law involved in the case. With regard to the nature and value of the *luggage amissing*, and the evidence to be brought thereupon, the Sheriff at present gives no opinion on the modifications of the common law, alleged to have been introduced by sections 164 and 187 of the Railway Act. But he considers the rule of common law formerly in use, in regard to public conveyances, carriers, innkeepers, &c., to have been this:—That every traveller is presumed to carry with him a reasonable stock of clothes and other necessaries, for which amount only the *conveyers* shall be liable in case of loss. But for all beyond this, or for articles of unusual value, they shall not be liable, unless the party has disclosed the fact, and they have consented to take the luggage on a higher or insurance *premium*. This makes the actual proof of the articles amissing a matter of less consequence; and, indeed, as few persons call witnesses to the packing of their trunks, it would be unreasonable to insist on *legal proof* of every particular article carried. A statement, however, of their nature and value will of course be required, with perhaps (if demanded) the party's oath *in litem*. The Sheriff will not at present enter into the particulars of the list of articles lost (No. 3 of process) as it may become a subject of future discussion. The above principles were recognized in the case 6th February, 1787, Macausland *v.* Dick, &c. In a subsequent case, a view apparently somewhat different was taken; but the case was attended with specialities, and gave rise to great difference of opinion on the bench, 21st June, 1810, Williamson *v.* White. In this last case, the party's oath *in litem* was admitted, as to value; as it was in the after case, 15th February, 1825, Blain *v.* Sinclair. There was another noted case where similar views were taken, although the Sheriff cannot find it in the printed Reports, that of Lord Cockburn (then at the bar) *v.* the Proprietors of a Coach from Inverness to Edinburgh. His trunk was lost, containing (besides clothes, &c.) the sum of 50 guineas. He brought an action for recovery of the amount, but the Court held that no notice of the money having been given at the coach office, nor an insurance premium paid, the proprietors were not liable. As this case involves an important principle of law, the Sheriff-Substitute, after the proof is concluded, will probably allow a full argument in the shape of mutual memorials, or otherwise.

A proof having been led by both parties, and on which they were allowed to lodge minutes, the cause came to be advised by the Sheriff-Substitute, who pronounced the following judgment:—

Ayr, 26th July, 1842.

The Sheriff-Substitute having considered this process, with the writings produced, proof adduced, and debate thereon, finds it proved that the pursuer was a passenger on the defenders' railway from Paisley to Monkton on the day libelled; finds it also proved that she had a box or package, which was given in charge to one of the defenders' servants, and was by him placed on a truck, along with luggage belonging to the two witnesses M'Lachlie and Ninian; finds that on her arrival at Monkton the pursuer did not get delivery of said box or package, and that the same has gone amissing while under the charge of the defenders' servants; finds, in point of law, that a passenger in a railway carriage or other public conveyance is entitled to carry a reasonable stock of clothes and other necessaries, without booking the same or paying any extra carriage therefor, and that if the same be lost or go amissing through the carelessness or negligence of the servants of the proprietors of such conveyance, the proprietors are liable for the value. Therefore repels the defences urged by the defenders as to their non-liability for the pursuer's box; and before further advising, allows the pursuer to give her oath *in litem* as to the contents of the box and the value of the articles therein; but reserves to the Court to give decree for such part of the articles as it may consider reasonable and suitable for the pursuer's station in life. Finds the defenders liable in the expenses of process, allows an account thereof to be lodged, and thereafter remits the same to the auditor to tax and Report.

(Signed) WILL. EATON.

The defenders having brought the above interlocutor under review of the Sheriff, he pronounced the following judgment:—

Ayr, 12th September, 1842.

The Sheriff having considered this process, adheres to the interlocutor complained of.

(Signed) A. BELL.

Note.—This case is of little importance in a pecuniary amount, but of much in the ascertainment of a principle. The system of travelling by railway bids fair speedily to supersede all other modes of conveyance, and to absorb the whole travelling in the country. It is therefore of great moment that the principles on which it is to be regulated should be fixed by courts of law, and made known to the public.

The Sheriff, in a note to his interlocutor of 8th February, 1842, has stated what he conceives to have been the rule of law as to liability for luggage under the former system of travelling by public coaches. He will now add that he sees no reason for holding that any change has taken place on that principle of responsibility in the case of railways; nor is he satisfied that any change was either intended or effected by sections 164 or 187 of the present Railway Act. The defenders, indeed, scarcely seem to dispute the doctrines borrowed from the Roman law, under the edict "*nautæ caupones stabularii*;" but the main ground of their defence is a regulation or bye-law, made by themselves, that all luggage must be *booked*—if beyond a certain weight, *paid for*—but at all events *booked*, a ticket with a number placed on the luggage, a corresponding ticket given to the passengers; and unless all this ceremony be gone through, it is maintained that the Company will not be liable for the luggage.

Now, under the old coach system, all this was equally attempted—warnings were posted up in every coach office that the proprietors would not be answerable beyond 5*l.*, &c. All these warnings were disregarded by courts of law, and the equitable rule established that coach proprietors should be liable for a reasonable amount of travelling equipment.

But the above warnings were at least well known to the world. How stands the case with this Railway Company? The Sheriff has often travelled by this line, and till he saw the intimation in these papers, he never heard of the plan of booking and ticketing; nor does he believe that fifty persons in Scotland ever heard of it, beyond the defenders and their servants—nay, it is negatived by the whole evidence in this case, including that of the Company's own servants. The plan of ticketing, when well conducted, is an excellent one, and has been carried into effect on the Continent, particularly in Belgium (as the Sheriff is informed,) with an accuracy and regularity highly praiseworthy. But here it is not only not carried into effect, but it is simply impossible that it can be so, as matters are conducted.

The Sheriff lately came from Edinburgh to Ayr by the railway. On arriving at the Edinburgh terminus, in their own omnibus, before he could get out of the carriage, his luggage (consisting of a portmanteau, trunk, and carpet bag, both legibly addressed), were seized on—he knows not by whom—and slid down an inclined plane to the floor below, while he had still to take out his seat ticket. On getting down, his luggage had disappeared; and all the satisfaction he could receive was from a porter hurrying past, that it would probably be in the baggage-waggon in front, and that all would be safe. With this comfortable assurance, he was obliged to take his seat in a coach, and was conveyed to Glasgow. Under such a system, to talk of booking, giving corresponding tickets, &c., appears something very like a burlesque and a mockery. The Company make bye-laws, which the system adopted in

Digitized by Google

their own establishment makes it impossible to observe.

On arriving at Glasgow, he hurried to the foresaid baggage-waggon, where he stood watching, about a quarter of an hour, while all sorts of luggage were hoisted out, in the utmost confusion; and at last recovered his two articles, which were stowed at a distance from each other, and buried under a mass of bulky boxes. Had he been less active and vigilant, he probably might have lost one or both of them; and if such was his case, what must be that of ignorant persons, young persons, or females. The wonder is, under such a system, not that loss occurs occasionally, but that it does not occur every day. At the Ayr Railway terminus at Glasgow things were not quite so bad as at Edinburgh; but still there was great hurry, confusion and want of arrangement—and any system of booking and ticketing equally impracticable; and this the Sheriff has always experienced at the same place, whether coming or going. In these circumstances, and until this system is amended, the responsibility of the proprietors for luggage, so far from being relaxed, must be enforced more strictly than ever.

The Company allege that the pursuer has not brought sufficient proof of the existence and quality of her luggage. The Sheriff is only surprised that she has been able to bring so much. Indeed, travellers have so little means or opportunity of bringing such proof that Courts must proceed much on the ordinary probabilities of the case, and very generally allow the oath *in litem*.

The Sheriff having thus freely expressed his opinion of the erroneous system as to luggage, has much pleasure in contrasting it with the whole other details of the establishment, as to which he must give unqualified praise. The transit from Edinburgh to Ayr is easy, commodious, and agreeable—the servants of both Companies intelligent, attentive, and obliging. As to the Ayr and Glasgow Railway in particular, it requires only to be stated that, having now been open above three years, not one accident or casualty has happened fairly imputable to the fault of the conductors, or to the general system of railway travelling. This shows what may be effected by judicious management and the choice of good servants.

Rob. Robertson, writer, Ayr, agent for the pursuer; H. Reid, writer, Ayr, and Bannatynes and Kirkwood, writers, Glasgow, agents for the defenders.

EDINBURGH AND GLASGOW RAILWAY. THE LATE DECISION.

[From the *Scotch Reformers' Gazette*, Oct. 11.]

ALTHOUGH we are warm friends of the Edinburgh and Glasgow Railway Company, we cannot overlook a gross and glaring decision in a case of theirs which occurred before Mr. Sheriff Skene last week, and the particulars of which were slightly noticed by us last Saturday. But the public interests seem to require that very special notice should be taken of it now.

The material facts of the case are these: Mr. David Murray, a most respectable citizen, applied for and procured, on *Monday*, at the Railway Company's office, *four* tickets to enable him and some friends to proceed to Stirling, *via* Castlecary, on the following morning (*Tuesday*) at 6 o'clock, to witness the Queen's entrance into Stirling on that memorable occasion. The Railway Company had advertised that a "special train" for the above purpose would start at the hour specified from Glasgow. So anxious were Mr. Murray and his friends to avail themselves of it, that, as already stated, they applied for and *secured* their tickets on the day previous. Accordingly Mr. Murray and his friends proceeded to the railway station for the purpose of taking possession of the seats for which the tickets had thus been *sold* to them, and *paid* for by them; and this they did as early as 10 minutes *before* 6 o'clock on the Tuesday morning. But they had the mortification to find the doors of the railway office already barricaded against them; they knocked in vain for admission; but after some difficulty and trouble, they procured an entrance to the railway station through some new buildings in an opposite direction.

Now if the case had stood at *this* point, we should have no hesitation whatever in saying, and so we are sure would every sound lawyer or man of common sense, that beyond all question Mr. Murray and his friends were entitled to *reparation* from the Railway Company. Besides, by selling the tickets and taking the money from Mr. Murray, they manifestly came under a contract or *agreement* to carry him at 6 o'clock in the morning, by their railway, to the place specified; and it was enough for Mr. Murray to show that he was denied access to the railway station, he being ready with his friends to take their seats *prior* to the hour fixed for starting. We say, if the case had stood at this point, Mr. Murray and his friends were well entitled to turn round and hire the first post-chaise or mode of conveyance they could get to Stirling, and charge the Railway Company for the whole expense; and we say further, that the Railway Company or its officers, if they did not make an apology to Mr. Murray, should have been well contented to have been let off in such a manner.

But having got into the station, Mr. Murray and his friends found, that after all their squeezing and trouble, every railway carriage was already occupied—that not a single seat could be found—such was the pressure of passengers that morning; and after witnessing the departure of the train, and complaining bitterly (as he had a right to do) of the disappointment, it is stated that he received nothing but *insolence* from some of the Company's servants, who actually *refused* to allow him or his friends to leave the station for nearly half an hour. This, therefore, we say was a great *aggravation* of the non-fulfilment of the contract; and it was impossible for Mr. Murray, or any man of spirit, to allow the Railway Company to take his money, and then literally to mock him. Accordingly he hired a post chaise, and *prosecuted* the Railway Company through their Secretary for the expense of it, being 2*l.* 17*s.* 3*d.* before the Sheriff in the Small Debt Court.

The case was heard before Mr. Sheriff-Substitute Skene on Thursday week. Mr. Murray *proved* the above facts by *three* unimpeachable witnesses. The evidence of one of his witnesses, viz., Mr. W. F. Kirkland, was most decisive. He was not connected with Mr. Murray's party at all. He was therefore a most impartial witness, and he swore distinctly that, being also desirous of getting to Stirling, he anxiously examined every one of the railway carriages before they started at 6 o'clock in the morning, and that not a single seat could be procured for Mr. Murray or his party, and that this witness was actually obliged to allow his own sister to go to Stirling without accompanying her as he intended. In opposition to this evidence the Railway Company brought forward—not any *disinterested* witnesses, but their own servants—the accused parties—who swore certainly that there was room in the carriages plenty, if Mr. Murray and his friends had chosen to occupy them! One of these witnesses, a guard, swore that there were seven or eight empty seats in different first-class carriages *forward*, but that the carriage *last* attached was perfectly full. The other guard could say nothing as to the *forward* carriages, but swore that there were three empty seats in the *last* carriage. And on this latter description of contradictory evidence the learned Sheriff-Substitute (Skene) *dismissed* the case, and assoilzied the Railway Company.

Now, any one with half an eye in his head, might see that the weight of the evidence—the *truth* of the case—was wholly with the pursuer. For is it credible that Mr. Murray would allow himself to be jostled at the railway station, anxious to get forward on such an occasion—securing his tickets, as we have said, on the day preceding, for the express purpose of getting forward—and yet, after all, that he would allow the railway train to move off, if there was really plenty of room in it for himself and party, as alleged by the railway servants?

The evidence, we say, of the railway servants is not credible, in comparison with that of the clear and positive testimony of Mr. Kirkland and the other witnesses. And we publish this case for the purpose of letting the Railway Company know that although they have obtained a most extraordinary decision in their favour, they would very soon knock their Company on the head if they presumed to treat all their customers in the manner they have done Mr. David Murray, who, we hope, will take some method or other of getting this wild judgment of Mr. Sheriff-Substitute Skene reversed or altered. But if the lieges are to have no redress in such cases, when they appeal to the competent tribunals of the country, it may be time to have those tribunals themselves overhauled, or their decisions at least prominently noticed. We wonder what Mr. Sheriff Skene himself would have said, or how he would have acted, had he been in Mr. Murray's place on the morning referred to?

We (*R. T.*) erroneously quoted our report of last week from the *Glasgow Chronicle*; it should have been from the *Glasgow Argus*. We have received a copy of the report sent in by the station-clerk of whom we made mention last week; it is as follows:—

Glasgow Station, 15th September, 1842.

SIR,—In reply to some statements respecting my conduct on Tuesday morning last, I beg to submit the following:—

Two gentlemen came to me in the midst of the bustle on Tuesday morning, the 13th inst., and told me that they could not get seats in the train just gone (20 minutes past 6 o'clock) and that they intended taking a chaise to Stirling. I said I could not help it, that they would get seats by the next train. Something was then said by one of the gentlemen, which in the hurry I could not distinctly hear. I thought he said, we cannot wait. I then told him that they must just do as they chose. The gentlemen then went away, but in a short time returned to tell me that they could not get out, and desired me to order some of the porters to let them out; I replied that I could not leave my box; that all the porters were engaged; and that they might apply to Mr. Stewart. They told me that Mr. Stewart was away to Castlecarey, which I learned for the first time. I then repeated that they would get per next train. They told me they cared nothing about that, all they wanted was to get out. I then said I could not help them. The gentleman mentions that I was *very insolent*. From the interruption they caused to the business I spoke rapidly, but neither angrily nor insolently.

I am, Sir, yours, respectfully,

(Signed) JOHN PARSELL.

H. G. Wright, Esq.

PLYMOUTH AND EXETER RAILWAY.

THE following letter has been sent to us, as having appeared in the *West Briton* of last week. We do not usually see that journal, otherwise we should have re-published the letter in our last week's number:—

SIR,—Your correspondent, "An Engineer," affords one more verification of the old observation, "that two of a trade can seldom agree;" and I am not without hope that by this little falling out of Engineers, the public will detect the fallacies, if there be any, in Mr. M'Neill's Report; but it does seem rather hasty in your correspondent to call statements fallacies which he admits may, after full explanation, turn out to be no fallacies at all.

I, however, must leave hostile Engineers to expose each other's fallacies, and though their hostilities may result in damaging their own craft, the public will nevertheless be benefitted by having all their calculations and estimates thoroughly tested. And in order to save the credulous people of Plymouth, and the public generally, from investing their money in what might prove a deceptive scheme, let your zealous, and apparently prudent and cautious, correspondent come up from Redruth to Plymouth and examine Mr. M'Neill's entire Report for himself. Let him take off his eyes

Digitized by Google

from the back-bone of Cornwall, Brown Willey, Blisland, and Alternun Moors, and let him contemplate singly for awhile the beautiful countries of south and east Cornwall and south Devon, with their excellent roads and teeming and busy population. If this do not satisfy him, let him go up and down the roads from Plymouth to Exeter, and if he is an Engineer really in earnest to afford facilities for speedy and safe travelling, it will do his heart good to see the traffic moving up and down there—keeping in view, at the same time, the line traced out for the display of engineering talent and skill.

The Engineers who have been so unceremoniously attacked will defend themselves when and how they may deem most fitting, or they may not notice anonymous attacks at all; but I gladly avail myself of this opportunity to clear myself from even an anonymous charge of being mainly instrumental in furnishing materials for a fallacious statement, so called. I am not only willing, but anxious, that it should be made known most extensively, that the traffic on the several roads between Plymouth and Exeter was noted down in books provided for the purpose, and from actual observation. The persons employed were ordered to note down every person and thing that could be considered traffic, and nothing else, and I believe the order was strictly obeyed; so that as regards the southern roads, there could have been no fallacy, no deception in taking the traffic. And as regards the Dartmoor line, it must be obvious to any one who reflects on the subject, that to the actual traffic on the line must be added the *through* traffic from Plymouth to Exeter, and *vice versa*. This could not be ascertained accurately, it may be a little over or under stated; but this I can say, that two others, equally desirous as myself to state it fairly, calculated it as nearly as could be done from the book entries. This calculation, while it does not pretend to strict accuracy, would be found, on the closest examination, to be a pretty near approximation; and who would claim more than this for any estimate? At any rate, Tavistock people have said that they consider the thorough traffic underrated, and some in Plymouth think so too. I can only say, that if there be a fallacy, there was no intention to deceive. And for my part, my predilection is strong for a southern line. Plenty of people are living there already, and of a locomotive disposition; but on the north, tens of thousands must be created, or, at least, located; and it is only by slow degrees that a mere pastoral population acquires habits of travelling. I have now, I hope, pretty clearly shown that what "An Engineer" calls "Fallacy 3rd," is no fallacy at all.

It should be borne in mind, that whenever the railway is constructed, the *thorough* traffic, *i. e.*, all the traffic directly to and from Plymouth and Exeter, will be taken over it. The intermediate or local traffic must depend upon the population of the districts through which it passes.

As "An Engineer" identifies himself with the Cornish line, calling it "our Cornish line," it may be useful to the public to know how the traffic was calculated on that line. I could never learn that it was done by actual observation, by placing persons on the road; but I did hear incidentally, that inquiries were made at one little town near the Moor where I happened to be, as to the number of vehicles that were kept in the place, and by these easy but doubtful means, the traffic was guessed at somewhat lumpingly. This is all that I know in the matter. If it was otherwise, and how, I dare say "An Engineer" can tell, *if he will*; and I am sure the public *ought to be told*, when other eminent Engineers are charged broadly and hastily with practising the most deceptive fallacies.

I would just observe, in conclusion, that if an Engineer can point out how traffic and cost of construction can be so estimated as to preclude the possibility of deception or mistake, and also how Engineers can be so controlled as to limit their expenditure by their estimates, he might confer an immense benefit on all those who may hereafter invest capital in railway speculations. One word more, I do earnestly wish that he may closely and rigidly investigate all the statements and the calculations, and the data on which they are based, in Mr. M'Neill's Report, because I abhor deceiving, as much as I dread being deceived.

Trusting to your candour for the insertion of this in your next impression, I am, Sir, your obedient servant, R. COLE.

Plymouth, October 1, 1842.

NORTH MIDLAND RAILWAY.

REPORT of the Committee appointed for the purpose of examining the position and future management of the North Midland Railway Company, with a view to increase the prosperity of the undertaking.

Your Committee have not considered it within their province to go back into any inquiry as to the excessive expenditure in the original formation of the North Midland Railway and its stations, which would lead to no beneficial result; they have, therefore, confined their attention to three points:—

1st. The unsettled liabilities of the Company.

2nd. The present scale of expenditure.

3rd. The future improvement of the revenue.

Your Committee regret to find that eight contracts for the construction of parts of the line are still open; and, although an engineer with an expensive establishment is maintained, little progress has been made in this department, only one contract having been closed since the 19th of January last. There are disputed accounts with the Manchester and Leeds, the Birmingham and Derby, and the Midland Counties' Railway Companies, which the Committee are of opinion ought to be brought to an immediate settlement.

In the scale of annual expenditure, your Committee recommend the following reductions and alterations:—

That the Superintendent's office, as at present conducted, be discontinued, and that the duties be transferred to the Secretary, who shall be a person of practical knowledge and experience in railway management, with a salary of 500*l.* per annum. That the Audit, Accountant, and Transfer Offices be concentrated under the Auditor, who is responsible to the Secretary; and that 700*l.* per annum be allowed for this department, including the Secretary's assistant. By this arrangement, an amount of saving will be effected of 1,347*l.* 4*s.*

The coaching department, which consists of a manager, clerks, and porters, having the care of all the stations on the line, is conducted at present at an expense of 15,306*l.* 16*s.* Your Committee have carefully examined the expenditure of this department, and they think it may be reduced to 10,608*l.*, thus effecting a saving of 4,698*l.* 16*s.*

In the carrying department the expenditure amounts to 3,602*l.* 0*s.* Your Committee have conferred with Mr. Robins, the newly-appointed Manager of the goods' traffic. They have stated to him their opinions as to the more economical management of this part of the Company's business, and they hope he will be enabled to carry out their views for the benefit of the Company.

Your Committee think that the stores' department has been conducted on too extensive a scale, and recommend that the whole expense of management, including stationary clerk, shall not exceed 300*l.* per annum, and that the stock on hand be kept lower than at present, to avoid loss by interest and deterioration. The saving proposed by your Committee in wages and salaries will be 619*l.* 16*s.*

Your Committee are of opinion that the engineering expenses are much too heavy, and as they have recommended the disputed accounts to be closed immediately, they consider that the total expenses in this department may be reduced to 800*l.* per annum.

They also think that Mr. Swanwick's office ought to be removed to the Derby station.

The saving will be 1,597*l.* 14.

The largest amount of saving your Committee are enabled to recommend is in the locomotive and carriage establishment, in number of servants, salaries and wages, amounting to nearly 10,000*l.* per annum. This reduction is proposed on the understanding that the road shall be kept in complete repair.

Your Committee have communicated generally with the officers and heads of the several departments, and they find that the most intelligent servants of the Company admit the practicability of the proposed reductions.

The attention of your Committee has been particularly drawn to the very heavy charge per mile for maintenance of way. The contract for the southern portion remains still unexecuted, which may bring the Company into dispute with the contractor.

The Committee think the road is not in so good a state of repair as it was when the present contractor took charge of it. They strongly urge the propriety of requiring Mr. Swanwick, his assistant and overlookers, to exercise increased vigilance in compelling the contractor to keep the road in the best possible state.

It is due to the Directors to mention that some of the reductions included in the recommendations of your Committee have already been adopted; but your Committee are unable to state their amount. For the basis of their examination and comparison, they have taken the list furnished to them of the establishment as it stood on the 10th of August, 1842.

Your Committee recommend that the Company's stock of surplus carriages shall be placed in some of their present extensive buildings, to protect them from the weather, and that the expense of another shed for the purpose be not incurred.

Your Committee have refrained from inquiry into the consumption of coke and other stores, as well as many other items of expense, but they confidently expect that considerable reductions will be effected if their recommendations be carefully carried out.

With a view to an increase of revenue, the Committee recommend a reconsideration of the passengers' fares, and of the rates paid by carriers for the conveyance of goods.

Much remains to be done in the management of the goods' traffic.

In conclusion, your Committee feel bound to state, that it is with much pain they recommend the adoption of measures involving the dismissal of a large number of the Company's servants, but their duty to the shareholders leaves them no alternative. A statement of the proposed reductions is subjoined; and although the amount must appear large, your Committee believe they may be carried out without prejudice to the efficient management of the business of the Company.

Leeds, September, 20, 1842.

Statement, referred to in the Report, of Amount of Reductions proposed by the Committee.

	Amount per list, Aug. 10, 1842.	Proposed.	Reduction.
	£ s. d.	£ s.	£ s. d.
The Secretary's offices	1,948 0 0	1,200 0	1,347 4 0
The Superintendent's office	591 4 0		
Engineering department	2,597 14 0	800 0	1,797 14 0
Stores' department	919 16 0	300 0	619 16 0
Coaching department	15,306 16 0	10,608 0	4,698 16 0
Locomotive power and carriage department	12,433 13 9	9,013 18	9,824 15 9
Total	30,616 3 9	22,821 18	17,788 5 9

THE ROAD *v.* THE RAIL.—We beg to call attention to an advertisement in another column, announcing that the *Taglioni* fast coach still continues to run successfully between this city and Birmingham, despite the powerful opposition offered by the railway, and that *at fares considerably lower than those by the latter.—Worcester Chronicle.*

[How is this?—ED. R. T.]

GREAT WESTERN RAILWAY—THE BOX TUNNEL.

THE substance of the following Report has more than once been noticed in our pages, but with a view to future reference we now give it entire :—

"Bath, August 12, 1842.

"My Lord,—According to your desire I yesterday inspected the whole of the Box tunnel with great attention, accompanied by Mr. Merchant, an Assistant Engineer under Mr. Brunel, who provided workmen with ladders, torches, and tools, as I had requested, and by Mr. Brewer, one of the most experienced quarry proprietors in this neighbourhood, who executed as contractor all that part of the tunnel which has been cut out of the Bath freestone, geologically termed the great oolite formation, which it was not deemed necessary to secure by masonry or brickwork.

"The Box tunnel has been laid out with a gradient of 1 foot in 100, ascending from west to east, but the natural strata of the oolite dip longitudinally at about the same inclination in a contrary direction, whilst transversely they are very nearly horizontal, the south side being perhaps a little lower than the other. The thickness of the strata varies from about 2½ to 4 feet and upwards. These are intersected by vertical fissures, of such moderate width as can scarcely be appreciated, but of considerable height, generally at right angles or transverse, but in some few cases oblique in reference to the line of the tunnel.

"At its eastern entrance, a small portion of the Box tunnel has been arched over and lined with masonry; after which, for about half a mile in length, the natural rock has been considered sufficiently strong, without masonry or brickwork, and whilst the extreme width of this portion of the tunnel is about 30 feet, the height varies from about 30 to 40 feet. I examined all the vertical fissures that appeared suspicious, going up by a ladder, and striking the rock on each side of them with a hammer, or iron rod, and as it everywhere emitted a clear sharp sound I consider it to be sufficiently solid; a hollow dull sound being the symptom of danger. The sides of the tunnel are cut in the form of an oblong elliptical, or nearly a Gothic arch, but the uppermost bed of the oolite has not been completed in that form, but left horizontal for 2 or 3 feet in width; and, in consequence of the line of the tunnel and the inclination of the strata intersecting each other, as above described, this upper part of the tunnel has been cut in the form of steps, in order to get rid of the thin wedge-shaped form of those parts, in which each successive stratum would have terminated if the tunnel had been made of uniform section throughout, which portions would of course have been weak, and liable to exfoliate. The cause of varying the height of this part of the tunnel as before mentioned was to avoid finishing in any lower stratum of a doubtful nature, which in the sides might be perfectly strong, but not so trustworthy in the roof.

"From the description which I have given it will be understood, that the upper strata of the oolite being supported by those below them, beyond which they each successively project in a moderate degree, like corbels in architecture, the whole enter into that sort of combination which has the strength of an arch without its form, provided that the vertical fissures do not cut through them longitudinally, of which I could not see any symptom; but, as I said before, there were a number of transverse fissures, which can evidently do no harm; whilst the oblique ones, less satisfactory than the latter, are by no means so dangerous as the former might be.

"In order to judge more accurately of the great oolite formation in the Box tunnel, I next proceeded to examine three several quarries of that stone in the same hill; first the lower hill quarry, of considerable extent underground, which we explored by lights. The roof has been everywhere left flat and nearly horizontal, according to the natural level of the strata. The distance between the sides of the excavation, or between square pillars left here and there to support it, varies from about 10 to 20 feet across, and to as much as 29 feet if measured diagonally. There are vertical fissures of considerable height in the spaces alluded to, but Mr. Brewer, who is an elderly man, born in the neighbourhood, assured me that those parts which I have examined in company with him have remained in the same state ever since he can remember. I afterwards examined Mr. Skell's quarry, in which there were men at work, and I observed in one part of the flat roof a fragment of stone about 15 feet long by 5 feet in width, surrounded by an irregular vertical crack, entirely unsupported by the sides of the excavation, which were about 8 feet apart. Afterwards I examined the Boxfield quarry, at the summit of the hill, which is now worked by Mr. Brewer to the depth of about 100 feet, into which the workmen descend, and the stone is raised by means of several shafts, two of which are very near to each other; and all round, as well as between these two shafts, the flat roof of the quarry is intersected by a complete network of vertical cracks, cutting through the horizontal strata in a manner that to an observer unacquainted with the nature of this rock would appear extremely dangerous, as the portions of the roof bounded by these fissures have no apparent support; and I should not like to see the roof of a tunnel is such a state. Mr. Brewer declares that they have remained in this condition for the last 20 years; and it is certain that there are men constantly at work at the bottom of this quarry—who can, of course, have no apprehension as to their own personal safety.

"I am, therefore, of opinion that the portion of the Box tunnel which has been excavated through the great oolite, having the form of an elliptic or Gothic arch, is much stronger and safer than the flat roofs of any of the quarries; and taking into consideration that the latter have stood for years, though intersected by a network of vertical cracks, from which the tunnel is free, I sincerely believe that that portion of the tunnel which is unprotected by masonry or brickwork is perfectly strong and safe, and that any opinion to the contrary must have been hastily formed, without that minute and accurate examination and comparison of the said portion of the tunnel with the adjacent quarries of the same sort of stone in the same hill, which I thought it my duty to make.

"In respect to the supposed injurious action of the concussion of the air produced by locomotive engines in passing through this tunnel, which has been held out as likely to endanger the safety of the passengers in the unarched parts of it, I beg to state, that during the time that I was examining the Box tunnel, which occupied several hours, two passenger trains and one luggage train passed, and in order to ascertain their effect I stood within 3 or 4 feet of them whilst passing, without the smallest personal inconvenience, though they were much nearer to me than to any part of the rock above them. The passenger trains produced a moderate breeze of wind, the luggage train rather a stronger breeze in passing, but neither capable of having any effect on the roof of the tunnel, for I think it will be admitted, that any power capable of throwing down a stone or mass of rock from the roof, at a certain distance, would with great ease have thrown down a man standing at a smaller distance.

"The remainder of the Box tunnel, passing through fuller's-earth and clay below the great oolite formation in its centre, and afterwards through the inferior oolite towards its western extremity, has been arched over with brickwork, complete throughout its whole extent, varying in thickness from four to seven concentric rings of that material, and as much as nine at the western entrance, and in every part, except where the oolite formed the foundation or bottom of the tunnel, an inverted arch has been introduced. In some parts a portion of the side walls have been formed of the inferior oolite unprotected by brickwork, but no part of the roof has been formed of this substance, in which Mr. Brunel and his assistants placed little confidence.

"Upon the whole, I consider that the Box tunnel has been constructed with great judgment, and that it would have been a useless and prodigal expense to have introduced brick arches in those parts of it which are cut out of the great oolite rock. This formation may, perhaps, greatly vary in quality in different parts of England or of the world; but that which is intersected by the Box tunnel requires no support. Small exfoliations may or may not take place in winter; but as all tunnels, deep cuttings, and high embankments, are carefully watched on well regulated railways, no risk to the safety of passenger trains can be apprehended from such exfoliations.

"I examined also with great attention the brickwork and masonry of the other parts of the Box tunnel, which are of good materials and well executed, all the brickwork having been built with bluelias lime mortar of excellent quality; but though this mortar is in common use, and approved by civil engineers, I must confess that I would myself have preferred cement for those small portions of the brickwork which are generally in a damp or wet state, and from which stalactites or a coating of dissolved lime are to be seen on the surface. In some very small portions of the side walls I found that common lime mortar of inferior quality had been used, but this occurred in parts only of a very secondary importance.

"I have the honour to be, my Lord, your Lordship's most obedient humble servant,

"C. W. PASLEY, Major-General, Ins.Gen.R.,

"To the Right Honourable the Earl of Ripon."

RAILWAYS AND THEIR MANAGEMENT.

IN our description last week of the modes in which the enormous sum of 70,000,000*l.* had been expended on railways, we omitted to refer to tunnelling. Now this is clearly a mining operation, and although represented by railway engineers to be work of most extraordinary difficulty, there is in fact none whatever beyond those usually encountered in mining operations; and it is, consequently, as capable of control under the management of experienced miners, whose wages are less than half the sum per week paid per day to the chargeable engineers employed; in fact, for want of practical experience in mining operations, these are the very last persons we should employ for such a purpose. The extravagant cost of all works of the kind undertaken by these men, and the failure of some, prove the correctness of our opinions.

Having thus given the public some idea of the sort of persons they are dealing with in railway management, in the construction of the works, we will just give a brief account of some of the charges after the railways are ready for use. One of the first is the locomotive engines, for which the shareholders are charged little short of 2,000*l.* each, which is more than double their value, if calculated at the cost of materials and workmanship, allowing the highest rate of wages and the largest remunerative profit. Then comes a charge for maintenance of way, but in plain English, surface repairs; and, by way of example, we will just take the Southampton line, one in very good repute with the shareholders, yet the charge for the maintenance of way in which amounts to the enormous sum of 24,000*l.*, which are annually deducted from the shareholders' funds, under a contract for 10 years; whereas, if the Directors had competent persons in their establishment, or if the contract had been made after giving public notice for tenders, the cost to the Company would not be 5,000*l.* per annum. Here, then, is a clear sacrifice, on the part of the public and the shareholders, to the extent of nearly 20,000*l.* yearly, by payment of a higher rate of fares, and reduced interest for the capital invested. The same proportion of overcharge will be found in most other charges to the shareholders, and there cannot be the least doubt that out of the four millions annually received from railway traffic, the shareholders and the public are mulcted of considerably more than half a million, without the means of protecting themselves, except through the Government Railway Board, which should have unlimited powers to establish economy and safety in railway management.—*John Bull.*

CLARENCE RAILWAY.

We stated in the *Gateshead Observer*, a week or two ago, that the Exchequer Loan Commissioners had taken possession of the Clarence Railway, in this county; and the reader will have seen, in our advertising columns, an announcement of the intended sale of the line by auction. The Company being thus threatened with the loss of its property, measures have been taken by some of the larger and more energetic shareholders, with a view to arrest the public sale, and retain (or rather recover) possession of the railway.

The proprietors have held two meetings—one in London, on the 12th instant; and the other in the Town Hall, Stockton, on the 15th. Henry Vansittart, Esq., presided at the latter meeting. The attendance of shareholders was large. There were three gentlemen present from the south, viz.—Henry Blanshard, Esq., George William Rowley, Esq., and (we believe) William Ambrose Shaw, Esq.; also Mr. Farquhar, the Company's Solicitor. Among the north-country shareholders in attendance were—Messrs. Rayson, T. Richmond, C. Wigham, A. Landers, W. Skinner, jun., T. & R. Walker, R. Dickson, G. Swan, C. Lodge, R. Pulman, John Langley, R. W. Jackson, John Stagg, T. Jennett, Andrew Brown, William Sleigh, Mark Ryder, Robert Appleby (Wolviston), R. Ableson (Gainford), F. S. Stokes, John Page, Charles Barrett, Richard Ord, and M. Best.

Mr. Rowley, who has a large stake in the railway, was the principal speaker.

The following facts came before the meeting:—The money advanced upon the line by the Government, with interest, amounted to 155,000*l.*; and 80,000*l.* must be raised on or before the 1st November, to discharge so much of the debt as to prevent the sale. The propriety of making this effort was advocated on the following grounds:—The income of the railway had been steadily advancing for several years past. Take, for instance, the last three years:—

Gross receipt in 1840	£18,995	
Expenses, exclusive of interest, about	14,000	
Surplus		£4,995
Gross receipt in 1841	22,940	
Expenses, exclusive of interest, about	15,000	
Surplus		7,940
Gross receipt in 1842, to Sept 30	19,600	
Estimated do., remaining quarter	8,000	
	27,600	
Expenses (excluding interest) to Sept. 30	£11,600	
Estimated do., remaining quarter	3,900	
	15,500	
Surplus		12,100
Total		£25,035

This surplus had been applied in completing and perfecting the railway, and in discharging the floating debt that had been incurred for the same purpose; and at the end of the present year the affairs of the Company, if carried on, would be free from all floating debt, by reason of the surplus income. In 1843 the new collieries coming into work would give an additional revenue of at least 7,000*l.*, and swell the gross receipt of the year to 34,600*l.*, leaving a surplus of 17,000*l.* after payment of all outgoings, interest excepted. The debts of the Company would then stand as follows:—Exchequer Loan Commissioners 155,100*l.*; bondholders, including subscriptions by sundry shareholders, and other advances by way of loan, 125,000*l.* To meet this state of things it was proposed:—

1. To convert the bonds, subscriptions, and other advances into shares, limiting such shares to 5 per cent.: to have priority over any dividend on the original shares. Number of new shares to be thus created, about 1,220.

2. To raise, by an immediate issue of 6 per cent., preference shares, 155,000*l.*, in discharge of the debt due to the Commissioners.

The surplus income of 1843 would then be applicable—1. To pay 6 per cent. on the preference shares (9,300*l.*) 2. To pay 5 per cent. on the 1,250 shares above named (6,250*l.*) 3. To divide among the original 3,000 shares (1,450*l.*). Should the Company think it expedient at any future time to sell the railway, payment would *first* be made to the 6 per cent. shares at par, and *secondly*, to the 5 per cent. shares at par. The surplus would be the property of the original shareholders. The resources of the railway, year by year, would develop themselves, and increase the revenue, enabling the payment of a moderate annual dividend to the holders of the original shares, and the establishment of a sinking fund for the redemption of the 5 and 6 per cent. shares. It was proposed to issue 16,000 shares at 10*l.* each (redeemable at the end of 7 or 10 years), on which an immediate deposit of 10*l.* would be required: the remainder to be paid by instalments of not more than 3*l.*, at times to be fixed on the passing of a short Bill to legalise the issue. Each proprietor of one share, and each holder of 100*l.* bond or of subscription debt converted into shares, to be entitled to take four new shares—and so in proportion for the amount of interest on such bond or debt. In the meantime, and until the passing of the Bill, an assignment would be taken from the Commissioners of their mortgage-debt, so that the persons making advances would hold the same security which the Commissioners now possessed. Part, therefore, of the said 80,000*l.* would be obtained by the deposit of 3*l.* per share, and the remainder by a number of the proprietors at once paying up their shares in full. Six per cent. interest to be paid on the amount advanced, from the time of payment.

The foregoing plan was adopted in London on the 12th instant, and 6,194 of the new shares taken, upon which the sum of 42,525*l.* was signed for, to be paid down at once.

At the Stockton meeting on Saturday, after the plan had been discussed, it was agreed to *nem. con.*, and many of the gentlemen present signed the subscription list.

Thanks were voted to the Chairman, and the shareholders then separated.—*Gateshead Observer.*

CLARENCE RAILWAY.

To the Editor of the Railway Times.

Sir,—I am equally surprised with yourself at the impolicy displayed by the Directors in excluding the press from the special general meeting of proprietors, held on the 12th instant, particularly at the very time when they contemplated to invite by advertisement the public to co-operate with the shareholders to extricate this valuable concern from the contingency with which it is at present threatened; because it is obvious, that where concealment is considered necessary, some suspicions will naturally arise that the financial state of its affairs will not bear examination, and its future prospects are not so flattering as represented. Now it has long been known to those interested, that its liabilities to the Loan Commissioners has prevented the shares rising in the market; and although, under any circumstances, secresy of this nature is attended with disadvantages, yet there may have been good reasons, hitherto, why the proprietary alone should be acquainted with the detail of its affairs; but now, when the probable contingency is made publicly known by announcement of sale, and the Directors feel it necessary to issue new scrip shares by way of loan, as the only means of averting the danger, the public, other than the present shareholders, who might feel induced to invest capital at 6 per cent., will naturally expect that all concealment should be laid aside; nor can their objection against the Stockton and Darlington Company's anxiety to become acquainted with their proceedings be urged with any success, because if nothing is concealed from the public when application is made to the Secretary for the *necessary* information, it follows, that if so inclined, their opponents in the north can avail themselves of the same opportunity of obtaining it.

In fact, at the present crisis, the more that is known of the prospects of the line will be to its advantage, and induce those, who might otherwise stand aloof, to come forward, and by the proposed measure release it from the only drawback which it now has. The revenue has been steadily increasing for some years past, and will now leave a handsome income as profit after paying expenses of maintenance and management. Independent of this, the revenue must necessarily increase from new collieries opening in its locality; but, above all, if the whole of the new shares are subscribed for, it will enable the Company to extend the Chilton branch; and by getting into the Auckland valley, free all those coals which cannot now go down the Clarence except by paying prohibitory dues imposed on all coal leaving the Stockton and Darlington line to go down to Port Clarence—which shipping-place is always preferred by owners and masters of vessels, particularly those of heavy draught, in consequence of the great depth of water at the Clarence Staiths, and facilities of getting away without having to wait the opening and delay of dock-gates.

Exclusively devoted as your paper is to railway property, and anxious as you have always seemed that such undertakings should prosper, I trust you will not let any feeling of disappointment, at being prevented giving a legitimate report of their proceedings, induce you to continue remarks likely to operate disadvantageously. We all know the power of the press, and that frequently it can make "the worse appear the better reason"—but such should be avoided; nor do I think it fair that, because a concern may not hitherto have flourished, sweeping charges should be brought against the Committee of Management, or insinuations made against their ability and integrity. To my own knowledge the Directors of the Clarence have devoted themselves unceasingly and gratuitously for its benefit; and in some instances made sacrifices, and themselves personally liable, for the general good; and when I add, that I am neither a Director, shareholder, nor have any interest therein, except hearty good wishes for its success, I trust some attention may be paid to this communication, when I say that, from a thorough knowledge of the whole line of works and its prospects, I am convinced now is the time for the Company to rescue itself for ever from its difficulties; but if neglected, not only will the proprietors lose their long-invested capital, but also the certainty of a future good interest for their money. I am, Sir, your obedient servant,

B.

London, October, 17, 1842.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

Sir,—The Directors of the London and Blackwall Railway Company having circulated an official reply to my letter of the 24th ultimo, I shall proceed to notice its contents.

The reply sets out by stating, that certain documents were sent to Mr. Stephenson and me towards the close of the year 1837, with the view of assisting us in drawing up our Report; and that the Directors now learn for the first time, and that not with surprise, that we do not consider ourselves identified with what they are pleased to call the original estimates of the London and Blackwall Railway. So much of this allegation as is contained in the last paragraph is wholly incorrect, as we refused to recognise the estimate referred to altogether, assigning for our reason, its utter insufficiency, its omitting several items of expenditure amounting to near 30,000*l.* This estimate was not made by Sir J. Rennie, but by an individual wholly unacquainted with railway practice, and ignorant of the rudiments of practical engineering. We refused to make any, except an estimate of saving to be effected by the introduction of a viaduct of narrower and altogether reduced dimensions, on the ground that the information supplied was quite insufficient for the former purposes.

In proof of the above remarks, I [redacted] to the annexed extract from the Directors' address of 1838:—"It appears from this Report, taken in connection with the former estimates, that the line from the Minories to Blackwall may be constructed for about 440,000*l.*, and this estimate of gross traffic being 139,787*l.*, an interest of 22 per cent. may reasonably be calculated upon. [redacted]

Digitized by Google

a deduction of one-third of the gross return for the working expenses, rates, and all other annual charges of management; and in this estimate, no credit is taken either for rent of arches, or for wharfage at Blackwall," from which you will gather that the estimate was in fact made by the Directors. Secondly, in no part of our Reports or our instructions will any reference be found to any *given estimate*, and the Report quoted in the official reply only goes on to state that the anticipated *saving* will be realised, and moreover this very Report was framed in connection with the Parliamentary estimates for the proposed extension to Fenchurch-street, as a comparison of the dates will prove, and consequently the saving must be taken in reference to the latter estimates; and finally, to dispose of this allegation of the Directors, I have only to refer to a meeting convened especially for the purpose of taking into consideration the subject of estimates and expenditure on the 9th of March, 1841, and attended by the Chairman, Deputy-Chairman, Secretary, Solicitors, Surveyor, and Engineers, when it was admitted as a matter of course that the Engineers were identified with the *Parliamentary estimates of* 1839, and with them only, and if this point be further contested, I shall be under the necessity of publishing a correspondence with the Chairman on this subject, which will be found to confirm the accuracy of my statement most unequivocally.

The public will demand information on the two following points, namely, why it was that we, the Engineers, refused to make any estimate of cost of construction, when we undertook the estimates of saving; and secondly, why we permitted the Directors to put forth an estimate based on such defective original data. To the first, I reply now, as I did at the time to the Directors, namely, that any deficiency in the data for the estimates could only effect a comparative estimate by diminishing the difference of cost, and consequently that any additional or more accurate data, or the occurrence of any unforeseen engineering difficulty, could only have the effect of throwing the balance of advantages still now in favour of that system, which without any further assistance was entitled to a preference.

My answer to the second is, that I did as before stated, represent to the Directors the inadequacy of the so-called original estimate. To this, however, they replied, that as there must be an immense reduction in the cost of purchase of property, the deficiencies of the said estimate would be thus compensated; and at their request I investigated and ascertained the number of houses and properties avoided by the narrower viaduct, to be about one-half of that required by the original project, and from this the Directors inferred that if the original estimates of property were in any degree sufficient, a saving of at least 100,000*l.* would have been effected; but as these estimates were entirely fallacious these expectations were not realised, as the Directors express through their Chairman in his address to the spring half-yearly meeting of 1841: "With regard to the other estimates, he would say that no excess had arisen on the estimates for property. The Directors had hoped indeed that when the width of the viaduct was reduced a reduction would have taken place in the estimate for land."*

In short, the Directors are perfectly conscious that the reduction attending the introduction of a narrower viaduct has effected a saving of more nearly 273,000*l.* than 173,000*l.*, as stated in their reply, and they are also aware that the contracts were let on the width of the viaduct being taken at 26 feet 6 inches, previous to the date of the Report quoted by them, and that it was upon this data that the Parliamentary estimates were framed.

* To what hopes do the Directors refer, except to those alluded to above, and to what estimates can the Directors refer, except to those prepared by the Surveyor in 1839, so that these gentlemen commit the injustice of holding the Surveyor who made both the original as well as the Parliamentary estimates of 1839, responsible for the latter only, whilst the Engineers are held responsible for estimates with which they had nothing to do!

I have only one more observation to make on this subject, and that is with reference to the paragraph in the official reply, wherein it is broadly asserted, that the advice of the Engineers had been implicitly followed in the construction of the works, in the hands to be employed, and in every other particular. This is inaccurate, as in many instances, and these quite familiar to the Directors, and involving a considerable expenditure, the opinions of the Engineers were entirely disregarded.

The official reply, in order to make out a case against the Engineers, again refers to a paragraph in the Report of February 25, 1842, wherein it is stated that the working of the line will not exceed 8,000*l.* per annum, and pretends that this sum was believed by the Directors to include interest on cost of engines, &c., as well as the general charges of working the railway, such as maintenance of way, cost of ropes, repairs of sheaves, and ropemen, &c.* No man in his senses, much less the Directors of the London and Blackwall Railway, would draw such an inference from the passage quoted; for mark, if the 3,000*l.* per annum, the amount of interest on the cost of the above items, be deducted, there only remains 4,900*l.*, a sum wholly inadequate, as must be apparent to any person having the smallest possible knowledge of such subjects, to meet the current working expenses of the engines, much less the other items of expenditure, they pretend they believed it to comprehend; but in order to place this position beyond the possibility of further dispute, I beg to annex the following quotation from the Chairman's address to the meeting in the spring of 1841:—

"With regard to the excess of estimates, this had arisen from the various causes, as adverted to in this Report. A considerable excess had taken place on the estimates of the Engineers, but it was due to these gentlemen to state that in the original estimate the cost of the stationary engines and engine-house had been set down at 35,000*l.*, and the annual expense of working at 12,000*l.* per annum; whereas, after mature consideration, it had been deemed advisable to substitute another description of engine of a much more expensive kind. It had been considered that the high-pressure engines at first contemplated would not be on the whole the most judicious. Had these been adopted, the first cost would have been less, the space required for them would have been less, and the machinery would altogether have been of a less ponderous description. The Engineers, however, had given the preference to low-pressure engines, and the first cost had therefore been increased. The engines had cost 47,000*l.*, the tank and well, 9,000*l.*; and the engine-houses, 25,000*l.*; being in all 84,000*l.*, or an excess of 49,000*l.* over the original estimate. An excess of this character was not to be justified except on the ground that the annual expense of working would be reduced, and this had been the case; for instead of 12,000*l.*, it had been reduced by 4,720*l.*; viz., to 7,280*l.* In addition to this great saving, the engines now in use were less liable to accidents. The great saving had been in the important article of fuel, it had been expected that 200 tons of coal would have been required per week, whereas the actual amount had been reduced as low as 54 tons per week."

Before concluding this letter I would ask, have the Directors attempted to contradict the statement in my letter, that their original estimate of annual revenue was 189,800*l.*, that their estimate of working expenses was 46,600*l.*, and their estimate of net revenue 22 per cent.—(this, however, is an error, the return should be 21, not 22)—or that the working expenses of the engines, with interest, is less than 11,000*l.* per annum? or that the total expense of conducting the above anticipated revenue would not exceed 38,000*l.* per annum, in place of 47,000*l.*, as estimated by them?

They have done no such thing; on the contrary, in the official reply, as at their general meetings, and indeed on all occasions, the Directors have attributed the failure in the prospects of the London and Blackwall Railway to Engineers' errors, and excesses of estimates, rather than to the true causes—that is, the unprecedented extent to which the revenue of this railway has fallen short of their original anticipations. Had they acted more fairly, and with more candour, I should not have been drawn into a discussion so foreign to my feelings and habits.

GEO. P. BIDDER.

35½, Great George street, Westminster, Oct. 18, 1842.

* I do not know how they reconcile this position with their original estimates of working expenses, for according to this view their estimate of 47,000*l.* must have been at least 20,000*l.* in excess.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—I was accosted yesterday, in the City, by a highly-respectable proprietor of the Blackwall Railway, who told me that he had prepared a requisition for signature by the shareholders, calling on the Directors to convene a public meeting, at which it was his intention to move the appointment of a Committee to investigate their affairs, and to endeavour to devise some means to arrest the ruinous depreciation of property which is taking place in that concern. In this proposal I heartily concur; and I would earnestly entreat of the proprietors to join in promoting an inquiry which, should it be fruitless, will have the effect of satisfying them that the Direction is managing their affairs with more wisdom than the public generally gives them credit for.

If an inducement be wanting to stimulate the shareholders to some effort, I beg to assure them that their prospects of a dividend for the current half-year are extremely doubtful. Since the fares were raised the receipts have fallen off so much that, with the still further diminution which may be expected from the season, there is great reason to fear that the small surplus, which the summer traffic left available for a dividend, will be entirely absorbed before the end of December.

I profess not to be prepared with a nostrum for the resuscitation of this woful concern; but there are questions which a Committee may with advantage consider, such as the possibility of further reductions in the cost of working the line—whether the charges of the office and storekeeping of the steam-boat undertaking should be defrayed by the railway—whether the injudicious raising of the fares at this season should be persisted in; and I have no doubt that various subjects which have escaped my notice will be taken up by others.

GEORGE RENNIE, JUN.

1, Chesham-place, October 20, 1842.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—Will you allow me to inquire, through your valuable journal, in what way the deficiency between the receipts and outgoings on the Blackwall line will be made up at Christmas, since it appears to me from the amount already taken, and what may fairly be reckoned on at the reduced fares, the proprietors will be subjected to a call for that purpose, more especially should the lawyers demand payment in the present crippled state of the finances? I cannot but think the Directors are bound in common honesty to give their real opinion on this point, to prevent any further needless sacrifice of property in the sale of shares.

A CONSTANT READER.

City, October 20, 1842.

SOUTH-EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The remarks of "Idem," on this line of railway, appear to me more for the purpose of influencing a stock speculation than, as the author professes, of warning unsuspecting shareholders who had unwittingly involved themselves in so ruinous a concern.

As, however, I differ with your correspondent as to the value of this line as an investment, may I crave your indulgence for the insertion of the following reasons:—

1st. I have been informed by one of the Direc-

Digitized by Google

tors, a gentleman of high standing, that no more money will be required than I have calculated in the third reason.

2nd. The works on this line are executed in an equal, if not superior, manner to any others in England; and for my authority I refer your readers to the remarks made by General Pasley, when comparing them with those on the Manchester and Birmingham line.

3rd. The traffic is estimated at 7,500*l.* per week, *which I firmly believe to be much under the true amount;* but let us take as a minimum—

£7,000 per week, making per annum		£364,000
Less—		
Greenwich and Croydon tolls, an ample sum..	£33,100	
Working expenses, say 35 per cent...	127,400	
Interest on 750,000*l.* borrowed money, which will complete the works	37,500	
		198,000
Leaving as applicable to a dividend....		£166,000

which will give 3*l.* per share on 56,000 shares, or 6*l.* per cent. per annum on 50*l.* shares.

The traffic will be much more steady on this line than most others, because, during the winter months, most of the steamers to the north of Europe are withdrawn from their stations, and will thus swell the winter receipts to nearly an equality with those of the summer months.

4th. The line will be further opened to Ashford, 11 miles, next month, and at that point the Canterbury and Dover traffic will come into operation. Further openings will be made of 6 miles to Grove Bridge, in March, and 5 miles to Folkestone, in May; and I have not the slightest doubt but by this time next year the whole line will be in full operation.

5th. Money is now offered liberally on loan; and the opening to Ashford will raise the traffic to an amount that no further creation of shares, in place of obtaining loans, will ever be made.

I am a considerable holder of this Company's stock, and to my brother holders I say, hold on, through good and bad report, and before 1844 your stock will be worth three times its present value.

SCOLD.

Liverpool, October 17, 1842.

P.S. Some time ago you promised us a report of the progress of the works beyond Folkestone. Please not to omit it; it cannot be otherwise than satisfactory.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Having read many statements of the supposed income and expenditure of this railway, and none of them being satisfactory to me, I trouble you with my statement, and if wrong, some of your numerous correspondents will, I have no doubt, point out where I am in error. The last Report is now lying before me, and which states *the cost* to be 2,568,000*l.* Now 36,000 shares at 45*l.* each paid, being 1,620,000*l.*, there must be loans to the amount of 948,000*l.*—(the Report states 853,662*l.* as borrowed.) I take the working expenses per annum in round numbers, say 78,000*l.*, (the Report made them for the half-year 38,796*l.*); then interest on 948,000*l.* is 47,400*l.*, making 125,400*l.*, leaving 55,560*l.* to divide on shares, which requires 81,000*l.* to pay 5 per cent. upon them. If it should be said there is 300,000*l.*, or some such sum, to be received from the Croydon line, deduct 15,000*l.* from the interest, and it still leaves 10,000*l.* odd, less than would pay 5 per cent.; but if the *total cost* is as stated in the Report, why should the 15,000*l.* be deducted? How our Chairman could at that meeting states that 3,480*l.* per week would pay *all* expenses, the interest upon loans, and divide 5 per cent. on shares, I cannot understand; when if the above account be correct, it is impossible any weekly average less than 4,000*l.* could pay 5 per cent. to the shareholders, leaving 4,300*l.* only for contingencies.

A HOLDER OF SHARES AND LOAN-NOTES.

October 14, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Will you allow me to call the attention of your readers to the injustice and absurdity of making no difference in the charge for children by the third-class carriages—injustice to the poor man in not allowing him the same privileges with those who can better afford to pay and; absurdity, as I will undertake to show, supposing him to have 3 or 4 children, in permitting him to travel by a second-class carriage cheaper than he could by a third? But this is only a solitary instance of the wisdom which characterises the management of this concern.

Cost in a third-class carriage:—					
One full fare	£0	6	0		
Four children	1	4	0		
				£1	10	0
Cost in a second-class carriage:—					
One full fare.....	0	9	6		
Four children at half price	0	19	0		
				1	8	6
Saving by preferring a second to a third-class carriage				0	1	6

I am, Sir, your obedient, servant,

ARGUS.

Brighton, October 14, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Shareholders.

GENTLEMEN,—If you refer to the *Railway Times* of August 6th, you will find our Chairman makes a confident calculation that 3,480*l.* per week will pay us 5 per cent. dividend. The receipts for 13 weeks, from June 30th, *have exceeded that sum by upwards of* 10,500*l.*, *and are now on the increase.* Yesterday's market price was 36½ to 37, at which you will sell if you think fit; but not one of mine shall go at anything like such price, for it is now all but certain that we shall get 6 per cent. in February, and if so, our shares will be *at least at par.*

I am, Sir, yours, &c., A. Z.

October 18, 1842.

THE DOVER AND BRIGHTON RAILWAYS.

To the Editor of the Railway Times.

SIR,—Seeing the able and independent manner in which through your journal, the mode of conducting Railway Companies is generally handled, I cannot help calling your attention to one subject connected with the Brighton and Dover Companies, thinking it will be the means of drawing the attention of the shareholders to the subject, for surely so desirable an object for those parties interested *in both Companies* can only be required to be brought before their notice to at once make them stir themselves in it—I allude to the great inconvenience that now arises from the situation of the *two stations* at Red-hill; and it must be evident to any one who has paid the least attention to it, that however much the junction of the two stations may be opposed by some parties at the present time, it surely cannot be doubted that eventually the two must merge into one. Only fancy being put down at the Brighton station, wishing to go to Headcorn, and seeing the Dover station you are going to, close to you, and yet being compelled to walk (for there is no regular conveyance) a distance of three-quarters of a mile to arrive at it, and perhaps the very train you are intending to go by just starting in your sight, or on coming in the opposite direction the same may, and does, occur; and I believe it really is not known the great disadvantage travellers between Brighton and Tunbridge, or *vice versa*, suffer by this (inconsistent, for I cannot call it any other) arrangement, which might, I conceive, be so easily remedied. I am informed that the Dover Company are quite willing to make an arrangement if the Brighton would do so, and I am satisfied that a part of the Direction in the latter Company are also in favour of it; then surely does it not seem a folly for the Brighton Company to be still spending money in the erection of buildings preparatory to bringing heavy goods (which on my being there lately I witnessed), when it must be evident to every one that immediately the Dover Company are prepared to bring such goods, they will be transferred almost wholly, if not entirely, to that station from the very superior advantage of the *road* to the only town of importance, that of Reigate?

I can venture to speak on this subject, as I occasionally travel by both lines, and am not interested *as a shareholder* in either of them, but I cannot help regretting that so desirable an object should be delayed for want of being taken up in the proper quarter, and I think you would be rendering a great service in calling the attention of the shareholders to it by the insertion of this letter, or by such means as you may think best calculated to answer the purpose.

I am, Sir, yours, &c.,

A LOOKER-ON.

19th October, 1842.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—I am glad to see your remarks upon the case of Mr. Murray and the Edinburgh and Glasgow Railway. I can bear out Mr. Murray—at least I can speak to the incivility of the servants of the Company. I have travelled upon almost all of the railways in England and Scotland, but I never met any servants so bad; they are disgraceful. The porters are dressed only as the poor creatures you meet with upon landing on the quays. The times I have been with them they go badly as to punctuality. What other Board of Directors would have allowed such a case to go before a court? None, surely, but a set of persons, who call it a sin to enjoy the pure air of the country on a Sunday. By-the bye, one of your correspondents, signing "Well-Wisher," who wishes the second-class carriages made into first-class, states, there is enough of aristocratic feeling in Scotland to induce them to pay the best fares they can afford. I hope he will not include Glasgow in Scotland, for I am credibly informed the magistrates take the third class carriages from and to Greenock and Glasgow—the fare being 6d. for 22 to 23 miles; and further, if the steam-boats would carry them, and take 2½ to 3 hours, and for 3d., they would go by them. Beware of the statements of these Northerns. Travel between Edinburgh and Glasgow, as I have, and then judge. I take the Brighton as a comparison; the one is as travelling with a carriage and post-horses, and the other like the Portsmouth van; the one intended for gentlemen and ladies, the other for sailors and ——

There would be no necessity for first-class carriages if it depended upon Glasgow men. The money-takers know you are a stranger if you ask for a first-class ticket. I am happy to say the Greenock and Glasgow is better conducted; there are a few Greenock gentlemen among the Directors.

I am, Sir, yours, &c.,

A SCOTCHMAN.

Worthing, October 16, 1842.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—I am glad to observe from the number of communications on the subject of the Edinburgh and Glasgow Railway, which appeared in your last publication, that the public are beginning to give that undertaking more of the attention which it decidedly merits. In estimating the winter traffic, however, none of your correspondents, so far as I have noticed, allude to the fact of the canal being generally shut, owing to the frost, for several weeks, which must necessarily increase both the passengers and goods, especially the latter, by the railway.

It may also be remarked that in winter the railway will be preferred to the canal by passengers in general, as few will expose themselves to the cold for eight or ten hours, when two will suffice. First-class passengers, moreover, will increase in winter.

I am, Sir, yours, &c.

A LOOKER-ON.

Edinburgh, October 18, 1842.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—I am glad to find that the conduct of the Board of Directors towards the shareholders of the Midland Counties' Railway, has at length roused certain Liverpool gentlemen to apply for proxies, with the view of enforcing economy, and respect to the shareholders. In consequence of what has taken place, it is said that the Directors have appointed a Committee of five of their own number to see what can be done in the way of retrenchment. Some persons expect great benefit from this Retrenchment Committee, because Mr. Ellis and Mr. Waters, two Leicester gentlemen recently admitted as Directors, are upon it. I am, however, inclined to suspect that the present Board in selecting these two individuals for Directors did so for the purpose of shutting their mouths with 50*l.* a year, and the honour of being Directors; time will show whether this suspicion be well or ill-founded.

But what is to be expected from a Board who, having received instructions from the proprietary to obtain a clause in the Act passed last session, for reducing the number of Directors from 24 to 12, for the purpose of diminishing the expense of Direction from 1,200*l.* to 600*l.* a year, get a clause passed, which commences in the following treacherous terms:—"And be it enacted, that when by death or resignation, *or any other cause than that of going out by rotation*, the number of Directors shall at any time be reduced below 24, it shall not be necessary for the remaining Directors to proceed to fill up such vacancy previous to the general meeting of the Company, &c." Instead, therefore, of obtaining a clause for reducing the number of Directors to 12, as was intended by the shareholders, the present Board have obtained a clause by which it is rendered illegal to reduce the number of Directors below 24, unless Directors either die or resign. And even then it is optional to keep up their number to 24; and at the meeting of the proprietary on the 13th of August last, the Directors used their proxies to keep up that number, with all their allowance of 1,200*l.* a year—Theodore Woolman Rathbone using upwards of 1,000 proxies for such a purpose.

But the whole conduct of the present Board of Directors is indicative of the grossest mismanagement and extravagance. In proof of this, we need only compare the Midland Counties' Railway with the York and North Midland; the former, including the branch to Nottingham, being 57½ miles long, and the latter 27; both of them traversing an equally level country.

The revenue of the York and North Midland for the half-year ending 31st December, 1841, was 44,262*l.*, and the expenditure, exclusive of interest of borrowed money, 1 ,178*l.*, being about 36½ per cent. of the gross revenue. The revenue of the Midland Counties' Railway for the same period was 73,457*l.*, and the expenditure 37,650*l.*, being 51 per cent. of the gross revenue.

The revenue of the York and North Midland for the last half-year, ending 30th June, 1842, was 39,529*l.*, and the expenditure, 14,648*l.*, being about 37¼ per cent. of the gross revenue. The revenue of the Midland Counties' for the same period was 64,007*l.*, and the expenditure no less than 38,423*l.*, being 60 per cent. of the gross revenue.

Now, I am aware of no way of accounting for the great excess of expenditure on the Midland Counties' Railway over that of the York and North Midland, relative to the gross revenue, except by supposing that the latter is economically managed, while the former is the reverse.

As it is obvious that the allowance of 1,200*l.* a year is one of the reasons for the present Board attempting to keep themselves in office, the first motion, when a meeting is called, ought to be that all allowance to the members of the existing Board of Directors, shall henceforth cease and determine. If this motion be carried, the Directors, provided they possess anything of the spirit of gentlemen, will immediately resign, and their places can be filled up. But should they not resign, it will be necessary without delay to appoint a Committee of proprietors, not only authorised to enforce retrenchment, and supersede them in the management, but invested with powers to apply as early as possible for a new Act, containing a provision for limiting the number of Directors to 9, with a yearly allowance for Direction, including Auditing, not to exceed 300*l.*; 100*l.* to the Chairman, and 25*l.* a year to each of the other 8 Directors. It should also contain a clause for raising the qualification of Directors from 10 to 50 shares, and giving votes to shareholders, by proxy or otherwise, in exact proportion to the number of shares they hold. By this, the Company will permanently save 900*l.* a year, and the diminution in the number of Directors will, in a considerable degree, deprive the Board of power to resist the will of the proprietary. The head quarters of the Company, where the Secretary ought to reside, should likewise be transferred from Leicester to Derby.

In carrying out retrenchment, the Committee ought not to take as their model the rates of salaries and wages adopted in such expensively-managed and prosperous railways as the Grand Junction or the Liverpool and Manchester, but should make comparisons with cheaply-managed lines, such as the York and North Midland and the Edinburgh and Glasgow. They should recollect that, exclusive of the former balance, the surplus of last half year's revenue, after paying expenses and interest of borrowed money, only amounted to 13,683*l.* The expenditure on the Midland Counties' Railway, with only ordinary economy, ought not to exceed 40 per cent. of the gross revenue; and a retrenchment Committee should set out upon the principle of reducing the expenditure to that extent, which, if they accomplished, would immediately raise the shares to par. The expenditure of the Edinburgh and Glasgow, 46 miles long, with the small mean weekly traffic of 1,784*l.* for the first four months of its being opened, did not exceed 33½ per cent. of the gross revenue, after setting aside what was considered a sufficient allowance for maintenance of way.

Now as to salaries, every office ought to be filled up at the lowest rate possible, consistent with efficiency. A Secretary to the Newcastle and Darlington Junction Railway was recently appointed, with an annual salary of only 150*l.*, and, to save expense, a banker was appointed Treasurer, without any salary at all. Under the present circumstances of the Midland Counties' Railway, similar economy ought to be observed. But their Secretary is paid 800*l.* a year. If you can get a Secretary for 200*l.* a year, you ought not to pay 300*l.* And if a good working foreman to superintend the repair of engines, &c., can be got for 200*l.* a year, and be as efficient as Mr. Kearsley with 500*l.*, the circumstances of the Company will not permit of Mr. Kearsley's being longer employed. A further saving might be likewise effected by dispensing with police, save at sidings and points, as is done on the North Midland and the Edinburgh and Glasgow Railways.

In comparing the cost of repairing engines, tenders, and carriages, in the last half year's Reports of the Midland Counties' and the York and North Midland Railways, we have a remarkable instance of the superior economy of the latter Company. The following are the respective statements.—

MIDLAND COUNTIES'.

Repair of Engines and Tenders:—			
Materials	£2,633 10 1		
Wages	3,003 2 9		
		£5,636	12 10
Repairs of carriages		1,886	0 5
Total		£7,542	13 3

YORK AND NORTH MIDLAND.

Cleaning and repairing engines	£1,181	5 8
Repairing carriages, waggons, &c.	345	9 10
Total	£1,526	15 6

From the preceding statement it appears that cleaning and repairing engines, carriages, waggons, &c., cost only about one-fifth part of the sum on the York and North Midland Railway that they do on the Midland Counties'. Considering that the latter railway is 57½ miles long, and the former 27, had the cost been only double, little could have been said. But the one to cost five times the amount of the other shows gross mismanagement and extravagance. In getting a working foreman to superintend this department, with 200*l.* a year, an interest in the economical management of his department might be given him, in this way: for every 5 per cent. that the expenses of this department in any half year fall short of 3,300*l.*, his salary should be increased 5 per cent., and for every 5 per cent. that it exceeds 3,300*l.*, his salary ought to be reduced 5 per cent.

Considering that the Midland Counties' Railway traverses so level a country, and has so little embankment, maintenance of way is so enormously expensive, that it is obviously made one of the chief means of diminishing the dividends. By their last half-year's Report, maintenance of way cost at the mean rate of 285*l.* a mile per annum; whereas on the York and North Midland for the same period, it cost only at the mean rate of 131*l.* a mile per annum. The Edinburgh and Glasgow Company expect to get it all contracted for at the mean rate of 110*l.* a mile per annum. The Glasgow and Ayr for 33 miles from Paisley to Ayr, with the addition of every extra charge included under the title of maintenance of way in any railway in England, get it done under the mean rate of 90*l.* a mile per annum. And when the present Secretary of the Grand Junction was asked, during his residence in Scotland, why maintenance of way cost so much in England, answered in some such terms as the following, "that the contractors for maintenance of way in England all made fortunes." Considering the smallness of the embankments on the Midland Counties' Railway, maintenance of way ought not to cost more than 130*l.* a mile per annum.

Lastly, it is proposed to increase the fares. At present they are rather under 3d. a mile for first-class passengers, whereas, on the London and Birmingham, they are 3½d. a mile. A railway like the Midland Counties', forming an intermediate link in a long chain, has an advantageous position for profitting by high-fares. A large proportion of their traffic is derived from through going passengers. And every increase in their fares, as a matter of certainty, must increase the revenue of the Company, while it can have no influence whatever in diminishing this portion of their traffic. In the present circumstances of the Company, the fares for all through-going first-class passengers should be increased as high as possible, viz. to 3½d. a mile; or at all events, they ought not to be lower than on the London and Birmingham. And an arrangement should be made with the Directors of the Birmingham and Derby Junction, to make a similar advance of fares by the two trains a day, in which through-going passengers are sent north and south by way of Hampton.

The propriety of raising the fares on short distances between towns on the line is a question for consideration, and cannot be decided satisfactorily, without experiments continued on each plan for a year at least. *A priori*, I am inclined to think, that a small increase of fares, even on short distances, would augment the revenue of the Company.

Shareholders, a circular forwarded from Leicester, where probably it was written, has recently been sent you, signed by two of the present Directors, Edward Cropper and Theodore W. Rathbone, endeavouring to dissuade you from forwarding proxies to Mr. Heyworth and his friends. As a shareholder, I strenuously and honestly recommend you to forward your proxies without delay to Mr. Heyworth and his friends. And if you do so, and they act with proper vigour and decision to reduce the expenditure to 40 per cent. of the gross revenue, your 100*l.* shares will soon be worth 100*l.*, whereas, under the present management, they are not worth 50*l.* I am, Sir, yours, &c.,

A GLASGOW CITIZEN.

Glasgow, 15th October, 1842.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—It is with great pleasure that I have observed the part you take in respect of the proposed investigation of the Midland Counties' Railway. By none is an inquiry more loudly called for than by the inhabitants of Nottingham, and of the adjacent country, whose interests and accommodation are altogether sacrificed. The transit from Nottingham to Birmingham, though a direct line is in existence, is most absurdly inconvenient.

Passengers who leave Nottingham by the afternoon train, though booked through, are detained just one hour at Derby, and all the trains change carriages there—an absurd and inconvenient consequence of the neglect of the Directors to arrange terms with the Derby Junction Company. It rarely happens that a carriage is sent through from Nottingham to London, almost all being changed either at Leicester or Rugby. The approach to the station from the Newark road, though open, is in a very bad state, and no steps have been taken to secure the attendance of persons with trucks or flys to bring the luggage of passengers from the Lincolnshire coaches, which, in order I suppose to secure some few sixpences to the innkeepers, go straight up into the town without calling at the railway station. How, in the name of common sense, could a spot in the middle of a meadow, a full quarter of a mile from the road, have been fixed upon for the terminus, unless under the influence of some powerful jobber. The Lincolnshire passengers frequently lose the train, in consequence of the want of means to transport their luggage directly from the coaches to the station. Within the last few weeks the mail trains have been discontinued, and the letters for Nottingham and places to the east, which pass by railway within five miles of Nottingham, go on to Derby, and thence retrace their steps, by a mail-coach, to Nottingham. The delivery in Newark, Lincoln, and elsewhere, is of course retarded by this unnecessary coach journey of 16 miles. The inconvenience is still more strongly felt in the up correspondence—the box at Nottingham closing at 7 instead of 10. The blame of this arrangement I have heard thrown on the Railway Company, who, it is said, demand an exorbitant sum for the transmission of the mails. With whom the blame should rest I know not, but the inhabitants of Nottingham are deprived, by bad management, of the full use of the apology for a railway which the besotten stupidity and selfishness of those who deprived the town of the main line to the north, have left to it.

As to the Post-office, I have long thought it one of the most backward of our public departments, but it seems also not to be impartial. Petty towns of no commercial consequence are admitted to the advantages of a double post, while Leeds, Sheffield, Derby, and Nottingham, are denied it. In some cases, from Leicester to Rugby for instance, the letter bags are entrusted to the railway guards, by which means letters arriving by the Yarmouth mail are conveyed to the down day mail train from London. Why might not a bag from Nottingham to Leicester be entrusted to the same guard? Besides the night mail to Derby, there is a gig mail sent off soon after the arrival of the mail from Grantham, though a train actually starts for Derby as the mail drives into the town.

I remain, Sir, your obedient servant,

T. R.

Birmingham, October 16, 1842.

RAILWAY "MONOPOLY" AND THE PUBLIC.

To the Editor of the Railway Times.

SIR,—Your correspondent "N. O. E." "blows hot and cold." He says, first (in No. 250), that—

"The whole value" (of railway shares), "if ground down to an impalpable powder, would not affect the vision of an animalculæ."

He afterwards deprecates any legislatorial interference with his vested rights—meaning thereby rights whose value he asserts are reduced to zero.

"N. O. E." goes on to assert that all the conditions which the legislature asked have been complied with, and that "double, quadruple, and not unfrequently centuple, its value has been paid for the land taken." He sums up: "In what respect have Railway Companies failed to acquit themselves of all their obligations to the State and to the public?"

To save trouble we may admit these premises, and to prevent any misunderstanding, let "N.O.E." at once understand that, I think, "it would be a great injustice to *rob* the minority for the benefit of the majority." If any private property be taken possession of for the benefit of the public, it must in all cases be paid for at its value; but it is clear that in case of demur as to the value, some tribunal—a jury or others—must determine this, or it would be within the power of any mischievous individual to inflict great evils on the community. If the nation, or the jury representing it, are unjust enough to *rob* the individual under colour of law, the injustice will soon re-act on the nation at large by the destruction of social confidence, and progress would be arrested.

The true statement of the case is this:—The Government believed railways to have attained a state of perfection, and they legislated for the transit prices of the public on false data. They must keep faith with the Railway Companies, and leave them to deal with their "property" according to law—to waste or make productive, according to their own reason, or the want thereof. But the State has entered into no contract to exclude rival lines, if it discovers that they may be beneficial to the public, in reducing the cost of transit to the public. And if the State further discovers that a rival line would not reduce the cost of transit to the minimum, the State would be perfectly justified in making a line of its own. It is for the consideration of the Railway Companies whether it would not be preferable to convert their "property" into Government stock, at a fair valuation, than tempt this perfectly justifiable Government interference, or rather equipoise.

"N. O. E." asks, "Have not railways been classed with the invention of printing and the steam-engine, as boons to mankind?"

Most true; but these boons are not given by mere monied capitalists. Faust or Gutenberg gave the printing, and Watt gave the engine in its practical form; and Stephenson first gave to the railway its wide-spread utility. The capitalists who first aided them were true-hearted, steadfast men—genius on the one hand, and faith on the other—of which we have a bright example in Brindley and Bridgewater. But what claims have Railway Companies, incited by mere hopes of a "capital speculation" or "good investment," to don the robes of these men? If they went on certain grounds, they merely followed a track; if on uncertain grounds, they merely resembled shareholders in mines, and must take all the risk of drawing prizes or blanks, without any pretext of public service.

There are certain railways on which competition exists, as to the carriage of goods, to a certain extent, *i.e.* on the part of the carriers—but the Railway Companies have the monopoly of the haulage. There seems to me no sound reason why every three or four years this, also, should not be put up to public tender, and the minimum cost ascertained. It would then be for the prudential consideration of the Companies as to what per-centage they might resolve on retaining.

A body of men offered to lease the Northern and Eastern line, producing nothing, at 5 per cent., expecting to produce 14; and this offer was refused. The public will naturally suppose that bad management must exist; and if in one, why not in all? The "vexed question" of high and low fares will never be solved, till as effective a competition is established on railways as on highways. If any one will point out a more effective mode of solving it, than I have proposed, I will take up his or her opinion and forego my own.

Your other correspondent, "Justus," says, "Everybody from the first, expected that railways would be virtual monopolies, of a mitigated description." Who are to be the mitigators, or moderators? Alas, there are none, save "the pressure from without!"

He also says, "No rights should be more sacred than the rights of property." He here puts the cart before the horse. Man existed before property, and consequently the "right of man," must be antecedent to the rights of property. And one chief right of man is the right to education, which comprises the right of a free press to communicate printed thoughts, a minimum postage to circulate written or printed thoughts, and a minimum charge on personal transit, in order

"That man and man the world o'er may brithers be an' a' that."

It is my fixed belief, that an outcry of both poor and middle classes will ere long be raised, to produce the same effect in personal transit that has been produced in the transit of letters. It was much trouble to the Post-office authorities to set the penny postage at work, yet it was done, and so must the minimum fares of railways be accomplished, will ye nil ye, Messieurs the Directors; and if you will not consent to have it on your own lines, it must be on State lines. This large population will not consent for ever to be shut out from the free transit which the strong brains of the original men have shown to be practicable. The real cost of transit, when competition shall have wrought its work, will be found as proportionably small as is the penny postage to the old prices.

If the railways are entitled to have their "mitigated monopolies" upheld against competition, the claim may descend. George Stephenson may claim with more justice a "mitigated monopoly" of engines, and so through the whole tribe of railway mechanists, who have established factories to meet the new demand, and are every day cut out by enterprising imitators.

To conclude, when the street omnibuses were first established, passengers were charged according to the distance they rode. Competition practice soon found out that the best mode was to charge one fare for the short or long distances. Let Railway Directors take the hint, and do likewise. Ten miles on a railway is far less costly than four miles on a highway. It would probably not be a very difficult matter to arrange carriages with indicators, marking the numbers carried, so as altogether to get rid of tickets. It is a subject on which it would be well worth the while of Boards to offer a premium.

"N. O. E." grows quite good-humoured. Perhaps as the discussion goes on he will discover that I am a truer friend to railway shareholders than he at first anticipated.

I am, Sir, yours, &c.,

EXAMINER.

October 20, 1842.

RAILWAY "MONOPOLY" AND THE PUBLIC.

To the Editor of the Railway Times.

SIR,—Verily, if I had not the strength of a second Hercules, I should scarce be able to try the ponderous gravity of your correspondent "N. O. E.'s" wit. He is funny, and he cannot help it. He is the very impersonation of the laughing philosopher—for "N. O. E." does philosophise; but then his philosophy is still more droll, and more calculated, perhaps, to excite the risible faculties of his audience than the wit which "sparkles" in his somewhat lengthy rejoinder.

But *virum tenentis*, not only are farce and philosophy brought to bear upon poor humble "P. E.," but he is also called upon to bide his diminished head before the solemn denouncement of the histrionic muse, who, accompanied by monarchs, slaves, and Directors of Railways, mixed in glorious confusion, celebrate a sort of Indian war-dance, to the bewilderment of your correspondent and the astonishment of your readers.

But if "N. O. E." in vain essays to laugh

Digitized by Google

that his droll philosophy and solemn merriment will restrain me from boldly expressing and maintaining my opinions, he is wofully mistaken. Although "P. Z." must necessarily sink into insignificance when compared with the magnificent Hidalgo "N. O. E.," still he humbly ventures to suggest that wit, however brilliant, is not argument, and that sarcasm, however keen, is but a poor substitute for sound reasoning; he, moreover, *has heard* of ridicule being not unfrequently employed for the purpose of concealing the weakness of a bad cause.

But before I join issue with "N. O. E.," I must disclaim "having called hard names." It was the coarseness of "N. O. E.'s" allusion to the placing of the "stupid effigy" of "Examiner" on the pump, or some equally refined witticism, that induced me to take up my pen; and if by scourging this, as I humbly think it deserved, I shall have rendered "N. O. E." more courteous for the future, it will not have been without its use. But "N. O. E.," afflicted with that not uncommon disease, a *cæcus amor sui*, entirely overlooks his own aggression in this particular, and transfers the rebuke of "Examiner" to me. This, also, together with his pungent wit and brilliant sarcasm, I have borne, and strange to say, as yet without feeling any ill effects from them.

"N. O. E." candidly admits I have improved the illustration which he gave; but, with a strange perverseness, denies that it improves "Examiner's" position. If, as "N. O. E." persists, there *is* an analogy between the case he puts and the proprietary of railways, the carrying out of this analogy proves him distinctly in the wrong; then he is placed in this dilemma, either to deny his original position, the analogy between the two, or to admit himself proven in the wrong. It is a saying of Hobbes, "that when reason is against a man, he will be against reason;" this seems pretty much the predicament of "N. O. E." He could not in any reply entirely overlook the point, so he notices it to save appearances, and then quietly drops it altogether. But I will be more courteous to him, and extend more notice to the few sentences given in reply to me than he did to my whole letter. He says, before admitting the improvement of the illustration in "Examiner's" favour, we must assume "that the possessor of the new pump made pledges which he does not redeem, and obtained powers which he abuses." This assumption may be made without doing any violence to the facts of the case. Did not the proprietors of railways make promises which they subsequently failed to redeem? Did they not promise cheaper travelling in return for the monopoly which was granted them? Did they not promise superior comfort and convenience in addition to cheaper travelling? Have these promises been redeemed? Is it not the fact, that on many routes the fares by rail are higher than those by coach? Is it not also the fact, the accommodation is not the good, people having to stand, and being crammed together like so many pigs in a sty, whereas formerly they had seats and a sufficient quantity of room? Will your correspondent "N. O. E." deny this? Have the Companies, too, not abused the powers their monopoly gave them, by first undersselling the coach proprietors, and then, when these were ruined and driven from the road, and the traffic destroyed, raising their fares upon the public? These pledges, distinctly given in many instances, and in others tacitly acquiesced in, *have not been* redeemed. To suppose the public or the Parliament granting these monopolies without there were some distinct gain, some equivalent advantage, secured to the public in return, would be to charge the one with extreme blindness to their own interests, and the other with extreme neglect of the interests of their constituents.

Having proved the assumptions which "N.O.E." says we must take before admitting the improvement of his illustration in "Examiner's" favour to be just, I suppose he will now, with the candour that dictated the avowal of my having improved his illustration, admit that the carrying out of the analogy between the case he puts and the proprietary of railways, distinctly proves the fallacy of the cause he would uphold. Your correspondent, "N. O. E.," in another part of his letter, is extremely ingenious in his defence of railway monopoly, and the monstrous violation of the rights of men in the legislature interfering with railway property; but does he not see that his arguments would be equally tenable with regard to any other monopoly, or to any interference of the legislature with other private property? Take an instance:—I buy land at a time when certain corn laws are in existence which have the effect of keeping up the value of land; the legislature by altering these laws lowers the value of my land. Does the legislature in this instance commit an enormous and monstrous act of injustice towards me? I have fulfilled every condition which I stipulated for upon entering into possession; in the words of "N. O. E.," "I have not failed in acquitting himself of all obligations to the State and the public." But still, has not the Government a perfect moral right, as well as that of might, to make this alteration? I may resist the change as far as law will permit me; but surely the legislature does nothing that it has not a perfect moral as well as legal right to do, and which act, therefore, can be no injustice!

But it is most absurd, with all due deference to the philosophy of "N. O. E.," and a humble bow to his powers of wit and sarcasm, to apply such reasoning as he uses to obligations between a part of the public and the State. It is an established maxim in all Governments, that private interests must give way to public good; but the antiquated notions and queer-fashioned reasoning of "N. O. E." would apply with equal truth; and, consequently, he would have perpetuated all the monopolies which have ever existed, from the days of good Queen Bess down to our present glorious reign.

"N. O. E." says "that proprietors of railways may be regarded as benefactors of their country." O yes; they invest their money in shares from a desire to serve their country; from a wish that the public may travel more expeditiously, and from a sincere conviction that railways will advance the march of improvement in the intellectual, political, and commercial state of England! It is from no conviction that they will prove profitable speculations; perish such base thoughts that would in any measure detract from the pure, cheap (the word slips in accidentally) patriotism of railway proprietaries!

I confess that I cannot see wherein lies the advancement of public interest; if after railways are established, and by their superior capital have destroyed all competition, in fact have obtained a complete monopoly, I say I cannot see how the public interests are advanced if, either by their exorbitant fares or want of proper accommodation, more than one-half of the public are shut out from participating in them at all. Your correspondent "N. O. E.'s" art might be advantageously employed in reconciling the public to this kind of advancement of their interests.

"N. O. E." asks, in a short concluding defence of railways, and a brief allusion to the inapplicability of the word monopoly to them, "Is there one of them secured against the competition of rival lines, or permitted to make unlimited charges, or independent of public opinion?" Yes; I would answer, they are all, though not legally, virtually and actually secured against the competition of rival lines! In the first place the interests of the one established is sufficient to prevent any attempt of the kind; and in the second place, Parliament would be not inclined to grant a Bill to a rival line. It is true that they are not permitted to make unlimited charges; but then the limit fixed is so unreasonable as to bear no proportion to a moderate or remunerating charge. Are they not independent of public opinion? Does "N. O. E." suppose that, if they were not, the London and Blackwall, *summâ pruria*, would dare to raise their fares, to the loss and detriment of the proprietary thereby to the amount of 120*l.* per week? Is not this pretty conclusive proof of their independence of public opinion? I hope that what "N. O. E. terms my horror of his facetiousness has not prevented me giving, even what he will consider, a consideration to his arguments.

One word, before concluding, to your correspondent "Justus," who seems to be a simple man, with a pious horror of the unscrupulousness of the age, and beholds my unseemly act, of giving an opinion upon *the very abstruse subject* of the policy of high and low fares, with all the virtuous indignation so becoming in one of the old school. He cannot expect me to give in to his opinion, but I think this subject, although familiarised by habitual legislation to Railway Directors, and therefore within their own peculiar province, is not beyond the sphere of minds even as simple as that of "Justus." Yours, &c.,

October 16, 1842. P. Z.

ARBROATH AND FORFAR RAILWAY.

To the Editor of the Railway Times.

SIR,—My attention has been drawn to a letter in your paper of Saturday last, bearing the signatures of "Solomon," recommending a junction of the Boards of the above-named line and the Dundee and Arbroath. I marvel greatly that the "*canny Scots*" should not ere now have seen the policy of such a plan, which would save their *bawbees*.

The usual meeting took place in June, when the result of the traffic to 15th April showed that no dividend *ought* to be paid (so the meeting decided) on the original shares. The *guaranteed* 5 per cent. on the new shares was paid, if my memory serve me, in August, leaving a balance in hand of 836*l.* 7*s.* 6*d.* It was stated in the official circular, that the new Railway Duties' Bill was to take retrospective effect from April; and that, had it been in force last year, they would have paid 180*l.* in lieu of 495*l.* Since April the receipts have been, *on the whole* (taking into account the alteration of duty), considerably larger than for the corresponding period of last year; and it seems to me that it would be only *fair* if the Directors were to hold shortly a *half-yearly* meeting, ascertain what dividend could be made on the traffic from April to September, and let us have it in part payment of our Christmas bills. Your obedient servant,

DAVID.

London, October 18, 1842.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—In a former letter I showed that only 4 per cent. per annum had been netted by the Leeds Company during the year ending June last. During the present half-year the gross proceeds will certainly not exceed those of the corresponding period of last year, which amounted to 117,000*l.* This will just afford a dividend of 4 per cent. for the present half, as the charge for depreciation of working stock for the entire year must be deducted, say—

Gross receipts		£117,000
Deduct working expenses	£42,500	
Do. depreciation of stock	10,000	
Do. interest on loans	37,500	
		90,000
Leaving for dividend, being not quite 4 per cent.		£27,000

Should trade revive in the manufacturing districts it is probable that the working of the Leeds line, during the year 1843, will afford a dividend of 5 per cent.; and in 1844 a great accession of traffic is looked for, as a junction will then be effected with the Liverpool line, at Hunt's Bank. Unfortunately, however, just then the Sheffield line will be opened throughout ("then comes the tug of war"), which, it is to be feared, will again reduce the dividend to 4 per cent.

Such, Sir, are the brilliant prospects of the Leeds line—the *pet* line of Manchester men, and of which it has again and again been predicted, in high and influential quarters, that it would pay 9½ per cent.! *Sic transit gloria mundi!* Yours, &c.,

HAUD CAPTUS OCULIS.

NOTES TO THE TRAFFIC TABLE,

(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

5. The total amount of stock on which dividends are payable is 750,000*l.*

6. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, as also the toll from the Manchester and Birmingham Company. The divisor employed to ascertain the daily receipts per mile is 121 (85+15+21.) The Company do not now carry goods to Manchester.

14. The receipts include those derived from the Cheltenham and Exeter lines: the former opened for 18 miles, and the latter for 44¼. The divisor employed to ascertain the daily receipts per mile is therefore 180¾ (118¼+18+44¼.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. At the last meeting no dividend was declared, the disposable balance from the previous six months' working being only 1,472*l.* 10s. 9d.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,326*l.*, and there was a balance from the previous half-year of 12,479*l.* Out of these two amounts combined, the dividend (after making certain deductions) was paid.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

23. Capital of 993,800*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch. The dividend is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c., and subject to payments to the Grand Junction Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 5,019*l.* 12s. 3d. are the receipts after deductine omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 40*l.* 4s. 0d.; carriages, 55*l.* 7s. 0d.; dogs, 3*l.* 11s. 0d.; parcels, 235*l.* 14s. 9d.; cattle, 39*l.* 12s. 0d.; corn, 10*l.* 16s. 9½d.; heavy goods, 478*l.* 19s. 9d.; coal and lime, 177*l.* 16s. 10d. —Total, 1,043*l.* 2s. 1½d.

31. The amount of stock *created* is 3,000,000*l.*, on which dividends are payable; and the sum of 850,000*l.* is borrowed money at interest. The 3,000,000*l.*, however, is nominal, inasmuch as the shares were some of them issued at a discount, which reduced the actual amount to 2,589,360*l.*, viz.:—15,000 shares at 100*l.* = 1,500,000*l.*; 15,000 of 50*l.*, issued at 40*l.* = 600,000*l.*; 22,500 of 33*l.* 6s. 8d., issued at 21*l.* 13s. 4d. = 489,360*l.*; total 2,589,360*l.* The details of the receipts are as follows—Passengers, 2,547*l.* 12s. 9d.; carriages and horses, 172*l.* 10s. 6d.; parcels, 218*l.* 1s. 4d.; mails, 50*l.* 5s. 9d.; merchandise, 1,143*l.* 15s. 6d.; minerals, 360*l.* 3s. 10d.; cattle, 28*l.* 18s. 6d. — Total, 4,521*l.* 3s. 2d.; including North Midland proportion of Manchester and Leeds traffic, and amount received for Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester an Birmingham toll.

37. The length stated includes branches.

38. The traffic stated does not include the Leeds and [illegible]

TO CORRESPONDENTS.

Investments in Railways.—We are constantly receiving applications for advice with respect to the sale or purchase of particular shares. We have repeatedly stated, that we are very unwilling to offer any opinion upon such points, and, indeed, our readers have the same data as ourselves whereby to form a judgment. Nevertheless, as they *will* have our opinion, we cannot refuse to give it. We wish them, however, to bear distinctly in mind, that we do not, in any instance, hold ourselves answerable for the event. The course we recommend to our correspondents, is simply what we ourselves would follow, were we buyers or sellers under the circumstances detailed by them respectively. With this caution, which we shall take care to keep before parties who apply to us on such subjects, we proceed to notice the applications of the week. We may just add, that the figures and letters have no reference whatever to our traffic list, or to the initials of any railway. We cannot notice questions where this rule is violated. In order that we may not be subjected to needless questions, we must have the name and address of every inquirer, although the answers may be given under a fictitious designation:—A. G. *Do not sell No.* 1. *No.* 2 *will go lower, but at present prices will be a good investment. No.* 3, *yes; No.* 4, *doubtful*—A Constant Reader. *No.* 2, *a good investment. Nos.* 1 *and* 3 *will be lower.*—B. B. *No better time than the present will be found for disposing of No* 1, *but we would not recommend investment in Nos.* 2 *and* 3, *especially No.* 2.—M. A. M. *(Badom).* 1, 2, 3, *and* 4, will be *good investments; 5 and* 6 *are tolerable; have nothing to do with* 7.—A Glasgow Subscriber. *Nos.* 1 *and* 2, *good: have nothing to do with No.* 3.—P. Q. R. *Do not sell the shares of the first-named railway. Those of the second will, we think, rise.*—W. H. *No.* 1 *will, we believe pay ultimately. We think* 2*l. may be counted on from the other railway mentioned.*—W. P. M. *Do not sell Nos.* 1, 2, *or* 3 *The new shares will pay well We think further investment (to a moderate extent) in No.* 1 *would be profitable.*—P. C. *(Liverpool). We cannot answer our correspondent (as he desires) by the initials of the several lines named, as it would not be fair thus to hurt property of which we may have a bad opinion—perhaps without good reason. We recommend him, however, to part with the shares of the Company respecting which he principally writes, in preference to those of either of the other Companies named.*—Beta. *The security for the bonds is quite as ample in No.* 1 *as in No.* 2, *both being fully sufficient. The difference in the rate of interest depends upon many circumstances, totally irrespective of the security.*—H. *(near Wigan). No.* 1 *do not sell; but if you can, purchase.* Ultimately *the line must prove very profitable. No.* 2, *if* 5 *per cent. be secured, the shareholders may, all things considered, deem themselves lucky. No.* 3 *we would not particularly recommend. Nos.* 4 *and* 5 *will do at present prices; No.* 6 *will go somewhat lower.*—J. T. *(Leeds). We must decline answering a correspondent who wishes to know "if it be advisable to sell at present price, in the hope of buying lower ere winter is over." Such gambling we resolutely discountenance.*—A Subscriber to the *Railway Times (Waterford). The shares first referred to will, we make no doubt, go lower. The first of the three other lines referred to is good, the second bad, and the third indifferent. Our correspondent should have numbered his queries.*—T. A. *(Liverpool). Purchase Nos.* 1 *and* 2; *the others are not so favourable.* —We have left several questions unanswered, the parties not having appended their names and addresses. We have received several applications for advice *by private letter*, but our avocations will not allow us the necessary leisure. It is scarcely reasonable in our correspondents to expect it.

A Shareholder *(Glasgow), has our best thanks.*

Mr. B. *(Winchester).—We have made inquiry, and it will be seen have altered accordingly.*

A Shareholder *(Taunton) is thanked; we have attended to his hint.*

Q. in a Corner —*We do not believe in the existence of any favouritism in the instances alluded to, and, therefore, need not inquire into the (alleged) causes.*

Brighton and its Vicinity, with the Railway and Country from London.—*Under this title, two maps, mounted so as to fit the pocket, have been published by Mr. Jobbins, of Warwick-court, Holborn. They will prove valuable aids to strangers visiting Brighton, being got up in the very superior style for which the establishment of Mr. Jobbins is noted.*

Industrious *(Brighton).—We know no method of obtaining a situation, except by personal influence with some of the Directors, or by public advertisement.*

An Old Subscriber *(Cambridge).—The sum total was right.*

Mr. Park's *railway verses are very good, but other matters at present claim our space.*

Correct.—*The discrepancy does not lie with Mr. Frost, but arises from the different methods adopted by the two journals.*

We feel obliged to A Proprietor in the Midland Counties' Railway *for his good opinion, and for his concurrence in our views.*

London and South-Western Railway.—*A correspondent* (Watch) *says*:—"*I cannot gather from the reports of the South-Western Railway meetings what is the number of the shares of that and* the Gosport *lines* conjointly, *on which the next dividend will be payable—nor is it stated whether the 'maintenance of way' of the Gosport line for the current half-year will fall on the revenue. Perhaps in your notices to correspondents you can give this information to an old subscriber. Also, whether any further sums will be taken on loan during this half-year?*" *Our answer is, that the number of shares is* 45,912;—*that the maintenance for the first year is generally included in construction, and that all the sums authorised to be taken upon loan have been borrowed.*

TRAFFIC OMITTED.

Taff Vale Railway —*For the week ending October* 8—*Receipt from passengers (number of passengers* 2,016¼) 141*l.* 12*s.* 9*d.*; *goods and parcels,* 447*l.* 3*s.* 2*d*; *total* 588*l.* 15*s* 11*d.*

THE RAILWAY JOURNALS.

The Stamp Returns for April, May, and June, just published by Order of the House of Commons, enable us to complete the Returns for the year ending the 30th of June last. The results, as affecting the railway journals, are as follows:—

RAILWAY TIMES	**146,374**
Railway Magazine	68,500

Majority in favour of the RAILWAY TIMES .. **77,874**

from which are to be deducted 10,874 Supplement stamps used for double numbers, still leaving the ordinary circulation of the *Railway Times* just about double that of its contemporary.—*September* 17, 1842.

THE RAILWAY TIMES.

SATURDAY, OCTOBER 22, 1842.

We are enabled to-day to submit to our readers the Report of the Committee lately appointed to investigate the affairs of the North Midland Railway. It is unusually brief for such a document, being in that respect in keeping with the short period over which the labours of the Committee extended. Its recommendations are, nevertheless, sufficiently sweeping, having for their object to effect a saving of not less than 17,788*l* on an annual expenditure in salaries of 40,610*l.*!

A reduction to so great an extent must, of course, contribute largely to the augmentation of the yearly dividends, provided it can be carried out consistently with the efficient working of the railway. But *can it be so carried out?* The Committee say it can; the Directors, it is rumoured, say it can't; and we really are totally unable, from the absence of details, to give an opinion either way. That the consolidation of the Secretary's and Superintendent's offices might judiciously be effected, any one can at once understand, inasmuch as the duties

Digitized by Google

appertaining to such offices cannot, upon such a line as the North Midland, be very heavy—certainly not half so onerous, conjointly, as those which the Secretaries of many other Companies transact with ease to themselves and credit to their employers, while the scale of remuneration proposed is such as thousands of gentlemen of education and experience would be but too happy to accept. But when the Committee dispose of a department in a summary way by merely saying, that as at present conducted, it costs 15,306*l.*, and having "carefully examined the expenditure," they think it might be reduced to 10,608*l.*, it is quite impossible for us or for the shareholders, who have not had the benefit of personal inquiry into the facts, to say whether the recommendation can safely be carried into practice. It may, or it may not, be available; but for the present we must pin our faith upon the strongly-expressed opinion of the Committee. We take it for granted that the amount fixed upon is not a random guess, but that the Committee carefully compared the wants of the North Midland traffic with the wants of efficient lines in the same neighbourhood, and regulated the scale of expenditure accordingly. We think, however, it would have been more satisfactory to the proprietors, if the Committee had gone somewhat more into particulars. For anything that appears in the Report, the inquiry may have been a complete farce, huddled up and hurried over, without due investigation into the arguments and facts which of course the Directors are able to adduce in support of existing practices—we say *of course*, otherwise as individuals professedly anxious for economical working, they would spontaneously have effected the reductions now recommended. By supplying details, too, all excuse would have been taken away from an unwilling Board; the proprietors would have seen the reasonableness of the suggestions offered by the Committee, and have *compelled* the Directors to carry them into effect, or to vacate their seats.

The Directors, it may fairly be presumed, will require further explanations before they take any steps to carry into effect the suggestions of the Committee, and doubtless these explanations will be forthcoming. Until this has taken place, we must suspend our judgment on the merits of the Report. We shall rejoice to find that the reductions recommended are practicable, although we still think that the suggestions of the Committee would have carried with them infinitely more weight had they devoted more time to the investigation.

One point is clearly settled by the Report of the Committee, and that is the very discreditable inefficiency of the Company's engineering staff. The mere fact that there are still eight contracts for the construction of parts of the line unsettled, and that nine months have been spent in the closing of another, is quite sufficient to convict the parties concerned of gross neglect. When to this is added the consideration that "the Committee think the road is not in so good a state of repair as it was when the present contractor took charge of it," and moreover, that the inference to be drawn from one of the paragraphs in the Report establishes great want of attention to the care of the "surplus carriages," it will, we think, be admitted that in no department is reform so much needed as in that over which Mr. SWANWICK presides. That gentleman enjoys, we understand, a very handsome salary, and we cannot acquit the Directors of blame in not looking more closely after him. We suspect the Board were much more inclined to cut down the wages of porters and policemen than to keep in check, and to reduce to proper limits as to remuneration, gentlemen of Mr. SWANWICK'S pretensions. We are not ignorant of the high airs assumed by Engineers, or of the contempt in which they hold any endeavour on the part of Directors or shareholders to interfere with them in the discharge of their professional duties, but, in *this* instance, carelessness seems to have been carried beyond all reasonable bounds.

We are ready to give the Committee credit for sympathising with the servants whose dismissal must follow the adoption of the Committee's suggestions. There is, nevertheless, no help for it, although the case of the North Midland officials is peculiarly distressing, from the fact that very many of them were seduced from other Companies by the promise of higher wages. The interest of the proprietors is paramount, but we trust that if necessity compels the discharge of any great number of servants, as much indulgence and consideration as possible will be extended.

Since the above remarks were written we have received the following note from the Secretary of the Company:—

"*To the Editor of the Railway Times.*

"Sir,—The attention of the Directors having been called to a paragraph in your last number, stating that you hoped to be able to publish the Report of the Committee appointed at the last general meeting to investigate the affairs of the Company, I am desired to state that they have been unable to take that Report into consideration until the present week, in consequence of the details of the reductions recommended not having been furnished until Saturday last. They are now occupied in a careful examination as to the practicability of carrying those reductions into effect; the result of which, together with a copy of the Report itself, they hope to communicate to their proprietary in the course of a very few days, after which it is their intention to call a special general meeting to consider the whole subject.

"The Directors beg it to be understood that the statements which have appeared in the public papers on the subject have been wholly unauthorised by them.

"I am, Sir, your obedient servant,
"R. FROST, Secretary."

It will be seen, from this note, that the details to which we have referred are now in the hands of the Directors, and that in a short time a meeting of the proprietors will be called, to determine the question finally. It is to be hoped that the result will contribute to the permanent prosperity of the undertaking.

THE existing state of Post-office management is beginning to excite considerable attention, even from those who may be presumed from their political creed to be far from prejudiced against the powers that be. It is next to impossible that it could be otherwise. So glaring and so general are the signs of inefficiency, and so nearly do the results touch the practical business of almost every man in the community, that the wonder really is that the public have so long kept silence. The grand experiment of the penny postage is far from receiving fair play at the hands of those who have now the superintendence of this branch of the public service. On this point a Conservative daily journal remarks, with much justice, that the uniform system has been attended with a great many limitations of the convenience previously enjoyed:—

"The restriction upon the hours of posting in London, as well as elsewhere, is at the head of these limitations. Why should letters be dispatched from London to be received at one o'clock in the morning in Bristol, and one o'clock in Birmingham, and at four o'clock at Liverpool and Manchester, when they are not wanted in any of those places before seven or eight? The four hours' lag in London is not merely a loss of convenience—it is a *loss of revenue*. It is altogether a mistake to suppose that no letters but letters of necessity contribute to the Post-office revenue; probably nine-tenths of all letters written are perfectly unnecessary letters, written often because the writer has a few spare moments to write (which generally happens in the evening); and thus the early hour of posting causes, besides the inconvenience to the public, a serious loss to the revenue. What would be thought of a notice that from six o'clock, p.m. to nine o'clock, a.m., nobody shall use the other taxed community? Yet this notice is practically given in the matter of letters by the present Post-office regulations."

We have in previous notices alluded to the apparent unwillingness of the Post-office authorities to render general the convenience of morning mails. Why any difficulty in such a matter as this should exist, is best known to the parties themselves. We suspect, however, that at the bottom of—we were going to say the indifference to general convenience, but that would be far from conveying a proper idea of Post-office tactics—at the bottom of the studied neglect of the public accommodation displayed by Post-office functionaries from the highest to the lowest, is the all-pervading consideration of self—the dread of innovations which would entail personal inconvenience upon those who have thriven under the old system, and of course are strenuous admirers and advocates of "things as they are." The convenience of the British nation at large is nothing compared with the convenience of a score or two of overpaid and underworked functionaries in St. Martin's-le-Grand, who most heartily anathematise railways for interfering with the old routine! Reform from within is, we fear, not to be looked for from those connected with the Post-office; if Parliament do not see that the requisite changes are forced upon them from without, the functionaries, of whom Lord LOWTHER is the head, may for some time to come set the community at defiance. They themselves are insensible to remonstrance.

Morning mails, indeed! Why should there not be forenoon mails, and afternoon mails, as well as evening and morning mails? Why but because an "innovation" so extensive as this would interfere with the plum of those to whom the control of Post-office arrangement is entrusted. Of course they would supply another answer in the alleged high charges of the Railway Companies for the transmission of the bags. Let them try. Let them show that they are sincerely anxious to make as much as possible of railway facilities in the conveyance of the correspondence of the country, and we venture to assert that there is not a Railway Company in the United Kingdom who would not only willingly forego all profits, but would submit to considerable sacrifices, to give an experiment of the kind a fair trial. Did a far greater degree of activity is displayed on the part of the Post-office, the penny postage will never have that justice shown to it which so comprehensive a measure merits—will never have room for a full development of its effects on the public revenue, or its benefits to the community at large. We hope to see this really most important matter energetically taken up. It concerns more persons' more than at first sight may appear, and railways will have but half accomplished their office

Digitized by Google

while personal dislike, or the convenience of a class, is allowed to stand between the public and those facilities for the transmission of their "winged words," which all the prejudices and partialities of a Government Board cannot withhold from the public in their own persons.

We had occasion last week to notice and to censure the conduct of the Executive of the Edinburgh and Glasgow Railway towards one of their customers, and it gives us great pleasure to find that precisely the same view of the case of Mr. MURRAY has been taken by one of the most influential and independent of the local journals, whose comments we give in another page. To-day we regret to be compelled to administer reproof to parties more immediately within our sphere. We have, however, the satisfaction of knowing that the exposure of one case frequently obviates the necessity for future complaint, and we trust it will be so in the present instance.

The case to which we allude is thus narrated in the last number of the *Sheffield Independent*:

"On Thursday, Mr. Thomas Wright, of Doncaster, took a third-class ticket at the Oldham station of the Leeds and Manchester line for Sheffield, and left Oldham by the 7 o'clock morning train. At Normanton it appeared there was no third-class carriage to the train forward, and Mr. Wright was put by one of the attendants into a second-class carriage. When the train reached Sheffield Mr. Wright was required to pay the additional fare for riding in a second-class carriage from Normanton. This he refused to do, alleging that, having taken a ticket through, it was the duty of the Company to convey him, and if they had not a carriage of the third class in the train, that was their affair, and not his. He was told he might have waited several hours at Normanton for the next train with a third-class carriage; but to this he replied that he was entitled to be conveyed through without unnecessary delay, since he was not informed when he took his ticket that he would be liable to any such stoppage. The servants of the Company, however, persisting in their demand, and Mr. Wright being resolved that he would not submit to the injustice, he was brought to the police office, where Mr. Rayner took bail for his appearance before the magistrates. He had, therefore, to remain in Sheffield during the day. In the course of the afternoon, however, Mr. Henry Vickers, Solicitor to the Company, made an offer to withdraw the charge on his signing a declaration of the facts, namely, that he was not informed when he took his ticket that there were not third-class carriages through to Sheffield by that train, and that he was put into the second-class carriage by a servant of the Company at Normanton. Mr. Wright at once complied with the terms. We understand that the North Midland Company complain much that, in defiance of repeated instructions to the contrary, the Leeds and Manchester Company persist in booking through. But the latter Company have also much reason to complain of the North Midland, that they do not consult the convenience of the public by attaching third-class carriages to all their trains. We are glad, however, of the opportunity of making known Mr. Wright's spirited and successful opposition to the injustice, and we trust that it will force upon the Railway Companies a greater regard to the interests of the public."

Throughout all this business it would seem as if Mr. WRIGHT, the passenger, had been looked upon by the railway authorities as the offender, instead of the party against whom a most gross, a most unpardonable, offence had been committed. Mightily magnanimous and forbearing it was, no doubt, of "Mr. HENRY VICKERS, Solicitor to the Company," to "offer to withdraw the charge" on certain conditions; and to get rid of the annoyance of detention, and the not very pleasant ordeal of an examination before a police magistrate. Mr. WRIGHT seems to have complied with the terms presented to him. We are sorry for it. Had we been in Mr. WRIGHT's position, nothing short of a public apology for the treatment which the officials of the railway ventured to offer should have sufficed. What matters it to Mr. WRIGHT—what to the public who travel by either railway—that there is a misunderstanding between the Manchester and Leeds and North Midland Companies, with respect to the "booking through" of third-class passengers? Mr. WRIGHT took out his ticket at Oldham for Sheffield, and ought to have been conveyed to the latter place without let, hindrance, or delay. Instead of this, he was taken to the police-office, and detained a whole day—his liberation, after all, being effected rather as a matter of favour than of right!

How often must we repeat the self-evident truth, that these instances of disrespect to the public, and of disregard for their accommodation, tend most sensibly to bring odium upon the system generally! The squabbles and jealousies of contiguous Companies have been most fertile in producing dissatisfaction, and no stronger argument in favour of the amalgamation for which we have recently been contending could be adduced, than the difficulty of settling these arrangements to the mutual advantage of the parties, and the convenience of the public.

Far be it from our wish to stir up strife, or to encourage litigation where no one profits but the professional harpies who prey upon both sides alike, but if Mr. WRIGHT do not bring an action for false imprisonment against the parties concerned in his detention, he will fail in his duty to the public, to say nothing of what he owes to himself. The "spirited and successful opposition to injustice" of which our contemporary speaks, will then be more complete. If it do not "force upon the Railway Companies a greater regard to the interests of the public"—and we do not think that in general they require the application of such a threat—an appeal to the strong arm of the law may at least exert a beneficial influence upon the Companies more particularly referred to.

While on the subject of complaints against Railway Companies, we may call attention to a case reported in another column, in which the Glasgow and Ayr Railway Company were the defendants. As far as we can gather the result from the jargon of Scotch jurisprudence, it seems that the bye-laws of a Company do not relieve them from the responsibility attached to them as common carriers. It is perhaps right that it should be so, but we apprehend that something more than the decision of a Sheriff's Court will be required to set the matter finally at rest.

Reverting for one moment to the case of Mr. Murray *v.* the Edinburgh and Glasgow Railway, the more we look at the circumstances the more satisfied are we that very gross injustice has been dealt to the complainant. It will be recollected that the defence set up by the Company was, that there *were* empty seats in the carriages, the evidence in support of which, as given by the guards, was most unsatisfactory and conflicting. Even had the testimony of the guards been perfectly unsullied, even had it been true that there were empty seats, this was nothing to the purpose. An individual in going along a line of railway carriages may chance to overlook a particular seat, and surely it is the duty of the Company not only to provide the seats for which they give out tickets, but also to point out where the seats are to be found. In this case the attempt on the part of the Railway Company to show that Mr. MURRAY and his friends insisted upon being accommodated together in one carriage, and that they were offered single seats for the whole party in different carriages, broke down completely in the proof, and was an allegation utterly at variance with the truth. It was, on the contrary, proved that a party of ladies and gentlemen were during a space of 25 minutes engaged in a vain search after seats, that they applied again and again to various servants of the railway, that annoyed at the position in which they were placed they applied to Mr. STEWART, the Superintendent of the station, who promised to get them seats, and that ultimately the train went off, taking Mr. STEWART with it, leaving them standing with many others in a like situation on the platform. Surely in circumstances such as these it is no valid defence to bring forward two guards to say that there were really seats after all. Suppose even that this were true, it was no answer to Mr. MURRAY and his friends, who it was proved had used every diligence in their search after seats. The reasonable presumption too, is, that when people purchase tickets for a particular railway train they intend going by it. Mr. MURRAY, we understand, lives at a considerable distance from the railway, and it is scarcely to be supposed that the ladies of his family would get up between 4 and 5 in the morning, which they required to do in order to reach the station in time, and after all allow the train, the only one as they knew that could carry them to Stirling in time to see the Queen, to go off without them, if they could by any possibility have contrived to get seats. In addition to the direct proof, which in itself is most conclusive, the reasonable probabilities of the case are all against the railway.

We have heard, but can scarcely believe, that even now the Railway Company retain the price of Mr. MURRAY's four tickets for a contract which they did not perform!

In the year 1840, when the Brighton, Croydon, and Dover Companies, on the one side, and the Greenwich Company on the other side, were before Parliament for the purpose of widening the Greenwich line, the Directors of the Croydon Company had already convinced themselves, by experience, that the short traffic of the Croydon Railway could never be profitably conducted under the imposition of a fixed toll of 3d. per passenger, because at the then rate of fare almost the whole of the profits, such as they were, became payable, under the *then* rate of toll, to the Greenwich Company. To raise the rate of fare would obviously be to cause a decrease in the number of passengers, perhaps more than commensurate with the increase of price, and a consequent diminution of the toll per passenger payable to the Greenwich Company, accompanied by only a very slight saving of expense of carriage to the Croydon Company. To lower the rate of fare would indeed promote a very great increase in the traffic, and a larger receipt from the public, but which larger receipt, being obtained from a still greater increase in the number of passengers, must necessarily, under the operation of a fixed toll per passenger, be paid over to the Greenwich Company without any increase of profit to the Croydon Company.

When, therefore, the Greenwich Company

Digitized by Google

sought to obtain the power to levy an additional toll, the Directors of the Croydon Company protested against it as impracticable—warned the Directors of the Greenwich Company that they would fail in obtaining the results which they expected from it—and finally retired from the Committee of the House of Commons rather than become parties to a proceeding which they knew to be fraught with loss and evil to both parties.

Before, however, any proceedings were taken in Parliament, and for the sake of avoiding a Parliamentary contest which eventually cost each of the two parties 4,000*l.* or 5,000*l.*, the Brighton, Croydon, and Dover Companies jointly offered to expend the whole sum necessary for widening the Greenwich line, and to pay thenceforward 1d. per passenger for all passengers passing over that line, as an indemnification to the Greenwich Company for the use of their land.

Whilst the Parliamentary proceedings were in progress, and it was argued that a high rate of toll would be incompatible with a low rate of fare such as that charged on the Croydon line, the Directors of the Croydon Company were repeatedly urged to *raise* their fares, and printed papers were actually circulated by the Greenwich Company to show that these fares were ridiculously low, and would bear a very considerable increase.

After a twelvemonth's experience of the working of the 3d. toll, the results, as above stated, were laid before the Greenwich Directors, and they were told, that unless they would consent to some modification of the toll which should have the effect of making a fair division of the profits of the Croydon traffic between the two Companies, instead of the whole being taken by the Greenwich Company, the Directors of the Croydon Company would be under the disagreeable necessity of *raising* the fares, by which these profits would be diminished, but that if they, the Greenwich Directors, were prepared to consent to a modification, then the Croydon Directors would *lower* the fares, by which these profits would no doubt be increased, and the *share* only of such profits, if equitably divided, which would fall to the Greenwich Company, would in all probability be larger than the gross sum now received as toll. The Croydon Directors even offered to guarantee this result, but the Greenwich Directors refused to accede to the proposition.

The fares were accordingly *raised*, and the results were exactly what the Croydon Directors had predicted—the profits fell off; and as these profits had been nearly all received by the Greenwich Company, the toll of that Company, which was about 6,000*l.* per annum, has gradually declined to little more than 3,000*l* per annum, even although 50 per cent. has in the meantime been added to the *rate* of their toll; whilst, until the imposition of the 4½d. toll, the Croydon Company has sustained no loss, its income being stationary. During this time repeated offers have been made by the Croydon Directors for an adjustment of this question, which offers have been constantly refused by the Greenwich Directors. The imposition of the toll of 4½d., however, forced upon the Croydon Directors the necessity of submitting to a loss, or of giving up the Croydon traffic, since they must either allow the Greenwich Company to substract a certain larger amount of the present gross receipts, already not more than sufficient to pay the expenses, or, by raising the fares, drive off so much more of the traffic as must cause the remainder to be carried at a loss. The abandonment of the traffic is, no doubt, as far as immediate profit is concerned, the more advisable course, as, should other parties be disposed in the meantime to carry any small part of the traffic thus given up, the Croydon Company would at least secure a toll of 1s. upon every passenger from whom the Greenwich Company should receive the toll of 4½d., and this without the expense of carriage. The toll so obtained, however, would be but a poor compensation to the Croydon Company for the loss of the profit they might derive from carrying the public at low rates, since it is not conceivable that any other parties would long continue to bring passengers at a loss; and there can be no profit in carrying them at an average fare of 1s. 5d. (the rate received by the Croydon Company even at the present high fares), and paying upon them at the same time a toll of 1s. 4½d. per passenger.

It seems to be difficult to understand how propositions so equitable, and apparently so advantageous to the Greenwich Company, as those made by the Directors of the Croydon Company, should be refused by the Directors of the former Company. It is believed that the solution of this difficulty will be found in the following statement. If by any arrangement to be made between the Companies, the Croydon Company, or the other Companies, should be able to pass over the Greenwich Railway so many passengers as at 1d. per passenger would amount to a larger sum than that which was received by the Greenwich Company under such arrangement, then would the Directors of the Greenwich Company be proved to have been in the wrong, and to have expended a large sum of their proprietors' money to no purpose, since they might have received this 1d. per passenger without any outlay at all, by the proposition made to them by the three Companies in the first instance, which they refused. Or should the numbers in that case passing over the Greenwich Railway be so great as to amount, at 2d. each, to more than the sum, however large, received by the Greenwich Company under an arrangement, then will the Greenwich Directors be equally wrong, since the means adopted by them for increasing their revenue by an additional or higher toll per passenger will have likewise failed, and the money expended by them, for the sake of securing this higher rate of toll, have been expended in vain.

There can be little doubt that to the fear of this exposure the present interests of the proprietors of both Companies are being wilfully sacrificed.

A WISEACRE in the *Standard* is of opinion that the Income Tax might have been dispensed with, by *levying a tax upon locomotive steam-engines!* The Editor says his correspondent "is an individual of high rank and education, and the reverse of a prejudiced man," and yet admits that the mistakes into which this gentleman of "rank and education" "falls are surely such as would be discreditable to the judgment of even the most illiterate!"

Except as indicating the animus of a few (and we trust they are but a few) individuals of "high rank and education," the absurdities of such persons as the correspondent of our contemporary are not worth notice. The *Standard* itself supplies an answer in its hint that to render profitable any such tax as is proposed, it would be necessary to treble the fare of railway passengers, thus of course bringing ruin upon every Railway Company in the kingdom. The *Standard's* correspondent thinks, if this tax on locomotive steam-engines had been put on "at anything like the rate imposed upon post-horses, the returns would have been immense." No doubt of it, if the present number of passengers on railways would continue at treble fares. As the *Standard* very justly observes, "if beer were taxed in the same proportion as tobacco (600 per cent. upon the prime cost), without causing any diminution in the consumption of beer, the returns would be immense also." But of course any such expectation would be altogether out of the question.

Perhaps the correspondent of the *Standard* does not know that *already* Railway Companies are taxed quite heavily enough. Did the revenue gain anything like so much from the stage-coaches on the Birmingham road as is now secured from the London and Birmingham Railway? We think the answer which the Stamp-office people could give, would satisfy the *Standard's* friend, that not much injury to the revenue has resulted from what he no doubt deems the immunity of railway locomotion from Government charges.

But if "locomotive steam-engines" are to be taxed, of course the correspondent of the *Standard* would include the engines (or in other words, the passengers) of steam-boats. This would only be just and equitable. Why should travelling by water be more exempt from taxation than travelling by land? We are not advocates for restrictions upon travelling of any kind, and have long contended for a modification even of the stage-coach and post-horse duties, but we do not see why all should not be *served alike*. A small capitation impost upon steam-boat travelling would produce a very considerable revenue, and might thus serve to reduce the tax, if not upon railway passengers, at least upon travellers by common road. Indeed we feel surprised that in the present state of our taxation this source of revenue has not sooner been looked to. There is no reason why it should *not*.

IN our front page will be found an advertisement setting forth that a requisition has been presented to the Directors of the Midland Counties' Railway Company, calling upon them to convene a special meeting, for the purpose of appointing a Committee of Investigation, totally distinct from the Board. The result is not stated; but we take it for granted that, if the requisition be sufficiently subscribed, a meeting will be forthwith convened. We trust that this matter will not be allowed to degenerate into a scramble for office, or be rendered subservient to the promotion of personal interests or dislikes.

IT will be seen from a report elsewhere that the new shares of the West London Railway will in a few days be brought before the public. We have no doubt that they will be speedily subscribed for.

Next week we shall have something further to say relative to this scheme. In the meantime we cannot too strongly censure the conduct of such persons as MR. JOHN WHITE, who, by the introduction of crude and impracticable projects, and the advocacy of visionary views, hazard the future success of the undertaking. The attention heretofore shown to parties of this character has been one of the principal causes that have sunk the railway to its present condition.

AN advertisement appears in another column from Messrs. PICKFORD & Co., the well-known carriers, with reference to certain recent

Digitized by Google

reductions made by the Directors of the Grand Junction Railway in the charges for goods carried by the Company themselves. We have not had time as yet to make full inquiry into the matter, but shall probably return to it at an early day. It will naturally occur to every one, that the Directors had previously been charging the public more than a fair price, or that they are now working this department of their business at a loss. We have an indistinct recollection of statements made and figures given on the part of the Company before a Parliamentary Committee, which would show that the Company *must* now be conducting their goods' traffic at a loss. But of this hereafter.

A CORRESPONDENT of the *Scotch Reformers' Gazette* says:—"I returned yesterday with my family from the coast, taking the railway from Greenock. My family having been out of town during the sea-bathing season, they had a considerable accumulation of luggage, and on stating this circumstance to the Manager of the railway, he at once offered, in acknowledgment of the custom we had thrown into the hands of the Company, to convey our entire luggage free of charge. The quantity carried, which filled *two* of the railway carts, was delivered at my house, a mile distant from the railway terminus, for the mere expense of the cartage, namely, the trifling sum of 3s. A neighbour of mine was similarly treated on the preceding day. I think this instance of the liberality of the Greenock Railway Company, *and the courtesy of their servants*, should be made known, more especially as forming so striking a contrast to the case [Murray *v.* The Company] reported in the columns of your paper last Saturday, in which the Edinburgh Railway Company were concerned."

—*o*—

IT appears, from a statement in a local paper, that previous to the opening of the railway the price of coals at the Swindon wharf of the Wilts and Berks Canal was 27s. 6d. per ton, whereas a good article may now be had at 20s. per ton.

—*o*—

THE Directors of the Newcastle and Darlington Junction Railway are bringing compensation cases before juries in the county of Durham, in which county it has hitherto been the practice to plunder Railway Companies, by high prices and enormous rents for *way leaves*. The first case tried before the Under-Sheriff — Wooller, Esq., was for the price of the Dean and Chapter of Durham's interest in 50 acres of land, let on several leases. Their valuers swore to 12,319*l.* as the value, and the jury gave 3,500*l.*! Comment on this result would be superfluous.

—*o*—

THE *Brighton Gazette* of Thursday says:—"We understand that a survey has been made for a continuation of the Brighton and Shoreham Railway to Chichester, to enable an application to be made to Parliament for a Bill next session. There is little doubt that the line will be ultimately continued to Portsmouth; and we need not point out the inestimable advantage, in a national as well as military view, of a railway communication along the coast." We should like to know who is to be *Engineer* of this scheme, and who the Provisional Committee.

—*o*—

THE most recent accounts from the Iron districts represent the trade as in a very depressed condition, its future prospects being, if possible, still more discouraging.

LONDON AND DOVER RAILWAY.

Traffic Receipts for the Week ending October 18, 1842—the Seventh Week of the Low Fares.

Date.	First-Class.	Second-Class.	Third-Class.	Total.	Amount.
Oct. 12.. .	219	565½	433½	1,218	£196 15 7

Add Total to the 11th October, from last week's *Railway Times*.....				8,160½
Total loss to the Greenwich Company in *seven* weeks by their prohibitive toll				9,819

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I am glad to perceive, from an article in your paper of Saturday, October 15, that the Northern and Eastern Railway incites discussion. I quite agree with the Director at the last meeting of the proprietors, who stated that the traffic on the line was not fully developed.

If the proprietors and Directors, instead of squabbling, would endeavour to carry on the line of railway towards Cambridge, and so into Lincolnshire, or through Newmarket towards Norwich, and so join the projected Yarmouth and Norwich Railway, it would be a most productive speculation, and well deserving the attention and support of the landowners, occupiers of land, and the monied interest. The vast extent of country between the Birmingham Railway and the German Ocean is without a railway—for I consider the Eastern Counties' never will be completed. The eastern counties must soon obtain a more rapid means of conveyance for their inhabitants, and their produce, to the chief market, London, or they will fall to decay, and lose their station amongst the leading agricultural counties of England. Fat cattle are now conveyed from Inverness far north of Edinburgh more rapidly, in better condition, and at no greater expense, than they are now driven from Norfolk and Suffolk. A railway would enable the farmers to attend the sale of their fat cattle at Smithfield, also take a peep into Mark-lane, of which they would be too willing to avail themselves, as at present they are entirely at the mercy of the drover and the Smithfield salesman. The short conveyance by railway to Hockerill has occasioned the Norfolk coaches to load very heavily; extra coaches have already been put on the road, and probably more will. I believe the only two coaches which might have availed themselves of the railway, and who have not, (the Lynn day-coach and the Newmarket mail) will soon be obliged to do so. The most expensive part of the road to make would be from Hockerill to Littlebury, if the hills could not be turned; after that, the country is nearly a level one.

I am, Sir, yours, &c.

A NORFOLK OWNER AND OCCUPIER OF LAND.

October 18, 1842.

GREAT NORTH OF ENGLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—In common with many shareholders of this county (of whom there are not a few), I have been anxiously expecting from the Directors of this undertaking, some explanations of the charges contained in a letter, and published in your valuable journal, from their late Engineer, Mr. Storey. Certainly, such a letter should not be passed over in silence; if incorrect, it is the duty of the Directors to say so; if true, it is the duty and interest of every shareholder to be prepared at the next half-yearly meeting to seek a Directory in whom they can place confidence.

My confidence in the Directors of this railway induced me to become a shareholder; I am sorry to say, however, that I am disappointed.

M. P.

Devon, October 17, 1842.

JOSEPH PEASE AND THE GREAT NORTH OF ENGLAND RAILWAY.

To the Editor of the Railway Times.

RESPECTED FRIEND,—A communication appears in your last week's paper from one of your correspondents, signing himself "A Looker On."

Permit me to say, in reference to the strictures which he therein makes upon my character, that they are such as must naturally have occurred to the mind of every one, who, like himself, labours under the erroneous impression that the writer of the letter from which he quotes, is the individual whose name appears in connection with the proceedings of the Great North of England Railway Company.

It would have been better had your correspondent ascertained this point prior to placing me before your numerous readers, in the inconsistent position which he does.

For his information, however, as well as theirs, I beg distinctly to state that *I never held a share, or had any connection whatever, directly or indirectly, either with the Great North of England or the Stockton and Darlington Railway Companies.* The "Mr. Pease," whose name has been confounded with my own, is the late member of Parliament for South Durham, and is now Treasurer to both these Companies.

In conclusion, I would observe, that every day's experience only tends to confirm me in the sentiments advanced in my letter of 3rd month (March) last, in reference to the payment of dividends out of capital, and *I rely on your justice* in defending me from the gross charge brought against my character, by "A Looker-on," by giving a prominent place in your columns to this public refutation.

I am, respectfully, your friend,

JOSEPH PEASE, SEN.

Feethams, Darlington, 10 Mo. 19, 1842.

N.B.—The quotation made by "A Looker-On," from the letter of mine to which refers, is as follows:—"If this is the way to support the prosperity of railways, then permit me to say, perish railways, and live justice and truth immutable." JOSEPH PEASE.

EASTERN COUNTIES' RAILWAY.—Surprising activity is evinced by the contractors upon the portion of the line in our immediate vicinity. The embankment on the western side of the river Can was last week closed up to the lofty viaduct, the arches of which are now being ballasted for the reception of the rails. The embankment from Springfield has reached the station in the town field within a very short distance, and the rails being uninterruptedly laid from the commencement of Mr. Walker's contract, in Springfield, to Witham, we understand the Engineer and several of the Directors will shortly traverse that portion of the line. Apprehensions having been entertained that several footpaths now temporarily obstructed would not be otherwise provided for, Mr. Braithwaite has been conferred with, and that gentleman has promised that provision shall be made in this matter.—*Chelmsford Chronicle.*

NORTH MIDLAND AND MANCHESTER AND LEEDS RAILWAYS.

To the Editor of the Railway Times.

Sir,—I have frequently heard it remarked, that a strong parallel exists in the circumstances of the North Midland and Manchester and Leeds lines. Both were laid out by the same Engineer; both were constructed at an enormous cost, and each of them has the town of Leeds for a northern terminus. The entire cost of both lines (when the branches of the Manchester and Leeds are finished) will be as nearly as possible the same, say about 3,250,000*l.* As regards the traffic, the gross receipts on the North Midland line for the year ending June last, were 229,000*l.*, against 226,000*l.* on the Manchester and Leeds.

Under these circumstances, Sir, is it not surprising that the North Midland can only make a dividend at the rate of 2 per cent. per annum, whilst the Manchester and Leeds Company divides 5½ per cent.; and that the shares of the Leeds line are at par, the North Midland shares being at 42*l.* discount? This seeming mystery may be explained in a single sentence, "the North Midland line is badly managed, and the Leeds Company divide more than they can afford." I do not mean to assert that the Leeds Company's dividends have not been made out of the clear profits, but a dividend has been eked out from the partial working of the line previous to its opening throughout.

If the shareholders in the North Midland do their duty, they may yet realise 4 or 5 per cent. for their money; they have much to hope for from improved management, and nothing to fear from an opposition line, *their* opposition line, the Grand Junction, being long ago in full operation.

The Manchester and Leeds shareholders, on the other hand, have much to fear from the opposition of the Sheffield line (which will undoubtedly compete with them for the Hull traffic), and they have nothing to hope for from improved management, their line being the best managed in the kingdom with the exception of the London and Birmingham. A revival in trade is their only hope, their sheet anchor, and to this they must look for the maintenance of even a 4 or 5 per cent. dividend. Let them beware of putting too much trust in the glowing anticipations of their Directors, which have too often already proved at fault. Let them moderate their expectations. It was utter folly in the Directors to divide 6 per cent. The Manchester and Leeds line will never prove that *El dorado* that its promoters predicted it would. 9½ per cent. dividend indeed! It will be well if it affords 5 per cent.

I am, Sir, yours, respectfully,
TEMPORA MUTANTUR.

October 20th, 1842.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

Sir,—I read an article in yours of the 15th inst., copied from the *Leeds Mercury*, in which the following passage occurs:—

"It would be very unjust to the Directors if it were not borne in mind, that for the original cost of construction, the North Midland Railway, as well as for the establishment of officers and servants at first provided, the Board of Directors formerly sitting in London was mainly answerable. It is evident that a very extravagant outlay took place; and we take upon ourselves to assert, that the Leeds Directors objected, on several distinct occasions, to the outlay authorised in London."

I can hardly express my indignation, in terms sufficiently strong, at this attempt on the part of the Leeds Directors, through their organ, to throw whatever blame may be fairly chargeable to the Board of Directors on the shoulders of the London Committee.

If they "objected on several distinct occasions to the outlay authorised in London," had they not their course left open to inform the shareholders, at their next meeting, of their protest against such items, and thus rid themselves of all blame, instead of agreeing to all such "very extravagant outlay," thereby making it an act of the Board, and not that of a separate Committee? Men of business will now be inclined to throw the blame more upon them than their colleagues, in conniving at this said "very extravagant outlay."

As it is evidently the object of the gentlemen to kick the dirt in every quarter but their own, so as to keep themselves from getting soiled, allow me to ask these immaculates a question or two: First—How many thousands of pounds as a premium did they give to the contractors on their division of the line, to expedite their contracts in order to get them finished in January, 1840, although it is well known that that division was not finished until June in the same year?

How many duplicate, and therefore useless, offices did they establish?

It has been a great misfortune to this line that a jealousy has always existed on the part of the Leeds Directors towards their colleagues in London, and from this cause has arisen the following duplicate, and consequently useless, appointments which they have been compelled subsequently to abolish, viz., a chief coaching clerk, a cashier, a storekeeper, a chief parcels' clerk, together with sundry other minor offices, all at the same salaries as those appointed by the London Directors, to be at the most important station, and transact the general and whole business of the Company at Derby.

These Leeds gentlemen may well say, "Heaven save us from our friends," for I am certain that this injudicious and officious friend of theirs has, through the columns of the *Mercury*, done more to lower them in the estimation of their officers, the shareholders, and the public generally, than all the abuse which could be heaped upon them from any quarter whatever; for when men can come forward and throw the onus of their own mismanagement upon their late colleagues, there can be but one opinion of the contempt they merit, and which all right-thinking men will award them.

I am, Sir, your very obedient servant,
Z. X. Y.

London, October 18, 1842.

PROSPECTS OF THE GREAT WESTERN RAILWAY AND ITS BRANCHES.

LETTER I.

To the Editor of the Railway Times.

Sir,—With your leave I beg to offer a few remarks on the above subject, and will premise that it is not my intention to amuse your readers with speculative calculations of income and expenditure, which are notoriously unsatisfactory, and, as your columns have lately proved, may be bent and twisted at pleasure, so as to give any prospect of loss or gain that may be asked for.

It is obvious that the present income from the trunk and the branches held on lease is, at best, but little, if at all, more than adequate to maintain the present rate of dividend; and that the difficulty of making both ends meet must necessarily become greater as loans are paid off, and the same rate per cent. extended to the whole, instead of half, of the capital. I here pass over all question as to the amount of capital beyond that already announced (say 6,300,000*l.*); and all expectations held out or entertained of a higher dividend.

It becomes, therefore, a matter of something more than curiosity to ask, what may we look for from things as they exist at present, and from what sources may ulterior advantages be derived?

As regards the line between London and Bristol, it would be too much to say that *no* further development of traffic is likely to take place; on the contrary, I hold that in the department of carriage, the business done falls considerably short of the maximum amount that may eventually be looked for,* and a small progressive increase of income in all departments may yet be expected; but it is undeniable, that in the most favourable view to be taken, no *great* additional income can accrue on the main trunk.

Of the branches, the Exeter line, from the extent and nature of the districts it passes through and connects with other parts of the kingdom, is doubtless the most profitable and intrinsically valuable. Above all, it presents great capabilities for further development; and a sound policy would dictate that efforts, and if needful, sacrifices of immediate profit, to a greater extent than appear to be now contemplated, should be made to accelerate the period of its coming into full operation.

It is perhaps scarcely worth while to discuss the question of the influence on the Great Western of an Exeter and Plymouth line, because the attempts at carrying it out have little appearance of real energy or earnestness. The traffic of the western districts must come to the Great Western in one way or the other; and it is quite possible that the scheme of leasing such a line, together with the cost of working, might prove a very equivocal advantage to those who ventured on so doing.

To bring about the formation of a packet station in the Bristol Channel, as for instance at the western side of Uphill Bay, would probably be found quite as practicable, and beyond a doubt more immediately and permanently advantageous. Such an undertaking, whilst it is essential to the ultimate and complete success of the Exeter and the Great Western lines, has in addition the recommendation of supplying the known demands of the south of Ireland in facilitating its free and speedy intercourse with the rest of the kingdom; and though some local interests in South Wales must suffer from a change, the benefits to the whole of *this* country are scarcely less obvious or notorious.

It is to be hoped that the Directors of both Companies may be induced to turn their earnest attention to this matter, with the determination either to originate such a plan, or to foster and co-operate with the efforts of parties otherwise interested in its accomplishment.

As to the Cheltenham and Swindon line, it may fairly be assumed, that, with present experience, no parties would ever have been induced to expend capital on the formation of this branch as it now exists; but the question as to what is best and most judicious for all interests concerned in the actual state of things rests on distinct grounds. It is plain, that whilst a gap exists in the chain of communication, making it both tedious and difficult, a portion, at least, of the traffic naturally belonging to this line must be lost, and drawn off to quarters which, under other circumstances would not enter into competition. The precise amount of loss or gain in this particular is just that which individuals have no means of duly estimating; but which will doubtless receive full and adequate attention from those to whom the proposed negociation between the two Companies shall be entrusted. It would be unwise to form over-sanguine expectations, but undoubtedly, inspection of the map, and a comparison of distances, together with gradients and general working facilities, will go far to establish the existence of an important traffic reaching as far north as Worcester, with a large part of South Wales and the border counties, which is either inadequately brought to bear as a source of profit, or is diverted into other and less natural channels.

There will probably be less difference of opinion on this point, than as to the ultimate benefit of securing the advantages, even if it be possible. They may be purchased too dearly, not merely with reference to the anticipated amount of traffic and cost of working on the branch line, but even with every allowance for the increased passage on the main trunk that may be thence derived.

Be this as it may, unless *third parties* should be found willing to undertake the completion of the Cheltenham line on a guaranteed rent from the Great Western Company, there is little prospect of its immediate accomplishment, as the opinions expressed by influential persons at the recent meetings of either Company show that both are not

* Within the last three months the income from carriage (on the trunk and branches) has increased from 11 per cent. of the gross receipt to 21 per cent., though the *actual* amount from this source has increased less rapidly.

Digitized by Google

justly cautious of over-extending their own responsibilities.

In thus endeavouring to estimate the prospects of these western lines of railway, it will be seen that the examination has rested exclusively on general grounds, and that no attempt has been made to enter into any inquiry respecting their pecuniary condition and internal economy. Here is an ample field for further and closer investigation, in order to estimate how far early anticipations have been, or may be, realised, and the best manner of bringing about the desired object.

With your permission, I will return to this part of the subject at an early opportunity,

And am, Sir, your obedient servant,

INVESTIGATOR.

Bath, October 17, 1842.

CROMFORD AND HIGH PEAK RAILWAY.

To the Editor of the Railway Times.

SIR,—I take great pleasure in reading the *Railway Times* every week, and as I have a few shares in three or four railways, I am interested in observing the particulars of them which you so well publish.

I beg leave to state that there is a railway in Derbyshire a little less than 34 miles long, which is not in your list. Perhaps the Managers of it would prefer its being kept out of sight; it has been many years used to carry goods, but does not produce profit enough to pay both interest of loans and dividends, therefore the shareholders get nothing except interest of money lent, and that is in arrear.

The number of shares is 1,640, of 100*l.* each, with power to borrow 32,880*l.* by mortgage of the undertaking, which may be called 5th shares. Besides this, I believe money has been borrowed, the amount of which I do not know. In 1840 the annual income was 4,942*l.*, including the expenses, and of course weekly 95*l.*, and this is to be less in future, and is all absorbed in expenses and interest, and there is no hope of its being any better under the management of the present Committee. In the year 1829 the Committee then existing seem to have been sensible of what was required to make this railway useful to the Company and the public. In their Report of that year they say—"The railway is constructed to correspond with the Manchester and Liverpool Railway with a view to a future junction."

To make such a junction it would require extending 8 or 10 miles, and at a very trifling expense.

I believe the present Committee, or a majority of them, discourage extension, and that a more active Committee ought to be appointed, who would be willing to aid any new Company inclined to make the proposed 8 or 10 miles of new railway, or any other improvement of which the working of the line admits of.

I am, Sir, yours, &c.,

SENEX.

CROYDON RAILWAY.

To the Editor of the Railway Times.

SIR,—Being deeply interested in this railway, and seeing that there is now no probability of an arrangement with the Greenwich Company with respect to the toll payable to them by the Croydon Company, I beg to point out, through the means of your valuable paper, to the Directors of the latter, what measures, under the present circumstances of the Company, would prove most conducive to the interests of the proprietors. I am prepared to prove, that the only means now left to obtain a dividend is by suspending the Croydon traffic; but as assertions of this sort are of little value without facts and data to support them, I add a detailed statement of the expenditure, and probable income that would arise if the traffic was given up by this Company, premising that my information is derived from the two last balance-sheets sent to the proprietors.

DEBTOR.			
Maintenance of way	£3,627	0	0
Interest on bonds	8,150	0	0
Ditto on new loan notes	3,800	0	0
Police wages and clothing	400	0	0
Insurance	41	0	0
Annuities	30	0	0
Rates and taxes	700	0	0
Salaries	200	0	0
Lighting	200	0	0
Sundries	200	0	0
Total	£16,548	0	0
CREDITOR.			
Rent	£527	0	0
Breese	117	0	0
Transfer fees and discount	143	0	0
Wharfage	26	0	0
Toll from Dover and Brighton Companies, 450*l.* per week	24,000	0	0
To be received from Dover Companies for the use of the New Cross station, and interest on the Croydon Company's portion of locomotive stock	3,000	0	0
Toll from Brighton and Dover Companies for passengers now taken by the Croydon Company	3,000	0	0
Total	£30,813	0	0
	16,548	0	0
Balance appliable for a dividend	£14,265	0	0

It will be thus seen that by adopting this plan the Croydon proprietors will be enabled at once to receive a small dividend, which will doubtless be increased when the Dover line is completed and in full operation. Objections may be made to this plan that it will annihilate all the short traffic, and greatly inconvenience persons residing near the line. With respect to the first objection there can be no doubt that the short traffic would be destroyed, and this must not be forgotten in any future arrangement with our Greenwich friends, but I would observe that the traffic *now* is gradually leaving the line (the receipts now are not much above 300*l.* weekly), and it is more than probable that before the winter is over it will die a natural death. With respect to the latter objection, it is to be regretted that parties residing near the line should be put to any inconvenience; and with a view of obviating this as much as possible, I would suggest that an arrangement be made with the South-Eastern Company to run a morning and evening train from *New Cross only* to the stations on the Croydon line.

I am no advocate for leasing the line, as I am of opinion that with low fares and the traffic worked with energy, it would of itself produce a handsome profit.

It would not be difficult to show that the Company are, with the present curtailed receipts, losing 10,000*l.* or 12,000*l.* per annum; the Directors will therefore be without excuse if they do not adopt this or some similar plan, and I will not allow myself to suppose that personal feelings or interests will prove any obstacle to its adoption. Railway Directors, as a body, do not stand very high at the present moment, nor can it be wondered at when we have recently seen the best interests of their proprietors sacrificed by a metropolitan Board (I allude to the Northern and Eastern Company) to further their own ends; yet I have the most entire confidence that our Board will maintain that honourable position, which I feel pleasure in saying their past proceedings fairly entitle them to. I am, Sir, yours, &c.,

A CROYDON SHAREHOLDER.

October 18, 1842.

THE CROYDON TOLL QUESTION.

To the Editor of the Railway Times.

SIR,—In justice to all concerned, be pleased to give place to the following useful table, for the edification and instruction of the unfortunate Croydon shareholders, whose loss is *now* at least 500*l.* for every 100*l.* lost to their neighbours, the Greenwich proprietary. The permanent expenses of the Croydon Company are daily increasing in the ratio of the constantly diminishing income—namely, 300*l.* per week, or equal to 15,600*l.* per annum!

I am, Sir, yours, &c.,

VERUS.

October 17, 1842.

MANCHESTER AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

SIR,—The conduct of the Directors of this Company exhibits the very infatuation of folly. The railway has been open for upwards of two months, but that which ought to have increased public confidence, and augmented the value of our property, has tended only to diminish the one and reduce the other. The 40*l.* shares are selling at 19½, in other words, with the line open throughout, they are worth much less than before.

The causes of this continuing depreciation of our property ought surely to be inquired into.

You are aware that the line was completed long before it was opened—that we lost the traffic of the most valuable season of the year, and were embroiled with the Grand Junction Company, from causes which, in their origin, common precaution would have obviated, and which, even at the crisis, conciliation, candour, and firmness, would have removed in one week. Into the origin of this squabble I will not now enter. Suffice it to say, that we owe our extrication from it to the charity of the Grand Junction, not to the skill of our own Directors; and that though the terms conceded to us were moderately fair, our own Deputy-Chairman confesses that they are not such as we were entitled to claim, and therefore not such as an able management might have procured us.

But in the midst of this controversy, which was remote in its origin and slow in its growth, and from which, therefore, it might have been expected that our Directors would derive a lesson and a warning—in the midst of this, as it subsequently appeared, the Board were actually sowing broadly the seeds of a more serious mischief, the mischief which now depresses our property.

You are acquainted with the origin and details of the struggle between the Leeds and Liverpool Companies respecting a junction of those two and the other Manchester Railways. Of this contest the Manchester and Birmingham Company were, in its earlier progress, mere spectators; their line was incomplete, the shareholders were averse from new undertakings, so that from motives of prudence the Directors ought to have stood, and they gave their shareholders to believe that they were standing, neutral between the combatants. They held the scales in fact, and had the power to turn them in favour of the northern or the southern junction, as their own interests, after inquiry and consideration, might prompt.

The Liverpool Company favoured rather the southern junction; but, like men of business, they sought and proposed, as well to the Leeds as to the Manchester and Birmingham Company, an inquiry into the merits of the two lines. The former naturally enough declined it, their interests and determination both pointing to the northern line.

The Manchester and Birmingham Company, with no such interests, but with every motive for neutrality—and this among others, that at the time their relations with the Grand Junction Company were not settled, and it was therefore incumbent on them to conciliate—not to offend—"the Liverpool interest;" our Directors, I say, actually declined inquiry too; nay, refused even to meet a Liverpool deputation, stating, laconically, that their decision being taken [they had promised their shareholders *not* to decide], no good could come of discussion.

Digitized by Google

In the result the Leeds Company, thus reinforced by their new friends (for a secret compact had even now been formed), drove their opponents into the Northern Junction.

How the Leeds Company contrived to lead the Manchester and Birmingham Company into this profitable alliance, you must hear.

The Leeds Company had got on to their line, which in fact was then the only route southward for goods, some traffic which would legitimately belong to the Manchester and Birmingham line, when open and ready to receive it.

This traffic the Leeds Company generously promised to give up to the Manchester and Birmingham Company, on certain terms set forth in their secret agreement, one of which was, that our Company should make a tunnel under the town to join the Leeds line—a project to which our Directors bound themselves to obtain the consent of their (notoriously unwilling) shareholders, within one month after the opening of the main line!

I will not attempt to describe to you the anger and disappointment of our shareholders, when, after much equivocation, the existence of this monstrous agreement was discovered, and with it the fact that the Leeds Company cared not, on the one hand, for the formation of the tunnel, whilst on the other, they not merely evaded performance of the stipulations they had entered into, but actually reduced their tolls for the express purpose of retaining the traffic they had consented to yield up; nor will I detail to you the miserable attempts of our Directors, their conferences, negociations, and arbitrations, to get out of this their second failure in diplomacy. It is enough for me to state that this embarrassment, like the first, is one gratuitously created by the Directors—that up to this hour we are without the traffic, which I have heard variously estimated from 700*l.* to 1,200*l.* weekly—that the shares are scarcely saleable, and that, if report speak truly, our Directors are actually attempting to patch up an offensive and defensive alliance with the Liverpool Board—the very men whom they formerly snubbed—in the hope of being dragged at their coat tails out of this quagmire of folly. The issue will probably be that the traffic must be (as from the first the public had a right to expect that it should be) fairly competed for by the two Companies, and ultimately taken by that which can carry it most economically, as doubtless the Manchester and Birmingham can.

Here, then, is another specimen of the ability of our Directors, who seem to be competent only for mischief—successful only in the creation of difficulties, which nothing but the intrinsic strength and excellence of the undertaking could overcome. *Noli me tangere*, would be, as between them and the works which they affect to manage, an excellent motto, for the line needs only fair play and an open stage to ensure its success.

This, however, it can never have under its present Management. With one or two exceptions the Board is constituted of the worst material—of men, some of whom have lost the public confidence by their official connection with those huge bubbles, the Bank of Manchester and the Commercial Bank; whilst others, who may possess business capability, are valueless here, because they are either heavy shareholders in, or (as in one case) *actual Directors of the new rival Leeds Company*, or they have not leisure to devote to the concerns of the railway.

Of mere salary-receivers there are abundance—a briefless barrister, a country gentleman, and so forth—men whose heads will hardly save their shins, much less meet the manifold claims of an important public Company.

Pray, Mr. Editor, inquire into these matters for yourself, and, as you find the truth to be, so direct the influence of your valuable pen.

I am, Sir, your obedient servant,

A SHAREHOLDER.

Manchester, October 17, 1842.

STOCKTON AND DARLINGTON RAILWAY.

To the Editor of the Railway Times.

SIR,—If the Stockton and Darlington Railway Company wish to preserve upon their line the proportion of North and South Traffic which their omnibus arrangements have at present secured, they should be preparing for the time when the Newcastle and Darlington Junction Railway will be opened. Here is a line which nature seems to have designed for a railway, following the courses of the Wear and the Browney, from about Byers Green to Baxter Wood or the neighbourhood.

The Company might make a junction from their present line at Black Boy Colliery, following the route here pointed out, and uniting with the Durham Junction Railway at Framwell-gate Moor Colliery, near Durham. Such a line would give to the inhabitants of Auckland and Durham much greater facilities than any other main line hitherto proposed.

Judging from the map, the distance may be about ten miles, passing by the following places; Byers Green, Whitworth, Holywell, Littleburn, Stonebridge, Baxter Wood, and Drybrorn.

I am Sir, yours &c.,

A. B. C.

FLUCTUATIONS IN RAILWAY PROPERTY.

To the Editor of the Railway Times.

SIR,—Amongst all the great and important changes that have taken place in this country during the present century, none, perhaps, is so great or so important as the change that has been made in the means of communication between the various parts of the country by the substitution of railways for the old high roads. I have been for some years a careful reader of your useful journal, and a no less careful observer of the fluctuations which from time to time have occurred in the current value of railway property, and I have been induced to consider what have been the causes for such repeated and such extensive changes in the current value of property which essentially (in many instances) may not have altered in real value, either by a variation in the dividend of lines completed, or by any alteration in the prospects of those in progress. It is rather remarkable that these changes have, for several years (with the exception of 1839) been in favour of an advance during the first half of each year, and a decline in the second half. The question arises, from what has this uniformity in the fluctuations arisen? It appears to me chiefly to have arisen from the fact, that during the early part of the year the exchanges have been favourable to this country, and there has been a gradual increase of bullion in the coffers of the Bank of England, with a tendency to increase the circulation, while (owing to a succession of deficient harvests) in the latter part of each year it has been requisite to import a quantity of foreign corn, and thus by throwing the exchanges against us, and thereby draining the Bank of England of its bullion, the circulation has become decreased, and there has been a corresponding fall in the price of shares. I think the only instance for many years of shares falling in value in the first half-year was in the year before-mentioned, viz., 1839, and this may be accounted for (and indeed strengthens my supposition) by the fact that early in that year, owing to the failure of the wheat crop in 1838, and the very bad season for sowing preparatory to 1839, the importations of foreign grain were much earlier than usual—in addition to which the calls made on the various railways were very heavy all that year, more money being called on railway shares in 1839 than in any other year either before or since. The question now arises, will there be the usual advance next spring; and if so, will those advanced prices be maintained, or will they, as heretofore, fall again? These are important questions, for the system of railways has absorbed so large a capital that even a small fluctuation in the value of them is sensibly felt. The result of my observations would lead me to the conclusion, first, that higher prices will be obtained; and secondly, that those prices will not, as heretofore, fall again. My reasons for coming to this conclusion are, the probabilities of so little money being required for foreign corn next year, and the present very healthy position of the Bank of England, which I do not see any prospect of being altered for the worse; indeed, I look for a still greater increase of bullion, probably reaching as much as 12,000,000*l.* (the foreign exchanges, particularly on France, being much in favour of this country.) Should this be the case, the Bank will certainly increase its circulation, and it is upon this increase, and the fact that so little money will be wanted for calls, that I chiefly ground my opinion. There is a large amount of unemployed capital in the country, a considerable portion of which will probably, by degrees, be brought into this kind of investment, (thus reducing the quantity of shares pressing on the market), and which will, I think, tend to support my opinion.

I am, Sir, yours, &c.

AN OLD SUBSCRIBER.

London, October 20, 1842.

SECOND-CLASS CARRIAGES IN SCOTLAND.

To the Editor of the Railway Times.

SIR,—Your correspondent subscribing himself "The Edinburgh and Glasgow Railway Company's Well-Wisher," in your last paper, while making some remarks on the open uncomfortable state of the second-class carriages used on the Edinburgh and Glasgow line, goes on to say, that "If the Directors are afraid of the effect upon the first class were these second-class carriages made too comfortable, these fears, in my opinion, are altogether groundless. There is enough of *aristocratic feeling* in *Scotland* to induce every one to take the best and most genteel conveyance which his circumstances enable him to command," &c. Now, I must say, I at one time was very much of the same opinion; but my experience in railway travelling has convinced me that the aristocratic feeling mentioned, if it exist at all, is easily and speedily evaporated by making a shilling or two of difference in the second and third-class fares, and I consider your correspondent exceedingly unfortunate in particularising the Scotch as being pre-eminent in the possession of that feeling, or exemplifying it in that particular way, for in that respect I have observed that both the English and Irish, in travelling, keep more closely to the class of carriages their circumstances allow them to occupy, than the Scotch do; but if I had any doubt on the subject it has been removed this season. During the past summer I have had occasion very frequently to travel on a neighbouring railway to the Edinburgh and Glasgow, viz., the Glasgow and Greenock, and since third-class carriages have been put on that line at low fares (now the fares on that line are all remarkably low) the most wealthy and influential merchants of Glasgow are daily to be seen crowding into the *third-class* carriages; indeed, it is nothing uncommon to see them drive up to the station in their own carriages, and then step into a "stand-up," as they are called, at 6d. for Greenock. On getting to Greenock on Saturday last, I observed one of the present magistrates at Glasgow, and a Director (or lately was) on a neighbouring railway stepping from a third-class carriage, and was told by an individual standing by, who had an opportunity of knowing, that he (the Bailie) had travelled third class during the whole season. Now did the *aristocratic feeling* of your correspondent exist in any degree, this would not be the case, for it is not caused on that line by the first or second-class fares being high, as in both instances they are, I think, lower than any other railway in Britain. Running third-class carriages at very low fares was intended for the benefit of the poorer classes, but when it is found that they are *very generally* taken advantage of by

Digitized by Google

individuals who are known to be well able to pay for the *best class carriages*, there is no doubt whatever that it has the effect of keeping both second and third-class carriages more uncomfortable than they otherwise would be; for every one must see that it cannot be the mere expense (which would be perfectly trifling) that prevents second-class from being closed at the side, or third-class carriages from being seated and covered, but the effect it has on the higher classed carriages, and that from the want of that very *aristocratic feeling* which your correspondent conceives so generally to abound in Scotland.

I am anxious to see *comfortable* and *cheap* travelling enjoyed by all classes, and I am convinced that nothing would tend more towards the accomplishment of that object than the exercise of that "live and let live" feeling which would prompt every individual to occupy that station in travelling that his circumstances enable him to do; and were this done, instead of the sixpenny *mania* so strongly exhibited in the above case, the Directors of Railways would then have an inducement to make both second and third-class carriages more comfortable than they now are, and I have no doubt but they would do so.

It may be considered from the above that I am deeply connected with the Greenock or Edinburgh lines, but I have not a shilling in either. These observations have been made from reading your correspondent's letter, and conceiving his inference to have been wrongly drawn.

I am, Sir, yours, respectfully,

EQUITY.

Glasgow, October 19, 1842.

DAVIES' RAILWAY CARRIAGE BREAK.

To the Editor of the Railway Times.

SIR,—From the extreme interest you take in every improvement tending to lessen the danger of railway transit, I am sure you will receive with great satisfaction the following brief notice of the successful application of an invention, eminently calculated to ensure the above desiderata. This invention has already been very fully described, (with an illustrative engraving) in the *Railway Times*, for February 6th, 1841 (No. 162.) It is the improved Railway Carriage Break of Mr. David Davies, coach manufacturer and improver, of Wigmore-street.

One of Mr. Davies breaks has been fitted to a second-class carriage on the London and Birmingham Railway, which has now for some time been employed for bringing the in-trains from Camden Town to Euston Square, down the incline between those two stations. From the very nature of this employment, the break has thus been submitted to the severest possible test, from which it has come off triumphant: and it may be taken as a striking proof of the good sense of the managers of that line, as well as the great confidence they had in the practical merits of this contrivance, in assigning to it so important a duty.

I have had frequent opportunities of seeing the break in action, and of conversing with the breaksman (Turner) respecting it. He speaks in the highest possible terms of this break, and gives it a decided preference before all others, stating that he feels a degree of confidence when using Davies' break to which he was before a stranger. It has been the practice heretofore to employ three breaks to bring a heavy train of carriages from Camden Town, but Turner has repeatedly found Davies' alone to be sufficient to ensure a safe passage down this steep incline. Wet weather, which materially diminishes the efficacy of all the ordinary breaks, produces no ill effect upon the new one. Much error prevails as to the real operation of breaks on railways, and it is generally supposed that the object of a break is to set the wheels fast, and when that is done the break has accomplished its duty; it happens, however, that the greatest resistance to motion is not so produced, nor is it in this way that breaks are most effectively employed. A circumscribed and *slow rotation* of the wheel, by continually presenting a fresh surface to the rail is much more effective than fixing the wheels; in the latter case there is a wearing and smoothing of a small surface of the wheel which soon slips upon the rails. Under these circumstances it follows, that where a small rigid surface is employed and made to act upon one side only of the wheels, a harsh grating noise is produced by no means agreeable to "eurs polite"—a straining of the axle or axle guards, with great liability to rupture, ensues—while great power is required *to apply*, and *to keep applied*, the breaks. In Davies' break, a large surface of the wheel is embraced with equal force on each side of the wheel, and on all the wheels simultaneously—the strain is distributed throughout the several parts of the break without the slightest pressure upon the axles or axle guards, while a comparatively slight force is sufficient to cause the required retardation, the breaks having no tendency to flinch or fly off from their work. Davies' break is, moreover, a perfect exemplification of the "silent system;" I have repeatedly tried, but without success, to detect by the organs of hearing, the application of the breaks. This I could never do, although assisted by the organ of vision to boot.

The experience of the London and Birmingham Railway with Davies' break, has so perfectly and fully demonstrated the utility of this invention, that there can be no doubt of its immediate and universal adoption on every line of railway, the Directors of which care one jot for the safety or comfort of their best patrons, the public.

I am Sir, your obedient servant,

A WELL WISHER.

WEST LONDON RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL general meeting of the proprietors of the West London (late the Birmingham, Bristol, and Thames Junction) Railway Company, was held yesterday, at the Company's offices, Abchurch-lane, City.

The meeting was in reality merely formal, in consequence of some doubts which had been raised as to the strictly legal mode of issuing the new shares.

On the motion of Lord Kensington, ROBERT GUNTER, Esq., was unanimously called to the chair.

The SECRETARY (John Thompson, Esq.) having read the advertisement, which appeared in the *Railway Times* of the 11th inst., convening the meeting,

Mr. JOHN WHITE at considerable length took an objection to the wording of the notice. The word *and* had been misprinted in the daily *Times* for *or*, but immediately corrected. In no other journal had the mistake occurred. Mr. White appeared to think the matter very important, but to no one else did it seem of the least moment. The honourable proprietor likewise referred to an expression used by the Chairman at the last meeting relative to the "swamping" of the original proprietors.

The CHAIRMAN explained that he referred only to those proprietors who did not take up their quota of new shares. By subscribing for the new shares, of course, they would be in a better position than at present. The honourable gentleman then adverted to the Board of Direction, and stated that the Director alluded to at the last meeting, as being in arrear of calls, had resigned. There were now four new Directors, the Board being completely filled up, and he had no hesitation in expressing his opinion, that the new members would be a decided acquisition. At the request of Mr. John White the names were given; namely, Mr. W. Wilkinson, Mr. Burge, Captain Sparshott, R.N., and Mr. Whittaker. The Chairman then went on to say, that this was not the only Company in which preference shares had been created, and he believed that in general the plan had proved successful. He firmly believed that, but for the recent extreme pressure upon the Manchester shareholders, caused by the failure of the Manchester Bank, and other circumstances, these parties would have taken up their proportion of the new shares. As matters stood this was scarcely to be expected, but the public, to whom the shares would now be offered, would be gainers. He would not detain the meeting by further remarks, but should feel happy to answer any questions, or give any further explanations. (Hear, hear, hear.)

Mr. WHITCHURCH (a Director) stated that an estimate had been given in by Mr. Bidder, for the completion of a single line of rails, at 32,000*l*. They had, however, received an intimation from Mr. Stephenson that the estimate might be reduced to 25,000*l*.

Mr. GARLAND had hoped that Mr. Stephenson's estimate would on the present occasion have been submitted in detail, in consequence of what transpired at the last meeting.

The SECRETARY said, the resolution on this subject, moved by Mr. John White and seconded by his son, at the last meeting, had for its object the production of the estimates at the general meeting on the 2nd of November ensuing—and this would no doubt be done.

After some further conversation, Mr. Whittaker (a Director) moved the first resolution, as follows:—

That a sum of 32,000*l*., part of the 60,000*l*. which this Company is authorised by the amended Act to raise in shares, be raised in 3,200 new shares of 20*l*. each; and this meeting do create the said shares, and direct the same to be issued at the price of 10*l*. per share, in substitution for all shares hitherto created or directed to be created in respect of the aforesaid sum of 60,000*l*., or any part thereof; such shares to form the first class of shares mentioned in the Report of the Directors adopted by the said general meeting.

That the holders of the said 3,200 new shares so created and directed to be issued as aforesaid, shall be entitled to a dividend of 1*l*. per annum for every such share; which dividend shall have priority over, and be paid in preference to, any dividend to be paid upon the original shares; and in case the profit of any year shall be insufficient to pay such dividend, the arrears shall be paid before any dividend whatever is paid on the original shares in the undertaking.

That a deposit of 1*l*. be paid upon each of the said new shares at the time of the same being allotted, and that the further instalments upon the said shares be paid in such sums, and at such periods, as the Directors in their discretion shall think fit.

Captain SPARSHOTT (a Director) seconded the resolution.

Mr. JOHN WHITE made a long speech in opposition to the scheme which has been so frequently approved of by the proprietors, and moved as an amendment, that the amount of preference shares in the first class be reduced to 25,000*l*. Even that amount the honourable gentleman thought would not be necessary, if the sort of steam-carriage which recently ran on the common road to Greenwich were used. His principal objection, however, seemed to be, that having gone away from the previous meeting, after waiting three-quarters of an hour, resolutions had been adopted in his absence.

Mr. RUSSELL WHITE having seconded the amendment,

Mr. C. CRAUFURD made a brief but spirited reply to Mr. White, in the course of which he said, it was scarcely fair in Mr. White to complain of the delay in commencing business at the last meeting, seeing that he had been solicited to stay, and that his departure had led to considerable inconvenience. As to the alteration recommended by Mr. White, the meeting, it appeared to him, had not the power, even if they had the inclination to make it, after the creditors had given their assent to the scheme. After all it amounted to the same thing, for as they would have to raise money by debentures, if the whole 32,000*l*. proposed to be

Digitized by Google

raised by shares were not wanted, there would be less to be raised by loan, and it would be only the difference between 10*l.* and 5*l.* per cent. upon 7,000*l.*

Ultimately the amendment was put, when only the hands of the mover and seconder were held up for it.

The original motion was then put, and carried with the same dissentients.

Mr. JOHN WHITE said, he had proxies to put in, but it would be useless.

The SECRETARY here handed in proxies from the holders of 1,800 shares, it being necessary by the new Act that the assent of three-fourths of the proprietors should be given to any scheme for the creation of new shares.

Mr. John White hereupon left the room.

Lord KENSINGTON, in moving the second resolution, highly eulogized the conduct of the creditors of the Company, which he described as liberal, straightforward, and manly, and the meeting expressed their feeling to the same effect. The resolution was as follows:—

That a further sum of 15,200*l.*, also part of the 60,000*l.* which this Company is authorised by the amended Act to raise in shares, be raised in 760 new shares of 20*l.* each; and this meeting do create the said shares, and direct the same to be issued to the simple contract creditors of the Company at the price of 20*l.* per share, in further substitution of all shares heretofore created or directed to be created in respect of the aforesaid sum of 60,000*l.* or any part thereof, such shares to form the second class of shares mentioned in the Report of the Directors, adopted by the said general meeting.

That the holders of the said 760 new shares so created and directed to be issued as aforesaid, shall be entitled to a dividend of 5 per cent. per annum for every such new share, which dividend shall have priority over, and be paid in preference to, any dividend to be paid upon the original shares in the undertaking; such dividend, however, not to be paid until the dividend payable upon the 3,200 shares of the first class is satisfied.

Mr. W. WILKINSON seconded the resolution, and it was carried unanimously.

Captain SPARSHOTT moved the third resolution as follows:—

That after and subject to the payment of such dividends to the holders of new shares of the first and second classes respectively, any surplus profit there may be in the current year shall be divided equally amongst all the shareholders, whether holders of original or new shares, in proportion to the number of their respective shares; the holder of each new share being in the division of such surplus profit entitled to the same dividend as the holder of an original share.

Mr. G. GODWIN, jun, seconded the resolution.

On being put it was carried, Mr. Garland alone dissenting. Being asked by Mr. Craufurd to give his reasons for dissenting, Mr. Garland declined.

Mr. Whittaker moved, and Mr. Craufurd seconded, the fourth resolution as follows, it was carried unanimously:—

That as the whole number of new shares of the first class have not been subscribed for by the present shareholders, and simple contract creditors of the Company, the Directors be requested immediately to offer the remainder of such shares to the public, and to use such means for disposing of the same as in their discretion they shall think fit.

Mr. GARLAND then introduced the subject of allowance to Directors, and inquired if they had consented to waive their claims to remuneration previous to January last, from which date, it will be remembered, no claim is to be made till the completion of the railway. It was explained, that further information would be given on this point at the general meeting, and that most of the old Directors having retired, the present Board could not answer for what their late colleagues would do, but they would consult them. Mr. Garland and Mr. Craufurd deprecated the payment of the past allowance to the Directors under all the circumstances of the Company, and the former said he would never cease to bring this matter forward until the money set off against payment of calls were refunded.

The CHAIRMAN said, some of the Directors had been put to considerable cost in attending Board meetings, and although he himself had received nothing, it was not reasonable to expect them to give up their time for nothing, besides incurring expense. He himself had this year come three times from Ramsgate for the sole purpose of attending Board meetings. Last year Mr. Alexander had done the same, and Mr. Lewis, of Bath, had also been considerably out of pocket.

After some further remarks,

Lord KENSINGTON moved the best thanks of the meeting to the Chairman for his services that day.

Mr. GARLAND seconded the motion, and on being put by his Lordship, it was carried unanimously.

The CHAIRMAN returned thanks, and the meeting separated.

AN AMERICAN RAILWAY.

WE take the following extract from Mr. Dickens's new work on America, entitled "American Notes for General Circulation:"—

"I made acquaintance with an American railroad, on this occasion, for the first time. As these works are pretty much alike all through the States, their general characteristics are easily described.

"There are no first and second-class carriages, as with us, but there is a gentlemen's car and a ladies' car; the main distinction between which is, that in the first everybody smokes, and in the second nobody does. As a black man never travels with a white one, there is also a negro car, which is a great blundering clumsy chest, such as Gulliver put to sea in from the kingdom of Brobdignag. There is a great deal of jolting, a great deal of noise, a great deal of wall, not much window, a locomotive engine, a shriek, and a bell.

"The cars are like shabby omnibuses, but larger—hold thirty, forty, fifty people. The seats, instead of stretching from end to end, are placed crosswise. Each seat holds two persons. There is a long row of them on each side of the caravan, a narrow passage up the middle, and a door at both ends. In the centre of the carriage there is usually a stove, fed with charcoal or anthracite coal, which is for the most part red hot. It is insufferably close, and you see the hot air fluttering between yourself and any other object you may happen to look at, like the ghost of smoke.

"In the ladies' car there are a great many gentlemen who have ladies with them. There are also a great many ladies who have nobody with them; for any lady may travel alone from one end of the United States to the other, and be certain of the most courteous and considerate treatment everywhere. The conductor or check-taker, or guard, or whatever he may be, wears no uniform. He walks up and down the car, and in and out of it, as his fancy dictates, leans against the door with his hands in his pockets, and stares at you if you chance to be a stranger; or enters into conversation with the passengers about him. A great many newspapers are pulled out, and a few of them are read. Everybody talks to you, or to anybody else who hits his fancy. If you are an Englishman, he expects that that railroad is pretty much like an English railroad. If you say 'No,' he says 'Yes?' (interrogatively), and asks in what respect they differ. You enumerate the heads of difference, one by one, and he says 'Yes?' (still interrogatively) to each. Then he guesses that you don't travel faster in England; and on your replying that you do, says 'Yes?' again (still interrogatively), and, it is quite evident, don't believe it. After a long pause he remarks, partly to you and partly to the knob on the top of his stick, that 'Yankees are reckoned to be considerable of a go-ahead people too;' upon which *you* say, 'Yes,' and then *he* says 'Yes' again (affirmatively this time); and upon your looking out of window tells you that behind that hill, and some three miles from the next station, there is a clever town in a smart locomotive, where he expects you have concluded to stop. Your answer in the negative naturally leads to more questions in reference to your intended route (always pronounced rout); and wherever you are going, you invariably learn that you can't get there without immense difficulty and danger, and that all the great sights are somewhere else.

"If a lady take a fancy to any male passenger's seat, the gentleman who accompanies her gives him notice of the fact, and he immediately vacates it with great politeness. Politics are much discussed, so are banks, so is cotton. Quiet people avoid the question of the Presidency, for there will be a new election in three years and a half, and party feeling runs very high: the great constitutional feature of this institution being, that directly the acrimony of the last election is over, the acrimony of the next one begins; which is an unspeakable comfort to all strong politicians and true lovers of their country—that is to say, to ninety-nine men and boys out of every ninety-nine and a quarter."

LONDON AND GREENWICH RAILWAY.—The Greenwich Railway, it appears, have raised their fares to 1s. and 8d., and considering the accommodation provided, and the bad management attending the whole concern, this increase has called forth the reprobation of several correspondents, who probably rightly imagine that the interests of the shareholders will receive additional damage if some steps are not taken to arrest the course of ruin which it is likely will be followed up, should the present expedient of invigorating the traffic of the line be found to fail. In the first instance, there can be little or no doubt of the injury the concern sustains from the pending question of tollage between that and the Croydon Company, already fearfully showing its effects upon general receipts; and in the second, almost as little doubt can exist that these will diminish in a degree equally, if not more serious, from the competition now started by the steam-boat and common road conveyances. So much is the concern already depreciated, that the value of the shares in the market is 4½ to 5, upon which 12*l.* 15s. 4d. has been paid; and this, we think, is strong evidence of the opinion of the public concerning them as an investment.—*Times* of Wednesday (City article).

EDINBURGH AND GLASGOW RAILWAY.

WINTER ARRANGEMENTS.—On and after Monday next, the 24th October, the Trains will run at 8, 11, 3, and 6 o'clock, calling at the Stations as follows:—

7 o'clock at all the Stations. In addition to the usual Third-Class Carriages at 2s. 6d., as at present, this Train will have First and Second Class attached, at the usual fares.

8 o'clock—calling at Linlithgow, Falkirk, and Castlecary; the 8 o'clock to Edinburgh (*up*), also at Kirkintilloch—the *down* at Winchburgh.

11 o'clock } as at present. See Time-bills.
3 o'clock }

6 o'clock—at all the Stations.

The 8 and 11 o'clock Trains will run in about 2 hours; the 3 o'clock in about 2¼ hours; and the 7 a.m. in 2¾ hours. All the Trains carry First, Second, and Third Class Carriages.

SUNDAY TRAINS.

8 a.m. and 5 p.m.—carrying First, Second, and Third Class Carriages, and calling at all the Stations. To run in about 2½ hours.

None of the Trains will stop at the Cowlairs Station, which will be DISCONTINUED until further notice.

Parcels forwarded by all the Trains, and delivered on the arrival of the 8, 11, and 3 o'clock Trains. Express delivery as at present.

For starting of Goods Trains, and arrangements with the various coaches running in connection with the Railway, and other particulars, see hand-bills.

By Order of the Directors,
H. G. WRIGHT, Secretary.

Glasgow, October 17, 1842.

PRESTON AND WYRE RAILWAY, HARBOUR, AND DOCK COMPANY.—Incorporated by Act of Parliament.—The Directors of the Preston and Wyre Railway, Harbour, and Dock Company, hereby give NOTICE, That in compliance with the provisions of their Act, the Half-yearly Meeting of the Proprietors of the said Company will be held at the Company's Offices, No. 8, King William-street, in the City of London, on Monday, the 31st day of October instant, at One o'Clock precisely.

By order,
H. HAZELL JONES, Secretary.

Fleetwood-on-Wyre, October 19, 1842.

TO RAILWAY TRAVELLERS.—Mrs. WATSON respectfully informs Gentlemen visiting London on business or pleasure who prefer a Private House to the bustle of an Hotel, that they can be comfortably accommodated at her Commodious Board and Lodging Establishment, 31, Arundel-street, Strand, directly opposite Hungerford-street, and two minutes walk from Temple Bar.

Visitors will find the Charges Moderate, and the comforts second to none but their own homes.

Terms—Bed, Breakfast, and Attendance, 3s. Private Rooms if required.

WEST LONDON RAILWAY. — Resolutions passed at a Special General Meeting of the West London Railway Company, held at the Company's Offices, No. 11, Abchurch-lane, in the city of London, on Friday, October 21, 1842.

1st. Resolved — That a sum of 32,000*l.*, part of the 60,000*l.* which this Company is authorised by the amended Act to raise in shares, be raised in 8,200 new shares of 20*l.* each; and this meeting do create the said shares, and *direct the same to* be issued at the price of 10*l* per share, in substitution for all shares heretofore created or directed to be created in respect of the aforesaid sum of 60,000*l.*, or any part thereof; such shares to form the first class of shares mentioned in the Report of the Directors adopted by the said general meeting.

That the holders of the said 3,200 new shares so created and directed to be issued as aforesaid, shall be entitled to a dividend of £1 per annum for every such share; which dividend shall have priority over, and be paid in preference to, any dividend to be paid upon the original shares; and in case the profit of any year shall be insufficient to pay such dividend, the arrears shall be paid before any dividend whatever is paid on the original shares in the undertaking.

That a deposit of £1 be paid upon each of the said new shares at the time of the same being allotted, and that the further instalments upon the said shares be paid in such sums, and at such periods, as the Directors in their discretion shall think fit.

2nd. Resolved—That a further sum of 15,200*l.*, also part of the 60,000*l.* which this Company is authorised by the amended Act to raise in shares, be raised in 760 new shares of 20*l.* each; and this meeting do create the said shares, and direct the same to be issued to the simple contract creditors of the Company at the price of £20 per share, in further substitution of all shares heretofore created or directed to be created in respect of the aforesaid sum of £60,000 or any part thereof, such shares to form the second class of shares mentioned in the Report of the Directors, adopted by the said general meeting.

That the holders of the said 760 new shares so created and directed to be issued as aforesaid, shall be entitled to a dividend of 5 per cent. per annum for every such new share, which dividend shall have priority over, and be paid in preference to, any dividend to be paid upon the original shares in the undertaking; such dividend, however, not to be paid until the dividend payable upon the 3,200 shares of the first class is satisfied.

3rd. Resolved—That after and subject to the payment of such dividends to the holders of new shares, of the first and second classes respectively, any surplus profit there may be in the current year shall be divided equally amongst all the shareholders, whether holders of original or new shares, in proportion to the number of their respective shares; the holder of each new share being in the division of such surplus profit entitled to the same dividend as the holder of an original share.

4th, Resolved—That as the whole number of new shares of the first class have not been subscribed for by the present shareholders, and simple contract creditors of the Company, the Directors be requested immediately to offer the remainder of such shares to the public, and to use such means for disposing of the same as in their discretion they shall think fit.

ROBERT GUNTER, Chairman.

Offices, 11, Abchurch-lane, October 21, 1842.

WEST LONDON RAILWAY.—Original Capital, £150,000; new Capital, £32,000; in 3,200 preferred Shares of the first Class, at £20 each, to be issued at the reduced price of £10 per share.

The holders of these new shares of the first class will be entitled to a dividend of 10 per cent. per annum, to be paid before any dividend is payable to the holders of the second class and original shares.

The Company being incorporated by Act of Parliament the liability of Subscribers for the new shares is limited to the sum of £10 per share.

Deposit £1 per share, an interval of three months to elapse between the calls.

Applications for the unappropriated shares to be made to the Secretary, at the offices of the Company, No. 11, Abchurch lane, London, on or before the 7th day of November next.

ROBERT GUNTER, Chairman.

11, Abchurch-lane, October 21, 1842.

PICKFORD AND CO. have been informed of a reduction by the Agents of the Grand Junction Railway Company in their rate of Manchester Goods, amounting to 4s. per ton.

In announcing to their friends their intention, for the present at least, to follow this reduction, they venture to remind them that for the last two years they have succeeded in defeating repeated attempts on the part of the Grand Junction Railway Company to obtain a monopoly of this business, and have, during that time, carried the Goods at the very lowest possible sum above the tonnages they have had to pay.

The present alteration in charge has been managed by the same parties as those above alluded to, and the immediate result, as far as Pickford and Co. are able to ascertain it, will be a very serious loss to them.

Believing, however, that it is as important to the public as to themselves that the Carriers should not be driven from this trade, they earnestly solicit a continuance of the support they have hitherto received, and by which they have been enabled so long to maintain their position as Manchester Carriers.

City Basin, London, 18th October, 1842.

TO ARCHITECTS OR ENGINEERS, SURVEYORS, &c.—A situation is desired by a Young Man of business habits, who has had ten years practice as Leveller, Calculator, Surveyor, and Draughtsman on Canals, Harbours, Railroads, &c., in America. Can give unquestionable vouchers, has instruments pertaining to the above business, and who requires only a moderate salary. Address W. S. B., No. 7, Edmund-place, Aldersgate-street, London.

NATIONAL PROVIDENT INSTITUTION, Enrolled under Acts of Parliament relating to Friendly Societies, for Mutual Assurance of LIVES, ENDOWMENTS, AND ANNUITIES, 13, Nicholas-lane, King William-street, London.

DIRECTORS.

Solicitor—George Cooper Turner, Esq.

Surveyor—Mortimer William Lewis, Esq.

General Manager—Oswald Bloxsome, Esq.

The British Colonial Bank and Loan Company was commenced in the beginning of the year 1839, for the purpose of lending money in the Australasian Colonies. Mortgages have already been obtained to an amount exceeding 200,000*l.*, at an interest at the rate of 11 per cent. per annum, secured on real property in Sydney and its neighbourhood, to double the amount lent. The Company issue Debentures on the security of the Capital Stock and effects of the Company, and the lands and hereditaments mortgaged to the Company. Interest will be payable on the Debentures half-yearly, at the rate of 6 per cent. per annum, and the principal monies lent will be repaid at the expiration of three or five years.

The holders of these Debentures will be liable to no responsibility, and will have security in real estate of undoubted value.

The Debentures will be granted for any sums not less than £100, and at the expiration of the three or five years the holders of them will be entitled to the option of taking Shares in the Company at par.

Further particulars may be obtained at the Office of the Company, 50, Moorgate-street; at the Commercial Bank of London, 3, Moorgate street; or of the Solicitors to the Company, Messrs. Adlington, Gregory, Faulkner and Co., 1, Bedford-row.

ROBERT STYLES, General Manager.

50, Moorgate-street, 12th October, 1842.

N.B. The dividends of 6 per cent. on the Colonial Shares paid in full, are paid at the Office of the Company every Thursday, provided the Certificates of such Shares be left on or before the preceding Tuesday.

I. AND D. GLASGOW, Trafford St. Knott Mill, MANCHESTER, Manufacturers, by Improved Machinery, of Wood Screws, Screw Bolts, Spikes, &c., for Railways; also Boiler Rivets, &c.

ENGINEER.—A Gentleman who has served his time in London, is desirous of a situation as an Engineer's, or to superintend an establishment where his services might be required. As the advertiser has a competency, salary is not so much an object as employment. Address M.N., Churton's Library, 26, Holles-street.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Baillere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun.* evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

BRISTOL AND EXETER RAILWAY.—NOTICE is hereby given, That in pursuance of a Resolution of the last General Meeting of Proprietors, the Directors of this Company are ready to receive Tenders of Loans of Money, in sums of not less than £200, and for terms of not less than three, nor more than seven years, on security of Loan Notes under the corporate seal of the Company, bearing Interest at the rate of 5 per cent. per annum, payable Half-yearly.

Tenders expressing the sum, the term of years, and the residence of the lender, to be addressed to the Secretary.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Bristol, Office, 30, Broad street, 14th Oct., 1842.

Interest Warrants will accompany the Loan Notes.

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to grant Mortgages of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

Interest Warrants, for the whole term for which the Loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London or Bolton, as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

Bolton, 24th May, 1842.

MESSRS. THORNTON'S FINAL SALE OF RAILROAD MATERIALS — IMMENSE AND VALUABLE COLLECTION.—MR. RIDLEY is instructed by Messrs. J. and G. Thornton, the eminent Railroad Contractors, to Sell by AUCTION at the Hassocks Station, Seven Miles from Brighton, on Wednesday and Thursday, October 26th and 27th instant, commencing each day on the arrival from Brighton of the Eleven o'Clock Train, AN EXTRAORDINARILY LARGE ASSEMBLAGE OF EFFECTS, lately used by Messrs. J. and G. T. in the execution of their stupendous works on the London and Brighton Railroad, and laid in by them at a cost of many Thousand Pounds.

Railroad Contractors, Builders, Timber Merchants, Coal Merchants, Farmers, Carriers, Brickmakers, and others, are earnestly invited to this important Sale, and to an early inspection of the very numerous effects, an outline only of which can be given in the present announcement, viz.:—

A locomotive engine and tender in complete repair, a four-horse stationary engine and apparatus complete, a 16-horse engine boiler, a new iron tank, 16 ft. by 7 ft., and 5 ft. deep, (will hold 4,000 gallons), *a powerful punching and cutting machine for boiler plates*, about 300 tons of T headed and flat bottom iron rails, (45 lbs., 42 lbs., and 33 lbs. per yard,) 350 3-yard railroad waggons on 3 ft. and 2 ft. 6 in. wheels, 56 2½-yard ditto on 2 ft. 3 in. wheels, a considerable number of 2 ft. 6 in. cast iron wheels, and 3 ft. ditto with iron spokes, 10 superior and very strong 3 ton road carts, a large broad wheel 6 ton waggon applicable for a timber or stone carriage, a pair of 7 ft. timber or stone wheels with knib and crab complete, four very superior draught horses, and 70 sets of thill and trace harness (a great portion nearly equal to new), three 5-ton railroad travelling cranes and chains, 5 tons new bar iron (various sizes), 20 tons old wrought iron, and several tons of cast ditto, 3 iron pumps, about 3 tons stone drills and crow bars. Railway trucks and three-wheel carts, considerable quantity of pullies for horse rails, fire grates, &c., superior second-hand memel timber (some in balks), also a large number of broken-up centres, wheeling planks, &c., new ash, beech, and elm planks adapted for waggon work, &c., several thousand sleepers, 120 earth barrows, 400,000 extra size country bricks, assorted and of the best quality, brick making materials of every description, 60 box horses, numerous iron chains (various sizes), 3in. and 3½in wrought iron waggon axles, a 900 gallon tank of 3in memel, two powerful crabs, capable of lifting 15 tons each, various small crabs, large iron quarry bars, two excellent double-action horse pumps and gear, 8 cast iron chills for 2 feet 6 inch wheels and other foundry apparatus, 9 pair smith's bellows, and 1 pair large circular ditto, smith's tools, anvils, vices, and benches, moulds and patterns for wheels, pullies, &c., *two 4 ft. pullies for reciprocating incline planes*, 70 smaller friction pullies, 10 railway lifting levers for repairing roads, six large strap drums for lathes (3ft. to 6ft. diameter), considerable quantity of shed and stable build-materials, weather boarding, ladders, gravel sieves, casks, tubs and cans, iron and wood barrow wheels, *a powerful boring and turning lathe to work by hand*, barrels of cement, 2 chaff cutters (1 patent), a new bean and oat mill, a water cart, a light spring cart, a large quantity of old rope, brass, copper, &c. &c.

The effects will be on view till the time of sale.

Refreshments will be provided for purchasers.

Messrs. Thornton will be willing to enter into arrangements with the purchasers for the removal of any portion of the effects to Shoreham, or into the Railway Company's trucks, on reasonable terms.

Catalogues may be had, two days prior to the Auction, at the place of sale; at Messrs. Rushworth and Jarvis's, 19, 'Change Alley, Cornhill; and at Mr. Ridley's offices, 155, North-street, Brighton.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 252. Vol. V.—No. 44.] SATURDAY, OCTOBER 29, 1842. [Price 6d.

WEST LONDON RAILWAY.—Resolutions passed at a Special General Meeting of the West London Railway Company, held at the Company's Offices, No. 11, Abchurch-lane, in the city of London, on Friday, October 21, 1842.

1st. Resolved—That a sum of 32,000*l*., part of the 60,000*l*. which this Company is authorised by the amended Act to raise in shares, be raised in 3,200 new shares of 20*l*. each; and this meeting do create the said shares, and direct the same to be issued at the price of 10*l* per share, in substitution for all shares heretofore created or directed to be created in respect of the aforesaid sum of 60,000*l*., or any part thereof; such shares to form the first class of shares mentioned in the Report of the Directors adopted by the said general meeting.

That the holders of the said 3,200 new shares so created and directed to be issued as aforesaid, shall be entitled to a dividend of £1 per annum for every such share; which dividend shall have priority over, and be paid in preference to, any dividend to be paid upon the original shares; and in case the profit of any year shall be insufficient to pay such dividend, the arrears shall be paid before any dividend whatever is paid on the original shares in the undertaking.

That a deposit of £1 be paid upon each of the said new shares at the time of the same being allotted, and that the further instalments upon the said shares be paid in such sums, and at such periods, as the Directors in their discretion shall think fit.

2nd. Resolved—That a further sum of 15,200*l*., also part of the 60,000*l*. which this Company is authorised by the amended Act to raise in shares, be raised in 760 new shares of 20*l*. each; and this meeting do create the said shares, and direct the same to be issued to the simple contract creditors of the Company at the price of £20 per share, in further substitution of all shares heretofore created or directed to be created in respect of the aforesaid sum of £60,000 or any part thereof, such shares to form the second class of shares mentioned in the Report of the Directors, adopted by the said general meeting.

That the holders of the said 760 new shares so created and directed to be issued as aforesaid, shall be entitled to a dividend of 5 per cent. per annum for every such new share, which dividend shall have priority over, and be paid in preference to, any dividend to be paid upon the original shares in the undertaking; such dividend, however, not to be paid until the dividend payable upon the 3,200 shares of the first class is satisfied.

3rd. Resolved—That after and subject to the payment of such dividends to the holders of new shares, of the first and second classes respectively, any surplus profit there may be in the current year shall be divided equally amongst all the shareholders, whether holders of original or new shares, in proportion to the number of their respective shares; the holder of each new share being in the division of such surplus profit entitled to the same dividend as the holder of an original share.

4th. Resolved—That as the whole number of new shares of the first class have not been subscribed for by the present shareholders, and simple contract creditors of the Company, the Directors be requested immediately to offer the remainder of such shares to the public, and to use such means for disposing of the same as in their discretion they shall think fit.

ROBERT GUNTER, Chairman.

Offices, 11, Abchurch-lane, October 21, 1842.

WEST LONDON RAILWAY.—Original Capital, £150,000; new Capital, £32,000, of £20 each, to be issued at the reduced price of £10 per share.

The holders of these new shares of the first class will be entitled to a dividend of 10 per cent. per annum, to be paid before any dividend is payable to the holders of the second class and original shares.

The Company being incorporated by Act of Parliament the liability of Subscribers for the new shares is limited to the sum of £10 per share.

Deposit £1 per share, an interval of three months to elapse between the calls.

Applications for the unappropriated shares to be made to the Secretary, at the offices of the Company, No. 11, Abchurch-lane, London, on or before the 7th day of November next.

ROBERT GUNTER, Chairman.

11, Abchurch-lane, October 21, 1842.

In Royal Octavo, 8s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle street; Manchester, Simms and Dinham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating Intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For farther Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

"PERSONS suffering from LOSS OF TEETH are little aware how greatly they may be assisted by Artificial Substitutes; one for whom I had supplied an upper and lower set of Teeth assured me to day (10th month, October 22, 1842) of their usefulness in mastication; &c."

EDWARD MILES, SURGEON-DENTIST, is at home from 9 till 4 every day, except third day (Tuesday), then after twelve.

15, Liverpool-street, Bishopsgate Church, London.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,
ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—TO RAILWAY CONTRACTORS AND OTHERS.—The Directors of this Railway are ready to receive Tenders for the execution of the whole of the works necessary for the formation of that portion of their line extending from Rainton to Shincliffe, and the Branch to Durham, together about eight and a quarter miles, including the construction of Three Timber Viaducts over the Shincliffe, Sherburn, and Casop Becks.

Plans, sections, and specifications of the works may be seen at the Office of the Company at the Railway Station, York, and at the Office of Mr. Thomas E. Harrison, South Shields, on and after Monday, the 24th of October instant. Sealed Tenders addressed to the Secretary must be delivered at the Company's Office at York on Wednesday, the 9th day of November, before One o'Clock. The Directors will meet at their Office, in York, on Thursday, the Tenth of November, at Twelve o'Clock at Noon, to let the Contracts, when parties who have previously sent in Tenders or persons duly authorised by them are requested to attend.

The Directors do not bind themselves to accept the Lowest Tenders.

GEORGE HUDSON, Chairman.

RUSSIAN STEEL IRON—C C N D.—The undersigned having been appointed sole Agents for the Messrs. de Demidoff, in England, the above mark of Iron can only be obtained through them, at

18, HIGH-STREET, HULL, and
29, AUSTIN FRIARS, LONDON.

At Liverpool, they have appointed Messrs. Cabne and Telo; and at Bristol, Messrs. P. Mare and Son, their Agents.

The undersigned particularly request all buyers of the C C N D to make their purchases through them, or through their Agents, which will effectually put a stop to a fraud which is extensively practised by unprincipled parties selling a loose, roaky, inferior Iron, with a counterfeit mark of the C C N D, by which Manufacturers have been grossly imposed upon, and the old, favourite, genuine mark, unjustly discredited.

ANTHONY AND GRAHAM.

29, Austin Friars, 7th September, 1842.

NEWCASTLE AND DARLINGTON RAILWAY—COMPENSATION CASES.

[From the *Gateshead Observer* of this day.]

In our last number, we brought down our report of the proceedings before the Under Sheriff, W. E. Warler, Esq., to the closing of the Court on Friday night, the 21st instant. At that time three cases had been tried and two compromised. Five remained unsettled, viz., those of Sir George Musgrave, Bart, the Master and Brethren of Sherburn Hospital, Mr. Philip Thompson, Mr. John Booth, and Mr. Martin Dunn.

On Saturday morning the Court re-opened at the usual hour, in the long room of the Grey Horse, Gateshead. Clients and attorneys, jurymen and witnesses, barristers and bystanders, were once more in attendance. But the freshness and excitement of the scene had passed away. The learned gentlemen, and the parties whom they represented, had less "fight" in them than at the commencement of the struggle. English juries had taught them their relative strength, and admonished the one party to be less extortionate, the other to be more liberal. Thus, an inquiry, which at one time threatened to extend over a fortnight, gave promise of a conclusion within the week. This promise as was stated, in our second edition, was happily fulfilled.

The business of Saturday began with the impannelling of a jury in the case of Mr. Phillip Thompson.

Mr. HILDYARD, Q.C., and Mr. ADDISON, were counsel for the Railway Company: Mr. GRANGER, M.P., for Mr. Thompson.

Mr. HILDYARD had again occasion to challenge certain gentlemen that were on the panel, and who were lessees of church property.

Mr. GRANGER inquired if his learned friend also objected to landowners?

Mr. HILDYARD—Certainly not.

Mr. GRANGER—I cannot understand the distinction.

The Under Sheriff, however, was not called upon to give a decision. A jury was formed to the satisfaction of both parties, consisting of the following gentlemen:—

Messrs. James Bent Summers, Durham; James Anthony Crofton, Littleburn; William Darling, Durham; Philip James Dunn, Houghton-le-Spring; Charles Dodgson, Neville's Cross; Cuthbert Mills, Viewly Grange; Ralph Page, Eldon; William Hall Thompson, Durham; Thomas Emerson, Frosterly; Robert Ovington, Durham; Robert Robson, Durham; and John Whitfield Beckwith, Merrington.

Mr. HILDYARD said he was afraid he must trouble the jury to have a view of the property in dispute. They could proceed to the spot by railway, and a special train had been provided for their accommodation.

The Under Sheriff appointed a deputy to accompany the jury; and each party appointed a "shower," Mr. Hodgson being selected by the Company, and Mr. Oliver by the legal advisers of Mr. Thompson.

In Sir George Musgrave's case, a jury had been sworn on the previous day, and had viewed the land of the worthy Baronet. Therefore, when Mr. Thompson's jury had left the room, there places were supplied by Sir George's, and the inquiry proceeded.

SIR GEORGE MUSGRAVE *v.* THE COMPANY.

Mr. TEMPLE, Counsel for Sir George, rose and said, the land required by the Company was about eight acres of an estate in the immediate vicinity of the city of Durham. The jury had seen it, and he was therefore spared the necessity of explaining its nature, its situation, or other circumstances of the property in dispute. He was also the less called upon to trouble them with details of this description, because Mr. Robinson, the agent of Sir George Musgrave, was present in court, and would be examined as a witness. His learned friend, in a previous case, had laid much emphasis on an argument to which he himself attached no great weight. Mr. Hildyard had argued that the Dean and Chapter, and the Bishop, were entitled to less compensation than a landowner enjoying property which had been handed down to him by his ancestors, and which he was desirous of transmitting to his descendants. Well, then, here was a case in which the Company were taking land that had been for centuries in the family of Musgrave, and which Sir George naturally wished to preserve to those who were to come after him. He (Mr. Temple) could not see that Sir George was entitled to larger compensation than the Church; but if the jury differed from him—if they thought, with his learned friend, that land held in strict entail, and which had descended from generation to generation, ought not to be taken away from its possessor, except at a higher price than than if it were held in trust by an ecclesiastical or other corporation—then let them give his client the benefit of their opinion. The land required by the Company formed part of the Kepier estate. The railway would pass through several enclosures of the estate, and was chiefly to be "cut" and "embankment." The severance would therefore be considerable; indeed, there were only four points at which the line ran on a level. The injury done to the estate would at once present itself to the minds of the jury; they would many of them know, from their own practical experience, the damage that must ensue, from such severance as this, to land held for farming purposes. The property, from its proximity to an important city, was of peculiar value. It lay in the township of St. Giles, behind the street of Gilesgate. The duty of the jury in assessing the compensation due to the owner, would be easy. There was no question of wayleave to occupy their attention—no calculations in the present case, of the reversionary interest of lessee or lessor—Sir George Musgrave, the party to be compensated, being a freeholder in possession. He would not take up the time of the jury with any further observations, but proceed to call witnesses.

Gervase Robinson, Esq. deposed, that he was the agent of Sir George Musgrave, and had occupied that situation ten years. Sir George lived at Eden Hall, in Cumberland. The Kepier estate was an old family property of the Musgraves, and was entailed. He had five or six children, sons and daughters. The eldest son was about ten years of age.

Mr. HILDYARD—Oh, I will admit at once that there is every prospect of the estate descending in the family of Sir George Musgrave.

Mr. Robinson continued—The estate lay all together, and consisted of 249 acres. The Company proposed to take 7 acres, 3 roods, 35 perches. The land lay near the terminus of the railway, at the bottom of Gilesgate, by the side of the river. The Wear was one of the boundaries of the estate. The land in general was good. It was let out in parcels as accommodation land more than for farming purposes.

Cross-examined—Sir George Musgrave resided in Cumberland. He had no residence on the estate under consideration. The Cumberland estates formed an old hereditary property. The proposed western line of railway would intersect Sir George's land in Cumberland. He (witness) had not heard that Sir George presided at a meeting in favour of the western line of railway to Scotland, nor that he had offered to make the Western Company a present of so much of his land as the line required.

Mr. Otley, of Darlington, land-surveyor, had viewed and valued the land required by the Newcastle and Darlington Railway Company, belonging to Sir George Musgrave. [Mr. Otley stated in detail the value of the several portions of fields which the Company proposed to take.] The total quantity was 7 acres 3 roods 35 perches; the annual value of which, according to his estimate, was 22*l.* 3*s.* 1*d.*; and this, at 35 years' purchase would give 775*l.* The damage by severance he calculated at 750*l.* Compensation for loss of communications, &c., 750*l.*; and for alteration of fences, and in the cultivation of the land, 225*l.*: total, 2,500*l.*

Cross examined—Had allowed for three descriptions of severance. He could not say how many chains of fence would have to be stubbed up; but 10 per cent. on the value of the land, and the damage done by severance, he knew from experience, was not too much to give for alterations in fences. He had proceeded upon this principle, and not from his knowledge of the particular land under consideration. His whole estimate was made before he came to Gateshead, to attend the present inquiry. In making it, he had assumed that the Railway Company would make and maintain fences on the side of the line, and that the landowner would have to make all drains rendered necessary by severance, except such as were required for the purposes of the railway. He had also assumed that the railway would restore all communications:—three, he presumed, would be the number they would give.

Re-examined—Witness was land-valuer for the Great North of England and Stockton and Darlington Railway Companies; and he had assumed, in that capacity, that 10 per cent. on the value of land required for a railway, and on the damage by severance, was a fair average allowance for alterations in fences and in cultivation.

Mr. Matthews deposed that he had estimated the annual value of the land at 31*l.* 2*s.* 3*d.*, which, at 35 years' purchase, gave 1,088*l.* 18*s.* 9*d.* Individual field severance, 23*l.* 12*s.* 10*d.* per annum, or (at 35 years' purchase) 827*l.* 9*s.* 2*d.* Depreciation of the estate (one year's purchase), 750*l.* Total, 2,666*l.* 7*s.* 11*d.* [Cross-examined]—He assumed that the Company would give three communications, and that they would do as they pleased with the fences, and leave the occupiers to put them right as they could.

Mr. R. Nicholson had estimated the annual value of the land in question at 28*l.* 5*s.* 8*d.* This, at 35 years' purchase, gave 989*l.* 18*s.* 4*d.* Damage by severance, 1,010*l.* 6*s.* 8*d.*, exclusive of injury to the estate (the probable loss in case of sale)—which he estimated at a year's purchase (750*l.*). Total, 2,780*l.* 5*s.* [Cross-examined]—Witness was engineer of the Newcastle and North Shields Railway, both when it was constructed and at the present time. In the formation of that line, severance was calculated on this scale. The Newcastle and Darlington Company, he had assumed, would restore all drains, so far as they could. He had supposed that they would give four communications.

Mr. Rutherford had estimated the annual value of the land at 31*l.* 2*s.* 3*d.*, which gave, at 35 years' purchase, 1,088*l.* 18*s.* 9*d.*; severance, 1,827*l.* 9*s.* 2*d.* Total, 2,916*l.* 7*s.* 11*d.*; Cross-examined]—Had been examined, so far, in every case that had been tried. Was not at all staggered in his judgment by what had happened. Was not shaken by the circumstance that three juries had materially reduced his estimates. Could not say that he would not be staggered if three other juries were to take the same course. Was not staggered by the verdicts already given; nor by the fact that, in the present instance, he exceeded all the other witnesses in his estimate. Had not noticed that his estimate was the highest.

Mr. HILDYARD—You are the highest at present, Mr. Rutherford; but I don't know how much higher my learned friend may get before he is done. He mounts as he goes on. (Laughter.)

Mr. Rutherford continued—He had been guided by his own judgment in his estimates, and they were the result of his conscientious convictions. He had assumed that the Company would make all reasonable and necessary communications, and valued accordingly. Had also presumed that they would restore existing drains, so far as it was possible. [Re-examined—Had heard the evidence of Mr. Hildyard's witnesses, and marked the difference between their estimates and the verdicts of the juries. Was also aware that Mr. Hildyard, in the preceding case (Messrs. Pemberton's), had not dared to bring his witnesses before the jury.

Mr. HILDYARD—That only proves that I am not so audacious a man as my learned friend. (Laughter.)

Mr. TEMPLE stated that he had now closed his case: he did not think it necessary to occupy the time of the jury with further evidence.

We give, in a tabular form, the valuations of the several witnesses:—

Valuers.	Annual value.	At 35 years' purchase.	Damage by severance.	Total compensation.
	£	£	£	£
Mr. Otley	22 3 1	775 0 0	1725 0 0	2500 0 0
Mr. Matthews	31 2 3	1038 18 9	1577 9 2	2666 7 11
Mr. Nicholson	28 5 8	989 18 4	1760 6 8	2750 5 0
Mr. Rutherford	31 2 3	1088 18 9	1827 9 2	2916 7 11

Mr. HILDYARD rose to reply. He had the honour of addressing gentlemen who were probably in the practice of sitting upon juries, and therefore conversant with the habits of counsel. They would all be aware, that, towards the end of an assize, gentlemen of his profession descended from their stilts—(laughter); they got their heads out of those clouds into which they had lifted them at the commencement of the proceedings—(laughter); and the questions with which they had to deal were treated more practically—common sense and the force of circumstances compelling them to moderate the extravagant assumptions with which they had severally set out. This was observable, on both sides perhaps, in the present proceedings. His learned friend, in launching Sir George Musgrave's case, had shifted his ground: he had descended from the position which he had assumed in dealing with the property of the Church, and was now anxious to take refuge in an argument which, when urged by him (Mr. Hildyard), he had hotly opposed. Mr. Temple had reminded them of his (Mr. H.'s) argument, that a freeholder, when deprived of ancient family possession, was entitled to more liberal compensation than a corporate body, who merely held an estate in trust, and who regarded it as nothing more than a source of revenue. His learned friend felt that the argument was not applicable in the present case, and had not ventured to take it upon himself, but had cast it upon him (Mr. Hildyard). He had taken up the argument of an opponent—shaped it to his own purposes—and then endeavoured

Digitized by Google

to get the jury to adopt it on the responsibility of a third party. His learned friend was more ingenious *than ingenuous*. He (Mr. Hildyard) had never used the argument as distorted by Mr. Temple. He had spoken of a case in which the mansion and land of a *resident* proprietor were taken by compulsion. Was this a case in point? Certainly not. Sir George Muirgrave did not reside upon the estate—it was a mere *farm*. He (Mr. H.) did not mention this fact to the prejudice of Sir George; the worthy Baronet resided elsewhere—he was a resident in Cumberland, and one of the most active and zealous promoters of the western line of railway, which intersected his estates in that county.

Mr. TEMPLE must object to this assumption. It was not in evidence that Sir George Musgrave was a supporter of the western line; and his learned friend, who had no intention to call witnesses, had no right to indulge in such statements.

Mr. HILDYARD resumed—The fact was not in evidence, but Mr. Robinson, Sir George's agent, had not ventured to deny it; yet, if it were not true, he would surely have known its untruth—he would have been fully aware of Sir George's hostility to the western line, if, instead of being friendly, the worthy Baronet had been opposed to it—and Mr. Robinson would have been glad, in reply to his (Mr. H.'s) cross-examination, to have made Sir George's hostility known. The jury would judge, from Mr. Robinson's examination, whether Sir George Musgrave was friendly or hostile to the western railway to Glasgow and Edinburgh. He would now come to the question of the value of the land. He had thought it time to put an end to the unseemly exhibition of monstrous valuations by professional partisans. He had felt it to be his duty to do what his learned friend might have done, viz., to exercise his privilege of sending the jury to view the land for themselves. He thus got rid of Mr. Temple's taunt that he (Mr. H.) brought forward Yorkshire valuers—men not accustomed to value land in the county of Durham; for by taking this course, he was trusting his case to the testimony of twelve Durham valuers—the gentlemen of the jury. By this means he had signally defeated his learned friend in the preceding case, and yet the same witnesses were now brought forward as before, to pursue the same unworthy course. If Mr. Rutherford were not staggered by the verdicts of the juries, and by the excess of his valuations over those of other witnesses on his own side, his mind must be singularly constituted, and his judgment worthy of little reliance. Look also at the evidence of Mr. Otley, a gentleman who confessed that he had not made himself acquainted with the actual damage that would be done to the land, in respect of fences, &c., but had made his calculations by a rigid, unbending rule, which he applied in every instance alike. No wonder the Great North of England Railway Company was plunged into difficulties, when Mr. Otley was its valuer. No wonder that its capital, which ought to have brought the line to Newcastle, was all expended by the time it had reached the town of Darlington. No wonder its 100*l.* shares were down to 50*l.* The estimates of the witnesses for damage done by severance were truly enormous. Take Mr. Otley's as a sample. The evidence of that gentleman reminded him of an echo. Out came, in the first instance, an item of 750*l.* for severance. That was the original explosion. (Laughter.) Then followed the echo—only it outdid an ordinary, every-day echo, which was usually fainter than the noise which gave it birth. Mr. Otley's echo—(laughter)—equalled his first explosion; for his second item of severance was again 750*l.* And then he was not content. There was another (though, happily, a fainter) echo, to the tune of 225*l.*—making a grand total for severance of 1,725*l.* [Mr. Hildyard went into an examination of the property, and showed, by means of a map, the actual damage done by severance. He also pointed out the communications from side to side of the railway, that would most probably be given by his clients, or which, if in any instance refused, two justices would oblige them to concede.] Taking the land required at 8 acres, he would fix upon an average annual value of 2*l.* 10*s.*; which the jury, having seen the estate, would admit to be liberal. This would give, at 30 years' purchase, 600*l.* as the price of the land. The witnesses on the other side based their calculations on an arbitrary rule, viz., that the owner should receive 35 years' purchase for his property. This rule was an absurdity. Why was it that 30 years' purchase was usually taken on the value of property? Simply because, looking at sales by public competition, that was found to be in general the price which property would bring. But it was a criterion which could not be applied, without gross folly, to any and every particular property. One property was worth less, another worth more—just according to circumstances. Therefore, to take 30 years' purchase as an unvarying rule, and then to lay on an additional five years in all cases of compulsory sales, was to pile absurdity upon absurdity, and to establish an arbitrary rule against which all reason and common sense protested. In dealing with any individual property, they must ascertain its actual value. The Act of Parliament under which the present inquiry was held, directed the jury to award the value of the land, and nothing more. That value, in his opinion, was 600*l.* If he were wrong, and the witnesses on the other side were right, how was it that his learned friend did not dare to ask Mr. Robinson the amount of rental realised by the land? He would certainly have done so if he had not been well aware that it would have cut a sorry figure in comparison with the valuations of his witnesses. He (Mr. Hildyard) would conclude with the following estimate, as his recommendation to the jury:—

For the land	£600	0	0
For damage by severance	337	0	0
Total	£937	0	

The Under Sheriff made a brief address, and the jury were closeted in deliberation for some time. On their return, they gave in the following verdict:—

For the land	£800	0	0
For damage by severance	500	0	0
Total	£1,300	0	0

During the absence of the jury, barristers, attorneys, and clients had been somewhat clamorously engaged in "amicable arrangements" of the remaining cases. The result was, that the whole of them were compromised; and the jury in Mr. Thompson's case had the pleasure of learning, on their return to Gateshead, that their further services would not be required.

In the case of Sir George Musgrave, if rumour may be relied upon, the Company had offered 1,500*l.* just before the case came on; but the offer was refused, and the verdict was for 200*l.* less. On the whole, the Directors are said to be satisfied with the issue of the inquiry.

In reply to the observations made by Mr. Hildyard on the evidence of Mr. Otley, we are authorised to make the following statement:—"Previous to the application to Parliament for power to execute a railway from Darlington to York, and before a single contract was made by Mr. Otley on behalf of the Great North of England Railway Company, *two* of the most eminent land-valuers in Yorkshire were appointed to make a valuation of the whole of the land required for the line (a distance of 45 miles); and after the contracts were made by Mr. Otley, the aggregate amount thereof — exclusive of compensation paid to prevent Parliamentary opposition (commonly called *hush-money*), and of the value of the land purchased by the Company on speculation — exceeding the valuation above alluded to, and sworn to before Parliament, *by* 3,300*l. only*. The very large amount paid for land and property in the county of Durham (upwards of 50,000*l.*), now sacrificed by the Company, in consequence of the change in their line through this county, was no fault of Mr. Otley's."

THE ATMOSPHERIC RAILWAY.

We extract the following from the *Cornwall Gazette*, where it appears among the proceedings of the Royal Cornwall Polytechnic Society:—

On Tuesday evening (October 4) Professor Vignoles delivered a lecture on the Atmospheric Railway to a large and respectable company, Sir C. Lemon, Bart., presiding; and as all information on the subject of railways cannot fail to be interesting to a county whose future prosperity may greatly depend on the rapidity and certainty of its land communication with the metropolis, we have deemed it right to give the following full report of the lecture.

The great interest felt in other parts of this country and on the Continent, respecting the very remarkable invention which had acquired the popular name of the "Atmospheric Railway," and the request of friends connected with Cornwall who had imagined it might be of equal interest here, were the reasons for his presenting himself, a stranger to the district, and almost to every individual in the room. The very talented and ingenious gentleman who was, for a long time, the Secretary of this Soicety, Mr. Jordan, after the meeting of the British Association at Manchester, had requested him to send down here, for exhibition, the tables and drawings which now hung round the room.* He was happy that his engagements enabled him to attend and give an explanation of them, and to convey some general information on the subject. Though Atmospheric Railways had not sufficiently attracted the attention of the great mass of the public in general, they had made a deep impression on the minds of almost every man of science, and of most of the engineers who had investigated them. Indeed, this invention was one which, the more it was inquired into, the more its truth and importance become manifest. It was a subject, too, which ought to be submitted to the most thorough scrutiny. If its principles were not true, or their application impracticable, it should be at once discarded: but if otherwise, the subject should be brought prominently before those who, it was presumed, would be benefitted by it; in order that, if not themselves familiar with scientific arguments on which to ground their acquiescence, they might have the practical deductions set before them, and thus rendered easily intelligible. Mr. Vignoles, after some further preliminary observations, expressed his conviction that the application of the Atmospheric Railway was the only means of securing railway communication either to Falmouth or Devonport. After some observations condemnatory of the lavish expenditure incurred in the construction of many railways, Mr. Vignoles proceeded to sketch the history of the invention of the Atmospheric Railway. It was nearly two centuries since a very ingenious French Engineer, of the name of Papin, conceived the idea of producing motion by means of atmospheric pressure. After him, the idea seemed to have slumbered for more than a century, when arose Lewis, Medhurst, Vallance, Pinkus, and lastly Clegg. Vallance had indulged in some curious speculations; he conceived the project of travelling in a tube from London to Brighton, which, it might be remembered, created a great deal of ridicule at the time and since. Medhurst took a better view of the case; he saw that there was a very great objection to the passengers being placed as it were within the receiver of an air-pump—(laughter)—and made the first step towards removing this difficulty, observing, with much *naivete*, that it might be more agreeable to the passengers to travel without being inclosed in a dark tube, and where they might enjoy the additional advantage of having a view of the country as they passed along. To get the atmospheric pressure to act in a tube, and yet keep the passengers in the air, he contrived a water valve. This valve was very ingenious, but it required that the line on which the railway was to be laid should be always perfectly horizontal; and as that was not easily managed, the water valve could not be brought into action. The next labourer in the field was an American gentleman of great ingenuity and perseverance named Pinkus; but they were indebted to Mr. Clegg, the practical applier of gas to the illumination of large towns, for putting into useful effect the very simple contrivance for working Atmospheric Railways. It was however right to keep in mind that Medhurst, about 40 years ago, first proposed to connect, by means of some ingenious apparatus, the moving power in the pipe with the carriage outside. With this brief history of the invention, he would now endeavour to explain what was requisite, *a priori*, should be effected, in order to produce the mechanical results without which this invention would be perfectly useless. First of all, it was necessary there should be a tube sufficiently air tight, not perfectly, but partially so; this was obtained by the contrivance which engineers call a valve. It was indispensable there should be a perfect connection, through this valve, between the moving power in the pipe and carriage outside. Into this partly air tight pipe was to be introduced a piston, to fit the tube so closely that a greater or less degree of vacuum being formed on one side of the piston, the pressure of the atmosphere should be able to act on the opposite side. The necessary degree of perfection in which this vacuum should be acquired and kept up was very much less than was generally supposed. Half the amount of the total atmospheric pressure was quite sufficient to produce all the desired results. It had been supposed that a perfect vacuum must be formed in front of the piston; and that the full effective pressure of the atmosphere could not be obtained in an apparatus of this kind. But the fact was that probably 99-100ths of the whole atmospheric pressure was obtained. The Professor then called attention to diagrams and tables displayed before the company. All the drawings were drawn to the full size, and represented an apparatus equivalent in power to a locomotive engine such as would draw

* These were several large coloured drawings of plans and sections, and tables of constants and variables, connected with the subject of Atmospheric Railways.

Digitized by Google

about 10 carriages. Mr. Vignoles first pointed particular attention to an index table, in which the various parts of the machinery on which he was about to speak were explained; and next, to a drawing of the transverse section of the pipe—a cast-iron tube 12 inches in diameter, representing the valve shut, with shifting pieces describing the mode of opening and closing it; and the connection between the piston rod and the perch of the guiding truck or "traveller" in front of, and to which was attached, the train of carriages moving on the railway outside. He then pointed to a longitudinal section of the same pipe, and also to models of the pipe and its machinery. In the pipe was shown the piston made perfectly tight by means of collars of leather, so arranged that in case of any partial failure of one collar there was a second behind it, but this was seldom called into play. Attached to the piston rod were opening rollers (fastened between plates parallel to the rod) for the purpose of lifting and opening the valve outwards; on the hinder part of the traveller was a *closing* roller which, after the atmospheric pressure had acted upon the piston, shut the valve down again; and also a copper slide which, acting on a composition of bees'-wax and tallow, sealed the edge of the valve opening. This slide formed the border of a small cylindrical box containing lighted charcoal sufficient to keep the slide warm. Thus, after the valve had been opened and closed by the respective inner and outer rollers, it was hermetically sealed down again by the passing of the heated copper slide over the composition, which it was not necessary should be melted, it required only to be closely pressed down; and the object of the charcoal was merely to keep the heater sufficiently warm to prevent the composition from adhering to it. At the end of the piston rod was a balance weight, to retain the piston in equilibrium. After pointing attention to a drawing of the pipe, in plan or horizontal section, Mr. Vignoles observed, that the whole principle and practice of the Pneumatic Railway might be summed up in two words—it was the art of pumping the air out of the tube, and immediately sealing down the valve. In the peculiarity of this valve consists the whole invention. It was simply a hinge of leather protected on each side; the upper part was plated with flat iron in successive links to render it flexible, the under part was also plated with links of iron of segmental form, to complete the periphery of the circle of the tube when the valve was closed. A small groove, about half an inch wide and an inch deep, was filled with the composition before named, consisting of certain proportions of bees'-wax and tallow, which acted upon by the warm copper slide hermetically sealed down the edge of the valve, even when the train was proceeding at the rate of 50 miles an hour—an operation which he had repeatedly seen done most efficiently, so as to leave the pipe ready to be again exhausted of its air, and allow the next following train to be impelled by atmospheric pressure. In familiar illustration of the manner in which the piston in the tube was connected through the valve with a carriage outside, Mr. Vignoles referred the audience to the movement of a pencil in a pencil-case.

Having described the parts of the machinery, Professor Vignoles proceeded to show how it was set in motion. At certain points on the line, which for the present purpose he would suppose to be three miles apart, stationary engines were placed, which worked air pumps connected by branch tubes with the general tube lying between the rails. The air being exhausted by these pumps from the portion of the pipe in front of the piston, a certain amount of rarefaction was obtained, in proportion to the time employed on the air-pump, or to the load which was to be impelled. He would here pause for a moment to observe that the first wide distinction in the principle of the atmospheric railway, was the substitution of stationary for locomotive power; and in this substitution he conceived the advantage to be great. Even the old system of stationary power, with all its obstacles of ropes, &c., had its supporters, and that in places where, from coal being abundant, saving in fuel was disregarded. With the present advantages of Cornish economy, in addition to the merits of the atmospheric principle, the stationary engine might take the field once more against the locomotive. The air then, continued the Professor, having been pumped out of the pipe in front of the piston, a certain amount of vacuum was produced, which created a corresponding pressue on the opposite side. The whole amount of atmospheric pre sure was known to correspond to about half a pound on the square inch, for every inch of the barometer. In the practical working of the ordinary apparatus, the amount of vacuum might be taken as that corresponding to 16 inches of mercury, or 8 lbs. on the square inch, and as the air rushed in at the valve close to the back of the piston, the friction, from passing along the whole length of the tube, was avoided, and thus no waste of its power arose; and consequently the whole effect, or very nearly so indeed, of the pressure of the atmospere, was obtained. By ascertaining the area of the pipe in square inches and multiplying it by the pressure due to the vacuum, the product was a certain number of lbs., being the measure of the atmospheric power for producing motion. Thus a pipe of 6 inches diameter with a pressure of 10 lbs. on the square inch generated a pressure of 283 lbs. And a 24 inch pipe with 10 lbs. pressure, generates 4,524 lb., which was equal to the adhesive power of four of the best locomotive engines. From a 12 inch pipe with 9 lbs. pressure per square inch was obtained fully 1,000 lbs. pressure, which was the average adhesive power of a locomotive; and that power was generated, not in the wasteful method of a locomotive, but by the economic stationary engine. The effective pressure on the piston being ascertained, it was necessary to know what load it would draw. The Professor here pointed to, and explained the tables of constants and variables, and from calculations based on them, stated that a 6 inch pipe with 9 lb. pressure would carry 12¾ tons; a 12 inch pipe with 9 lb. pressure, would carry 51 tons; which was equal to 10 loaded carriages such as those on the Great Western Railway. With a larger pipe greater power was generated, and of course greater loads might be propelled. These representations were not based on theory only; they were the result of the working of a piece of experimental railway which had been in operation in the vicinity of London for the last two years and upwards, viz., on the West London Railway, at Wormwood Scrubbs, about 4 miles out of London. The experiment had been made by certain individuals at their own cost, and latterly the line had been suffered to get into wretched order; but, nevertheless, the success attending its operations perfectly proved the truth of all that he had been endeavouring to show. On the application of persons interested in the subject, Government Commissioners had made some investigation into it and had reported their opinion on the atmospheric system. These Commissioners reported the following remarkable facts:—"That experiments tried at Wormwood Scrubbs have proved the practicability of giving motion to considerable loads at a maximum velocity of 40 miles an hour; that it is therefore no longer a question whether trains of carriages may be worked by means of atmospheric pressure; that this principle of locomotion admits of advantageous extension, and that the economy of working increases with the length and diameter of the pipe; that to work three miles of pipe requires little or more than double the power requisite to work half a mile; that a large pipe is much more economically worked than a smaller one, so that with little more than double the power, four times the amount of atmospheric pressure may be obtained; that economy of working increases at every point, as the scale of operations are increased; that the time requisite to form an exhaustion equal to rather less than two-thirds of a perfect vacuum, in a pipe 9 inches in diameter and 3 miles in length is 5 minutes, and that, with double the power, the time necessary to produce the same vacuum, in a pipe of 18 inches diameter and 3 miles long, is about 10 minutes; that the resistance opposed by the friction of the piston, in a pipe of 9 inches diameter, appears to be about 10 per cent. of the whole pressure, for all degrees of vacuum, from one-fifth to one-half; and that, whatever this resistance may be in any case, it will be proportionably less, as compared with the pressure, as the diameter of the tube is increased—the friction increasing simply as the diameter, the pressure as the sectional area; that the chief atmospheric leakage is at the longitudinal valve in the pipe; but that it will be the same for large pipes as for small ones. That the atmospheric principle seems to be well suited for such a line as the projected extension of the Dublin and Kingstown Railway, from the latter place to Dalkey." But having admitted all this, the Commissioners appear to have been startled at the inevitable conclusions to be drawn from these facts; and they stated a number of objections based not upon the experiments they themselves had made, but on certain preconceived opinions and assumptions of their own, and their Report was on the whole calculated to create an impression unfavourable to the Atmospheric Railway with the superficial reader. Fortunately, the Directors of the Dublin and Kingstown Railway were satisfied that so many admissions must be worth an experiment. They decided on making an application to Government for pecuniary assistance, which proved successful, and they were now making two miles of railway with 15 inch pipe, which would be in operation in six months from the present time; and he hoped to be able at the next meeting of the Polytechnic, through their President, Sir Charles Lemon, to communicate the results. Should these be successful, of which Mr. Vignoles entertained no doubt, he need not say what must be the important practical consequences, particularly for this part of the country.

There were a few more peculiarities in this system, to which it was necessary he should call attention. He had stated that it was right that railways should be constructed with the utmost economy. But if it were necessary that the insides of the pipes should be turned, the atmospheric railway would no longer be attainable within reasonable bounds of price. Therefore, instead of turning them, the ingenious inventor finished them in the following way. A simple cutter is passed through the pipes after they come out of the sand. They are then placed in a proper receptacle, and raised to the temperature of melting tallow. In that state, a mop is dipped in tallow and passed through the tube by a wooden piston, coating it completely, and producing an interior surface nearly perfect. By the frequent passage of the piston, this tallow lining, or tinning as it were, becomes nearly as hard as plaster of Paris, and perfectly smooth, aiding, no doubt, greatly in preventing atmospheric leakage, and causing the piston to work in a tube of tallow protected by the cylindrical iron pipe.

He had spoken of the load. He had not yet spoken of velocity. It was very remarkable, that this might be said to be perfectly independent of load or of gradients. The velocity was regulated in a very simple manner. It depended on the proportion between the area of the pipe, and the area of the air pump. Mr. Vignoles here again explained one of the tables of constants and variables, adding that supposing there was no atmospheric leakage at all, to produce a velocity of 30 miles an hour with a 12 inch pipe, it would be necessary to have an air pump 41 inches in diameter. But as there would always be leakage, the air pump must be made so much larger. The amount of leakage had been computed to require additional engine power to the extent of six-horse for every mile of pipe; but the leakage was the same for all pipes, being almost wholly at the longitudinal valve. The leakage therefore being the same, or nearly so, the amount of additional power to supply it will be constant; and 1,000 square inches of air pump was the measure for a three-mile station, for that purpose, whatever the diameter of the pipe might be; in the preceding case the diameter of the pump must 55 instead of 41 inches; this required a steam engine of 32 horse power, computing horse power by the diameter of the cylinder and length of stroke, and taking in round numbers such nominal horse power as capable of raising 60,000 lbs. one foot in a minute—steam pressure 30 lbs. in the cylinder, cut off at half stroke and no expansion. Professor Vignoles then turned to the consideration of the effect of acclivities: and after explaining the mode of calculation, stated that with a 16 inch pipe, on an inclination so great as one in 28, 16 tons could be carried at a velocity of 30 miles an hour; and 16 tons would be equal to three or four railway carriages even of the present construction; and at least five loaded passenger carriages of the build applicable on the atmospheric system. With a pipe of 2 feet diameter, 38 tons could be carried up the same ascent. Of course the engine power must be provided in the proportions shown by the tables.

They had then to contrast the system of atmospheric railways with that of locomotive power. It was well known to have been once a matter of great discussion whether, on the Liverpool and Manchester line, *stationary* power should not be used instead of locomotive; and it was not without great hesitation that the latter was adopted. The objection to the stationary power was the vast amount of force requisite to overcome the friction of the ropes, shears, &c., by which much power was wasted. But with the atmospheric system what was there? A rope of air without weight or friction; positively nothing but the carriages to carry; so that very nearly the full dynamic effect of the power generated was obtained. They had no additional resistance but what the friction of the piston in the tube and the opening of the valve might create. This, added to the friction of the carriages, was all that there was to overcome. On the locomotive lines, fully half of a train, on the average, consisted of the engine and tender. Besides which there was to be considered the expense of locomotive power compared with stationary. It would be ridiculous in him, in Cornwall, to attempt to enlarge on the benefits of stationary over locomotive power. On the Blackwall Railway, the rope and pulley system was carried to the utmost possible perfection. But

Digitized by Google

what was the peculiar result? From some causes, this line was working at double the expense of many of the ordinary railways. The expense of carrying a train there was 7s. per train per mile, which was *double of* what it was on the North Union and Dublin and Kingstown Railways. The expense on the Belgian Railways was about 4s. The average of the *American* lines only 3s. The average in England was about 4s. to 4s. 6d.

But here, what was the moving power? It was a *column* of air. And what was the *retarding* power? A column of air also. The moving and retarding powers were alternately columns of air. And every engineer knew, that if it were possible to apply an atmospheric buffer, it would be the most efficacious of all buffers. In the atmospheric system, a rope of air was substituted for one of hemp or iron; so that the minimum of friction with the maximum of useful effect was obtained.

One of the greatest objections to the stationary system, as practised in the North of England by means of ropes and pulleys, was, that at every mile there must be a stoppage of the train. But in the present system, by means of a very simple contrivance (which Mr. Vignoles explained and exhibited in model), the train might run from one great terminus to another without any delay. Persons might thus travel from Falmouth to London in 10 hours without a stop. ("Hear," and laughter.) He need not say, at least to the people of Falmouth, it would be a very great advantage, if, instead of the letters from the West Indies arriving here, as to-day, just in time to be too late, they might have been delivered in London this evening. (Hear, hear.) He had himself always been an advocate for establishing an extreme western port as a packet station. (Cheers.) He had, on several public occasions, advocated, on principle, the propriety of going as far as possible by land; and, if land arrangements were as perfect in respect of the power of steam as in other respects, Falmouth would undoubtedly be the principal packet port of England.

In returning to his subject, it was necessary he should observe that the proposed plan of Atmospheric Railways need not interfere with any existing lines. The pipe could be laid down between the rail; and locomotive engines might pass over it, as the height above the rails was not more than the space usually allowed under the present engines and carriages.

He had stated that the distance between the stations should be 3 miles. It had been ascertained that when an air-pump acts on a pipe of the length of half a mile, the pulsation of the barometer was felt instantaneously at that distance from the air-pump, and to the same extent as close at hand. There was therefore no limit to the distance theoretically at which stations might be placed. They might be 10 miles apart; but it was necessary to look to what might be the effect practically; and those who had studied the question, had proposed 3 miles as the distance at which the engines and air pump may be advantageously placed.

He had now to repeat that the power of the atmospheric apparatus, and consequently the load, was as the pressure of the air and the area of the pipe; that the velocity was as the proportion between the area of the pipe and the area of the air pump; that if they had the full effective pressure, it would be about 15 lbs. to the square inch, but that it had been found that 8 lbs. pressure was the most advantageous consistent with economy. They must, however, provide steam power to generate a pressure of 9 or 10 lbs., and more occasionally, by working the engine more rapidly.

It might perhaps be interesting to give some reasons with respect to the amount of pressure at which they should work. It was more economical to work with the effect of 16 inches of mercury, because, although they might get a greater power above that, it would be at an increased expense, and they would be longer in obtaining it. With regard to the time necessary for obtaining a vacuum, Mr. Vignoles stated that with an 18 inch pipe, which was a very powerful one, a vacuum might be formed in 10 minutes, consequently, allowing for passing, a train could go every quarter of an hour, with great ease, carrying 100 tons on a level; and on an inclination of 1 in 22, about 20 tons. Therefore, it was a most powerful engine, and if introduced for passengers, it became one of amazing economy. Inasmuch then as an 18 inch pipe could be worked every 15 minutes, and as a 12 inch pipe could be worked with still greater activity, if there were any mercantile, mineral, or other traffic combined with the conveyance of passengers, the introduction of the Atmospheric Railway would justify the incurring of a considerable outlay.

This led him to the consideration of expense.

But there was one other point which he would previously speak of. It was the assertion he made in the early part of the lecture, that whatever the load, or gradient, within certain limits, the train would always move at the same rate of speed. Suppose the travelling load to be 50 tons, the degree of vacuum necessary to obtain a given degree of velocity being 10 lbs. pressure; so long as the load was the same and the line level, it would move with equal velocity, because the velocity was due to the rapidity with which the air was pumped out of the pipe. But if they had a load of only 25 tons, starting with the same pressure as with 50 tons, the train runs faster than the air is drawn out of the pipe; the power behind being so great in the first instance as to force the load forward at an increased rate. But this did not last long; the air would get packed up, as it were, in front of the piston, and then would begin to resist the velocity of the train, which was very great at first, would gradually diminish until the amount of vacuum was proportionate to the weight behind it, and then the train would go on equably. Again, supposing the train started with a load which was rather heavy, with a pressure of 5 lbs. or 6 lbs. The air was then drawn out quicker than the load could follow; and gradually the train increased its velocity until it became balanced with the vacuum. As to ascend an incline was the same as adding to the load, and to descend the same as diminishing the load; when the train came to an ascent, it would reach the foot of the plane with a considerable velocity; but its rate would gradually decrease as it ascended until the power was brought up equivalent to the pressure—that is until by the air pump going faster than the train, a power was generated sufficient to drive it up the hill. In coming down hill, the trains would start at the top with very great velocity; but the air would immediately begin to act, in front, as a buffer, until the pressure was reduced. The moment the train came to the level, its velocity would immediately increase. So that the velocity was, on the whole, nearly uniform, whatever might be the inclination.

The lecturer then proceeded to contrast the powers of the locomotive steam-engine with those of the atmospheric. Professor Barlow in a Report to the Railway Commissioners of Ireland, said that the amount of absolute power expended by a first rate locomotive engine in preparation for motion was 1,075 lbs. Now, a 12 inch pipe with a pressure of only 9 lbs. had a power of 1,018 lbs., the whole of which was effective. So that a power more than equal to that of the atmospheric engine, was thrown away by a first rate locomotive engine in mere preparation for motion. The truth was they were now on the threshold of improvements in this respect, and it was impossible for them to consider what would be the results when further developments of science should bring this wonderful power more within the grasp and command of man.

Now for the price to be paid for this. He ventured to state, on his professional reputation and experience as an engineer, that the sum of from 10,000*l.* to 12,000*l.* a mile would make an Atmospheric Railway in any part of the country between Falmouth and Exeter. Whether that was more or less than they had hitherto supposed, he did not know; but he was quite sure that a good locomotive line could not be laid for double the money.

The pipes would cost about 2,000*l.* per mile; the valves and apparatus for fitting 1,000*l.*; engines and air pumps at three miles stations about 600*l.* or 700*l.* per mile; the traveller, piston, &c. &c., 150*l.* per mile.

It would be necessary to combine with it the electric telegraph, brought to such great perfection by Professor Wheatstone, which would cost, including extra fittings, about 150*l.* per mile. Then came the advantage of getting rid of the heavy rail and expensive apparatus required for the locomotive engines. The rail about to be placed on the extension of the Dublin and Kingstown line, would probably weigh only about 18 lbs. per yard, and such a rail for an atmospheric engine was greatly stronger in proportion than the ordinary rail now used for a locomotive. He must be understood to speak always of a single line for the Atmospheric Railway: on that system it was impossible that two trains could travel together in the same direction, except they were at least one station, or three miles, apart; neither could trains travel in opposite directions so as to approach each other within that distance. Therefore collision, and overtaking, and such causes of accident, were perfectly impossible. It was also clear that from the construction of the apparatus carriages could not get off the line of railway. Single lines would therefore be perfectly sufficient; and there was scarcely any railway in which all the work could not be done on a single line, were it not for the apprehension of danger from locomotive accidents. To continue the estimates, next were the upper works, viz. the wooden sleepers, and the iron bars, &c. on which the carriages travelled, which would not exceed 1 100*l.* or 1,200*l.* a mile, for which at least 3,000*l.* a mile for a single line is required on the locomotive system. Then came the saving on earthworks, which Mr. Vignoles pointed out, and concluded by saying that, considering everything which it was in the power of an engineer to calculate, omitting only land and management, 10,000*l.* a mile ought, on an average, to complete the line. Mr. Vignoles concluded his lecture by expressing his gratification at having had the opportunity of explaining, to so intelligent an assembly, a system calculated to produce most important changes in all relations of society. (Cheers.)

Sir C. LEMON then asked the Professor if there were any peculiarities with respect to horizontal curvatures.

Mr. Vignoles replied, that another great advantage which he had omitted to state was, that curves of almost every degree of curvature might be surmounted. Engineers would see, by reference to the drawings, that the side of the polygon due to the curve was only 1 foot, or the length of the piston, instead of 10 or 12 feet, the length of the locomotive engine. The whole of the piston rod being perfectly flexible, the only retardation due to the curve would arise from the length of the piston, and the lateral friction of the carriage-wheel flanges. Curves of 200 yards radii might be used.

The President then, on the part of the company, returned thanks to Professor Vignoles for having paid the county and the Polytechnic Society the flattering compliment of attending to explain an object of such great national importance.

RAILWAY GRADIENTS.—Let those who are sceptical of the practicability of constructing a railway *to profit* over a hilly country, without encountering the enormous cost of securing what are called "easy gradients," visit the Hartlepool Railway, where they will find a locomotive engine (with its tender) pulling a train of three or four passenger carriages up a short inclined plane of 1 in 30, and two long inclined planes of 1 in 35, at velocities of from 20 to 25 miles per hour, four times in the day—and the only obstacle to its ascent (with still greater weights) appears to arise from the slipping of the wheels, or their want of adhesion to the rails in wet weather. This engine is furnished with 14 inch cylinders, and six 4½ feet wheels coupled together. Who then shall venture to assert that railways will not hereafter be laid over the rough surface of any country hitherto deemed inaccessible by them? If the tread or tire of the wheels of such a locomotive were considerably widened, and the main rails upon such inclined planes laid upon longitudinal sleepers, and an extra rail of wood or rough (why not cogged) iron fixed outside the main rail, to which the tire of the engine (but not the carriage) wheels should extend, their adhesive power, we imagine, might be doubled, whilst the tractive power of the engine might be increased by the use of cylinders of greater bore, supplied with full steam in rising a hill, half steam on level ground, and little or no steam on a descent. "*Nil mortalibus arduum est.*" we exclaimed, whilst flying up one of these Hartlepool inclined planes last week—much hoping that some of the Directors of the Newcastle and Darlington Junction Railway may visit them, and afterwards lay their new railway in a direct line to, instead of a circuitous line past, the good old city of Durham, which they might (with the advantage of cheap coke) do very satisfactorily to themselves as well as to the public, if content with steep gradients, but still greatly superior to those upon the Hartlepool Railway.—*Durham Advertiser.*

ACCIDENT ON THE NORTH MIDLAND RAILWAY.—On Saturday last, about noon, one of the down trains on the North Midland Railway ran into a luggage train which had been detained on its way, and was near the Chesterfield station, when it ought to have been many miles further down the line. By the concussion several of the windows of the carriages were broken and some other damage done, but we are happy to say *that no person was* seriously injured.—*Derbyshire Chronicle.*

RAILWAY "MONOPOLY" AND THE PUBLIC.

To the Editor of the Railway Times.

SIR,—Having recently read the fate of Antæus, the opening paragraph of "P. Z.'s" last letter rather startled me at first. I was prepared for a grave important personage, with the stern brow of a Covenanter, but to find that the victim of the Hydra was but a type of my antagonist was somewhat alarming. A second Hercules! The statue in Hyde Park become suddenly endued with vitality! Such was the image which my awed imagination conjured up. I recovered by degrees, however, as I proceeded with the perusal, and ere I reached the end found my giant foe subsiding into very ordinary dimensions, and the mighty stream which he fain would turn on Railway Companies dwindling into a tiny cascade, not much exceeding in volume that with which the redoubted Gulliver extinguished the conflagration in Lilliput.

My opponent is absolutely beside himself at my incorrigible hilarity. He has even forgot himself so far as to make a painful attempt at a joke, in which he has succeeded about as well as did the luckless animal of auricular notoriety, when trying to imitate the agile and winning playfulness of the lap-dog.

By some unaccountable process he has contrived to drag what he calls the histrionic muse into the discussion. I presume he must mean the comic muse, and that his object was to enjoy in fancy the pleasure of seeing her scalped by one of his imaginary Indians, in revenge for her patronage of lights hearts and laughing faces.

But, jesting apart, I cannot but admire the magnanimity with which he declares his determination to stand by his opinions at all hazards. Without doubt it requires some courage to avow so boldly the opinions which he professes. The public good, by which he means the exclusive good of the consumer, is the idol of his worship. On the altar of this Moloch he would immolate the principles of justice and the right of property as obsolete ideas, and antiquated notions; nay, according to his views there is no reason why his deity should not be propitiated by offering up as sacrifices, not only the railway proprietary, but the whole body of national creditors. Such views, however, are more like the fungi which spring up in the hot-beds of revolution and anarchy than the opinions of civilised communities, living in peace, and obedient to the sway of justice and law. I cannot but think that most people will think my "antiquated notions" preferable to his modern lights, and my "queer-fashioned" old English reasoning superior to his spruce Gallic argumentation. Having looked on while railways were forming, and chuckled—(I beg pardon, not chuckled, but shaken his head very gravely)—at the sanguine fools who were squandering their money on such mad schemes, he would, now that success has justified their sagacity, rob them of the fruits of their enterprise, to benefit those who had neither the soul to conceive, nor the vigour to execute, such great and useful undertakings. To pamper the drones at the expense of the industrious workers is his idea of public good. Had he come into the word in an apiary, there can be no doubt as to the fate to which the more rational ideas prevailing there would have consigned him.

Perhaps, however, his novel views are merely the result of confused ideas. He perceives that the supreme authority must, in every country, have certain powers in relation to private property, but he cannot see the limits within which the power may be exercised without injustice. He argues, that because the Corn Laws may be repealed, railway property may be confiscated. He does not see that the analogy is between the repeal of the Corn Laws and the construction of competing lines—while diminishing the value of railway property by direct legislation would be analogous to the compulsory reduction of rents by the same means. The abuses of monopoly and the rights of property are so jumbled together in his mind that he cannot separate them. In guarding against the one he would violate the other. I admitted in my former letter that Railway Companies had come under certain engagements which they were bound to perform, under penalty of vitiating their contracts; but I at the same time proved that they had scrupulously redeemed all their pledges, and conformed to all their stipulations. He meets my statement by two most extraordinary assertions, which no man would have ventured on if he had not been inspired with courage by the consciousness of wielding the club of a Hercules. He affirms that the old conveyances were less expensive and more comfortable than the new!! In refutation of the former assertion I annex a table of the coach fares formerly, and the railway fares now. The experience of every traveller will enable him to appreciate the value of the latter. "P. Z." makes some remarks which he meant to be sarcastic, on railway tubs. I am as much in favour of giving every reasonable accommodation to the poorer classes as he is, but the degree of accommodation must ever have relation to the amount of the fare. It would be unreasonable to expect that he who travels for 6d. should be as well off as he who pays 1s. 6d.

That railways have conferred a benefit on the humbler orders is obvious in the manufacturing districts, where those who formerly walked now ride, and find the saving of time more than an equivalent for the trifling sum they pay. Who ever heard of third-class passengers by coaches, or of outside passengers under cover, or of inside passengers who declared after a journey of 200 miles, that they had no stiff knees, aching backs, or the least sensation of fatigue! That your correspondent should have permitted himself to make such allegations, and after a little self-glorification on a former admission of mine have boldly challenged me to refute what was so palpably absurd, is truly surprising. Equally unfortunate is he in his assertion that after the coaches were driven off the road by underselling them, the fares were raised. Railway travelling did not supersede coach travelling solely by underselling it, but by outrunning it also, and it is only in one or two cases that the fares were slightly raised. Would your correspondent have compelled coachmasters to have carried passengers at a loss? If not, why should Railway Companies be forced to do so? I cannot but notice the intensity of "P. Z.'s" one-sided sympathy. For the hapless public groaning under the exaction of fares reduced nearly one-half for journies performed with more comfort in one-third the former time, he bleeds at every pore; but no feeling of pity ever crosses his mind for the man whose all may have been sunk in railways which do not, and never will, pay at the present fares: nay, ruined as he is, your correspondent would crush him still more.

Before concluding I must guard myself against being misunderstood on one point. While I admit the right of the Government to sanction the construction of rival lines, I maintain it should not, in doing so, overlook the interests of existing Companies. Despite the sneers of your correspondent, I still affirm that railway proprietors have been benefactors to their country. The spirit with which, in defiance of heavy blows and great discouragements, they persevered in their arduous undertakings, has established a claim to the national gratitude which ought not either in justice or expedience to be lightly repudiated: in justice because a boon has been conferred, and gratitude is due; in expedience, because future discoveries may demand similar sacrifices and perseverance on the part of future generations, and it is proper that they should be encouraged, not discouraged, by the experience of the past. The sneers of "P. Z." on this subject are misplaced. If he obliterate from the list of those who have benefitted their country, the name of every man whose motives were not marked by an utter abnegation of self, the search for national benefactors would be as fruitless as the surly cynic proclaimed the search he undertook to have been.

None of the statements in my former letter having been disproved, I see no use in continuing the discussion, and I now make my bow to my opponents. I shall allow them to have the last words, or rather the dying speeches, for their cause is on its last legs.

As for "Examiner," it seems that all the while he has been a friend to Railway Companies in disguise. These bodies having as little to hope from his friendship, as they had to dread from his enmity, the worthy gentleman may be permitted to "maunder" on; as that exemplary spinstress, Miss Grizzel Oldbuck alleged her brother Monkbarns was wont to do which mounted on his favourite hobby.

He may, if he so pleases, amuse himself by playing with the straws on the stream, fancying all the time that he is guiding the current; while his ally, wrapped up in his imperturbable gravity, meekly awaits the advent of Pope's Saturnian age of lead.

I had almost forgotten to notice some remarks made by "P. Z." on a phrase used in my first letter. "Examiner" will perceive that the obnoxious expression was used in a hypothetical conversation supposed to have taken place between him and the villagers, at a time when the latter were assumed to be rather angry, and not likely to be choice in their words.

Cannot "P. Z." see the difference between my representing a railway proprietor enraged at the preposterous arguments pretty plainly insinuating a resemblance between himself and Midas, and my directly affirming such to be the case, which I know would be very improper and very rude.

I am, Sir, yours, &c.

October 24, 1842.

Comparative Statement of the Fares by Coach and Railway.

	By Coach.		By Railway.		
	Inside.	Outside.	1st Class.	2nd Class.	3rd Class.
London to Birmingham	42	21	2 0	1 10	1 4
London to Bristol	32	16	2 0	1 10	1 4
London to Southampton	26	16	1 0	0 15	0 12
London to Brighton	21	12	1 0	0 15	0 12
Expenses on the road for every 100 miles	15	10	2 0	1 10	1 4

It is well known that fares for short distances by coach were always higher in proportion. In railways the just proportion is preserved.

RAILWAY "MONOPOLY" AND THE PUBLIC.

To the Editor of the Railway Times.

SIR,—In the short notice with which your correspondent "P. Z." condescends to honour me he announces the discovery that I am a simple old man full of antiquated prejudices in favour of rights which he has found out to be no rights at all. Hitherto the world has been in darkness on many important subjects, but he, like another Newton, has risen; and, lo! all is light. The simple people who fancied they had some title to the fruits of their industry were, it seems, all wrong. He assures them with great complacency, and no little exultation, that he has discovered the rights of property to be all comprised in

"The good old rule, the simple plan,
That they should take who have the power,
And they should keep who can."

Yes, Sir, I am an old man, my hairs are grey, and I am not displeased at being called simple, for to be simple is to hold opinions directly the reverse of those your correspondent avows and maintains. He must not, however, be allowed to flatter himself in the belief that he is a great discoverer. He must not be permitted to suppose that his "enlightened" views are the brilliant conceptions of a profound genius born to illuminate the world. His opinions are, in fact, as old as the time when the savage beat his weaker brother to the earth and robbed him of his prey, or when the unrelenting baron crowned the precipice with his [illegible]

Digitized by Google

from the vengeance of the plundered, and I know of no use to which his new lights could be applied, except to shed a lurid glare on the paths which would lead us back to the condition of those primitive ages.

But I must not occupy your space with the refutation of a writer who refutes himself. I leave him to the opponent whom he has provoked to the encounter, simply reminding that gentleman that no great honour is to be gained by breaking a butterfly upon the wheel.

I am, Sir, your obedient servant,

JUSTUS.

Hampstead, September 24, 1842.

GREAT WESTERN RAILWAY, &c.

To the Editor of the Railway Times.

Sir,—The lessons of the past are thrown away; experience, like the stern lights in a vessel, illumines the past alone. Thus it has been, is, and will be, and a beneficial result is produced, or fools would no longer be happy and hug themselves in their ignorance.

A year ago I, in common with far abler pens, pointed out in your columns the false results which were impending and inevitable from the ascertained and existing condition of the North Midland, Leeds and Manchester, and the Great Western; and as yet, so potent is self-will, with but little good effect upon the holders. Verily truth ought to be good, for of a truth it is most unpleasant work to tell and to hear.

If you express a high opinion of any undertaking in which your friend is a holder, and the self-complacency of the proprietor at his own sagacity overflows upon yourself, you are sagacious in that you have discovered the sagacity of your friend. Express a doubt, hint a dislike; breathe a fear of the soundness, or sufficiency of the ultimate success, of any property he may hold, and you are at once an evil-minded person, never satisfied, and little better than an incendiary. If these doubts are expressed publicly, you have to encounter the active hostility of all those interested in the suggestion, projection, or formation of the work, and the deadly animosity of those who live and fatten upon the subscribers' money; nay, so infatuated are the poor dupes that they join in the cry raised by the mercenary and interested against those who seek to serve them, and are undeceived only by those stern monitors, facts, which they have disregarded, or have been unable or unwilling to estimate, until ruin is upon them.

A year ago I warned the holders of the North Midland, prompted thereto by some circumstances then first made known to me as to the conduct of some amongst its late officers and Directors, and what was the result? Neglect, contumely, and abuse! Again, I raised my voice against that great mistake, the Leeds and Manchester, a line executed at an immense cost, exposed to frightful charges for maintenance of way, and making a circuit of 60 miles, whilst the direct road is little more than 36 miles; and for so doing, was well abused by the employés.

Where now are the confident assertions of the officers of that undertaking; where now the dominating arrogance of the Managing Directors, and the whole host of cliquers? The bubble has burst! The Great Western is yet untouched, and I deem it essential to guard those holders who are disposed to look at facts, not fancies, who possess self-reliance and decision, to act when their judgment is convinced. To those who wait because, though the facts and reasons are startling and convincing, yet the price has not fallen, and who measure merits by markets, this letter is not addressed; their time for wail is surely (and will be soon) at hand.

This stupendous line, for stupendous and magnificent it really and truly is, must be judged of from facts, and not by the will-o'-the-wisp of fancies, by hopes, and wishes. *It is a fact* then that this line cost 6,350,000*l.* of money, annually avouched for, and admitted to have been expended, with the certainty of a *very large sum yet to be brought forward*, when the receipts shall be sufficiently large to make such avowal safe. This it was which first attracted my attention, and led me to analyse the condition and prospects of the Great Western for the last two years. *It is a fact* that the accounts are not yet settled, though it is intimated that the amount, about which *doubt may exist*, is not likely to exceed 100,000*l.* *It is a fact* that this only applies to one portion of the unsettled account, when the Report was so worded as to lead an honest man to suppose that the whole amount in arrear, and unprovided for, would not exceed that amount. *It is a fact* that as yet there is no proper adequate station at London, and that a station, a merely appropriate station, is with its appendages and alterations, not to be constructed for much less than 100,000*l.* *It is a fact* that the terminus is most inconvenient, and unsuited to such a line, and that a new terminus must be sought for, or that a great porportion of the near traffic will, when the reductions in the mileage duty are complete, return to the old modes of conveyance. *It is a fact* that these different heads of expense cannot be covered by anything like half a million, and will probably exceed a million. *It is a fact* that the Acts under which this line has been constructed have been evaded, and that the capital borrowed greatly exceeds the share capital, and has heretofore enabled the Directors to make a larger dividend out of the so-called surplus, than they could have done if the shares had been called up, and the new capital been raised by shares. *It is a fact* that, without a sum in hand known as capital, the Directors could not have declared a dividend of more than, if so much as, 3 per cent. per annum for the last half-year, as a very large sum charged to capital for new engines must in that case have been paid for as repairs, and restoration of locomotive account. *It is a fact* that the Great Western line is now 182 miles long, instead of being only 118, as is credibly and commonly believed, and it is further a fact, that for such extensions a rent and toll is paid, which must in this year much exceed 70,000*l.* *It is further a fact* that as the engines on this line are much heavier than on lines of a narrower gauge (the *Hurricane* weighs about 44 tons), a far greater injury and displacement must take place on embankments than on any other road, to the great cost of the Company. *It is a fact* that the price of coke is much higher than on the average of lines, and further, that more trains are used on this line than on the Birmingham. *It is further a fact* that beyond Steventon very few passengers are carried, and that the fares are lower than on the Birmingham—that they do much more work for less money.

It is also a fact, and this, to those who can hear, will be very intelligible, that upon this line of 182 miles charged with above 170,000*l.* a year interest on borrowed capital, which is 130,000*l.* more than the Birmingham, and saddled with rent and tollage to above 70,000*l.* per anumn, the receipts are less than the shorter line by 3,000*l.* per week, though, as has just been shown, it is charged with outgoings, from which the other is free, to the extent of 200,000*l.* a year, or 4,000*l.* a week, which is just the same as if, all other things being the same, the receipts on the Great Western were 7,000*l.* weekly less than those of the Birmingham.

It is further a fact, that the outgoings of the Great Western, if fairly stated, are far greater than those of the Birmingham, seeing that they work 182 miles in place of 112, that more trains are run, and at a much greater expense, as the coke is far more costly, and the general character of the establishment and all its adjuncts is far more splendid.

I hold these facts to be quite sufficient; if not, the fatal warning of the Derby and Birmingham, the North Midland, and the impending fall of the Manchester and Leeds, have been in vain. Yet a little while, and the truth will ooze out, bit by bit, and great and general surprise will be felt by those who are left alone in their glory. To the initiated I may whisper—new rails for 35 miles, how much, to what account charged, how to be raised? You yourself, Sir, have cruelly gibbeted poor General Pasley's Report, as you emphatically say, "for more easy reference."

Yours, ever,

ALPHA.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

Sir,—Never did a man pass a more severe censure upon himself than Mr. George Rennie, Jun., has done, by his letter in your journal of Saturday last. Mr. George Rennie, Jun., therein calls upon the proprietors of the Blackwall Railway to unite in promoting "*an inquiry into the affairs of that Company*," and in an attempt to resuscitate that "*woful concern*." From that appeal, and the querulous tone in which it is made, one would be led to infer, that Mr. George Rennie, Jun., was an entire stranger to the affairs of the Company, and has never had any opportunity of making himself acquainted therewith. The former conclusion is, I have no doubt, a correct one, *that he is a stranger to the affairs of the Company*, but not so the latter, and the question naturally arises, why, with the opportunities he had of knowing all about the Company, and its affairs, he should now call for the information. For be it known to those who are ignorant of the fact, Mr. George Rennie, Jun. was a Director of the Company for a whole year—was made such by the shareholders at a public meeting—has been out of the Direction not quite two months, and that on quitting, he again and again begged it to be understood, that *he had no charge whatever to make against, or fault to find with, the Directors*, and that he was induced to leave them solely on account of the steam-boat question; yet Mr. George Rennie, Jun., at the end of not quite two months, comes forward in the character of public accuser, seeks for information, and to be allowed to resuscitate the concern! Verily, verily, if the concern requires resuscitation *now*, it could not have been in a very lively state when Mr. George Rennie, Jun., quitted it. Mr. George Rennie, Jun., has been long known to the lovers of the fine arts as an accomplished imitator of life, but he will now be known as soaring vastly higher, and as seeking to impart vitality itself. But to revert to the facts of the case—Mr. George Rennie, Jun., was (as already stated) appointed a Director by the shareholders, and if I recollect aright, in lieu of a gentleman who had not given them satisfaction—he was selected, I believe, solely from having made himself very conspicuous at public meetings of the Company, by the shrewdness, if not even *severity*, with which he cross-questioned the Directors. Thus powerfully supported, and with his preconceived opinions, Mr. George Rennie, Jun., no doubt took his seat at the Board as a thorough-going reformer, and it remains for him to tell wherein he was thwarted. If Mr. George Rennie, Jun., saw things going wrong during the 12 months he was a Director, he ought to have pointed them out, and had them remedied ere too late, and if he had cause to complain of his fellow Directors, for refusing to co-operate with him, he ought to have reported them to the shareholders—first at our meeting last February, then at our meeting in June, and lastly, at our meeting in August, at which last, although he appeared to resign, he coyly allowed himself to be again nominated, as willing to resume his seat among the very men he now accuses of mismanaging the concern! Mr. George Rennie, Jun., will not be allowed to blow hot and cold as it may suit his caprice, for he is in print. He must not be permitted to bring discord into the Company, on the score of steam-boats, or their pots of grease, now that he feels sore at having lost his ballot for re-election, when we recollect his having at the meeting, in June, declared that the Directors deserved the greatest praise, and gratitude from the proprietors, for having established these said boats, and (but a few minutes before his rejection in August) that he declared his late colleagues to, a

Digitized by Google

faultless. The attempt made now will not do, and although I can make every allowance for Mr. George Rennie, Jun., feeling sore at the construction of the Blackwall Railway having been taken out of the hands of Sir John Rennie, yet I cannot (without a struggle to save it) permit my interest in the concern to be sacrificed to his chagrin. In my letter which you were so kind as to give a place to in your journal of the 15th instant, I warned the shareholders against injuring our joint property, by playing into the hands of parties interested against us. I beg leave again to do so, and to assure them that there is no more certain way of ruining our concern, than by fomenting differences between us and our Directors. I would fain ask them what they would be at? We have Directors, all men of character, of business, and of application—in proof of which last I can safely aver that I never travelled the line, and I do so frequently, without seeing one or more of them on it; and as they are said all to have a large stake in the concern—larger, possibly, than any equal number of men that could be found to replace them, I cannot for the life of me see why, by disgusting them, we should run the risk of their resigning, and being replaced by others devoid possibly of the most important qualities above enumerated, and above all, assuredly deficient in *experience*.

Our railway is the only one of the kind in the world.—therefore I feel safe in asserting, that were the most talented Railway Directors in Great Britain selected to manage it, they would for a length of time feel themselves awkward in their places.

The Directors cannot (any more than the shareholders) control events, and I fearlessly assert, that it is a combination of events beyond the reach of management, that is now affecting the income of the Blackwall, and all other railways. In this opinion I am borne out by that of others; for I find the following observations in a well-informed Liverpool paper:—"The dulness of business, and the scarcity of money, have recently greatly diminished the number of passengers, even on the best railways, and have reduced the trains on the poorer lines to little better than a beggarly account of empty boxes." These observations are of general application, but apply more especially to our railway; in proof whereof I may refer to the present state of the greatest ship-building yards and engine manufactories at Blackwall, as contrasted with that of former years—not one-tenth the number of people employed that there used to be, and when money is not circulating, what matters fine weather, whether to steam-boats or to railways? To conclude, I trust my fellow-shareholders will pause before they complete the breach attempted to be made by Mr. George Rennie, Jun., between us and our present Directors, for should he succeed, they will find to their cost that the accomplished artist of Chesham-place, and his friends, will prove but poor substitutes for the hard-working men of the City.

I am, Sir, yours, &c., A. B. C.

Regent-street, October 24, 1842.

P. S. The fares were raised with the consent and approbation of the meeting in August last, and as I do not find from your report of that meeting that Mr. George Rennie, Jun., raised his voice against the measure, I do not see why he should now condemn it, or censure the *Directors* for having carried into effect the wishes of the proprietors.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

Sir,—There is an old adage, "Put power into what pot you will, if you don't watch it well, it will boil over." Never was this saying more clearly exemplified than in the above-named undertaking. From the various letters which have latterly appeared in the *Railway Times* from proprietors, it would seem that at this late hour they begin to feel where the shoe pinches, although at several of the half-yearly public meetings, when inquiry has been called for, many of the proprietors then present did not only negative such proposal, but by clamour actually aided to silence those who called for explanation.

It will be in the recollection of the shareholders, that when it was proposed at a half-yearly meeting to appoint Auditors, the idea was scouted, and the Chairman unequivocally stated that the appointing of Auditors showed a want of confidence in the Directors, and that he would not continue to hold office if the meeting should resolve to appoint them. This to me was not a matter of surprise, believing, as I do, that there have been many acts done which ought not to have been done, and which require explanation; and a public meeting is not the most proper place for inquiry, as a Committee is preferable. And it is well known that the Directors of a public Company can, by initiating a few of their friends into the secret of such measures as they wish to carry at a public meeting, so contrive "that the Directors may bad measures hide behind a good majority."

But since the Directors and their Engineers have ventured to attack each other, and several of the proprietors have suggested the expediency of a special general meeting being called, let us have hope. I most cheerfully respond to the call, and will add my name to a requisition to the Directors for calling such meeting, and contribute some information, of which the proprietors are utterly ignorant. I do not advise that a single share shall be sold at the present price, and I firmly believe that had the railway been laid down as originally proposed, it would have paid a better interest than that of any other railway in the kingdom. The whole blame lies with the Directors, the Surveyors, and Engineers. By their own Reports they stand convicted; and may they have a good deliverance. Under a new Direction with proper management there is hope for the proprietors.

I am, Sir, your most obedient servant,

ALPHA.

London, October 24, 1842.

CROMFORD AND HIGH PEAK RAILWAY.

To the Editor of the Railway Times.

Sir,—If your correspondent "Senex" knew the Committee of Management of the Cromford and High Peak Railway better than he appears to do, I am sure he would acknowledge himself wrong in making the reflections on their characters as managers which appeared in your last week's number. They have no possible motive whatever for wishing the undertaking to be "kept out of sight;" on the contrary, if it could be shown that any benefit would arise, either to themselves or the public, by publishing the weekly traffic, I have no hesitation in saying that the necessary information would be freely given. "Senex" appears to think that had the Committee of 1829 remained in office, all would have been well; unfortunately, however, for his argument, the Committee, with one or two unimportant exceptions, is composed of precisely the same individuals now as it was in 1829, so that if they were at that period "sensible of what was required to make this railway useful," their twelve years' experience must have tended to enlighten them still more on this important point. Yet, I believe their experience has taught them little more than that trade cannot be created at will, nor without great difficulty diverted from its original channels, or wrested from the possession of powerful and old-established competitors. According to "Senex," the Committee of 1829 were "sensible of what was required to make the railway useful," because they *said*, "The railway is constructed to correspond with the Manchester and Liverpool, with a view to a future junction." Now, the present Committee *say* the same; they must therefore be equally "sensible of what is required;" but having arrived at this important conclusion, where do we find ourselves? Just where the Committee were in 1829. "Senex" shows a most perverse disposition, as well as a want of judgment, in saying that "the present Committee, or a majority of them, discourage extension," when such a measure would be so obviously to their advantage; but really it appears absurd to attempt to refute such assertions, as their extravagance precludes the possibility of their being believed.

I fancy "Senex" cannot be very conversant with railway management, otherwise he would not express so much surprise at an income of 5,000*l.* a-year being "all absorbed in expenses and interest," on a line 33 miles in length, a sixth part of which is covered by inclined plane machinery and powerful stationary engines. If he is in the habit of reading the *Railway Times* attentively, he cannot fail to discover that on most railways such a sum would be absorbed in *maintenance of way alone*, whereas the mismanaged High Peak only expends 17*l.* or 18*l.* per mile per annum on this item, and the whole working expenses rarely exceed 3,000*l.* annually.

"Senex" must allow me to say that I might venture to defy him or any one else to point out an instance where economy is even understood, much less practised, to the extent which it is on the High Peak Railway, to which, judging from the statements put forth in the *Railway Times*, I may venture to add, that it would be difficult for him to find a Committee composed of more efficient or more disinterested individuals. Before attacking them in the way he has done, he ought to have known that on more than one occasion they have spent their own money in endeavouring to effect improvements on the line, and generously foregone not only some four or five years' interest on their outlay, but they have also made a sacrifice of a considerable portion of the principal. They also attend with the utmost regularity to their duties, carefully examining every item of expenditure, and paying the utmost attention to every suggestion for improvement; many of them coming from considerable distances *at their own expense*, and fulfilling their duties without the smallest fee or reward of any kind, except a plain dinner. To attribute, therefore, the want of success to mismanagement or inefficiency in the Committee, or as "Senex" seems to insinuate, to something worse than either, is manifestly unjust, and tantamount to blaming them for effects over the causes of which they have not the remotest control. Let "Senex" leave generalities, and ill-digested complaints of impossibilities not being effected, and if he knows of "any new Company inclined to make the proposed 8 or 10 miles of new railway," or can suggest any other method of effecting improvements in the line, I will take on myself to say that both himself and his plans will meet with the utmost respect and attention from the Committee of Management.

I am Sir, your very obedient servant,

JOHN LEONARD, Engineer and Manager.

High Peak Railway Office, Cromford, Oct. 25, 1842.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—I am informed on high authority, in fact by a gentleman who has been connected with the Northern and Eastern Railway for many years, that the sum of 114,000*l.* is *annually paid* for the conveyance of goods in the line of direction or country through which this railway passes. Now, as I have no doubt whatever that the whole or principal part of this traffic ought to pass along the Northern and Eastern, and as the line has now been opened for nearly six months, why is this large goods' traffic untouched? What are the Directors doing? Do they mean simply to look on in the hope that the traffic will leave its old channels without solicitation?

Surely there must be some reason *why* the goods' traffic is *undeveloped*; no man of business would be content to know such a fact as this without immediately putting goods' trains on the line.

If you will insert the above remarks in the *Railway Times*, you will be doing a kindness to a shareholder in the

NORTHERN AND EASTERN.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The shareholders in railway property are much indebted to you; they hear through your journal of matters relative to the conduct of their Directors, which cannot reach them through any other channel. You have taken a strong view of the Northern and Eastern Railway, and of the merits of its Direction. You are quite right in your conclusion that there are few examples of such weakness and disunion as exists in that Board. Amongst other facts you have exposed in your *Railway Times* of the 15th instant, you give the copy of a correspondence between one of the Directors and a proposed lessee. You lead us in the same journal to expect that the result of that dispute would be published for our information, but you do not revert to it in your subsequent publication of the 22nd. How is this? You say "Somebody has given currency to a deliberate falsehood. Who is it?" Now, Sir, you know by this time who it is. Mr. Mills would not keep you ignorant of it; so do in your next let us poor shareholders know also. I do not think it requires much conjuration to fix the cap on the right head, if it be fitted on the Director in question. Do you know whether he has resigned his seat in the Direction, and if not, have his brother Directors told him they cannot any longer sit at the same table of business with him? If they have adopted this course there is some hope that *this* Board have awoke from their slumbers, and that they need not resign *en masse*. The retirement of this man of mischief from the Direction may remove one of the heavy imputations against it—that of disunion.

I am, Sir, yours, &c.,

A SHAREHOLDER.

London, October 24, 1842.

[We have not been made acquainted with the result.—ED. R. T.]

SUNDAY TRAVELLING ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—Your correspondent "Christian," in your paper of last Saturday, seems to think that he can make short work of the Sabbath question. I shall therefore take the liberty of referring him—to go no further than the *Railway Times* itself—to some letters that were published in it on this subject during the months of July, August, and September of last year. If your correspondent will look over these, I think he will allow that his case is *not quite* so self-evident as he imagines. I take it for granted that he has not read these letters, as otherwise I should suppose he would have made some attempt to refute that writer's arguments before expressing himself so confidently in the very journal in which they appeared.

Your correspondent reminds us that we are shown in Scripture that "the Sabbath was made for man." This, I must confess, does not appear to me to be a very conclusive reason for supposing that it was made only for *the Jews;* it agrees, however, exactly with the first mention of the Sabbath, Gen. ii. 3, where no allusion whatever is made to the Jews. Again, no one can dispute the fact with your correspondent, that "it is lawful to do good on the Sabbath-day;" but, in consenting to this, I find I must tacitly acknowledge that it is not lawful to do *anything* on that day, else there would be no meaning in the admission that it *was lawful* to do good. So far, I think, your correspondent's quotations are rather against, than for, the supposition that we are "*free from one and all of the observances appointed by the law.*" Moreover, I may remark, that this supposition proves too much, for if it be correct, we must also be free to worship images, commit murder, or steal, which is a doctrine that I presume your correspondent would not subscribe to. But it seems he has come to this conclusion from what St. Paul says to the Galatians, that the law was our schoolmaster to bring us to Christ. Now, in Romans I find the same Apostle saying, "Do we then make void the law through faith? God forbid: yea we establish the law." From this, I think your correspondent will at least see, that St. Paul's meaning could not have been exactly what he supposes; and that it was not so, will appear still more certain, if we turn to Matt. v. 17, where we find our Lord himself saying, "Think not that I am come to destroy the law, or the prophets: I am not come to destroy, but to fulfil." Now, as the ceremonial law (which your correspondent seems to confound with the moral law, although they are undoubtedly perfectly distinct) was typical, it is easy to understand, when the types were fulfilled, that it must have been at an end: but as the moral law had nothing typical in it, the fulfilment of it (that is, the fulfilment of its precepts) could not, *ipso facto*, have *abrogated* it.

If "Christian" will examine the context, before passing his judgment on Rom. xiv. 5, I do not think he will find this verse so favourable to his view as one would suppose at first view; for the Apostle does not appear to be making any allusion at all to the moral law, but to be speaking with regard to certain holydays (new moons, &c.) enjoined in the Jewish ritual; and which some converts still supposed they ought to keep holy—just as some still supposed that they ought to abstain from certain kinds of meat, which latter supposition is the chief subject of the chapter. And now, Sir, I shall not trespass any further on your columns on this subject, or bring forward any of the numerous arguments which may be adduced against your correspondent's views; he will find many of them in the letters I have already mentioned; and besides, there are so many writers on the subject, that if he really wishes to study it, he can be at no loss for books which enter into it more fully.

I am not prepared myself to go the length of advocating a total stop to all travelling whatsoever on the Sabbath, as there may undoubtedly be cases where the plea of necessity or charity would justify it. For instance, it may be necessary for the *sickly* artisan, resident in this crowded metropolis, and unable to leave his avocations during the week, (or at least to do so frequently), to seek change of air whenever it is in his power, but to justify him in this, there is no need of endeavouring to make it appear that the Sabbath has been altogether abrogated. At the same time, I must confess that the abuse of Sunday travelling is almost enough to defer one from coming forward to say anything in its favour, particularly as the ease and expedition of railway travelling appears to have increased the numbers of mere pleasure and business travellers, many of which latter class seem to make Sunday their *travelling day in preference to* any other day of the week; so that I am far from being surprised, Sir, at seeing so many excellent people advocating a total stop to Sunday travelling; and I may remark that your correspondent's reference to Romans supplies a quotation to reprove himself for condemning as "*hard-hearted*" those who differ from him in opinion as to what real utility to man is in this matter. It is as follows—"Who art thou that judgest another man's servant? to his own master he standeth or falleth." I am glad, however, to see that he does not go far in this way; the general run of anti-Sabbatarians have a plentiful supply of that sort of *liberality* so rife in the present day, which leads them to denounce every person who *dares* to differ from *them* in opinion on this subject, as Pharisaical and fanatical, Methodistical and canting. How far this accords with Christian charity I shall not stop to inquire.

I remain, Sir, your obedient servant,

R. W. T.

October 20, 1842.

THE CROYDON RAILWAY.

To the Editor of the Railway Times.

SIR,—I beg leave through the medium of your paper to offer a few remarks on the letter of a "Croydon Shareholder," in your last publication, which perhaps may be interesting to him and others whose property is embarked in this undertaking, if not to the railway public generally. Your correspondent, by way of illustrating the advantage of giving up the local traffic to the extension Companies, goes into some details to prove that by a tollage of 3,000*l.* per annum for the local, and 24,000*l.* for the long traffic, as now payable, there would be a surplus, after deducting interest on bonds, of 14,265*l.* This I think cannot be disputed. But he takes a very humble view of the tollage now accruing from the Brighton and Dover Companies in putting it down at 24,000*l.*, and greatly indeed should I be disappointed if it did not considerably exceed that sum—my own calculation being (and which is confirmed by the opinion of other shareholders) that the tollage for the present half-year will be 18,000*l.*, and for the following half year certainly something more. I am informed that for the past months of August and September, it has reached 3,500*l.* a month, and from the weekly returns of the Brighton and Dover, I should suppose it must reach 3,000*l.* this month—and it is not unreasonable to expect that the falling off in the Brighton as the winter approaches will be partially made up by the increased receipts from the Dover, consequent on the extension to Ashford.

If then I am right, there will be 12,000*l.* a year to add to the estimate of a "Croydon Shareholder," or 6,000*l.* the half-year, thus:—

Surplus for dividend, according to "Croydon Shareholder"	£7,132	10	0
Add for increased tollage	6,000	0	0
Do. surplus from last half year	1,800	0	0
Total	£14,932	10	0

to divide among 33,000 shares, which would give 9*s.* a share.

But the question naturally suggests itself, what *is* the railway now doing for the shareholders under the diminished local traffic consequent on the high toll payable to the Greenwich Company? I am not sufficiently informed to give a decided answer to this question, but I can form an estimate of what it *ought* to be doing, and if it does not prove to be about the mark at the end of the half-year, I for one shall blame our Directors for it, and shall be ready to aid any body of shareholders in enforcing better management and stricter regard to economy.

To show what the railway ought to be doing now we will take this view of it.

The local traffic since the re-opening, 12 weeks, (omitting fractions of a pound) is	£5,072
For remaining 14 weeks, say only 290*l.* per week	4,060
	9,132
Deduct Greenwich toll, say	1,500
Gross Croydon traffic	£7,632
Then the tollage for six months from the Brighton and Dover, 18,000*l.*, I calculate is equal to a gross traffic, supposing the Croydon Company had to work it, of	27,000
	34,632
Deduct for expenses 40 per cent	13,853
	20,779
Deduct interest on bonds	4,075
Net profit for dividends	£16,704

which would give 10*s.* 3*d.* per share, without reckoning interest on the loan notes just issued, and which would not be due, I presume, at that time; but allowing for that it would only reduce the dividend 1*s.* per share. There is no reason why this railway should not be worked at as low a per-centage on the gross receipts as the South-Western, since the mileage receipts, if viewed in a proper light, are now double, and it is not under the disadvantage of working incident to a short line, being amalgamated, as far as locomotive power is concerned, with the Dover. In short, I do not see a single item of expense that does not equally belong to the South-Western, except in the more numerous stations for the local traffic, at which however, as the the duties are but small, they ought to be performed by persons at comparatively low salaries.

The Parliamentary estimate of the Brighton tollage is 30,000*l.*, and it is now yielding about 24,000*l.* The tollage from the Dover in like manner is estimated at 33,000*l.* Supposing when it has been open throughout 12 months it comes as near the estimate, it will then yield 26,400*l.*, say together 57,000*l.* at that time. This is a tolerable dependence, and should make us indifferent about the local

Digitized by Google

traffic, which is of far more importance to the Greenwich Company, who indeed can ill afford to lose it, and if they choose to act the dog in the manger, they do not deserve to be pitied. It is evident, to any one who has paid any attention to the subject, that the short traffic out of London can only be secured by low fares.

I have been a shareholder in this railway for the last four years, and have never sold a share though I have occasionally added to my stock; and notwithstanding the disappointments we have experienced from time to time, I am as firmly convinced as ever that the railway must, under ordinary management, pay at least 8 per cent. per annum on the average of the next 18 months. But, nevertheless, it is necessary that our Directors should study economy a little more than they have done, and they may depend upon it a large number of proprietors have their eyes upon them, and unless some such disposition is evinced at the next half-yearly meeting, it will be taken up in right earnest, and the same spirit which astonished and drove Mr. Moxon from the Direction, will be brought to bear on other parties. I say to all Croydon shareholders—Look to your property in this line, and see that it is well administered. You have long waited patiently for your dividend; and now, even now, there is a traffic which, if properly managed, will yield a fair dividend, to be vastly increased as the traffic on the great trunk feeders is developed.

Your obedient servant,
A LANCASHIRE SHAREHOLDER.
October 25, 1842.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—I am a shareholder in the Manchester and Leeds Railway, and having waited long and patiently for the result of my investment, I am naturally anxious about the future prospects of that undertaking. I have observed two letters in your paper with the signature "Haud Captus Oculis," asserting that 4 per cent. will be the highest dividend upon the current half-year, and holding out little better hope for the future; but I am at a loss to account for the triumphant tone of the writer at the conclusion of his second letter. Has he long ago foretold its failure, and is it the natural exultation of a true prophet; or as he "sold for time," and is he rejoicing in pocketing the difference? Or is it, lastly, a mere ebullition of gratified spleen? It is quite true, as he says, that bright promises of 9½ per cent. once flattered our hopes, but as I believe most reasonable men have some time ago laid aside any such expectations, I do not see why we should not be allowed to receive our very moderate dividend without the mortification of ridicule for ever having hoped for better things. Let me, however, pass over this delight in the disappointment of others (I conclude he is not a shareholder), and inquire whether he is really correct in his deductions and facts. I recollect well that the 3 per cent. dividend for the half-year ending on the 31st of last December was declared out of the net profits of that half-year, after setting aside about 5,000*l.* for depreciation of stock. But this was "by the extraordinary expedient of debiting part of the interest on loans to capital account," namely, of so much capital as had been expended on works not then finished, and which capital had consequently been unproductive during that time. This at least was the principle laid down in the Directors' Report, and the dividend founded thereupon was so far from disapproved by the shareholders, that an evident inclination was evinced on the part of some of them to increase it by dividing the whole of the reserve fund (then about 12,000*l.*) in addition thereto, on the ground that they who had borne the burthen so long were best entitled to that reward of their patience. That proposition was resisted, with the express object of applying the reserved fund (which was not *capital*, as Mr. Joseph Pease, senior, seems now to imagine it was, but the net profit earned by the Company between the 1st March and 30th June, 1841) in aid of future dividends. Such an application, "unwarrantable" in the opinion of your correspondent with the Latin name, was made to the extent of about one-half the fund in last September. But was that profit never to be divided, let me ask—for it would have been equally unwarrantable at any future period for the same reasons as at present? If, indeed, any attempt had been made to eke out the dividend clandestinely, so as to delude the public, this term would have been well deserved, but why it should be unwarrantable in men to divide the profits of their own enterprise at any time they please, I am unable to discern. Perhaps the man with the learned name will condescend to explain. The depreciation fund was delayed also for reasons which appear to me sufficient, viz., that in the spring half-year the receipts were less by some 6,000*l.*, while the working expenses were greater by about 5,000*l.* than in the preceding autumn half-year; and it was assumed that about the same difference would again be found. It was proposed, therefore, to take that fund entirely from the latter half of each year. I do not seek to uphold any system of bolstering up a falling concern, but when Railway Companies are charged with deceiving and ruining innocent families by declaring greater dividends than they can afford, it might be as well not to allow our compassion for the misfortunes of those who are unable or unwilling to look after their own interests, to blind us to the claims of those who have embarked their property, and after struggling through all the difficulties of the last five years, naturally expect to reap the fruits of their enterprise. As one of the earliest shareholders, I claim from the Company the greatest dividends that by fair and open means they are able to afford, and I deny any right on the part of the public to interfere under the pretext of consideration for those whose own neglect is the cause of their sufferings.

I am, Sir, your obedient servant,
A LEEDS SHAREHOLDER.
October 24, 1842.

EDINBURGH AND GLASGOW RAILWAY.—THE "ARISTOCRATIC" SCOTCH.

To the Editor of the Railway Times.

SIR,—In your paper of the 22nd instant, is a letter signed "A Scotchman," vituperating this railway. This "*Scotchman*" is no true Scot, for no Scotchman speaks of his own countrymen as "*Northerns*," and if he be really a Scot, he will know the proverb, "*that it is an ill bird that fyles* (fouls) *its 'ain nest*."

The Edinburgh and Glasgow Railway has been open now above eight months, and the complaint of Mr. Murray is the first that has been made, publicly at least, while the pages of the same paper contain the judicial testimony of the Sheriff of Ayr, affirming "the transit from Edinburgh to Ayr to be easy, commodious, and agreeable." I, who am no *pretended* Scot, aver, after ample observation and experience of all the railways, that the carriages of every class, on the Edinburgh and Glasgow Railway, are as good and commodious in every respect as those of any English railway whatsoever, the favourite "Brighton" not excepted, and the servants, of all classes, are to the full as attentive and civil. The terms "bad" and "disgraceful," are the mere spleen of this pseudo "Scotchman," which are in no respect justified. If he found cause of complaint let him specify it, and tell us why he did not state it in the proper quarter.

As to the stuff about the Glasgow magistrates preferring the river conveyance up and down the Clyde to save 3*d.*, if it has any foundation at all, it has no reference to *this* railway, which is exposed to no river competition. And if they do prefer the river conveyance, when it suits them, it is only the natural preference of every man, in fine weather, of a quarter-deck to a close carriage, and not for the paltry motive assigned by Mr. Scotchman. The Scots are no doubt strict economists, but they understand the economy of time as well as that of money.

A SCOTSMAN "WHO DOES *NOT* LOVE SCOTLAND BETTER THAN TRUTH."
Sherborne, October 25, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Many statements have appeared from time to time in your excellent paper, relating to this railway; some of them affording to the shareholder encouraging prospects, and others quite the reverse. I also take the liberty of sending you the following, which may possibly assist those interested in forming their own opinion of the probable value of their property:—

Interest on borrowed capital, expenses, and dividends.	Total.	Per Ann.
£		
600,000 debenture bonds, at 5 per ct. } 380,000 loan notes }	£ 49,000	£ 49
Toll to Greenwich and Croydon Companies 10 per cent. on gross receipts, on say 4,000*l.* per week, equal 208,000*l.*	20,800	
Duty to Government, 5 per cent. ditto ditto	10,400	
All other expenses of working and maintenance of way, &c., 35 per cent. ditto ditto	72,800	
Dividend payable on 36,000 shares at 1*l.* 12*s.* per share per annum	57,600	
Leaving a surplus of	1,400	
Total produce of an average of 4,000*l.* per week	£208,000	

Traffic per week.	Per share per annum.			
£4,000	gives	£1 12*s.*	and leaves	£1,400 surplus.
3,900	"	1 11	"	660 "
3,800	"	1 9	"	1,000 "
3,700	"	1 8	"	800 "
3,600	"	1 7	"	0 "
3,500	"	1 5	"	1,000 "
3,400	"	1 4	"	200 "
3,300	"	1 2	"	1,200 "
3,200	"	1 1	"	400 "

From the Company's Report, July last, it appears that a sum of about 330,000*l.* had been paid by the South Eastern Railway Company for their portion of the line. *Should any part of that sum* be applied at any future time to the reduction of the borrowed capital of the Brighton Company for every 36,000*l.* *so appropriated*, 1*s.* per share per annum may be added to the above dividends, and *should the whole amount* be disposed of in that way it will give 9*s.* 2*d.* larger dividend per share per annum.

There are some persons who entertain a strong opinion that a fixed sum for the weekly working of this line would better suit its character (from the fact of its being a decided passenger line, accompanied with high fares), than a per-centage on a fluctuating traffic, upon the supposition that great numbers can be conveyed at the same cost as a few, 1,300*l.* per week as the lowest, and 1,500*l.* as the highest, have been the sums mentioned as sufficient for the purpose. I will therefore take the former, say 1,400*l.* per week, although my own opinion is decidedly to adhere to the per-centage, and I think the shareholders would wish to do so too.

Taking a view of the returns with 1,400*l.* per week charged for working expenses, the traffic

Per week.	Per share per annum.			
£4,000	gives	£1 12*s.*	and leaves	£1,400 surplus.
3,900	"	1 10	"	660 "
3,800	"	1 7	"	1,000 "
3,700	"	1 5	"	800 "
3,600	"	1 2	"	0 "
3,500	"	1 0	"	800 "
3,400	"	0 18	"	200 "
3,300	"	0 15	"	1,000 "
3,200	"	0 13	"	400 "

Of course the 1,400*l.* per week is exclusive of the Greenwich and Croydon toll and Government duty, but the dividends are also subject to be increased by the reduction of the borrowed capital taking place as before mentioned, and in the same proportion.

If it should appear that I have charged anything to this railway which does not properly belong to it, I shall be happy in having it pointed out to me by any one who may take an interest in the matter.

I am, Sir, your obedient servant,
A CONSTANT READER.
London, October 25, 1842.

* The expenses in the last half-year's statement for these Acads, were between 40 and 50 per cent, with more than 1,044*l.* 11*s.* 3*d.* charged for maintenance of way, whereas for the future it will be at least 12,000*l.* per annum, so that I think I have rather underrated the expenses than otherwise.

MIDLAND COUNTIES' RAILWAY.

To the Proprietors of the Midland Counties' Railway.

GENTLEMEN,—I hope the observations contained *in the following* letter will be a sufficient apology for my addressing you, as it will not be in my power to attend the special meeting of proprietors which is *about to* take place.

In the first place, I hope the proprietors will not countenance the project of increasing the fares upon *our line*; such an act, *I am sure*, would be penny wise and pound foolish. We have had enough experience *of late* to show us that direct taxation is *not* the most certain method of increasing a revenue, and that there is great truth in the old proverb, viz.; "Light gains make heavy purses." If the fares are allowed to remain as they are, it has a strong tendency to make persons travel over our line who would not otherwise go by that route. Take for instance the journey from London to Carlisle—and my reason for mentioning Carlisle is, that it is a point which is the most disadvantageous to the interests of the eastern line down to Scotland. A person can go from London to Carlisle, round by York and Newcastle, for something less than if he went the direct route by Lancaster.

The fare from London to Lancaster is.....	£3	0	0
From Lancaster to Carlisle, inside the mail,	1	10	0
Coachman and guard, for 66 miles, say	0	4	0
	£4	14	0

The fare from London to Darlington is.....	£3	8	0
Fare from Darlington to Newcastle, 33 miles	0	12	0
Coachman	0	1	0
From Newcastle to Carlisle, by railway,.....	0	11	0
	£4	12	0

And if there were a train which went down to Darlington at the same rate that the day-mail train goes down to Lancaster, the journey might be performed by York and Newcastle in a shorter time.

The day-mail is 18½ hours between London and Carlisle; it travels on the railway at 24 miles an hour, and stops a quarter of an hour at Birmingham, and another quarter at Lancaster. Now if there were a train down to Darlington at the same rate, it would be just 11 hours (264 miles). The coaches run from Darlington to Newcastle in 3½ hours, and the journey between Newcastle and Carlisle is performed in 3 hours; and by allowing half an hour for refreshment, which is the time they have upon the Western route, that would be just 18 hours. The only trains, however, which run through to Darlington, is the mail which leaves London at 9 at night, and the 6 o'clock morning train out of London. Many persons do not like to travel all night, and many more do not approve of starting at 6 o'clock in the morning, particularly in the winter; and if they can proceed north by the western route at a more convenient hour, of course they will do it. The best arrangement that I think can be made for the present is, to get the Great North of England Company to run the special train which leaves London at a quarter past nine in the morning, through to Darlington. And if the Midland Counties', the North Midland, and York Companies, were to guarantee the Great North of England so much a-week for taking this train forward, so that they should not lose money by it, I think that there is every probability that they would agree to the arrangement. I believe the Directors of our Company have offered to fix the time for the special train to arrive in Derby at three o'clock; and if a train went forward at half-past three, and only went at the rate of 22 miles an hour, it would reach Darlington at half-past nine. I may be told that the trains *cannot* go so fast down the eastern line as they do on the western. All I can say in answer to this is, that I have several times been from London to Leicester by the mail train in *less* than four hours and ten minutes, which is 102 miles.

The above circumstances will show what a much more favourable position we shall be placed in as to the northern traffic, when the Darlington and Newcastle line is completed.

There are one or two things more which I have no doubt that the Committee of Investigation which will be appointed by the proprietors will recommend should be done. In the first place the salaries of over-paid officials *must* be reduced. There is one of them at least who I never wish to speak of otherwise than in high terms, but whose salary might very reasonably be reduced 40 or even 50 per cent. How many a clergyman there is, who has had a much more expensive education than Mr. Fox Bell, who would be but too thankful to be in the receipt of 400*l.* a year, though his time might be as fully occupied! The Chaplain of our county gaol (Leicester) does not receive so much as that, though he is required to be in attendance *every day*.

Also when eight Directors are found to be a sufficient number for the North Midland line, why, let me ask, do *we* want *more* than that number?

When the Board has been reduced to that number, or very nearly to that number, if any vacancy should afterwards take place, it is my intention to offer myself as a candidate for the vacant office. As I travel about very much, and am constantly moving upon our line, I think I may be able to make myself of use in looking after our united interests.

I have the honour to be, your obedient servant,

C. H. FREWEN.

Brickwall, Northiam, Oct. 24, 1842.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—In the North Midland Railway Company's statement of capital account, from June 30 to December 31, 1841—

The total credits are stated at.....	£3,254,887	5	6
Do. debits ,, ...	3,230,189	14	2
Leaving cash at the Company's disposal	£24,667	11	4

In the statement of capital account, from December 31, 1842, to June 30, 1842—

The credits of Dec. 31, 1841, are stated at	£3,239,182	0	6
Debits ,, ,,	3,230,169	14	2
Leaving at the Company's disposal only..	£9,012	6	4
Swamping the sum of	£15,655	5	0

I cannot find any explanation in the Reports of this difference; perhaps the Auditors could give one, but they have not; and I should be obliged to yourself, or any of your numerous correspondents, who could favour me with one.

I am, Sir, yours, &c.,

NEXILIS.

P.S. Amongst the items to the credit of the Company, in statement from June 30 to December 31, 1841, are the following:—

From Dearne and Dove Canal, for works, &c.	£3,471	2	2
From Midland Counties' Railway Co., do. ..	5,000	0	0
From Manchester and Leeds do. do. ..	1,738	15	4
From York and North Midland do. do. ..	1,366	0	0
From George Stephenson and Co., for land purchased, &c.	4,079	9	6
Total	£15,655	5	0

RAILWAY MORTGAGES.

To the Editor of the Railway Times.

SIR,—I observed a letter in your paper of the 15th instant, signed "A Broker," which has brought before the public a question of the first importance to the shareholders and mortgagees in those Companies which have borrowed money from the Exchequer Loan Bill Commissioners; and a case in point has not long been wanting, for in your paper of the 22nd instant is given (extracted from the *Gateshead Observer*) a melancholy picture of the present state of the "Clarence Railway Company" and its concerns. The Commissioners, it appears, have taken possession of the railway, and advertised it to be sold, thereby threatening the loss of the Company's *entire property*, unless some of the more energetic (*i. e.* wealthy) shareholders come to its relief.

I understand in all Railway Acts there is a power given to the Company to borrow money from the Exchequer Loan Bill Commissioners; and as a security for the money so borrowed they have to assign to the Secretary of the Commissioners for the time being, *free from all incumbrances*, "the undertaking, and all the works and property of the said Company, and all rates, tolls, profits, and receipts;" it is therefore quite clear that the Commissioners will have a priority of claim over everybody else. Such being the case, I beg to suggest that in your valuable table of Railway Statistics there should be a column showing which Railway Companies have borrowed from the said Commissioners, and what sums, in order that the public may know where "danger lurks." What may be the case with the Sheffield Company, about whom your correspondent inquired, I know not; but in the absence of any reply to his question, I must conclude that the security they have given will be the general one as recited above.

I am told that it is not Railway Companies alone that are occasionally found in such a hopeless plight, but that this question concerns shareholders and creditors in canal property quite as much as the former, as many know to their sorrow.

No one will blame the Commissioners themselves, for their duty is clear in the matter; but it behoves all prudent men to disconnect themselves from such Companies as have the honour of having the "Crown" for their creditor.

I am, Sir, yours, &c.

A SHAREHOLDER AND MORTGAGEE.

LONDON AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

SIR,—I beg to trouble you with an expression of approval of the measures which the London and Birmingham Company are now adopting, in order to insure the safety of the line. I perceive there are numerous gangs of workmen employed on various parts of the railway, whose object is to *prevent* such disasters as that which occurred near Weedon a short time ago. The Directors are evidently actuated by the principle, that prevention is better than cure; and this is a matter in which the public are so deeply interested, that I beg leave to express a hope that the example will not be lost upon others where vigilant inspection and prompt measures are equally required to insure the safety and establish the confidence of the community.

I am, Sir, your constant reader,

VIGIL.

Newington, 24th Oct., 1842.

FIRE ON THE LANCASTER AND PRESTON RAILWAY.—On Wednesday evening a fire occurred on the above railway, which was attended with considerable loss. As the mail train was on its way here, and within about two miles from Garstang station, one of the passengers in a first-class carriage perceived large pieces of burning material carried past the window, and on looking he perceived that the luggage upon the top of one of the carriages was blazing at a most furious rate. The alarm being made the train was stopped (though not before considerable apprehension of the great danger in which the passengers were placed had been experienced by each of them), and the guard and engineers proceeded with all possible dispatch to throw the burning materials from the top of the carriage. A good deal of property was destroyed. One gentleman stated his loss at 200*l.* It is supposed that a spark from the chimney must have fallen upon the tarpaulin, and having burnt a hole through had communicated with the passengers' luggage underneath. It would seem also that it must have been smothering some time, as it broke out with a tremendous blaze, and almost every article that the fire appeared to come in contact with, was nearly destroyed.—*Preston Pilot.*

BIRD-TRAP EXTRAORDINARY.—Upon the arrival of the *Elk* engine at Nine Elms, on Tuesday night, with the 6 o'clock train from Southampton, a lark was found in the ash-pan (within 6 inches of the fire-bars), which had received no further injury from this novel species of bird-trap than the singeing of a few tail feathers. It is now in the possession of the engine-driver, and appears quite lively.—*Morning papers.*

NOTES TO THE TRAFFIC TABLE,
(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

5. The total amount of stock on which dividends are payable is 750,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, as also the toll from the Manchester and Birmingham Company. The divisor employed to ascertain the daily receipts per mile is 121 (83+15+21.) The Company do not now carry goods to Manchester.

14. The receipts include those derived from the Cheltenham and Exeter lines; the former opened for 18 miles, and the latter for 44½. The divisor employed to ascertain the daily receipts per mile is therefore 180½ (118½+18+44½.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

16. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 481*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. At the last meeting no dividend was declared, the disposable balance from the previous six months' working being only 1,472*l.* 10s. 9d.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,326*l.*, and there was a balance from the previous half-year of 12,479*l.* Out of these two amounts combined, the dividend (after making certain deductions) was paid.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch. The dividend is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c., and subject to payments to the Grand Junction Company.

26. Canal cost, 100,000*l.*; railway, 372,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 5,007*l.* 13s. 6d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 28*l.* 4s. 6d.; carriages, 36*l.* 17s 6d.; dogs, 3*l.* 11s. 6d.; parcels, 228*l.* 8s. 0d.; cattle, 86*l.* 0s. 6d.; corn, 8*l.* 15s. 4d; heavy goods, 510*l.* 3s. 9d.; coal and lime, 187*l.* 11s. 4d. —Total, 1,039*l.* 7s. 5d.

31. The amount of stock *created* is 3,000,000*l.*, on which dividends are payable; and the sum of 850,000*l.* is borrowed money at interest. The 3,000,000*l.*, however, is nominal, inasmuch as the shares were some of them issued at a discount, which reduced the actual amount to 2,589,500*l.*, viz.:—15,000 shares at 100*l.* = 1,500,000*l.*; 15,000 of 50*l.*, issued at 40*l.* = 600,000*l.*; 22,500 of 33*l.* 6s. 8d.; issued at 21*l.* 13s. 4d. = 489,500*l.*; total 2,589,500*l.* The details of the receipts are as follows—Passengers, 2,386*l.* 17s. 4d.; carriages and horses, 102*l.* 18s. 6d.; parcels, 219*l.* 18s. 11d.; malls, 50*l.* 5s. 9d.; merchandise, 1,130*l.* 1s. 0d.; minerals, 518*l.* 6s. 10d.; cattle, 21*l.* 13s. 4d. — Total, 4,226*l.* 14s. 8d.; including North Midland proportion of Manchester and Leeds traffic, and amount received for Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 82½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester an Birmingham toll.

37. The length stated includes branches.

39. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Investments in Railways.—We are constantly receiving applications for advice with respect to the sale or purchase of particular shares. We have repeatedly stated, that we are very unwilling to offer any opinion upon such points, and, indeed, our readers have the same data as ourselves whereby to form a judgment. Nevertheless, as they *will* have our opinion, we cannot refuse to give it. We wish them, however, to bear distinctly in mind, that we do not, in any instance, hold ourselves answerable for the event. The course we recommend to our correspondents, is simply what we ourselves would follow, were we buyers or sellers under the circumstances detailed by them respectively. With this caution, which we shall take care to keep before parties who apply to us on such subjects, we proceed to notice the applications of the week. We may just add, that the figures and letters have no reference whatever to our traffic list, or to the initials of any railway. We cannot notice questions where this rule is violated. In order that we may not be subjected to needless questions, we must have the name and address of every inquirer, although the answers may be given under a fictitious designation:—An Original Subscriber. *No. 5 and 6 will be good investments at present prices. No. 1 will not maintain its present dividend. No. 2 is good, and some explanation respecting it will be found in our last week's number.*—W. W. *Do not sell the shares; we have no doubt that ultimately you will get the dividend of which you speak.*—C. F. *(Manchester). All are safe, but perhaps 5 and 6 are the best.*—T. T. S. *It is a bona fide undertaking.*—W. C. *Nos. 1 and 3 will be good investments. The others we would not recommend.*—A New Subscriber. *We would not recommend A. B. is the best of the three at present prices. C. will give about 5½ per cent. if bought now.*—East-Anglian. *T. V. Z. W. X We think the two last referred to will not pay more than 5 per cent. for some years.*—W. B. *(Maida hill). Good in the following order, Nos. 4, 5, 3, 1. Have nothing to do with No 6.*—Index *(Aberdeen). None of the lines are very good for investment at present prices. The best are Nos. 1 and 7. Admit 5 per cent. may be reckoned on from No. 5, and 6 per cent. from 8. Nos. 2 and 3 will go down.*—X. *(Huddersfield). No. 3, very good; Nos. 1 and 5 will go lower. Take No 7 by all means.*—F. M. C. *(Liverpool). All good; especially Nos. 1 and 2.*—At least a dozen letters have not been noticed because the names and addresses of the writers were not given.

Blackwall Railway.—*We have received an official reply to Mr. Bidder's last letter, but the press of other matter compels us to hold it over till next week.*

M.—*We are accidentally prevented from answering our correspondent this week, but shall do so in our next.*

L. K. *(Brighton.)*—*We feel much obliged. In due time the information will be turned to account.*

An Occasional Reader.—*The party who adopts this signature may spare himself the trouble of writing respecting the London Bridge railways. He has, no doubt, good reasons of his own for taking up the matter, but he must find some other channel for his remarks. He is known.*

A Member of the North Midland Committee.—*We did not copy the "obnoxious statement," and therefore need not give the contradiction.*

A Sub., *in reference to the Blackwall Railway, was rejected merely because more prominent parties were in the field. The letter (as in all such cases) has been destroyed. If he has anything new to offer, we shall be glad to hear from him again.*

TRAFFIC OMITTED.

Arbroath and Forfar Railway.—*For the week ending October 15—Receipt from passengers (number of passengers 1,585) 64l. 12s. 9d.; goods and parcels, 125l. 6s. 8d.; total, 189l. 19s 5d.*

THE RAILWAY JOURNALS.

The Stamp Returns for April, May, and June, just published by Order of the House of Commons, enable us to complete the Returns for the year ending the 30th of June last. The results, as affecting the railway journals, are as follows:—

RAILWAY TIMES	146,374
Railway Magazine	68,500

Majority in favour of the RAILWAY TIMES .. 77,874

from which are to be deducted 10,874 Supplement stamps used for double numbers, still leaving the ordinary circulation of the *Railway Times* just about double that of its contemporary.—*September* 17, 1842.

THE RAILWAY TIMES.

SATURDAY, OCTOBER 29, 1842.

We have received a letter, dated Manchester, October 25, and signed "A Looker-On," upon the subject of carriage of goods by railway between Manchester and London, expressing considerable indignation and surprise at an advertisement which Messrs. Pickford published in our columns last week—which is called an unworthy artifice—and at the account which they give of the reduction in the Manchester rates—which is designated as entirely false and unfounded. It may perhaps be as well that we publish in this part of our journal the letter referred to, and as the general subject is of considerable importance to those interested in the prosperity of railways, we will add a few remarks upon it. The letter is as follows:—

To the Editor of the Railway Times.

Sir,—It is an unworthy artifice of Messrs. Pickford and Co., in relation to the late reduction in the rate for goods between Manchester and London, to charge it as they do in their advertisement on the Grand Junction Company. They perfectly well know that this Company has retired altogether from the Manchester trade, and that the reduction complained of was issued by the Manchester and Birmingham Company. It suited, however, the interests of Pickford and Co. to endeavour to enlist public *sympathy* in their behalf, by diverting public opinion from the *facts*, and trying to make it appear that they were the victims of persecution, while the simple state of the case is, that Pickford and Co. continue to carry the Manchester trade to London by the Leeds Railway, *some* 30 *miles round!* and then, when the Manchester and Birmingham Company, to *secure* their legitimate traffic, reduce their rates, raise the cry of monopoly!!

Though no shareholder in the Manchester and Birmingham Railway, I do hope they will persevere till they obtain that traffic on the faith of which they have expended their couple of millions.

When the line opened, carriers were *invited* to come to it. Pickford and Co. held aloof. Are they to be allowed to carry the trade in another direction, and that direction 50 miles round?

Your obedient servant,

A LOOKER-ON.

Manchester, 25th October, 1842.

Our correspondent has not favoured us with his name, but his letter, although dated from Manchester, bears the Liverpool post-mark, and we cannot help suspecting that we have seen the same hand-writing in papers issued "*by order*" of the Directors of the Grand Junction Railway—which Company, as he tells us, have retired altogether from the Manchester carrying business; so that none but the Manchester and Birmingham Railway

Digitized by Google

Company were the parties who adopted the course of which Messrs. PICKFORD complain. Will "A Looker-On" further inform us—he surely ought to know—whether there is any truth in the report, that these two Companies have formed an offensive and defensive alliance for conducting an opposition to the Manchester and Leeds line, the management of which league is vested in two Directors, one from each Board—whether this joint Committee had not the entire control of the goods' traffic at the time alluded to, and whether consequently they are not the parties who ordered and carried out the new schedule of rates?

But however this may be—and it is not after all of very great importance—the question as to what is really the scope and tendency of a measure which at first sight appears so preposterous as a reduction to 52s. 6d. per ton upon goods from Manchester to London—a price which certainly does not leave for tonnage and locomotive power between Manchester and Birmingham more than about 10s. to 12s., while a first-class passenger between the same places is paying not less than 23s.—admits of a very ready and obvious solution.

It is probable enough that Messrs. PICKFORD & Co. want to enlist public sympathy on their behalf. No doubt at all, they issued their advertisement for that very purpose. But to say that either Messrs. PICKFORD or Messrs. Anybody Else would, or could, send goods between Manchester and London 50 miles round, unless something either in speed or in economy were to be gained by such a proceeding, is absurd upon the face of it, and incredible. If, however, it should appear that the scale of charges by the Manchester and Leeds route for London goods was something lower than that fixed by the Manchester and Birmingham, so that the carriers could gain more by sending their goods 50 miles round, and serve the public as well, then it will not be very surprising that they should persist in doing so, nor as "A Looker-On" has it, being "invited to come to the Manchester and Birmingham line," should "hold aloof;" and if it should appear further that the Manchester and Birmingham Company did upon this make such an alliance as we have alluded to with the Grand Junction Company, and, without reducing their charge to the *carriers*, commenced the business of carriers in their own name, and at rates which it was clearly impossible any one else could afford to follow without heavy loss, *then* the whole thing would be as clear as possible, and there would be nothing to wonder at, either in Messrs. PICKFORD's remarks as to the origin and the real objects of such a manœuvre, or in their complaints of the unfairness of it.

That this, or something like this, is really the state of the case, we are the more inclined to believe, as our correspondent does not attempt to deny Messrs. PICKFORD's statement that the reduction in rates by the Manchester and Birmingham Company was *not* accompanied by a similar reduction in the charges to carriers.

We will not pursue this subject further at present. We are exceedingly unwilling to suppose that two such Companies as the Grand Junction and the Manchester and Birmingham can have formed a coalition for the purpose of securing a monopoly of the Manchester and London goods' business; and we are satisfied that a little good temper and good management are all that are requisite to render "A Looker-On" quite satisfied with the amount of London business passed over the Manchester and Birmingham line, even though Messrs. PICKFORD themselves should be one of the carriers making use of it.

THE new shares of the West London Railway are now, as appears by an advertisement in our front page, offered to the public, and we have no doubt, with the inducements they offer as a means of investment, and with the liability of parties subscribing for them limited by Act of Parliament to the amount of their respective subscriptions, they will speedily be taken up.

The arrangement made with the creditors to accept second-class shares at par, or in other words, at their nominal value of 20*l.* each, with a priority of dividend over the original shares, but subject to, and following after, the dividend payable upon the first-class shares, in satisfaction of their respective claims, is exceedingly advantageous to the Company, as it not only neutralizes upwards of 15,000*l.* of debt, but makes parties who have hitherto been an obstacle in the way of completing the undertaking interested in its accomplishment.

The present plan is perhaps, under the circumstances in which the Company is placed, the best that could be devised for raising the money necessary to complete the line, and though it presses heavily upon the old shareholders, this would not have been the case had they come forward and taken their rateable proportion of the new shares, as they would thereby have preserved to themselves all the advantages of the railway, which will now pass into other hands. We can easily understand that the present state of Manchester, where, if we are correctly informed, a considerable portion of the stock of the Company is held, and the recent failure of of the Bank of Manchester, may have incapacitated many of the parties there from embarking further capital in the scheme, but we are surprised that the other shareholders have not subscribed for the whole of the new capital.

We are disposed to think favourably of the Board as now constituted, from the energy displayed in bringing these shares so quickly before the public; and it is another of the many charges we have to make against the old Directors, that they have permitted the measure to remain so long in abeyance. If the existing proprietors were unable or unwilling to take the new shares, the Board should at once have offered them to the public. It was quite right to afford every opportunity to the present proprietors to avail themselves of the advantages offered by these shares, but the length of time which has elapsed since the plan was first submitted has been injurious to the undertaking.

We have before said, that if the West London Railway were now, for the first time, brought before the public, we should hesitate long before we gave it our support; but having progressed so far as it has done, we must confess we are anxious to see it completed, and the large sum of money which has been expended upon it, rendered available to some useful purpose. That it ever can pay any considerable dividend upon the capital already expended, and that which is now proposed to be raised, we do not think probable; but that it will pay the preferred dividend of 10 per cent. upon new capital to be raised by first-class shares, and 5 per cent. upon those of the second class, and something beyond this, we entertain no doubt. This railway, even to the point Parliament has authorised it to be made, will be a useful adjunct to the two great lines, and when extended to Knightsbridge and the Thames, which eventually it most assuredly will be, either by the present parties or by others, it will be a valuable addition to them both.

One word to the Directors. We are not disposed to press heavily upon them for the past, in the hope that by future good management the undertaking may be rescued from its difficulties; but this can only be done by firm and vigorous measures, and by directing their attention solely to the one object in view, viz., that of completing the undertaking upon the plan of their Engineer; not suffering themselves to have their attention diverted by any visionary and impracticable projects, however speciously they may be urged, or however plausible the party may be who brings them forward. They will know to whom, and to what we refer.

THE attempts of landowners to secure from Railway Companies more than the legitimate value of the property required for the execution of the works, have not, it would seem, yet ceased. In our last number we noticed the result of a claim for compensation made by the Dean and Chapter of Durham against the promoters of the Newcastle and Darlington Railway—this result being, that the sum of 3,500*l.* was awarded, when the "valuers" had sworn to 12,319*l.*! To-day we publish the issue of a similar case, the "valuers'" estimates varying from 2,500*l.* to 2,916*l.*, and the award being 1,300*l.* In this latter case it seems the Company had, previously to the trial, offered more than the amount at which the jury have assessed the damage. There seems here to have been something rather ungracious on the part of the claimant, if it be true, as stated by the Company's counsel, that he is a particular patron of another railway scheme, to which the Newcastle and Darlington Junction may be regarded as in a great degree opposed. Perhaps, after all, Sir GEORGE MUSGRAVE was induced to ask just twice as much as a jury have awarded, from a confidence in the judgment of the professional gentlemen most inappropriately designated "valuers"—gentlemen who have not even the merit of being tolerable guessers—who, in a word, are generally as wide of the mark in their calculations as are Engineers in *theirs*. The mode in which they sometimes attempt to run up the "value" to a high figure was well illustrated in the first of the cases to which we have alluded, when, according to the journalist to whom we are indebted for the report, "a professional gentleman deposed, that he had assessed the damage likely to accrue to the Church from the shadow that would be cast upon her estate by a viaduct carried across a ravine on wooden gearing!"

The history of railway "compensation" cases remains to be written. When the legislature in its wisdom shall see fit to allow truth to be put forward without fear of subjecting the parties writing and publishing it to lawyers' letters and actions for "libel," then, but not till then, will the real character of patriotic gentlemen, like my Lords PETRE and HOWDEN, and a long train of noble and ignoble imitators, be fully displayed.

We are glad to find that the Directors of the Newcastle and Darlington Railway are resisting with so much spirit the claims made upon them. Already has the course taken brought other landowners to an amicable settlement, and no doubt the effects will be still more extensively felt. We know not how it may be with others, but for ourselves we would not

Digitized by Google

had we the honour of being Railway Directors, allow, by way of compromise, one farthing beyond what we conscientiously believed to be the real value of the property required. The trouble and annoyance (to say nothing of the cost) of law-suits are heavy enough, but on principle we would encounter all this and much more, rather than lend any countenance directly or indirectly to the extortions, the downright robberies, which, under colour of these "compensation" claims, are so frequently practised.

AGAIN have the inhabitants of Plymouth met—again have they deliberated—and again adopted sundry resolutions on the subject of a local railway. If there were but small hopes before, of attaining the object for which these repeated meetings are convened, we fear that this last gathering will not do much that is likely to hasten it forward.

It will scarcely be believed that one of the resolutions which the "shareholders" with all due gravity adopted at their last meeting, was, "that the copyright of Mr. M'NEILL'S Report be placed at the disposal of any respectable publisher." Just as if any publisher would be insane enough to print a dry detail like this of gradients and estimates, in the expectation that it would be productive of pecuniary profit! One would have supposed that with the enthusiasm which the promoters would fain have us think distinguishes the district in reference to the projected railway, a sufficiency of subscriptions might have been secured to pay for the printing and circulation of the Report. Surely this would have been a very legitimate mode of expending a portion of the original deposit on the shares—always supposing that any shares have been subscribed for. How can it be expected that even the inhabitants of the neighbourhood will be induced to pin their faith on the abstracts of the Report published in the newspapers? They ought to have the whole of the data before them, and not mere fragments of a lengthy document put out by those whose views may be best promoted by suppression, alteration or embellishment. As regards capitalists generally, of course the same reasoning applies with double force. They are removed from local influence, and the interests of a particular spot, and are not likely to embark their money in the prosecution of a scheme like this, without having the fullest opportunities afforded of examining the whole matter, and judging for themselves. The widely-extended diffusion of the Report upon which the scheme rests we hold therefore to be indispensable to even the smallest progress in the affair, and instead of leaving it at the disposal of a bookseller, the Committee should themselves give to it the most extended circulation. It would be money well applied. We do not say, that even then the project would go forward, but at all events the Committee would have done their best to make its merits public, and the misfortune of failure would be ascribed to its legitimate causes. We believe some two or three thousand pounds have already been disbursed in surveys and preliminary operations, and yet the further expenditure of fifty or sixty pounds is deemed a matter of vital consequence! *Another* meeting is to be held—a county meeting, with the Earl of DEVON as President—and it is to be hoped that *then* the proceedings will not be confined to speech-making and resolution-passing. Let a list of subscribers for shares be at once opened, and thus a test will be presented of the solicitude to secure the benefits of railway communication which is entertained by the parties more immediately interested in the question.

What are the people of Cornwall about? They seem to have gone entirely to sleep, and we fear they will experience anything but a pleasant awakening, whatever be the success of the Plymouth scheme. It is about two years ago since *they* held county meetings, and passed unanimously many excellent resolutions; but to what has it all amounted? To nothing! *They* had a prospect of a very fair rate of interest on the capital to be embarked, and yet they remain torpid—notwithstanding that Falmouth in particular is deeply, vitally, interested in the provision of railway facilities. They will have nobody but themselves to blame should the course of events very materially alter their position. Why should others strive to lend a helping hand if Cornishmen themselves will not endeavour to ward off the fate which inevitably awaits those towns and districts of the country which happen to be behind their neighbours in the facilities for internal communication? We trust it is not yet too late to save Falmouth from this deplorable doom.

A CORRESPONDENT calls our attention to the guaranteed shares of several of the Railway Companies, and expresses surprise that when money is so abundant as at present these shares should not be in greater request. He particularly alludes to the new shares of the Glasgow and Ayr Railway, which are guaranteed at 5 per cent. *minimum* dividend; and though only 5*l.* per share is called up, the holders of new stock have the privilege, till next July, of paying up the full 12*l.* 10s. with the same return. 12*l.* 10s. therefore at 5 per cent. is equal to 14*l.* at 4½, or 30s. per annum per share, and at 4 per cent. to 16*l.* or 70s. per annum. Now, as 4 per cent. is about the highest rate in Scotland, at all events on what is called "heritable property," to which this is, if not preferable, at least equal, the premium should be 70s., whereas the stock can be bought greatly under that rate. Our correspondent adds, that although this railway is only yielding its old shareholders 3½ per cent., still, when the Kilmarnock Branch is finished, and the great traffic of that extensive manufacturing district, together with the great mineral and other sources of traffic not yet developed, are made available, it is confidently expected the dividend will be doubled.

The case of the Ayr Railway is by no means a singular one, nor yet the want of information relative to guaranteed shares. Day after day are we solicited for advice relative to the loan of money on bond to Railway Companies. To those who prefer a regular steady rate of interest to the fluctuations of share property, nothing can possibly be safer than these loans. It will be a poor railway indeed that cannot secure to its creditors the stipulated amount of interest in such cases as these. No instance of default has, we believe, yet occurred, and we do not think that there is the smallest fear of such a contingency. Five per cent. may now readily be had upon the most ample security, with the convenience of having the loan redeemed within a very few years. Why there should be any difficulty on the part of Railway Companies in obtaining the regulated amount of borrowed money we cannot see. In general perhaps no such difficulty exists. We think, nevertheless, that if some of the Companies would accept of loans in smaller amounts than those which they advertise, the trouble to the officers of the Company might be somewhat greater, but an opportunity would thus be offered to small capitalists of finding a very desirable investment. Large capitalists look for a higher return than 5 per cent., whereas such a rate would amply content many parties of more moderate means, who are now shut out from making the customary tenders.

MOST of the shareholders in the London and Brighton Railway will, we doubt not, be as much surprised as we were, on learning that the Directors of that Company talk of applying for leave to introduce a Bill into Parliament, during the coming session, to authorise the construction of an "independent" line of railway from Croydon to the metropolis. It is even said that considerable progress has already been made in the preliminary preparations. That any such scheme will be sanctioned by the legislature it would be preposterous to affect to believe, and indeed it is very generally thought that the motive to action, on the part of the Brighton Management, is an inveterate hostility to the Grange-road scheme of the Croydon and Dover Companies. Whether, nevertheless, the Brighton shareholders choose that their money should be expended in such opposition, or even in a *bonâ fide* attempt to secure an impracticable object, it is for them to say! And when they know that the proposed extension of the Shoreham branch, to which we alluded last week, is apparently patronised by their Directors, and that the surveys, &c. (so we have been informed) are conducted by parties connected with the existing engineering staff, they may perhaps think it desirable "to look before they leap." With an expenditure, past and to come, of *three millions* upon the main line—for, despite the assertions of the Directors and their partisans, *that* amount AT LEAST will be required—probably the shareholders will wait till they see what dividend they are likely to receive, before they venture upon a further and unknown outlay. If, too, they would make inquiries respecting the fate of other proposed branches—that to Horsham for example—and ascertain who the parties were who profited by the preliminary expenditure in these instances, we rather think they would feel inclined to say "Nay" to the present propositions of their representatives.

We shall keep an eye upon these new projects, and the movers therein. The ambition of the Brighton Board to have an "independent" line from London to Brighton is, doubtless, highly to be lauded, but they seem to forget that the six miles on this side of Reigate now vested in the South-Eastern Company stand somewhat in the way of their grand conceit. By the way, it would look as if the existing Board counted upon a long lease of office, when they plan schemes so magnificent as these. We shall see. The lapse of a few months will throw some considerable light upon the position and prospects of the Brighton Railway and its present Managers.

WE gave last week a short summary of the proceedings connected with the toll question on the Greenwich Railway, which we had compiled from authentic sources, for the purpose of answering a question which had been asked us, (and which indeed we had often asked ourselves, having forgotten some of the circumstances) namely, how it happens that the Directors of the Greenwich Company should persist

Digitized by Google

in refusing 5,000*l.* per annum for that which brings to the Company only 3,000*l.* We believe that this question is answered by the statement there given, and that personal considerations, or the mortification of being convicted of error in judgment, have placed these gentlemen in a position of antagonism to the interests of their constituents. It is high time, therefore, that the proprietors should look to this before they are still further committed, and their case rendered desperate. If the Directors of the Greenwich Company had not sufficient knowledge or judgment to foresee the consequences of the imposition of a toll of 4½d. per passenger upon a short traffic, which must necessarily (although they cannot understand it) be carried at a low fare, and if they were so wrapt up in their own conceit as not to believe what was told them by those whose experience or judgment was better than their own, they may be equally blind to what further must befal them. It appears, from certain printed statements which have been issued by their friends, that they are now hugging themselves in the notion that if the traffic between London and Croydon be abandoned by the Croydon Company, it will be carried on to the same extent by the Brighton or Dover Companies, whose superior management will enable them to pay the toll of 4½d. upon this traffic, which the Croydon Company is contumacious enough to refuse. It is as easy to demonstrate that this cannot be, as it was to show two years ago that, if the Croydon Company raised its fares, the toll of 4½d. would produce less than the toll of 3d. then did. The Greenwich Directors, however, who were then receiving something like 6,000*l.* per annum from a 3d. toll, laughed at the prediction of the Croydon Directors, and promised their proprietors an income of 9,000*l.* per annum, or an addition of 50 per cent. upon the Croydon traffic from the 4½d. toll. It was therefore necessary to pass through a painful process of two years' experiment to convince these gentlemen of their mistake, and the result has been that the toll of 3d., which produced 6,000*l.* per annum, instead of rising to 9,000*l.* per annum by the addition of 1½d. per passenger, has dwindled down to 3,000*l.* per annum.

It may likewise become necessary, unless the proprietors should interfere to prevent it, to go through another disagreeable process by obliging the Croydon Company to relinquish its carrying trade, in order to convince the Greenwich Board that other Companies, having a toll besides the Greenwich toll from which the Croydon Company is exempt, cannot afford to carry so cheap as the latter Company, and cannot of course *so well* afford to pay the Greenwich toll. And yet this is to be seen by any person of ordinary judgment, without the expense of so costly an experiment as the probable total loss of a traffic which has produced a gross income of more than 30,000*l.* per annum. We have looked at the last half-yearly return of the number of passengers carried by the Croydon Company, and deducting therefrom the third-class passengers who do not pass over the Greenwich Railway, and likewise deducting from the whole sum of money received 6d. each for these passengers, or the whole third-class fare, we find the account to stand as follows:—155,347 passengers for 10,311*l.*, which gives an average fare of not quite 1s. 4d. per passenger. The toll of the Croydon Company to the other Companies using any part of its line to London Bridge is 1s. per passenger—that of the Greenwich Company 4½d.; together, 1s. 4½d. Now, we shall be glad to know how it is possible for the other Companies to carry a traffic with profit at 1s. 4d. per passenger, paying a toll of 1s. 4½d.? And yet the fares which yield an average of 1s. 4d. per passenger are called high, and are in fact so high as to preclude a remunerative traffic—so high as to have driven off more than half the number of passengers from the Croydon line.

One would think this was plain enough, yet the Greenwich Directors affect to believe that if the Croydon Company give up this traffic it will be carried to the same extent by the other Companies, and the Croydon Company must be driven to the proof before they will be convinced to the contrary.

In the present position of affairs the Croydon Company will only "save a loss" by the abandonment of its carrying trade; it is the Greenwich Company which will incur one by the abstraction of the small remnant of Croydon toll which it still receives. We trust, however, that the proprietors will ere long awaken to a sense of the injury they are likely to sustain by this conduct of their Directors, for assuredly it will not stop here. The Directors of the Croydon Company cannot tamely submit to the loss of a traffic which might be made so available of profit to their proprietors, and if it can be shown that a fair proportion of such profit has been offered to the Greenwich proprietors, and refused, Parliament cannot resist an application for the means to carry it on elsewhere. The Croydon traffic once diverted may be followed by all the rest. Let the proprietors of the Greenwich Railway take heed in time.

A concession of the principle of a fixed toll per passenger in favour of a short traffic which *cannot* be carried on under its operation, might be the means of preserving that principle with respect to longer traffic which *can* exist in spite of it, for some period, or as long as it was found useful, and at the same time would probably be the means of producing to the Greenwich Company an income which otherwise they are likely to lose.

We learn that the Directors of the North Midland Railway Company have concluded their deliberations on the Report of the Committee, which we published in full last week, and that a special meeting of the proprietors is to be convened on the 16th of November, to receive the Report, and the remarks of the Directors thereon. The more we consider the result of the Report—the proposed saving of 17,000*l.* out of 40,000*l.* a year—the more startling does it appear. We sincerely trust that the reduction will be found practicable, but we have our doubts. If it *is* practicable, what a miserable state of affairs has hitherto characterised this Company!

It is gratifying to know that there is every prospect of an immediate movement in the matter of railway communication from England to Scotland *via* the west coast. We hope we shall be able in an early number to give more precise information relative to the scheme, but in the meantime we can assure the numerous correspondents who have within the last few weeks written to us somewhat anxiously on the subject, that though silent, the progress of this most valuable undertaking is sure.

It would be entirely out of place to dilate, at this time of day, upon the importance of a connected line of railway communication between the capitals of the two countries. Equally uncalled for is any opinion as to the superiority of the route which now stands the best possible chance of being brought into service. We cannot, however, omit calling attention once again to Mr. Locke's offer in proof of the sufficiency of his estimates. To this we should be glad to see the confident calculations of every Engineer reduced. Pecuniary responsibility on the part of professional gentlemen is the only safeguard for the shareholders. We would not have this responsibility merely nominal, as in the case of contractors it too frequently is. The penalties should be heavy, and the enforcement of them most stringent. In the case of the Caledonian Railway, we have no reason to believe that the guarantee is not offered in the most perfect good faith, and such being the case, the inducement to all parties, more particularly to the resident landholders, to embark their capital in the undertaking, is of course very great.

Our space will not permit us to do more at present than simply to call attention to the full report which we furnish elsewhere of the adjourned meeting of the Eastern Counties' Railway Company, held yesterday. Disappointed as the proprietors no doubt were, that the object of the adjournment had not been answered, the harmony of the meeting was very gratifying. All parties appear to hold in high estimation the resources of this very important line of railway—and, in our judgment, most deservedly.

In our last number appeared a letter on the subject of the Midland Counties' Railway, signed "A Glasgow Citizen," wherein it was stated that Mr. T. W. Rathbone, one of the Liverpool Directors, had used upwards of 1,000 proxies, at the general meeting in August last, to keep up the number of Directors, with all their allowance of 1,200*l.* a year. We are authorised to state that this assertion is entirely without foundation—that the only use made by Mr. Rathbone of the proxies was to prevent the expulsion of two valuable members of the Board, the means of reducing the number, if desired by the meeting, by the resignation of less valuable members having been offered and refused—and that so far from keeping up the amount allowed to the Directors, or being in any way interested in it, the Committee of Management (of which Mr. Ellis, the new Director, proposed by Mr. Rathbone and Mr. Cropper, is a member), voluntarily reduced that allowance from 1,200*l.* to 700*l.* a year, a preceding Board having two years ago volunteered a deduction of 300*l.* from the original amount unanimously voted by the proprietors, and the distant Directors having insisted on leaving to the working Committee the whole of the sum then remaining. The "Glasgow Citizen," of whose name and address we are in possession, can have had no desire to misstate facts; but, in this instance, he has certainly fallen into error.

We have already referred to the extraordinary course taken by the Post-office authorities with respect to the conveyance of the Brighton night mail. The *Brighton Gazette* of Thursday, says:—

"The memorial against the employment of the mail-cart for the conveyance of the up night mail is, we hear, likely to have the desired effect. Mr. S. W. Bennett, on the part of the memorialists, has had an interview with Lord Lowther and Colonel Maberly, who manifested a disposition to enter into arrangements for carrying the bags by the railway luggage-train, probably at 10 o'clock. Nego-

Digitized by Google

cations, we believe, are now in progress between the Post-office authorities and the Directors of the railway for this purpose; and the only inconvenience resulting from the contemplated plan will be the making up of the bags at 10 instead of 11 o'clock, and the consequent curtailment of an hour in the time for writing by post."

The notion of carrying the mails by a "luggage train," is peculiarly good! Probably the employment of even *such* a train may be regarded as an omen of "go-a-headism" on the part of the "slow coaches" of St. Martin's-le-Grand.

LONDON AND DOVER RAILWAY.

Traffic Receipts for the Week ending October 25, 1842—the Eighth Week of the Low Fares.

Date.	First-Class.	Second-Class.	Third-Class.	Total.	Amount.

The following is the return of the numbers who embarked and disembarked at New Cross during the same period:—

WEEK—19th October to 25th October, inclusive.

	1st.	2nd.	3rd.	Total.
Number of passengers booked at New Cross station from the 19th October to 25th October, inclusive.....	91	190	280	561
Number of passengers booked for New Cross station from the 19th October to the 25th October, inclusive	142	268	448	798
Total				1,359
Add total to the 18th October, from last week's *Railway Times*.....				9,819
Total loss to the Greenwich Company in *eight* weeks by their prohibitive toll.....				11,178

A CORRESPONDENT of the *Times* complains, in yesterday's paper, that "the speed attainable on the greater part of the Great Western Railway is neutralised by the bad arrangements of the Company." He says, "Last evening (Oct. 26), I had occasion to come from Bath by the first-class train which leaves at 25 minutes past 6 o'clock, and calculated on reaching London at half-past 10 o'clock. At the Western entrance of the Box tunnel, however, we were detained exactly two hours, in consequence of a goods train having preceded us, and which it was necessary to divide into detachments for transmission up the tunnel. The consequence was, that I did not reach London until a quarter-past 12. This is the second time that I have experienced the same inconvenience, and it is, I am informed, no unusual occurrence. The Directors ought to be aware that such treatment of their passengers cannot be long endured; and it is to be hoped that they will not much longer delay the adoption of adequate means for pulling heavy trains up the tunnel with less delay, by the erection of stationary power." These delays are certainly much to be regretted. With respect to "stationary power" in the Box tunnel, we have heard that Mr. Brunel is inclined to give the atmospheric system a trial on that part of the line.

—o—

EASTERN COUNTIES' RAILWAY COMPANY—GENERAL MEETING.

THE adjourned general meeting of the proprietors of the Eastern Counties' Railway Company was held yesterday, at the Station, Shoreditch; HENRY BOSANQUET, Esq., in the chair.

There was a full attendance of proprietors.

The advertisement convening the meeting having been read, the common seal of the Company was affixed to the register of shares.

The CHAIRMAN then said, there was such a mass of documents to read, and so much business to be transacted, that he felt it would be bad taste on his part, and he believed unsatisfactory to the meeting, if he took up their time by any of those lengthened preliminary observations which were usual on such occasions. It was due, however, not less to the Directors themselves than to the shareholders, that he should offer a few remarks relative to the circumstances under which they had now met, and bearing upon the working out of their most important undertaking. The 31st of August last was the day on which, in the ordinary course of things, under the provisions of the Act, the Directors would have had the pleasure of meeting their constituents; but having received from the Engineer a Report stating that, in his judgment, the line might be opened by the 1st of October, the Board requested that the meeting should stand adjourned to that day. It subsequently occurred that the Engineer could not complete the works by the time named, and a further adjournment to this day was the consequence. In the name of his brother Directors, and for himself personally who moved these adjournments, he begged to return sincere thanks for the confidence reposed in them, and he would assure them that it was nothing but the confident expectation of being able to take the proprietors down to inspect the works—their own property—and to view the nature of the fertile and populous country through which the line ran, and which he believed was as little known to many of the proprietors as it undoubtedly was to the public at large—it was this firm conviction which led to the two adjournments which had already taken place. It would certainly have enhanced the pleasure with which they met the proprietors that day, if they could have fulfilled the promise of inspecting the line in a state of completion; but for reasons which would be laid before the meeting in full in the Engineer's Report, and upon which it was therefore unnecessary for him to dwell, this had been found impracticable. He did not allude to the disappointment in apologetic terms, for he need scarcely remind them that in all these undertakings the interests of proprietors and Directors were identified. It was the interest of the Directors, first as men anxious to finish successfully a work which they had taken in hand, and secondly, and from a deeper motive in human nature, from the effect which it would have on their own pockets to bring the railway to a prosperous issue, and when they reflected upon the enormous stake which the Directors individually held in this undertaking, they would readily account for their having laboured from time to time, for 6½ years, in prosecuting it. What could bring his honourable colleagues almost weekly from Liverpool, travelling night and day—what could induce his honourable friend on his right (the Deputy-Chairman) to expend his talents and time upon this railway—what could lead the London members of the Board to assemble diurnally—what, but the anxious desire to bring the railway to a prosperous result, as well for the shareholders as for themselves? (Hear, hear, hear.) They were not actuated—they never had been actuated (and he believed the same might be said of Directors generally of these noble enterprises) by the filthy wish (if he might so express himself) of mere personal pay, but by the greater stimulus of contributing to the remuneration of themselves and their constituents, as well as to the convenience of the public at large. (Applause.) In the public mind there existed, he was aware, very erroneous impressions as to the patronage appertaining to railway management. For his own part, he could only say that he had never exercised, and never would exercise, one penny-worth of patronage, and he ventured to say that this was the determination of his colleagues collectively. Their wish was to secure the best possible men in every department, in order to provide, in the first place, for the safety of her Majesty's subjects, and secondly, to work the undertaking to the best possible advantage. He had felt it his duty to offer these few remarks from the misconceptions which daily get abroad in the newspapers. As regarded their more immediate business, he would briefly draw attention to the expectations of the line. He held in his hand a return, with which the Manager had kindly supplied him, showing the progressive state of the 17½ miles of the Eastern Counties' Railway, which had been for some time in operation—a distance so short that, of course, they had not the means of grasping any of the long traffic. At the end of the year 1840, for 15 weeks the receipts amounted to 10,455*l.*; in 1841, for a corresponding period, they had risen to 14,990*l.*; while in 1842, during the same period, the receipts had amounted to 17,455*l.*, notwithstanding that in 1842 the toll received from the Northern and Eastern Company was less than in 1841, in consequence of the experiment of low charges. (Hear, hear, hear.) When he looked at this fact, and at the inter-communication between towns so important as Chelmsford, Witham, and Colchester, independent of the traffic from London to these towns, and to and from them from places lying beyond Colchester, he could not doubt that the prospects of this Company were brightening every hour, notwithstanding that the Engineer had been unable to accomplish the works by the time specified. This was his firm opinion, founded upon personal experience in travelling through the district. (Hear, hear, hear.) He hoped the proprietors would not allow themselves to be deluded by fallacious quotations of share-prices, but look at the merits of the investment, irrespective of temporary circumstances. He felt warmly on this subject, having with pleasure watched the undertaking from its origin—an undertaking which he would not call *great*, for that was a hackneied phrase—but which he was satisfied would eventually prove a most valuable and most prosperous undertaking in promotion of which his colleagues and himself had been so long, so anxiously, and so laboriously occupied. (Much applause.)

The honourable gentleman having thanked the meeting for their indulgent hearing, proceeded to state the order in which the official documents were to be read. It was considered unnecessary to read the original Report, which was published in the *Railway Times* of September 3.

The Solicitor of the Company (JOHN DUNCAN, Esq.) then read the following Reports:—

Digitized by Google

DIRECTORS' (SUPPLEMENTAL) REPORT.

The Directors, on again meeting the shareholders, need not dwell upon the object of this renewed adjournment, the proprietors being fully aware that it was solely in anticipation of combining with it the opening of the remainder of the railway, and in now meeting them the Directors greatly regret their inability to announce the accomplishment of this desired event. The present meeting was fixed in the confident hope that the proprietors would find the line opened throughout, and ready for public traffic on Monday next; and arrangements had been entered upon with coach proprietors, by which nearly all the coach traffic would have been immediately transferred to the railway. These hopes have, however, been disappointed, and the season is now so far advanced as to make the policy of opening questionable, even if it could be accomplished at an early day; for not only is the inducement as regards traffic at this time of the year considerably lessened, but also in connection with the effects of winter months, on new works, the chances of accident are increased. On such grounds the Directors might hesitate to name any precise day for the opening were they in other respects in a condition to do so; but candour requires them to state that they cannot now with confidence fix a precise period.

Hitherto, in the course of their frequent inspection of the various works in progress, doubts which have arisen as to the practicability of completing certain portions of the line within the periods assigned for the purpose, have been met by the calculations and unqualified expressions of confidence by the Engineer, whose professional skill and experience were of course entitled to greater weight than unprofessional opinions. How these confident expectations of the Engineer have failed of their accomplishment, his detailed statements are now presented to explain.

The Directors cannot leave the subject without assuring the proprietors that in connection with their interest in the opening of the railway, both as to time and security, nothing shall be wanting to which their strenuous exertions, and the same anxious solicitude which they have hitherto devoted, can contribute.

Signed by order, and on behalf of the Board of Directors,

HENRY BOSANQUET, Chairman.
THEODORE W. RATHBONE,
Deputy-Chairman.

ENGINEER'S REPORT.

To the Chairman and Directors.

Gentlemen,—It is my unpleasant duty to report to you that in consequence of the backward state of the Mountnessing and Shenfield embankments, the Brentwood Hill cutting, the Cann embankment, and the continued subsidence of the Lexden west embankment preventing its junction with the eastern over the Colne viaduct, it will be impossible to run an engine and train through from Brentwood to Colchester on the 27th. There are other parts of the line which are not in so forward a state as they might have been if considerable additional expense had been incurred, but when I satisfied myself by my almost constant presence on the works both by day and by night, that the above main features were insurmountable in the time I led you to believe you might fairly calculate upon for the time of inspection, I immediately put an end to such needless exertions, and all extra expenses by piling and timbering, which I had contemplated to enable me to carry out your wishes, and those of our shareholders. I can assure you, Gentlemen, the disappointment is exceedingly mortifying to my feelings, but I am quite certain, if the same facilities and co operation which I have ever experienced from the hands of your Committee, had been extended to me by our contractors, that I could have accomplished all I promised, save the Lexden and Mountnessing subsidences. As it is I entertain the possibility of running an engine with safety from Mountnessing to Lexden, about 29 miles, continuously by the 27th instant, provided we have moderately fine weather, although there is a portion of the line between Feering and Lexden upon which the rails are not permanently laid, which is in consequence of the contractor not being able to obtain his ballast, until the completion of the adjoining contracts 26 and 29. The remaining works are now progressing more satisfactorily, every part where necessary, without incurring additional expenses, is in active operation, and I look forward to the speedy completion of the whole.

With my regrets for the disappointment of which I have been the unfortunate but innocent cause, and with undiminished confidence in the great resources of the line,

I remain, Gentlemen, your obedient servant,
JOHN BRAITHWAITE.

Eastern Counties' Railway, Engineer's Office,
Hare Hall, October 22, 1842.

To the Chairman and Directors.

Gentlemen,—I have already transmitted to you, on the 22nd instant, my Report, intimating the fact that the line could not be opened and ready for the inspection of the proprietors by the 27th instant, and now, before going through my Report since 16th August last, to point out what extent of work has been accomplished, and where I have failed to do that which I then so confidently expressed my opinion of being able to do. I must express my deep regret at the great disappointment which I have unintentionally caused to yourselves, and through you to the proprietors at large—I can only affirm, which I most solemnly do, that when I expressed so confident an opinion as to the time of opening, I felt sure I could accomplish my expectation. I calculated on what had previously been done in the openings to Romford and to Brentwood, but without perhaps taking sufficiently into consideration the difference between the accomplishment of an opening of 12 miles, or of 6 miles, and an opening of 34, and I was urged on to undertake so early an opening by the knowledge of your anxiety to run traffic on the line this autumn. I feel, however, that I have done everything in my power to accomplish what I undertook, and you will see by the following account of the work done, that it has been utterly impossible to overcome the great difficulties at Shenfield, Mountnessing, and Lexden, and so soon as it was clearly obvious to me that I could not complete these parts, I ceased to urge several of the minor matters, which could only be, and were being, carried on at considerable expense, and which extra expense it became needless to continue, when the opening depended not on such matters, but on the three great difficulties which I have found it impossible to overcome. Had the weather, however, of last year been in the least propitious, even those could have been thoroughly surmounted, as will be seen by the enormous quantity of work which has been done during the last two months, out of which the works have been retarded 22 days and 24 nights.

Contract 22.—Out of 35,000 cubic yards remaining in August last, 27,000 have been excavated, leaving 8,000 to complete, besides, a very considerable quantity has been removed to lighten the north slope, in consequence of a heavy slip casting up the bottom. This has also prevented the gullet being cast out, which would have enabled the erection of the Warley-lane bridge; the two abutments and the two piers only being springing high, the remaining ones cannot with safety be built until the excavation is bottomed out. The permanent way is laid double throughout the cutting, excepting 4 chains, being rather more than 20 chains.

Contract 12.—This has been retarded by contract 12 A. as it was necessary to excavate 48,000 cubic yards before the contractor could commence operation, in leading his material and ballast, but out of the 141,000 cubic yards remaining in August, 84,000 yards have been run into embankment and to spoil, leaving 57,000 yards remaining in the cuttings (35,000 in the Shenfield, and 22,000 at Mountnessing), which are now being excavated very satisfactorily, The Mountnessing embankment has shown no signs of late to further subsidence, which has been of that serious character that for weeks together it was impossible to keep up the tips. With the exception of the Mountnessing Church lane bridge, the piers and abutments of which are springing high, and the centres ready for turning the arches. All the masonry is complete: 34 chains of permanent way is laid, and the cuttings and embankments are being formed to receive the ballast.

Contract 12 A.—The 48,000 cubic yards remaining, and above alluded to, have been excavated and ballasted, and permanent way laid double line 121 chains. The ballasting on this contract has also greatly retarded the earthwork in Contract 12, in consequence of a very general subsidence throughout nearly the whole embankment. All the brickwork is completed, and the slopes of the embankment trimmed and soiled.

Contract 13.—All the earthwork in embankments and cuttings is completed, excepting at the west end, where the work is open thoughout by a double gullet. A temporary bridge has been erected on account of the arches of the Mountnessing Bridge not being turned. 100 chains of permanent way, single line, have been laid, leaving only 37 chains to complete, which I expect will be done this week. All the brickwork is complete.

Contract 14.—The embankment is complete, but there remains about 20,000 cubic yards on the slopes to go to spoil. The line is ballasted throughout, ready to relieve the permanent way, which is being laid rapidly, of which 160 chains of single line have been laid.

Contract 13.—30,000 cubic yards of the 35,000 have been excavated, leaving 5,000 cubic yards which will be required to tip at the Margaretting embankment by the Aonger House Farm, where there is a considerable slip, although not of a serious moment, yet sufficient to have caused great delay in completing the permanent way. All the bridges are complete, except the Stock-lane Bridge at Ingatestone, the centres of which are set ready for turning the arches, and except a small foot-bridge at Margaretting Church. The permanent way is laid through this work for 160 chains, leaving only 30 chains to execute.

Contract 15.—All the earthwork which remained in August (75,000 cubic yards) has been completed, and an additional 20,000; but owing to an extensive slip at the Chelmer river, which required an additional quantity to make good the embankment, there remains now to complete, including the Duke-street station approaches, 40,000 yards. The Cann Valley viaduct of 18 arches is complete; the Duke-street viaduct of 83 arches requires only 6 arches more to be turned; Springfield Green bridge is finished all but the parapets, and the remaining bridges are all complete. The permanent way, double line, is nearly laid throughout the contract.

Contract 11.—57,000 cubic yards have been tipped into the Cann embankment, 48,000 from Widford Hill, and 9,000 from side cutting, which enabled us to back up the Cann viaduct. The masonry is completed, and the permanent way laid up to the gullet in the Widford Hill. To complete the embankment between the two viaducts, only 9,640 cubic yards are required.

Contract 23.—The earthwork of this is complete. The occupation road at Springfield is building, and only requires the timber framing for the roadway. This would have been done ere this, but we were in hopes of dispensing with it. All the other works are complete, and the permanent road is laid 200 chains, double line.

Contact 24.—54,000 cubic yards were reported to remain in excavation, of this quantity 41,000 yards have been carried to embankment. At Hatfield, the bank has been much retarded by the weather, and the yielding nature of the alluvial formation, which has required great care and exertion, and but for erection of a timber framing, we should have been much delayed. Chantry-lane and Feering-road bridges are complete. Lovibond's occupation ditto, requiring only the girders, and all others are finished. The permanent way is laid for 87 chains, double line, and 13 chains single.

Contract 25.—This contract, which the Company were compelled to take into their own hands, I am happy to say is about the first to be completed; 55,000 cubic yards have been excavated, leaving 8,000 yards to dress and widen the embankment in some parts. Job's Wood bridge has been retarded, not being able to get the gullet through to the bridge pit. All the other bridges are complete, with the exception of a little coping. The permanent way is laid through the contract single line, and 60 chains double.

Contract 26.—The earthwork is complete, also the masonry, excepting a few days' labour on the parapets, and the ironwork at Feering-road. An extra bridge of 3 arches has been built at Feering. The permanent way is laid for 90 chains single, and 280 chains double.

Contract 27.—The earthwork is all but complete, the masonry, excepting the parapets of the river Black-water bridge, which has been rebuilt. The permanent way is now being laid down and will shortly be complete.

Contract 28.—Since my Report 27,000 cubic yards have been excavated, leaving only 5,000 yards to complete the earthwork. Dormsay Farm bridge is finished, and the brickwork of the Coggeshall-road bridge is ready to receive the ironwork, which is now fixing. There has been great delay in the delivery of this ironwork, the excuses given by the founders being, that they were prevented completing the castings by the turn-out of the colliers. There will be now no hindrance to its speedy completion. The erection of the North lane bridge has been postponed in the hope that it would have been dispensed with—it is now erecting. The permanent way is now being laid, but has been much retarded, there being no ballast in this contract, and the contractor not being able to obtain his supply until the cuttings in contracts 26 and 29 were opened into his work. This cannot delay the completion above ten days.

Contract 29.—Of the 55,000 cubic yards of earthwork remaining in August, 50,000 have been excavated, leaving 5,000 in the cutting. The heavy subsidence and slips in the Stanway embankment have been a source of great trouble, involving the necessity of side cuttings to connect the embankment, which has been accomplished. All the brickwork and masonry is complete, except the Cambridge turnpike road bridge, which has been retarded by not being able to get through with the gullets to work out the bridge pits, and let off the water; but it is now springing high, and will speedily be completed. The permanent way is laid double line for 90 chains, and about 30 chains single.

Contract 30 A.—These works at the Colne embankment, extremely favourable as they were at the date of my last Report, I regret to say, although much has been done, are in a more backward state than they were; only 4,500 cubic yards were required at that time to complete the west embankment adjoining the viaduct, and 43,500 yards to complete the eastern embankment. So soon as we commenced preparations to ballast the viaduct, the embankment having reached it at its proper formation, the slip which had long been stationary recommenced, and 33,800 cubic yards which would have been tipped into the eastern embankment of 43,500 yards, have been swallowed up without forming the formation of the embankment. The slip does not run out so rapidly, but it will be necessary to treat this portion of the embankment with timber framing, when it is determined to run the traffic over it. Timber framing about chains in length had been erected to enable the rapid completion of the embankment, and for the safety to the working of the Colne viaduct. There now remains only 1 from the extremity of this timber framing to the top eastern embankment. The masonry is all complete except the parapets of the viaduct, and the permanent way is 40 chains double, and 14 single.

Contract 30.—The earthwork, 2,300 cubic yards, has been completed, but in consequence of the slip west of the Colne viaduct, as alluded to above, we are now completing the eastern embankment from side cutting, as all the earth from the excavation will be required to tip out the slip which fortunately happens to be nearly all ballast.

Your engine-house is now roofed in, the ironwork complete, and I am now devoting my attention to the erection of the tools and machinery, the major part of which are delivered. Until our large turntable arrives, I have given instructions to lay down a temporary one to house the engines and tenders.

Great progress has been made with the stations at Witham, Kelvedon, Chelmsford, and Colchester—a few days will suffice for their completion.

Thus, Gentlemen, you will perceive that more than the amount of earthwork where practicable has been performed, and but for the upheaving of the Brentwood Hill bottom preventing the gullet being carried through to facilitate the erection of the Warley lane bridge, the prevention of contract 12 running the excavation from the Shenfield cutting through contract 12 A, into the Shenfield embankment, the burrowing into the alluvial formation of the Chelmer river embankment at Mountnessing, together with its slip,

Digitized by Google

and the evidence prevailing the possibility of tipping. d the unfortunate slip at Lexden, over which I have had control, all that I had promised (prevented only by bad ather at the critical moment, as will be seen by the *ervation* and total stoppage during two months, of 22 ys and 24 nights), would have been faithfully per-rmed.

To give you some notion of what could be done in fine *ather*—*in* contract 11, from Widford Hill, in one week no s a quantity than 5,430 waggons; containing 2½ cubic rds, each equal to 13,570 cubic yards were carried into e Cann embankment over one tip.

Much *more of* the finish of the line might have been done, it was not urged by me, as before stated, as it only tended distract the attention of the contractors from the more portant and essential works.

Apologising for trespassing thus at such length upon your luable time, I conclude by assuring you, Gentlemen, that wever much you may regret the disappointment I have un-rtunately caused you, as to the time of completing the line ay for the opening when approved by General Pasley, that ither yourselves nor our shareholders will have cause, until ately to regret the delay, as the works which shall challenge mpetition with any other railway in the kingdom, will have greater chance of becoming more consolidated, thereby in-ring the public with a much greater degree of confidence travelling.

I have the honour to remain, Gentlemen, your obedient rvant,

JOHN BRAITHWAITE.

Eastern Counties' Railway, Hare Hall,
October 27, 1842.

P.S. To my Report of the 27th October, 1842, I subjoin a similar statement, showing the earthwork to be done on the 16th August last, and that which has really been done p to this period.

	TO EXECUTE. Cubic yards.	EXECUTED. Cubic yards.

* Side cutting.

The CHAIRMAN said, Mr. Braithwaite was now present, and would feel happy to answer any questions, or give any further explanations.

Mr. PERRY (of Shenfield) put a long string of questions relative to the legality of the late adjournments, and to the possibility of opening the line without the concurrence of General Pasley.

Mr. Braithwaite and others replied; but the questions and remarks of the *learned* gentleman were so ridiculous and irrelevant, that the meeting laughed outright.

A PROPRIETOR inquired if the Directors had any idea when the line would be opened to Colchester.

The CHAIRMAN must refer the question to the Engineer.

Mr. BRAITHWAITE said, he must give the same answer as he gave in August last, namely, that it depended very much on the weather. If there were moderate weather the line might be opened in three weeks for goods' trains, with a single line of rails, if not a double. It would depend, also, on the veto of General Pasley, Inspector-General of Railways.

Mr. DARBY (of Gloucester) said, as the representative of a large interest in this undertaking, and having some knowledge of the nature of railway works, he had walked over the railway in formation between Brentwood and Chelmsford, to satisfy himself as to the probable time the line would be opened, and to make a few inquiries as to the probable traffic when opened; and although, after anticipating the opening through to Colchester on this day, he was much disappointed at the state of the works, yet he was satisfied, that with the average of autumnal weather, *one* line of way might be laid through in *six weeks*, and if it should continue fine, a *month* would accomplish the same extent of work; and in *two months* from the present time, the line might be opened *for passenger traffic*. This was what might be done, but rather than again disappoint the public and proprietors, he should recommend the postponement of the opening of the passenger traffic for three months. The result of his inquiries and observation as to the probable traffic when this line was opened was certainly most favourable. There appeared to be at this time about 20 coaches each way between Brentwood and Chelmsford, which, with 5 more now taking a different route, but which would certainly come to the line, gave a passenger traffic of 50 coaches for the line when opened; and from the immense number of carriers' waggons, the goods to be forwarded would be proportionably extensive. (Applause.) He had had an interview with the Engineer, and heard his suggestion concerning the goods traffic immediately one line was laid through to Colchester. He hoped the proposition would be entertained by the Direction, as it would not only assist in consolidating the line, and giving confidence to the public, but would afford time for developing that description of traffic; and he was quite satisfied that if the Superintendent would make suitable arrangements to concentrate the traffic, both on passengers and goods, during the next two months, instead of after the opening, by publishing and circulating the charges and rates of fares, they might expect immediately after the opening, returns far exceeding the expectation of the most sanguine proprietor. He held 1,500 shares in the railway as a permanent investment. (Much applause.)

The DEPUTY-CHAIRMAN (T. W. Rathbone, Esq.) said, his colleagues and himself were much indebted to the honourable proprietor for his suggestions, especially as to the consolidation of the line by the running of goods' trains, and would take care to carry them into effect by every means in their power. (Hear, hear, hear.)

The CHAIRMAN would be happy to answer any further questions, failing which he would move that the Reports now read be received and adopted.

Mr. ASHTON wished to know if any more money would be wanted. This had been a most unfortunate concern from its very commencement. They were originally told that they were to go to Norwich with a single line for less than the sum which it would now take to complete the railway with a double line to Colchester. The delay, too, in opening was most tantalizing. No doubt it was unforeseen, for he had no desire to detract from the merits of the Engineer, but it was very unfortunate. In August last they had been called on to raise 200,000*l.*, and with all the slips and slides of which they had heard, perhaps 160,000*l.* more would be required. (Hear, hear, hear.)

The CHAIRMAN said, the Directors had no data before them to lead them to the conclusion that the estimates would be materially exceeded, beyond the uncertainty always attending the completion of such works.

Mr. BRAITHWAITE said, the extra outlay which might have arisen had been discontinued by him when he found that it was impossible to complete the line by the time specified. It would have been but a poor return to the proprietors for the confidence with which they had uniformly honoured him, if, to gratify his own ambition, he had secured the opening of the line by this day at an extra expenditure of about 40,000*l.* (Hear, hear, hear.)

Mr. MARKS wished to ask a few questions. It was stated in the Engineer's Report that the extra expense incurred on the Gubbins' embankment was 45,000*l.*, and this was attributed to the bad materials of which the embankment was composed. Was not the Engineer previously acquainted with the nature of the materials, so as to obviate the necessity of constructing the embankment nearly twice over? He saw no use of meeting periodically, unless to put such questions as would fully develop the position of the undertaking. ("Hear, hear," from the Directors, and applause.) The very circumstance that so many gentlemen of influence had assembled on this occasion—although he could have wished that *they* had elicited the requisite information—gave him additional confidence in the undertaking, for they, doubtless, had a much greater stake than himself in the railway, although his 20*l.* might be as much to him as their 100*l.* to them. (Hear, hear.) Another question which he wished to put had reference to the great expense of the side cuttings. Was not the land capable of being converted to the profit of the Company? Again, Mr. Braithwaite adverted to the influence of causes over which he had no control as increasing the expenditure, but were there not on the other side circumstances which would effect some saving? For instance, he believed they would require about 30,000 tons of iron for the 53 miles of railway, and from statements put forth by the British Iron Company, and by the Directors of the Bristol and Gloucester Railway Company, it appeared that a saving of from 5*l.* to 6*l.* a ton might be effected. Then the price of labour was less, so that altogether, he thought, they ought to save from 40,000*l.* to 50,000*l.* on the part now to be opened. With respect to the Yarmouth and Norwich Railway, he understood from the Directors' Report, that there were certain clauses having reference to the Eastern Counties' Company. Were these clauses so clearly defined that they could at once be acted upon? He put this question because they had been contending for a year and a half with the Northern and Eastern Company. With respect to the Northern and Eastern Company, he found from the Report that the arrangement now entered into extended only to two years, and he wished to know whether the whole affair would then have to be re-opened? He was anxious also to know what was the expense of the survey of the line from Bury to Kelvedon? It had been said that the expense of the survey would not exceed 1,000*l.*, whereas in the accounts the sum charged was 1,500*l.* Then as to the law accounts, he saw one item of 18,000*l.* to the Solicitors, independent of allowance to country solicitors. Was there any large amount in arrear? Next he saw an item for the examination of old books, with an addition during the last half-year. Were these books the books of the late Secretary, Mr. Robertson, or were the books of every preceding year regarded as *old*, and an Accountant employed to put them right? If so, of what use were the Secretary and clerks? Before he sat down, he begged to express his full confidence in the Chairman and Board of Directors. The reliance which the public felt in their honour and integrity had led them to embark in the undertaking, and it was with no wish to disparage them or the Engineer that he had submitted these questions. (Hear, hear, hear.)

The CHAIRMAN, after thanking the honourable proprietor for his good opinion and for putting these questions, said he would refer them to the Engineer, the Solicitors, and others.

Mr. BRAITHWAITE said, with regard to the Gubbins' embankment it was principally composed of side cuttings, which in dry weather would have stood well, but unfortunately it was put together in very wet weather, as there was no other means of completing the embankment, and they were obliged to use the best material they could get. Another part of the embankment had been subjected to a chemical process, and the result had thrown an entirely new light on such matters. It might be said that Engineers ought to be chemists. They did try to "cram" themselves as well as they could on all matters pertaining to the execution of the works, but in such an instance as this it seemed that they had not acquired sufficient information. The same phenomena had been developed on the Croydon Railway in the late very extensive slips, and had arisen from the decomposition of pyrites with the sulphate of lime, producing crystalization. Where the process would end it would be difficult to say.

Mr. MARKS hoped the Engineer saw that it would end, and soon.

Mr. BRAITHWAITE said, his impression was that the greater part of the embankment was in a healthy state. In fact, a great part of it was composed of

Digitized by Google

gravel used as ballast, and hence the enormous expense of tracking it. He had no doubt, however, that ultimately this would prove one of the soundest portions of the line. With regard to the side cutting, they had in the case of the Gubbins' embankment merely occupied for a time a field of 10 acres, at a cost of 30*l.* an acre (which, indeed, was more than the full value of the land), the field reverting to the original owner. As regarded the other side cuttings, he had no doubt they would ultimately be turned to the benefit of the Company. (Hear, hear, hear.) As to the rails, it would be seen from his Reports that great savings had been already secured under this head; and but for this, he could not have brought the figures of construction so low. It should be remembered, however, that the Company had not at times had much money at command, and therefore they only purchased the rails as they were wanted, and did not lay in a large stock. But it was not in respect of the price of rails only that money had been saved. The alteration of the gradients had been productive of economy, and he had thus been enabled to substitute masonry for those enormous embankments, which otherwise would have been indispensable. He wished he had taken upon himself to carry this substitution still further. If he had done so, instead of being here to-day, he should have had the pleasure of escorting them to Colchester, and however much he might now be blamed for taking such a step as that referred to, he was satisfied that ultimately, and ere long, he would not have their censure. (Applause.)

The DEPUTY-CHAIRMAN explained that the original agreement with the Northern and Eastern Company extended to 20 years, and that the 2 years' experiment of a low toll would not interfere (should the Eastern Counties' Company decline to renew the arrangements) with the amount in the first instance levied. (Hear, hear.) In addition to this agreement, several minor arrangements, which at first could not be entered into, had been concluded, and he had no hesitation in repeating what he had previously predicted, namely, that the arrangements would prove mutually advantageous. (Hear, hear.)

The MANAGER, (R. Hall, Esq.) replied to the question respecting the Solicitors' accounts. He stated that the Solicitors bills were examined and paid monthly, so that there were only the bills from July last that had not appeared in the statement of accounts. The two items in the accounts were divided, because the one referred to Parliamentary business, the other to the daily legal business of the Company.

Mr. BRAITHWAITE then noticed the question as to the Bury and Kelveden survey. He said the survey might possibly cost 400*l.* or 500*l.* more than the 1,500*l.* originally set apart for that purpose. This arose from the difficulty of the country, and from the circumstance that it had been desirable to re-survey the country, the previous survey having necessarily been made in haste. He was convinced that this new survey would be advantageous in carrying the Bill, and that the ultimate charge would be found extremely small for the work performed.

The MANAGER explained as to the "old books," that the examination of the whole had been completed two years ago, but that during the last six months a balance due to Mr. Davis on account thereof had been paid, and therefore appeared in the financial statement. The whole matter was now at an end.

Mr. ELLIS, jun. (of Leicester), said the Report referred to an extra expenditure; he wished to know its probable amount?

Mr. BRAITHWAITE said, the extra expenditure for side cuttings would amount to 10,000*l.*, and there would probably be about 1,000*l.* additional for other matters.

Mr. ELLIS presumed, therefore, that 15,000*l.* extra would be "the outside."

Mr. BRAITHWAITE did not believe it would be so much. (Hear, hear.)

Mr. MARKS said it was hinted in the Engineer's Report, that the contractors had not been so active as they might have been. Were these parties under penalties, or were the Company suffering from their neglect?

Mr. BRAITHWAITE said, the Company were not suffering. From the delay which had occurred in gaining possession of the land, the contractors had in part considered themselves absolved from stipulations as to time, and they objected to complete by day and night work what they thought they could have easily completed by day work alone, if they had obtained possession of the land as soon as was expected.

A good deal of conversation took place on this point, a proprietor (apparently from the neighbourhood of Brentwood—we could not get his name) contending that by other arrangements the works might have been expedited, and money saved. It was, however, the opinion of a non-professional against the experience of the Engineer, and so the meeting seemed to regard it, for the honourable proprietor was called to order, as entering upon irrelevant and trivial matters.

Mr. LEMON inquired the value of the Company's surplus property.

The CHAIRMAN said, it was estimated at between 80,000*l.* and 90,000*l.*

Mr. LEMON said, he had asked the question because, as another call was impending, the disposal of some of the surplus property might delay it.

The CHAIRMAN said the call would be deferred as long as possible, but probably it would not be for the interests of the Company to hurry on a sale. (Hear, hear.)

Mr. ELLIS said, he had come 100 miles to attend this meeting, and he was anxious to ascertain the total cost of the line. They had been called upon for 200,000*l.* in August last, and they were now told by the Engineer that about 11,000*l.* more would be required in his department. Was there any probability of excess in other departments?

The CHAIRMAN could only refer to what he had previously stated, namely, that the Directors had no data before them to lead them to the conclusion that the estimates would be materially exceeded, beyond the uncertainty always attending the completion of such works. The Directors must depend upon the statements of the Engineer, whose answers the meeting had heard. They did not anticipate any other excess, and their efforts should, as heretofore, be given to the promotion of economy in every possible way. (Hear, hear, hear.)

Mr. ELLIS said, he was quite satisfied with the Chairman's answer.

A PROPRIETOR inquired if Government would sanction the opening of the railway with only one track of rails.

Mr. BRAITHWAITE believed General Pasley was too sensible a man to object to the carriage of goods upon one line of rails, although he did not think the Company would be allowed to carry passengers without a double line.

A PROPRIETOR inquired when the line might be expected to be opened.

Mr. BRAITHWAITE said, he had already disappointed the proprietors in the promises he had made, and therefore was unwilling to promise further. He thought, however, that with three weeks of fine weather the railway might be opened for goods, and probably with a double line of rails throughout, except at the two or three points to which he had referred in his Report. (Hear, hear.)

After some further conversation,

The Chairman moved, and Mr. Squires seconded, the adoption of the Report.

The motion was carried unanimously.

The CHAIRMAN announced that the business of the day was at an end, whereupon

Mr. PERRY proposed that 100*l.* be given to the workmen to provide a dinner for them on the completion of the line to Colchester.

The proposition, however, was received with ridicule and contempt, which Mr. Perry did not seem to regard, having, as he said, done his duty in bringing the matter forward.

A vote of thanks to the Chairman and Board of Directors was then proposed from several parts of the room, and carried by acclamation, amid much applause.

The CHAIRMAN returned thanks, and took occasion to advert to the vast amount of traffic in the district through which the railway passed—a traffic he said almost wholly unknown to the residents at the west end of the metropolis. He also passed an eulogium on the beautiful scenery of Essex, as very different from the notions which most people entertained of it, who had seen nothing but the *aguish* banks of the Thames.

The meeting then broke up.

EASTERN COUNTIES' RAILWAY.—It being rumoured that negociations are going on between the Railway Company and Earl de Grey, for the purchase of a slip of land leading from the station recently erected on the Mile End Road, Colchester, to the Ipswich road, near Dilbridge farmhouse, for the purpose of making a new road for traffic to and from the railway, from Ipswich and other parts of Suffolk, thereby evading East and North Hills, and, in fact, to escape passing through or near the town altogether, a meeting was held at the Cups Hotel, on Friday last, at which were present Sir G. H. Smyth, Bart., M. P., the banker, and several of the most influential inhabitants, when it was resolved that Sir Henry Smyth be requested to communicate with Earl de Grey the injury such a project would inflict upon the trade of the town, and to request the noble Earl not to accede to it. If such is the case, it appears that the Railway Company, as a requital for the supineness evinced by the town authorities, intend, if possible, to give the town of Colchester the "go-by." Surely the inhabitants will not be so blind to their own interests as to suffer (without the strongest efforts to prevent it), the advantages of the traffic to and from the terminus to be taken away from the town. Might not some arrangement be made with the Railway Company ere it is too late? Surely the subject is of that importance to the town that it ought to be taken up generally without delay, as delay in such a case is dangerous—for if once a new road is established, farewell to the traffic.—*Essex Mercury.*

EDINBURGH AND GLASGOW RAILWAY.—On Thursday afternoon, about four o'clock, a sensation was produced along Prince's-street by the appearance of a train of six carts linked together, and laden with the immense rope manufactured by Messrs. Haggie, of Gateside, for the tunnel near the Glasgow terminus of the railway. The rope was laid in longitudinal coils along the range of carts; it seemed to be about two inches in diameter, and of very strong texture. The rope is upwards of three miles long, and weighs 15 tons, being five tons heavier than any line ever manufactured before. On the way up Leith-walk and Leith-street nine horses were required to drag this ponderous load; but on reaching the level ground of Prince's-street, three of these were dispensed with, and the remaining six proceeded at a brisk pace with their burden to the terminus of the railway.—*Caledonian Mercury.*

RAILWAYS IN FRANCE.—The total length of railways at present open in France is 748 kilometres (196 leagues), which are thus divided:—From Lyons to St. Etienne, by Givors and Rive-de-Gier, 58 kil.; St. Etienne to Andrezieux 22, Andrezieux to Roanne 67; branch line from Montrond and Montbrison 18; Paris to St. Germain 19; Paris to Versailles (right bank) 19, ditto (left bank) 17; Mulhause to Than 10; Strasbourg to Basle 140; the Grand Combe Mines to Nimes 64; Nimes to Beaucaire 24; Cette to Montpellier 27; Bordeaux to Teste 51; Paris to Orleans 26; Nimes to Montpellier 50; Lille and Valenciennes to the Belgian frontier 28; Epinay to the Burgundy Canal 28; Epinay to the centre canal 15; Villers Cotterets to Port-aux-Perches 8; Denain to St. Wast 9; Denain to Abscon 5; Montet-aux-Moines to the Allier 25; and from Creusot to the centre canal 10.—*Sun.*

ACCIDENT ON THE LONDON AND BIRMINGHAM RAILWAY.

(COPY.)

To S. Laing, Esq., Board of Trade, Whitehall.

SIR,—The occurence which I am instructed to report, although only productive of a partial delay to one of the Company's trains, was marked by circumstances which, as connected with the safety of railway travelling appear to deserve notice.

The 6 o'clock a. m. down train of yesterday, consisting of two second-class carriages and three first-class carriages, preceded by No. 15 engine and tender, was proceeding at its greatest speed over an embankment about a mile and a half on this side of Leighton, when a bull, which had been over driven, leaped the railway fence, rushed up the side of the embankment in front of the engine, and before the engineer could see the animal, or slacken his speed, was struck down and passed over by the engine and tender, which, remaining on the rails, dragged both train and carcase after it. The obstruction thus created had the effect of separating the axle and hind wheels of the first carriage from the body, leaving it suspended by the side chains which connected it with the next carriage and the tender. The two second-class carriages, with one first-class carriage, were in consequence thrown off the rails.

The facts to which it is particularly desired to call attention are, first, that the four-wheeled engine which passed over an animal of so much strength and bulk was not thrown off the rails, and that this is the fourth instance of our engines of this construction passing over the bodies of heavy cattle without being displaced.

Secondly, that no person in the train was in the slightest degree hurt, and that as all the carriages were fitted with buffer-springs, and carefully secured by their side coupling chains, it is more than probable that these precautions were the means of protecting the persons of the passengers from injury.

It is only necessary to add, that the fence which the bull leaped was in good condition, and that no blame whatever could attach on this occasion to any of the Company' servants.

Your most obedient servant,
(Signed) R. CREED.

Office, Euston Station, Oct. 25, 1842.

EFFECTS OF RAILWAYS.

[From the *Sun*.]

THE *Morning Post*, in throwing doubts on some observations on the effects of railways in diminishing the general prosperity of the country, has some judicious remarks on the change rather than the lessening of employment, by the use of new contrivances, which we should wish that journal always to remember. Speaking of such places as Hounslow and Barnet, our contemporary says—

But we must demur to the soundness of the conclusion that these "deserted villages" are the cause of the general distress, since they no doubt produce much activity in other quarters, and the difference between the large sums they receive, and the dividends paid to shareholders, must *go into the pockets of working people of some kind or another*, and thence to the purchase of such commodities as these people consume. There is, however, much reason to doubt that the innkeeping business has at all kept pace with the increase of travelling in England. The railways enable people to do without the accommodation of inns. Formerly, if a man were coming up from Liverpool, or Manchester, or York, to transact business in London, he would probably spend a couple of pounds by the way, going and returning, at the roadside inns. Now he gets from his own home to London, or from London to his own home, without spending more than 1s. in some luncheon-palace on the railway line.

But if he does not eat at the inns he eats at home. True; but then he pays only what the thing costs, whereas at the inn he "distributed" about three or four times the cost of the viands. There may be something in this. The railways, while they pay 10 per cent. to rich people, who embarked capital in them, cut away many of the profits of the poorer sort.

The same doctrine, of course, applies to all kinds of machinery, all the extra profit made by which will certainly be invested in some kind of new production or other, and find its way into the pockets of some class of working people. "Money-making men," says the Editor of the *Struggle*, published in the heart of the manufacturing districts, and well acquainted with the habits of capitalists, "never *accumulate*; that is to say, they never lay it by, for as it respects the actual possession of cash, they are often amongst the barest. They either sink it in trade, or place it in the bank, whence it is lent on interest to others who are short of capital. In either case it is used in such a manner as to find employment." What master manufacturers gain, therefore, by improved machinery, and by cheapening production, they immediately put out to use, and the greater their gains the greater is the sum which they so put out; the greater of course, also, is the demand by capital for labour, and the more the labourers are benefitted. This is a clear and plain deduction from the admission of the *Post*, and we hope that our contemporary will not again accuse machinery of lowering wages, or cheap production of injuring the labourer.

Having thus entered the *Post* on a right track by its own impetus, we proceed to notice, which is our chief object in making the quotation, the beneficial change in morals and in employment which our contemporary proves to be the consequence of railway travelling. Sojourning in inns has long been felt to be a great discomfort to domestic men, and has been long stigmatised as unfavourable to morality by religious teachers. Railways, in a great measure, enable travellers to dispense with inns. They pass from their home to the other extremity of the island in a few hours, and rarely, or never, have occasion to stop at an inn by the way. The old system of travellers drinking every half-dozen miles is quite at an end; if thereby innkeepers have suffered, many homes, we believe, have been made happier, and much money saved from taverns has been spent in a more beneficial manner.

The change which that indicates in employment is not undeserving of notice. Travellers stopping at inns spend considerable sums of money on waiters, boots, and chambermaids, persons whose occupations, however respectable the individuals, require no great degree of talent or skill. So the use of stage coaches gave employment at every couch and posting house to a considerable number of ostlers, grooms, stable helps, riding boys, loungers about the tap, half mendicants, half labourers, ready for any kind of job—to ride a spare horse, to carry a parcel, to run with a letter, to deliver a message—a great body of persons who were never trained to any continuous patient toil, and were amongst the least skilful and the least elevated of the community. At least it is consistent with all our early impressions to believe that the multitudes who collected about coaching inns were, next to poachers, perhaps the least creditable portion of the rural community. Railways have nearly put an end to their occupation, and must tend to lessen, if not to extinguish, such classes of men.

We are by no means of opinion that railways have caused any great diminution of employment for horses and coaches, for where one long stage before plied there are now a great number of short stages, of cabs and omnibuses. Little or no employment actually depending on the rearing and maintaining horses has been lost. Some of the persons connected with the long stages have become omnibus and cab drivers, and probably, by being dispersed, have improved in character and station. So far as the servants of inns have been superseded by porters and servants connected with railways, the change is advantageous, for the discipline maintained amongst the latter makes them in general quite models of propriety. They live not in public-houses, and do not, as the rule, pass their spare hours in drinking and smoking. Policemen on the railway line must be watchful and steady, or they cannot retain their situations. Next come the guards and conductors, who are continually under inspection, and must be at least as careful and steady as the guards of coaches. Great as is the skill of a coachman, and many of them were latterly most respectable steady men, it cannot be compared, we think, to the skill of the engineer, who has superseded the coachman. We know of no class of labourers connected with coaching to be compared to the stokers, who are always occupied during their working hours; or to the smiths, who make and repair the stupendous machines, that are at once horses and carriages, and give motion to the whole mile-long trains. A great many more carriages are required for railways than for common roads, and the use of the former has not diminished the employment of coach-builders and coach-smiths.

The principal and most noted change of employment is the substitution of the thousand intelligent and tolerably well educated mechanics who contribute to the perfection of a railway, for the stable boys and idlers who congregated about great coach houses and great posting houses. The mechanics live in a comparatively cultivated and informed society, and we could, if it were worth while, quote Lord Brougham's authority for their being some of the most enlightened and best behaved persons in the community. Such a change in employment in every way advantageous. It is a type of those changes which are going on in every part of society—which would go on more rapidly were politicians to interfere less—and of which the gist and principle is to substitute skilful machinery, the produce of the mind of man, for untutored animal power. No persons have a higher opinion, we believe, of railways, than ourselves. Great as is the celerity, the ease, certainty, safety, and convenience of railway travelling, are quite as surprising; yet we venture to doubt whether their moral benefits, substituting home for inns, and intelligent mechanics for the loungers of the tap and the stable-yard, be not quite as great as their physical advantages.

FORMIDABLE ACCIDENT ON THE BRANDLING JUNCTION RAILWAY.—On Monday evening, when the 7 o'clock train from Sunderland was crossing Boldon Flat, a horse was on the line, and was run down by the locomotive engine, which crushed the poor animal to instant death. The train was thrown off the line by the obstruction. The engine and tender, breaking loose from the carriages, rushed down the low embankment into the adjoining field, and were there overthrown. The first carriage fell across the line; the others were thrown over the embankment. Happily, and most surprisingly, neither the enginemen, stoker, nor passengers, sustained the slightest injury. The carriages were much broken, but the engine and tender escaped with little damage. This is the first accident, of any moment, that has occurred on the Brandling line.—*Gateshead Observer* of this day.

BLACKWALL RAILWAY.—The sale of the surplus property belonging to the Blackwall Railway Company, situate contiguous to the terminus in Fenchurch-street, has excited more than ordinary competition, owing to the growing demand for business premises in that part of the City. The Railway Company in extending the line from the original terminus in the Minories to the present one in Fenchurch-street, were compelled to purchase a much larger area than was ultimately found requisite for the purposes of the railway, and the property has consequently been brought to the hammer by order of the Directors, who selected Mr. Leifchild as their auctioneer. The sale, which has already occupied seven days at Garroway's Coffee House, has been numerously attended in every instance. Although bought originally at what was then considered an exorbitant price, as all property required for public purposes generally is, the sale has nearly realised the cost price. Nine lots were sold yesterday, consisting of freehold dwelling-houses, offices, counting-houses, &c., producing altogether, 8,640*l*.—*Morning Post* of yesterday.

LIVERPOOL AND MANCHESTER RAILWAY.—The dulness of business and the scarcity of money have recently greatly diminished the number of passengers even on the best railways, and have reduced the trains on the poorer lines to little better than a beggarly account of empty boxes. The attempts made to remedy this by increasing the amount of fares have proved failures in every case that we have heard of. Two stopping places for the second-class trains are about to be abandoned on the Liverpool and Manchester Railway, namely, those at Flow Moss and Lamb's Cottage, both on Chat Moss.—*Liverpool Times.*

RAILWAY IMPROVEMENTS.—We are told, upon highly respectable authority, that "an entirely new description of railway carriage has been invented by a professional gentleman at Hammersmith, which may be propelled without the aid of steam at an extraordinary speed, exceeding 60 miles per hour, with comparative safety, without oscillation, or any possibility of turning over by the loss of a wheel or an axletree breaking, and worked upon a most simple principle, and which will, no doubt, eventually become the ordinary mode of railway travelling by short distances, from the circumstance that the railway and carriages may be constructed and kept in repair at less than a fourth of the usual expenses. —*Globe* of Monday week.

DOVER TERMINUS OF THE SOUTH-EASTERN RAILWAY.—The Directors of the South-Eastern Railway Company, attended by their Engineer, Mr. Cubitt, have arrived in Dover for the purpose of fixing the Dover terminus. They have had some interviews with Mr. Hardwick, the surveyor to the Dover harbour estates; and from what has transpired it is conjectured the station will occupy the site of Beech-street and Fisherman's-row—being the line from Archcliff Fort to Cheesman's Head; and it appears to us a better situation for the terminus could not have been selected. It will be very convenient to the harbour aud pier, and perhaps the least expensive of any that could have been found suitable for the purpose. — *Dover Chronicle.*

THE MANCHESTER AND LEEDS EXTENSION LINE.—The Manchester and Leeds Extension Railway, from the main line to the intended station at Hunt's Bank, is progressing rapidly. Every contract has been let, and the work has been commenced on every one except that of the station at Hunt's Bank. In preparation for it, however, we see that a row of houses in Hunt's Bank is already taken down; and it is intended to raise the level of the road over Hunt's Bank Bridge four feet, and to have an inclined approach to the line (which will be considerably above the level of the road, the railway being carried over Ducie-street by an iron bridge), from a point just beyond the Castle Inn. It is expected that the rails will be laid down to the Hunt's Bank station in the present year.—*Manchester Chronicle*, October 15.

BRUSSELS, OCT. 26.—The section of the iron railway from Tournay to Courtray was opened on Sunday. The train set out from Courtray at half-past eleven, and reached Tournay in less than an hour and a half. Though the weather was most unpropitious, great numbers of persons were assembled at the several stations, especially that of Tournay.

SHEFFIELD AND MANCHESTER RAILWAY.—This line is rapidly progressing in its works, and in three months hence the Company will be able to open it as far as Glossop, to the numerous population of which district the immediate communication with Manchester will be of great service and convenience. Hattersley tunnel, between this town and Glossop, is formed, but not finished, and the other parts of the line leading to it are in a forward state. Thus, for the next summer, another section of delightful and picturesque country will be rendered cheaply and easily accessible to our townsmen in pursuit of health and pleasure. The Vale of Glossop is distinguished for its wild and romantic scenery, and the hills and vales surrounding it are equally marked for their natural beauty and grandeur.—*Manchester Times.*

WEST LONDON RAILWAY.—The general meeting takes place next week, when it is to be hoped as large a number of the new shareholders as can possibly attend will be present.

NORTHERN AND EASTERN RAILWAY. —ALTERATIONS OF TRAINS for the WINTER MONTHS.—On and after Monday, the 7th November, the Trains will run as follows:—

DOWN TRAINS.

From Shoreditch to Bishops Stortford.

8 o'Clock	morning.	
30 minutes past	9	morning.
30 minutes past	11	,,
30 minutes past	1	afternoon.
30 minutes past	3	,,
30 minutes past	4	,,
15 minutes past	6	,,
30 minutes past	8	,,

UP TRAINS.

30 min. past	5	morning,	from Bishops Stortford.
10 min. past	8	,,	from Broxbourne.
30 min. past	8	,,	from Bishops Stortford.
30 min. past	9	,,	Ditto.
30 min. past	11	,,	Ditto.
30 min. past	2	afternoon	Ditto.
30 min. past	4	,,	Ditto.
40 min. past	5	,,	Ditto.
7 o'clock		,,	Ditto.

SUNDAY TRAINS.

DOWN.

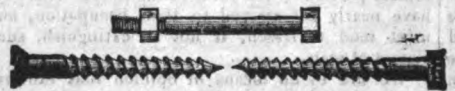
8 o'clock	morning,	to Broxbourne.	
30 min. past	9	morning,	to Bishops Stortford.
30 min. past	2	afternoon	Ditto.
30 min. past	4	,,	to Broxbourne.
30 min. past	8	,,	to Bishops Stortford.

UP.

30 min. past	5	morning,	from Bishops Stortford.
30 min. past	8	,,	Ditto.
30 min. past	2	afternoon,	from Broxbourne.
30 min. past	4	,,	from Bishops Stortford.
8 o'clock		,,	from Broxbourne.

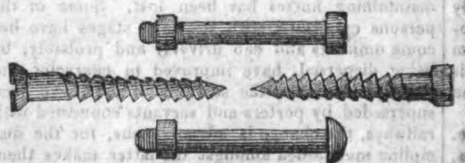
These Trains (except the 30 min. past 5 Up Train) call at all the Stations.

By order of the Board,
WM. BOURNE, Secretary.



Shoreditch, London, October 26, 1842.

THE GREAT LATHE.—To be Peremptorily Sold by Auction, without any reserve, by Mr. Gimblett, at the Union Inn, Union-street, Birmingham, on Monday, the 7th of November next, at Four o'clock in the afternoon, subject to conditions there to be produced—all that most complete and comprehensive Lathe, of very superior workmanship and design, with 18 feet Bed, Head Stock Centre 2 feet 11 inches, Compound Sliding Rest, self-acting, for turning cones, surfaces, of cylinders, with an Apparatus, applicable at pleasure to the sliding rest, for drilling against the face-plate, cutting and sawing metal, also for the cutting teeth of wheels of any pitch.



This Lathe is a complete self-acting Boring and Planing Apparatus for any sized cylinder up to 4 feet diameter, will plane a surface of 8 feet by 3 feet 6 inches, and will cut slots or key ways 15 inches long in the interior of a cylinder from 2 inches to 5 feet diameter, or 18 feet in length on the exterior of any cylinder under 6 feet diameter.

A quantity of Cast Steel Turning Tools, Boring Bars, Cutter Blocks, large number of Cast Steel Cutters, Boring Carriage, Planing Bed, &c., will be included in the purchase of the Lathe.

To view the same, apply to Messrs. Cemm and Hooper, Chunk Works, Coventry-road; and to treat, apply to Messrs. Tyndall and Son, Solicitors, Little Charles-street; Mr. W. R. Kettle, Accountant, Waterloo street; or to the Auctioneer, Cherry-street, all of Birmingham.

T. H. RYLAND AND CO., OOZELL'S STREET • BROAD STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws, Screw Bolts, Spikes, & for Railway and other purposes, also Boiler Rivets, &c.

I. AND D. GLASGOW, Trafford St. Knott • Mill, MANCHESTER, Manufacturers, by Improved Machinery, of Wood Screws, Screw Bolts, Spikes, &c., for Railways; also Boiler Rivets, &c.

IN A SHARE-BROKER'S OFFICE, IN THE NORTH OF ENGLAND, WANTED a Gentleman of active, business habits, who wishes to be initiated in the business of a Share Broker; to remain 6 or 12 months, as may be agreed upon. None but Principals need apply. Address, "Demidoff," *Railway Times* Office, London.
20th October, 1842.

TO ENGINEERS, RAILWAY PROPRIETORS, AND OTHERS.—An Apparatus, consisting of a powerful Lamp and Reflector, which is calculated to throw a strong light upwards of 300 yards in advance of an Engine on a Railway, has lately been constructed, and the value of its application proved by a considerable number of trials lately made. In case of an obstruction on the line, an Engineer would be enabled to stop, or so to decrease the spred of a train, as in great measure to avoid many of the accidents which have arisen from the want of such light.

For additional particulars apply to the Soho Plate Company, Soho, near Birmingham, or No. 16, Salisbury square, London.

TO ENGINEERS AND CAPITALISTS.—The Advertiser having made the Electro-Magnetic Engine his study for some years, has succeeded in effecting a construction free from the principal defects of those hitherto exhibited. The arrangement of the parts is such, that the full power of each magnet (both attractive and repulsive) is in constant operation, there being neither any cessation of power required for producing the motion, nor any back action created.

In all engines hitherto publicly known, there are certain points where the magnetic power almost entirely ceases to act, and the motion is only continued by the momentum acquired in the preceding part of the revolution. In this new engine that defect does not exist, and the power is calculated (*as that of every efficient engine must be*) from its *weakest point*.

The Advertiser not having at present pecuniary resources sufficient for the purpose, will allow liberal advantages to any Company or individual who will assist him in bringing out and securing his invention. A young Engineer with a few hundred pounds might thus secure himself permanent and lucrative employment.

Address P. E. *Railway Times* Office, 122 Fleet-street.

HORSE CLOTHS.—HORSE CLOTHS RENDERED WATERPROOF by the celebrated Burmese Japan Process of Newbery & Co. This excellent protection for that good and useful animal, the Horse, is fast superseding every other cloth or covering. It is totally impervious to rain, does not shrink, shrivel, or crack, and is very strong and lasting. The prices are moderate.

Improved Horse Cloths.—Horses, like ourselves, are benefited by a clothing, which, while waterproof, will not impede the free escape of perspiration. Newbery's Lycopodium, or ventilating process of waterproofing, is admirably adapted, and may be safely applied, for ventilating the clothing of gentlemen's horses.

When very hard wear is required, and for common use their Burmese Japan Canvass will be found all that can be desired, for it is at once the most impervious, supple, durable, and durable composition ever offered to the public.

7, Cripplegate buildings, Fore-street, City; 30, Pall-mall; 34, King William street; or, by post, at the Manufactory, Church-street, Deptford, Kent.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street.

I.

TUCK'S MAP OF THE RAILWAYS for 1842, throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to August. Price 1s., in cloth.

III.

ROBINSON'S RAILWAY DIRECTORY for 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street. Stitched with a Map of London. Price 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street. Stitched with a Map of London. Price 6d.

MR. HALL'S "SMOKE-CONSUMING" PATENT.

Dublin, Oct. 10.

To W. Y. Calster and Samuel Crompton, Esqs.; Honorary Secretaries to the Manchester Association for the Prevention of Smoke.

GENTLEMEN,—In my last I noticed Mr. Hall's statement that I was in error in calling his patent of 1841 the *second*, whereas it should have been the *third*; the main facts of the case, however, remain the same, namely, that it was *the* patent of 1841, which, in direct terms, amended that of 1836, that it was these amendments which Mr. Hall adopted in the *Star* engine, and that such amendments were infringements on my patent of 1839. I have now further to *add, as regards the Star* locomotive, and, I am informed, that, on being examined, subsequently to Mr. Hall's trials, it was found to have been seriously injured—that the steam chests were much burned, and may require to be renewed.

Mr. Hall, still harping on "the counsellor," observes, "The pugnacious counsellor is not satisfied with giving my poor *Star* a knock down blow, but, to use the language of the fancy, "he kicks it while down." The wit I do not see, but this I know, that, talking of his success, this *Star* is certainly not now in the ascendant, and had better not be mentioned as connected with success. As to the *pugnaciousness*, however, of "the counsellor," I think I have rather less claim to the epithet than Mr. Hall himself, inasmuch as, in the course of a long business life, I never either brought an action against any man nor ever had to defend one. Can Mr. Hall say the same? The St. George's Company, I apprehend, are put now in a position to answer the question. Mr. Hall endeavours to escape from the effect of Mr. Buck's letter by a quotation, the tenor of which, he would imply, means no insinuation against my furnace at Store-street, Manchester. Had Mr. Hall but given the passage just previous to his quotation, it would have put a different view on the subject; as he has omitted it, I here give it:—"I could point out many of *his failures*, and I challenge him to point out one of *mine*. I will only mention one instance of our coming in competition, as a criterion of our respective successes." Will Mr. Hall say there is no insinuation here, or that it was not intended to convey the impression that this "one instance" was an instance of "failure?" Mr. Buck's letter answers this subject.

Mr. Hall's last two diffusive letters really evade the real question at issue. Instead of taking it on its merits, he merely repeats the charges of "presumption" in my dictating to others, of "overweening vanity," and *such like irrelevant* matter. Yet, may I not ask, if such charges do not equally lay against all other patentees, and more forcibly against Mr. Hall himself, with his *three*, and Mr. Chanter with his six, patents, and all for the "consuming of smoke?" Mr. Hall is very liberal of personal abuse, but if a word be uttered in retaliation or self-defence, he at once becomes extremely sensitive, and exclaims against "aspersions" and "personal allusions." He threatens me through his solicitor, and yet exclaims against threatening, when I write him—in the only one letter I have addressed to him on the subject—that "I am not to be bullied or frightened."

In his letter in the Journal of the 1st instant, Mr. Hall characterises the chemical principles I have advocated and reduced to practice, as "fudge!" Surely Mr. Hall does not expect that this will pass for argument, and on a subject which has engaged the attention of the ablest chemists and philosophers? It is enough for me that those principles have been approved by many of the highest living authorities, and that Dr. Kane, in his late course in Liverpool, after experimenting with my furnace during two days, and examining several erected by me in that town, made those principles the subject of a special lecture. Such sanction outweighs a host of interested and uncandid cavillers. Indeed, to compare small with great, I cannot forget that even Dalton himself was, in his own town, both violently and offensively assailed when he first broached his doctrine of the "*diffusion* of gases," and which Mr. Armstrong, while undertaking to teach others on the subject of combustion, actually mistook for the *separation* of the combustible from the incombustible gases in furnaces.

Mr. Hall disputes my right to enter the lists with him, on the alleged ground that my education did not qualify me for chemical pursuits, that, "while the *ci devant* counseller was studying law, he (Mr. Hall) was studying chemistry and mechanics, as connected with his avocations of a cotton spinner, bleacher, patentee of gasing thread, lace, muslin, calicoes." &c., that he "flatters himself he succeeded in his pursuits as fully as the *learned gentleman* did in his," and finally, that such was his extent of scientific knowledge, that he "had forgotten more chemical and mechanical science than I ever knew, *or ever will know*, for, as he adds, "old dogs learn no tricks." How far this important enumeration of thread, lace, muslins, and calicos, may enable us to decide as to the merits of his *hot air* principle, against mine of *cold air*, is not exactly clear. I will not, however, question Mr. Hall's right, or prudence, in giving this interesting autobiography, but I do deny his right of inventing a biography for me, and have just cause of complaint that I am obliged, in self defence, to intrude myself, personally, on public notice. Instead of unworthy and silly personalities, let Mr. Hall take up my Treatise on Combustion, and dispute its chemistry *if he can*. Let him disprove the chemical principles which, in my mode of introducing air, I have carried into practice. This is the only way he can satisfy the public tribunal to which he has appealed, that "he knows more chemistry than I ever knew, or ever will know." And let me ask, what do the public care, in considering that Treatise, whether the author, "Charles Wye (*alias* counsellor) Williams" (as Mr. Hall pleases to name me) began his career as a barrister or a "bleacher?" There is the Treatise—there are the principles (which Mr. Hall calls "fudge") on which I introduce the air, and on which I rely for the more perfect combustion of the gases from a furnace. My biography has no more to do with the question than Mr. Hall's volunteer personal abuse.

But if it will give Mr. Hall more confidence in my opinion on a chemical subject, and as he seems to set so much value on it in his own person, I have to inform him that I have had the honour and advantage, as well as himself, of belonging to that valuable and distinguished class of the community, *the bleachers*—that I also began life as a "bleacher," and above forty years ago, having served a regular apprenticeship to the business in one of the first houses in the north of Ireland. That if that be not sufficient, I can tell him further, that I became the acting partner with one of the ablest and most accurate men of business I ever knew, and who is, happily, still alive; that I subsequently became the sole owner of the establishment, then one of the largest in the country—that I entered on my career at a critical period of the linen bleaching trade in Ireland, when Tennant, of Glasgow, was introducing the new process, and which then created a great sensation and important change in the trade; that the gentleman with whom I lived during my apprenticeship, being himself an able chemist, manufactured and applied the new chemical compound; that my first chemical and practical information was obtained in attending to the manufacture of this material, which was then called the oxygenated muriatic acid, afterwards the oxy-muriate of lime, and now the plain "bleaching salt." That chemistry being then considered the essential study of a bleacher, the first book put into my hand was that of the illustrious Lavoisier, the great reformer of our chemical nomenclature; and that from him I derived not only my first knowledge of what he named "oxygen," but my attachment to chemical studies, for which I have ever thanked that perspicuous writer and able master. Besides this practical introduction, I may add, as it bears directly on the very point in question—viz., the producing combustion by bringing together the due "equivalents" of atmospheric air and combustible gases—that I began the study of that most valuable and essential branch of chemical science, gaseous formations and combinations, under the first propounder of the "atomic system," and even before that great philosopher, Dalton, whom the world justly delights to honour, had published a line on the subject. That even at that early period I took no small interest in the dispute which was then angrily carried on, respecting the rival claims of Higgins and Dalton, as discoverers of the *atomic theory*, and that the lectures of Professor Higgins on that very branch are fresh in my recollection, so stirring an interest did the subject create, and having received from the Professor's hands those tracts (the first printed in 1798) in which the idea of chemical proportions was first developed.

I may further add, as information for Mr. Hall, that so far from presuming to have discovered any hitherto unknown principle of chemical action in furnaces, my "overweening vanity" goes no further than the mere carrying into practice those true and recognised principles under which gaseous bodies are generated and prepared for combustion, and as they illustrate the true conditions and character of flame which I heard from the lips of their great discoverer—the illustrious Davy himself.

These being my favourite pursuits, I have, during the last forty years, watched the progress and manhood of chemistry, and the important lights which have since, year after year, been thrown upon it. Practically, then, as well as scientifically, my studies and experience at least stand on a par with those of Mr. Hall, for it is above thirty years since I introduced many economic and scientific improvements in the previously ill constructed and enormous furnaces on my own works; and, by the means of peculiarly constructed evaporating and reverberatory furnaces, was the first who undertook to reduce the strong alkaline leys, after being used in the bleaching processes, and to render them again available.

Thus the first fourteen years of my business life was passed in the best school of theoretical and practical chemistry and mechanics, while the last nineteen (as originator and manager of the Dublin Steam Company) have been devoted to the progress of steam navigation, and particularly to what belonged to engines, boilers, and furnaces. And here I may add, however harshly it may sound to Mr. Hall, that it was this very education, and not the "study of the law," which, fortunately, enabled me to forsee the practical disadvantages of his "patent steam-engine Condensers;" the unfortunate adoption of which by the three Directors of the St. George Steam Company (after paying Mr. Hall above £5000,) produced, by its ultimate failure (though at first it offered favourably), much inconvenience, and a loss of above £20,000, as stated to me by one of those Directors. It was this education, and the experience it produced, which enabled me to steer clear of the plausibilities and syren inducements of Mr. Hall, and resist his importunities for the adoption of this very "patent Condenser," although aided by the attractions of the splendid *snuff box*—falsely stated to have been purchased and "presented to Samuel Hall, Esq., of Basford," &c., by those three Directors—but which snuff box was, in fact, bought by Samuel Hall's own money, and presented to Samuel Hall by Samuel Hall himself—a fact which I have on the authority of more than one of those Directors.

Mr. Hall boasts of his mechanical knowledge as a "cotton spinner." In mechanical pursuits, I have, at least, an equal claim to confidence. The subject has engaged much of my attention, and it is above 30 years since I planned and constructed a large mill, with complicated machinery, and many improvements, on my own premises, connected with the dressing of linens, and was even the first who ventured to introduce into that part of Ireland the use of metal geering—until then wood alone having been employed. Having left the bleaching business and the linen trade in Ireland, when the indications of decline (and which, unfortunately for that country, has since been realised) were but too manifest, I have yet to learn, that having been at one time of my life called to the rank of barrister is either discreditable, or as disqualifying me from following those pursuits which were more congenial to my taste.

In the year 1822 I established (and was solely responsible, under the firm of C. W. Williams and Co.) the first Steam Company which undertook to carry merchandise across the Channel, and to ply during the winter months, and which Company has since merged into the "Dublin Steam Company." As to the success Mr. Hall boasts of, I assuredly can boast of this, that I have never occasioned a blunder one-twentieth part so great, or so expensive, as that which Mr. Hall himself indirectly occasioned to the St. George Company, by the use of his "patent Condensers."

In the *Mining Journal* of the 8th inst., Mr. Hall again labours to make me appear to contradict myself, when I said I had yet done nothing in the way of locomotives. This, however was true, and was written in reply to his query, which was as follows:—"And, now, let me ask Mr. Williams, how far *he* has succeeded in the attempt he made some time ago, by applying his apparatus to a locomotive-engine and to a marine-engine?" My answer was, and is—I have not yet applied my apparatus to a locomotive. Let Mr. Hall, as I then asked him to do, show me where such engine was, or is, for I know not.

In my specification I have shown, if ever I do come practically to apply my principles or apparatus to locomotives, how I would do it, and I assert that my plan and suggestions are in strict accordance with the true conditions of the combustion of gaseous matter in furnaces, and particularly of the carbonic oxide from coke. When Mr. Hall's plan finds its level, I may begin with mine. In his last letter (in the journal of the 8th) he again shows his respect for the chemical principles of Davy and Dalton, to which I have strictly adhered in practice, by reiterating the cry of *Fudge! fudge!* This is, at least, bold; but does he think this will satisfy thinking men? Perhaps the best answer will be given in the words of his accomplished eulogist in the same number of the *Mining Journal*, who signs himself "A North Wales Subscriber." This writer observes—"Mr. Hall I do not know personally, but, with regard to the lithographed papers which *he had got to distribute amongst the public*, I should say they are perfectly correct, and, *therefore*, Mr. Hall proves himself to be a mechanic, and not one who studies the atomic system of Dalton." This is certainly admirable backing. How far Mr. Hall, who is desirous of being thought a Chemical philosopher (and where is even the pretender to chemical knowledge that would now dare to repudiate the "atomic system of Dalton") will thank his commentator for this left-handed compliment, that he *is* "a mechanic, and is *not* one who studies the atomic system of Dalton," I cannot say certainly. I am disposed to dispute the point, or reconcile the difference between such friendly brothers as the "North Wales Subscriber" and Samuel Hall.

I am, Gentlemen, your obedient servant,
C. W. WILLIAMS.

THE ELEVENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommennd it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*,

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

BRISTOL AND EXETER RAILWAY.—Notice is hereby given, That in pursuance of a Resolution of the last General Meeting of Proprietors, the Directors of this Company are ready to receive Tenders of Loans of Money, in sums of not less than £200, and for terms of not less than three, nor more than seven years, on security of Loan Notes under the corporate seal of the Company, bearing Interest at the rate of 5 per cent. per annum, payable Half-yearly.

Tenders expressing the sum, the term of years, and the residence of the lender, to be addressed to the Secretary.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Bristol, Office, 30, Broad street, 14th Oct., 1842.

Interest Warrants will accompany the Loan Notes.

MANCHESTER, BOLTON, AND BURY CANAL NAVIGATION AND RAILWAY.—LOANS.—The Committee of Management are prepared to receive Tenders for the Loan of a limited amount of Money, in sums of not less than £1,000 each, to be secured by the Bonds of the Company, bearing interest at 4 per cent. per annum, payable half-yearly. Period of the Loans to be either for three, five, or seven years, the term preferred to be mentioned in the Tenders, which must be addressed to the undersigned.

By order,
JOHN HAWKSHAW, Clerk of the Company.

Canal and Railway Office, Salford, Sept. 22, 1842.

LONDON AND GREENWICH RAILWAY OFFICE, London Terminus, 37, Canterbury-square, October 25, 1842.—TENDERS FOR CARRIAGES.—The Directors are desirous of receiving Tenders for the supply of Four New Carriages and Four New Carriage Bodies. The drawing and specifications may be seen at the Company's Offices on Thursday, November 3, and two following days, between the hours of 10 and 4. The Board will meet to open Tenders on Tuesday, the 15th of November, at 2 o'clock, p.m. The Directors will not bind themselves to accept the lowest Tender.

By order of the Board,
J. Y. AKERMAN, Secretary.

MORTGAGES.—WANTED, on MORTGAGE of the TOLLS and WORKS of the MANCHESTER AND BIRMINGHAM RAILWAY, EIGHTY THOUSAND POUNDS, in Sums of not less than £500 each, at 4½ per cent. Interest payable half-yearly, either in London or Manchester.

The Railway is completed, and was opened throughout for Traffic on the 10th of last month.

Mortgages will be granted for the under mentioned periods and amounts respectively:—

For the period ending 25th Dec., 1844	..	£30,000
Do. do. „ 1845	..	30,000
Do. do. „ 1846	..	20,000

For further particulars apply at the Company's offices, in Manchester; or at the office of Messrs. Slater and Heelis Princess-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, September 19, 1842.

CROYDON RAILWAY.—LOAN NOTES.—The Directors are now ready to receive Tenders for Loans of Money upon the security of Loan Notes, to be issued under the authority of a Resolution of a General Meeting of Proprietors, held at the London Tavern on the 8th of September last, payable in three years from the 15th of January next. The Notes will be under the Company's seal, bearing interest at the rate of 5 per cent. per annum, payable half-yearly, on the 15th of January and the 15th of July in each year.

N.B. The holders of the Notes have the option at any time previous to the 30th of September, 1844, of converting the same into shares of £20 in the Company, in the proportion of one share for every £15 of such Notes.

Tenders to be addressed to the Secretary of the Company, 205, Tooley street.

R. S. YOUNG, Secretary.

SIR W. BURNETT'S PATENT PRESERVATIVE FOR TIMBER, CANVASS, CORDAGE, WOOLLEN, &c.—This process is a very cheap one. It effectually protects even the commonest domestic or Colonial Timber and Deals from Dry-rot, and other causes of premature decay; and it renders them equal to the best Timber from the Baltic. No doubt can exist of its efficacy in the preservation of all the above-named articles, after the Official Reports from the heads of various Government Departments, which may be seen, together with the specimens, at the Company's Office, No. 4, Castle-court, Birchin-lane, Cornhill, London.

THE PARISIAN BITUMEN COMPANY take leave to inform their numerous friends and the public that offices are established at 4, Great Winchester-street, Broad street, for the City, and at 8, Denbigh-street, Belgrave-road, for the West-End and its vicinity, where every information will be promptly given.

GREAT WESTERN RAILWAY.—Alteration for Winter Trains.—On and after Tuesday next, November 1, there will be an Alteration in the Trains.

The 4.15 long train from Taunton will start at 3.15, and from Bristol at 5 o'clock, and from Cirencester at 5.40, arriving at Paddington at half past 9 o'clock in the evening.

The latest evening train from Taunton, for passengers to Bristol and Bath, and for goods, will leave Taunton at 5.15, instead of 6.30.

The under-mentioned trains will be discontinued during the winter:—

Down Trains—Paddington to Slough 4.30 p.m.; Bath to Bristol 10 p.m.; Bristol to Taunton 4 p.m. Up Trains—Taunton to Bristol 2.30 p.m.; Bristol to Bath 7 p.m.; Slough to Paddington 5 30 p.m.

The 4.30 train from Bristol to Bath will leave at 4 o'clock.

The 1.45 train from Maidenhead to Paddington, at 3.45, besides other alterations in stoppages, &c., of trains.

Full particulars may be known by train bills, to be had at the several railway stations.

October 25, 1842.

THE BRIGHTON NEWSPAPERS—LATEST OFFICIAL RETURN.

Extract from a Return of the Stamps paid by Newspapers in April, May, and June, 1842, ordered by the House of Commons July 12th, and laid on the table August 10th, 1842.

	April.	May.	June.	Total.
Brighton Guardian	6,000	5,000	6,000	17,000
Brighton Herald	4,000	5,000	6,000	15,000
Brighton Gazette	5,000	5,000	—	10,000

For the Twelve Months ending June 30th, 1842, the issues have been—

Brighton Guardian	70,000
Brighton Gazette	60,000
Brighton Herald	53,000

The Brighton Guardian is published early every Wednesday morning. Advertisements must not therefore be delayed beyond Tuesday's *Day* Mail from London.

TO RAILWAY AND OTHER PUBLIC COMPANIES.—The Advertiser, who has had considerable experience, and who for the last seven years has filled a most important and responsible post on one of the principal railways, is desirous of an engagement with a Railway or other Public Company, where business like habits and a thorough knowledge of the routine of each branch of the office will be found advantageous.

Any Company in want of a practical man of business will find the Advertiser a great acquisition. No objection to go abroad.

Address, post free, to X. Y. D., *Railway Times* Office, Fleet-street, London.

The Railway Times.

Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 253. Vol. V.—No. 45.] SATURDAY, NOVEMBER 5, 1842. [Price 6d.

WEST LONDON RAILWAY.—Resolutions passed at a Special General Meeting of the West London Railway Company, held at the Company's Offices, No. 11, Abchurch-lane, in the city of London, on Friday, October 21, 1842.

1st. Resolved — That a sum of 32,000*l*., part of the 60,000*l*. which this Company is authorised by the amended act to raise in shares, be raised in 3,200 new shares of 20*l*. each; and this meeting do create the said shares, and direct the same to be issued at the price of 10*l* per share, in substitution for all shares heretofore created or directed to be created in respect of the aforesaid sum of 60,000*l*., or any part thereof; such shares to form the first class of shares mentioned in the Report of the Directors adopted by the said general meeting.

That the holders of the said 3,200 new shares so created and directed to be issued as aforesaid, shall be entitled to a dividend of £1 per annum for every such share; which dividend shall have priority over, and be paid in preference to, any dividend to be paid upon the original shares; and in case the profit of any year shall be insufficient to pay such dividend, the arrears shall be paid before any dividend whatever is paid on the original shares in the undertaking.

That a deposit of £1 be paid upon each of the said new shares at the time of the same being allotted, and that the further instalments upon the said shares be paid in such sums, and at such periods, as the Directors in their discretion shall think fit.

2nd Resolved—That a further sum of 15,200*l*., also part of the 60,000*l*. which this Company is authorised by the amended Act to raise in shares, be raised in 760 new shares of 20*l*. each; and this meeting do create the said shares, and direct the same to be issued to the simple contract creditors of the Company at the price of £20 per share, in further substitution of all shares heretofore created or directed to be created in respect of the aforesaid sum of 60,000 or any part thereof; such shares to form the second class of shares mentioned in the Report of the Directors, adopted by the said general meeting.

That the holders of the said 760 new shares so created and directed to be issued as aforesaid, shall be entitled to a dividend of 5 per cent. per annum for every such new share, which dividend shall have priority over, and be paid in preference to, any dividend to be paid upon the original shares in the undertaking; such dividend, however, not to be paid until the dividend payable upon the 3,200 shares of the first class is satisfied.

3rd. Resolved—That after and subject to the payment of such dividends to the holders of new shares, of the first and second classes respectively, any surplus profit there may be in the current year shall be divided equally amongst all the shareholders, whether holders of original or new shares, in proportion to the number of their respective shares; the holder of each new share being in the division of such surplus profit entitled to the same dividend as the holder of a original share.

4th. Resolved—That as the whole number of new shares of the first class have not been subscribed for by the present shareholders, and simple contract creditors of the Company, the Directors be requested immediately to offer the remainder of such shares to the public, and to use such means for disposing of the same as in their discretion they shall think fit.

ROBERT GUNTER, Chairman.

Offices, 11, Abchurch-lane, October 21, 1842.

WEST LONDON RAILWAY.—Original Capital, £150,000; new Capital, £32,000, of £20 each, to be issued at the reduced price of £10 per share.

The holders of these new shares of the first class will be entitled to a dividend of 10 per cent. per annum, to be paid before any dividend is payable to the holders of the second class and original shares.

The Company being incorporated by Act of Parliament the liability of Subscribers for the new shares is limited to the sum of £10 per share.

Deposit £1 per share, an interval of three months to elapse between the calls.

Applications for the unappropriated shares to be made to the Secretary, at the offices of the Company, No. 11, Abchurch lane, London, on or before the 7th day of November next.

ROBERT GUNTER, Chairman.

11, Abchurch-lane, October 21, 1842.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is particularly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-active Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For farther information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.—The Directors beg to inform the Shareholders in this undertaking, that the Report of Mr. Robert Stephenson on the proposed Railways in France, to connect Paris with the Belgian frontier and the British Channel, is now ready, and copies may be obtained on application at the Office of the Company.

By order,
JOHN WHITEHEAD, Secretary.

10, Coleman-street, November 2, 1842.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,
ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

TWENTY CART HORSES, BRICK CARTS, HARNESS, &c.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, November 11, 1842, at One o'Clock, Twenty firm, useful, seasoned Cart Horses, with the Thill and Chain Harness; Four Brick and Rubbish Carts, the property of Mr. Alexander, of Brentwood, sold in consequence of having completed his Contract.

Colours.—Blacks, Bays, Browns, and Greys.

☞ The above stock of useful seasoned Cart Horses are worthy the attention of Brickmakers, Farmers, Carmen, Contractors, Wharfingers, Warehousemen, and Tradesmen, as they are from constant and hard work, and for absolute sale.

On view, and catalogues may be had two days previous.

A great variety of new and second-hand Carriages, of every description, always on private Sale at this Establishment, remarkably cheap.

TO CONTRACTORS, &c.—To be Sold by Private Contract, a 15 horse power Steam Engine (high pressure), with boiler, &c., complete; also 2 sets of Pumps 9 inches diameter, to lift 27 feet, and all connecting rods, &c., complete; 2 new Pile Engines with machinery; 1 screw pump, 30 feet long, with horse machinery to work the same, and capable to lift 12 feet; and a quantity of Bramleyfall Stone in blocks, 5 feet by 4 feet, and from 18 inches to 2 feet 6 inches thick; also Coping 3 feet wide and 1 foot thick; also 8 mud Barges, carry from 15 to 30 yards of gravel each, and other contracting materials belonging to Mr. David Thornbory, Ipswich, to whom application is to be made.

RICHARD GUNTER, corner of Motcomb-street, Belgrave-square, furnishes Breakfasts, Dinners, Desserts, Balls, and Parties; also the best English and French Confectionery packed for the country, at moderate charges. Pure Acidulated Pine-Apple and Florence Poppy Drops, Syrups, &c.; best Bride and Christening Cakes, with newest designs.

Corner of Motcomb-street, Belgrave square.

PRESENT POSITION OF RAILWAYS.

[From the Circular of Messrs. R. B. Watson and Co., Share-brokers, Leeds.]

It is now a month since we published our last Circular, arising from two causes; the absence of our R. B. W., at the usual time of publication, and the still more important absence of business in the share-market, generally speaking; at last, however, we begin to perceive some glimmerings of improvement, although the time of the year would, at first, appear not very appropriate to indulge in such an expectation. Into what channels of commerce, or finance, the abundance of money, which is so prevalent, is to take its course, remains to be seen; but this is certain, if experience is to guide one's judgment in these matters, that an advance in prices in general, of goods and shares, must, ere long, inevitably take place. Foreign stocks (so called), as well as American, appear to be altogether "repudiated," and, therefore, where the "plethora" of accumulated capital is to find a vent, it seems quite difficult to say, except in what we have already alluded to.

Nothing has lately attracted so much attention as the shares in the Brighton line, which, during the past month, have advanced from 34*l.* to 37*l.*, and although they have just received a temporary check in price, we cannot help thinking they will shortly experience another rise; nor should we be at all surprised to see them as high as 40*l.* before another month elapses. The present receipts fully justify these anticipations, being all but double of what they were last autumn, about this period, and should this idea turn out to be correctly founded, it would serve very materially to rescue this road from the obloquy which has so long attached to it; and what would not a little tend to get it into better odour with the public, would be a reduction of the fares—say the first-class, to 10s., and the second-class to 7s., and also by attaching third-class carriages to the trains at more agreeable times of the day. Look at the falling off in the number of passengers on the Blackwall Railway since the fares have been advanced; and if this fact will not convince the Directors of railways of the impolicy of high fares, nothing that we can say, or any one else, will convince them. High fares is a relative term, and any fare must be looked upon as too high, that allows any conveyance to compete successfully with railways.

But what can be the cause of so large a diminution of passengers in the Northern and Eastern road? It appears that, during the past three months, the number of passengers amounts to 128,000 against 168,000 in the corresponding period of last year, although the line was then unfinished, and now is fully opened. Where is the "screw loose" in this road, for certain it is, that a "screw is loose" somewhere? In this line, when it got opened throughout, our confidence at one time was great, but it seems our hopes and expectations are likely to be blasted for a time, although we by no means despair of shortly seeing it in a more prosperous condition. A friend of ours, likely to know, tells us, it all arises from want of good management. We hope the new Directors will turn over a new leaf, for the benefit of the shareholders, and not let this line experience the fate of so many of the London lines—to wit, the Blackwall at 6*l.* on 25*l.* paid, the Croydon at 10*l.* on 20*l.* paid, the Greenwich at 4*l.* 10s. on 20*l.* paid, and lastly, the Eastern Counties' at 8*l.* 10s. on 23*l.* paid.

The Directors of the North Midland having obtained from the Committee the details of the "swinging" reductions proposed by them, have been sitting during the past week at Derby, for the purpose of examining into the practicability of carrying them into effect. In a short time, a special meeting of the shareholders will be convened, and the whole matter will be laid before them, to decide what parties are to preside at the helm of this large undertaking. Anticipating that a more economical management must ensue, and that too in this half year, the shares of this line are in active request at advancing rates; sales having been made in London and in Liverpool, on Saturday, at 59¼ to 59½; thus proving how fallacious were the notions of those who anticipated a fall in the value of this stock to 50*l.*

We must not omit to mention Edinburgh and Glasgow shares, which we feel convinced have seen their lowest price; whatever every one anticipates seldom or hardly ever takes place, and such will be found to be the case in the looked-for falling off of the traffic on this line during the winter months. Within the last two months, the weekly traffic on goods has increased from 313*l.* to 519*l.*, with an upward tendency—these shares are held firmly at 46*l.* 10s. to 47*l.*

Manchester and Leeds are now decidedly giving way, confirming our previously-expressed fears; the old shares were sold in Manchester, on Saturday, at 4¼ dis. Hull and Selbys are very inanimate at 33*l.*; Leeds and Selbys, firm at par; York and North Midlands, are peeping upwards at 90*l.*, and 37*l.* respectively; whilst Sheffield and Rotherhams are perfectly tranquil, at 27*l.*

NORTH MIDLAND RAILWAY.

Derby, October 31, 1842.

The Directors now lay before the shareholders, first, the "Report of the Committee of Inquiry," (No. 1); secondly, the "Observations of the Directors upon the Report" (No. 2); and thirdly, a list of all the officers and servants in the Company's employ on the 10th of August, 1842, with the salaries and wages they then received, together with (in parallel columns) the reductions proposed by the Directors, and the reductions proposed by the Committee of Inquiry (No. 3).

No. 1.—*Report of the Committee of Inquiry.*

Report of the Committee appointed for the purpose of examining the Position and future Management of the North Midland Railway Company, with a view to increase the prosperity of the undertaking.

The Committee have not considered it within their province to go back into any inquiry as to the excessive expenditure in the original formation of the North Midland Railway and its stations, which would lead to no beneficial result; they have therefore confined their attention to three points:—

1st. The unsettled liabilities of the Company.

2nd. The present scale of expenditure.

3rd. The future improvement of the revenue.

Your Committee regret to find that eight contracts for the construction of parts of the line are still open. And although an Engineer with an expensive establishment is maintained, little progress has been made in this department, only one contract having been closed since the 19th January last. There are disputed accounts with the Manchester and Leeds, the Birmingham and Derby, and the Midland Counties' Railway Companies, which the Committee are of opinion ought to be brought to an immediate settlement.

In the scale of annual expenditure, your Committee recommend the following reductions and alterations:—

That the Superintendent's office, as at present conducted, be discontinued, and that the duties be transferred to the Secretary, who shall be a person of practical knowledge and experience in railway management, with a salary of 500*l.* per annum. That the audit, accountant, and transfer offices be concentrated under the Auditor, who is responsible to the Secretary, and that 700*l.* per annum be allowed for this department, including the Secretary's Assistant. By this arrangement an amount of saving of 1,347*l.* 4s. will be effected.

The coaching department, which consists of a manager, clerks, and porters, having the care of all the stations on the line, is conducted at present at an expense of *15,306*l.* 16s.; your Committee have carefully examined the expenditure of this department, and they think it may be reduced to 10,608*l.*; thus effecting a saving of 4,698*l.* 16s.

In the carrying department the expenditure amounts to 8,602*l.* 6s.; your Committee have conferred with Mr. Robins, the newly-appointed Manager of the goods' traffic. They have stated him their opinions, as to the more economical management of this part of the Company's business and they hope he will be enabled to carry out the views for the benefit of the Company.

Your Committee think that the stores department has been conducted on too extensive a scale and recommend that the whole expense of management, including stationary clerk, shall not exceed 300*l.* per annum; and that the stock on hand be kept lower than at present, to avoid loss by waste and deterioration. The saving proposed by your Committee in wages and salaries will be 619*l.* 16s.

Your Committee are of opinion, that the engineering expenses are much too heavy; and they have recommended the disputed accounts to be settled immediately, they consider that the law expenses in this department may be reduced to 800*l.* per annum. They also think that Mr. Swanwick's offices ought to be removed to the Derby station. The saving will be 1,597*l.* 14s.

The largest amount of saving your Committee are enabled to recommend is in the locomotive and carriage department, in number of servants salaries and wages, amounting to nearly 10,000*l.* per annum. This reduction is proposed upon the understanding that the road shall be kept in complete repair.

Your Committee have communicated generally with the officers and the heads of the several departments, and they find that the most intelligent servants of the Company admit the practicability of the proposed reductions.

The attention of your Committee has been particularly drawn to the very heavy charge per mile for maintenance of way; the contract for the southern portion remains still unexecuted, which will bring the Company into dispute with this contractor. The Committee think the road is not in so good a state of repair as it was when the present contractors took charge of it; and they strongly urge the propriety of requiring Mr. Swanwick, his assistants and overlookers, to exercise increased vigilance, by compelling the contractors to keep the road in the best possible state.

It is due to the Directors to mention, that some of the reductions included in the recommendations of your Committee have already been adopted; and your Committee are unable to state their amount.

For the basis of their examination and comparison, they have taken the list furnished to them of the establishment as it stood on the 10th of August.

Your Committee recommend that the Company's stock of surplus carriages shall be placed by them of their present extensive buildings, to protect them from the weather; and that the expense of another shed for the purpose be not incurred.

Your Committee have refrained from inquiring into the consumption of coke and other stores, as well as many other items of expense; but they confidently expect that considerable reductions will be effected, if their recommendations be carefully carried out.

With a view to an increase of revenue, the Committee recommend a reconsideration of the passengers' fares, and of the rates paid by carriers for the conveyance of goods. Much remains to be done in the management of the goods' traffic.

In conclusion, your Committee feel bound to state, that it is with much pain they recommend the adoption of measures involving the dismissal of a large number of the Company's servants; but their duty to the shareholders leaves them no alternative. A statement of the proposed reductions is subjoined; and, although the amount must appear large, the Committee believe they may be carried out without prejudice to the efficient management of the business of the Company.

(Signed) P. W. Brancker,
J. T. Alston,
Geo. Hudson,
Geo. Wilson,
Jno. Waddingham,
Wm. Murgatroyd.

Dated Leeds, Sep. 20, 1842.

* This sum should be 39*l.* less, arising out of a difference in the coaching department.

No. 2.—*Address of the Directors to the Shareholders.*

The Directors, in presenting the Report of the Committee of Inquiry, appointed at the last half-yearly general meeting, held on the 25th of August, feel called upon to submit to the shareholders the result of their deliberations, accompanied by the three following lists, viz.:—

1. The staff list as it stood on the 10th August last.
2. The reduced list as now proposed by the Directors.
3. The reduced list as proposed by the Committee of Inquiry.

The Directors trust that the circulation of these documents will furnish the fullest information to the proprietors, and prepare them to form a calm and dispassionate judgment on the several topics which will undergo discussion at the special general meeting to be held on the 16th of November. The Directors would have been able to circulate this at an early period, if the details of the reductions recommended by the Committee had been transmitted with the Report. They have now given the whole of that Report their most careful and serious consideration, actuated by no other feeling than the wish to adopt the views of the Committee to the fullest extent consistent with the safety and welfare of the establishment, and resolved to redeem the pledge embodied in their last Report, "*not to relax in their efforts until the expenses are reduced to the lowest point compatible with the efficient working of the line.*"

The points to which the Committee of Inquiry have confined their attention are—

1. The unsettled liabilities of the Company.
2. The present scale of expenditure.
3. The future improvement of the revenue.

As regards the first, the Directors may confidently affirm, that they have used all the efforts within their power to settle the contracts for the construction of those parts of the line which are still open. Had they been willing to submit to the claims of the contractors, the accounts might certainly have been settled long ago; but not without sacrificing the pecuniary interests of the proprietors. The Engineer, acting under the instructions of the legal adviser of the Company, has left no means untried to bring all differences with the contractors to a final adjustment. References to arbitration have been offered in every disputed case, and in some instances they have been acceded to.

The Directors regret that unsettled accounts exist with other Companies. This has arisen principally from the difficulty of assembling the numerous parties concerned; but as considerable progress has been made already in arranging the terms of settlement, they trust that this desirable result may shortly be attained.

Regarding the scale of annual expenditure, the Directors entirely agree with the recommendation of the Committee to concentrate the offices of Audit, Account, and Transfer, and to unite the duties of Secretary and Superintendent in the same person. This object has been previously contemplated, and only awaits the settlement of the disputed accounts with other Companies to be carried into operation. The Directors think that this department may then be efficiently managed at an expense of 1,500*l.*

The Directors are unable to concur in the recommendation of the Committee to reduce the expenditure in the coaching department to the sum of 10,608*l.*, as they believe, after a most careful examination, that the regularity of the trains, especially of those connected with Scotland and the north of England, the accommodation afforded to passengers, the due care of luggage, the guarding of the Company from fraud, and above all, the public safety, would be so impaired as seriously to affect the prosperity of the railway; but they are of opinion that the expenses may be reduced, consistently with the efficient and safe working of the line, to the sum of 12,922*l.* 8*s.*

In the goods' department little saving can be effected, as the increasing traffic demands the labours of all the present officers and servants. The expenditure proposed in this department is 3,417*l.* 8*s.*

In the stores' department considerable reductions have been effected, both in the amount of stock and salaries; but the Directors are of opinion that the staff now proposed is requisite to maintain an efficient check upon the receipt and delivery of stores. The expenditure in future will not exceed the sum of 454*l* 8*s.*

The expenses of the engineering department can not be reduced to their lowest amount until the remaining contracts have been wound up; but the Directors will then be prepared to limit the expenditure to the sum of 1,000*l.* In the meantime the offices will be removed to Derby.

With regard to the locomotive department, considerable difference exists between the recommendation of the Committee and the staff proposed by the Directors. The system which the Directors have pursued is to keep up the stock of engines and carriages in complete repair, and the best working order. They conceive that upon the scale of expenditure recommended by the Committee this object could not be attained; that the traffic would be impeded; and that, ultimately, a larger outlay for repairs would be requisite than on the plan pursued by them. They cannot, therefore, recommend the staff to be reduced for the present below the sum of 13,543*l.* 19*s.*, although they may confidently assure the proprietors that some additional reductions will ultimately take place; in furtherance of which they are engaged in exchanging with other Railway Companies, and with a number of private establishments, the scale of wages paid in every department of work.

In justice to themselves, the Directors beg leave to add that, previously to the appointment of the Committee, reductions from the staff list of the 10th of August had been effected *in this department alone* to the amount of 3,500*l.*, and that further reductions were decided on to the amount of 1,350*l.*, making a total of 4,850*l.*

The reductions proposed by the Directors (of which, as before stated, a considerable part had been previously either already effected, or decided upon) are

In the Secretary, Superintendents, &c., departments	£1,047 4 0
In the engineering, ditto, ditto	1,397 14 0
In the stores, ditto, ditto	465 8 0
In the coaching, ditto, ditto	2,345 8 0
In the locomotive, ditto, ditto	5,894 14 0
In the goods, ditto, ditto	184 18 0
Total Reductions	£11,335 6 0

Moreover, it must be borne in mind that towards the expenditure of the staff, the North Midland Company receives from various other Companies the sum of about 7,265*l.* a year, which would be subject to a reduction proportioned to the reduced amount of salaries and wages; so that the net expenditure on the 10th of August, and as now proposed by the Directors and the Committee, should be stated respectively as follows:—

* Staff List of 10th August.		Proposed by Directors.		Proposed by the Committee.	
	£44,173 9 9		£32,888 3 0		£22,821 18 0
Deduct received from other Companies	7,265 0 0	Deduct received from other Companies	6,690 0 0	Add for goods' department	3,602 0 0
					£26,423 18 0
				Deduct received from other Companies	6,116 0 0
Total	£36,908 9 9	Total	£26,198 3 0	Total	£20,307 18 0

The Committee having stated that the most intelligent officers of the Company admit the practicability of the proposed reductions, the Directors had no alternative but to put the question to each of them, whether they had made such admission. The answers given lead the Directors to infer that some misapprehension must have occurred on that point, as they all state distinctly that such a sweeping reduction of the establishment would, in their opinion, be both injurious to the Company's interest, and hazardous to the public.

The Directors feel no hesitation in assuring the proprietors that the permanent way is in a satisfactory state, and they would confidently appeal to any competent engineer for a confirmation of their assertion. The contracts for the maintenance of way are now all executed. Having been let by public competition for a term of years, with the approbation of the Engineer, no further observations need to be made on this subject.

The recommendation of the Committee that the stock of surplus carriages be placed in some of the Company's present extensive buildings, instead of incurring the expense of a new shed, had been anticipated by the Directors long since; but their opinion had been overruled by the Superintendent and the head of the locomotive department, on the ground that a suitable crane and other alterations for the purpose would incur considerable expense, whilst the additional outlay of 400*l.* would suffice for the erection of a shed which would serve the double purpose of protecting the carriages and affording suitable convenience for effecting trivial repairs without removing the carriages into the workshops.

As regards the future improvement of the revenue, the Committee having made no suggestion, except to recommend a revision of passenger fares and rates paid by carriers for the conveyance of goods, and the Directors not having been able to ascertain what the wishes and views of the Committee are upon these subjects, they have no observations to make beyond giving to the shareholders the assurance that their best efforts have been, and still continue to be made to secure this important object.

In conclusion, the Directors would strongly impress upon the minds of the shareholders that however great the reductions may be which are now contemplated, yet the prosperity of this great undertaking must depend mainly on the development of the traffic, both in goods and passengers. The adoption of any measures which would interfere with this would be deeply to be deplored. The difference between the reductions recommended by the Committee and the Directors amounts to about 6,000*l.*, and although this appears a large sum, it must not be overlooked that, even if it were all profit, it would only add 2*s.* to the half-yearly dividend on every 100*l.* share. For the sake of this, would the shareholders feel themselves justified in risking the welfare of the establishment, by crippling the traffic, disturbing the regularity and dispatch of the trains, occasioning ultimately an increased outlay for repairs, and, what is of still more importance, endangering the safety of the passengers—a result which every officer of the Company concurs in stating to be probable, if the scheme proposed by the Committee be fully carried out? W. LEAPER NEWTON, Chairman.

ESTON AND WYRE RAILWAY, HARBOUR, AND DOCK COMPANY—GENERAL MEETING.

E half-yearly general meeting of the proprietors the *Preston* and Wyre Railway, Harbour, and ck Company was held on Monday, at the Comy's offices, King William-street, City; Sir P. SKETH FLEETWOOD, Bart., M.P., in the chair. The advertisement convening the meeting having n read,

The SECRETARY (H. B. Jones, Esq.) read the lowing Report:—

REPORT

of the Managing Director to the Board of the Preston nd Wyre Railway, Harbour, and Dock Company, for he information of the Shareholders.

he following returns of the annual expense of working May and maintaining the harbour were made to the gager, shortly after his appointment, by the officers of Company's—

way Expenditure—			
alaries		£4,812	12 0
omotive power from the North Union Company		4,758	2 2
ocal locomotive		562	14 10
ilage paid to Government		865	7 8
tationery and other charges		1,203	8 3
tire of carriages and repairs		532	0 0
laintenance of way		3,180	0 0
		15,914	4 11
rbour Expenditure—			
alaries, lighthouses, moorings, buoys, &c.	£2,687 12 0		
ailway salaries, &c., annually charged to harbour	600 0 0		
ilot establishment	500 0 0		
		3,787	12 0
Total		£19,701	16 11

planation of Accounts—

The present half-yearly accounts (Nos. 1 & 2) will prove the shareholders that the railway expenditure has been uced to 5,202*l.* 14s. 6d. for the last six months, or 10,405*l.* per annum; and that the harbour expenditure has been uced to 1,510*l.* 5s. 8d., or 3,020*l.* 11s. 4d. per annum; and the Dennistoun trading steamer be deducted therefrom, heretofore, the expenditure will be 1,974*l.* 8s. But said ounts are still burdened with the remote consequences of system which will not be entirely eradicated before the end the present year. After that period the railway expendi- will be reduced to 7,676*l.* 1s. 6d.; the harbour expendi- to 987*l.* 9s. per annum; and the *James Dennistoun* ding and passenger steamer to Bardsea will cost 1,226*l.* per annum. (Refer to Statement, No. 6.)

From a minute of the Board of Directors, dated the 17th rch last, it appears that the former expenditure of the r year, owing to mistakes or omissions, even somewhat ger than it was returned; but it would not be fair to ribe the difference between the present and the past to s less and lavish propensity on the one hand, or to extraginary economy and prudence on the other. Some of the ms returned, and to mention one—the locomotive power mbrace a period of 18½ months between the 14th July, 0, and the 31st August, 1841. An arrangement had been de for three years with the North Union Railway for omotive power originally at 2s. 6d. per mile—it was subquently reduced to 2s. 1d.; and latterly it has been enly given up by mutual consent: thanks to the liberality the Directors of that line. Again, the reductions in the m of salaries alone exceed 2,000*l.* per annum. These laries were by no means extravagant as long as the works re in progress; but upon their being finished or discon- ued, some offices had to be suppressed; and others are g liberally paid. These two items form a large proporn of the entire reductions, and sufficiently account for rest.

It is, however, a subject of mortification to the Direcrs, as it will no doubt be for the shareholders, to find, in te of the most rigid economy, which scarcely admits of y material savings for the future, though some are still ensible, that the pecuniary value of the undertaking has en thereby little improved. This melancholy fact is, in me measure, to be ascribed to the distress of the times, hich has affected the traffic of every railway in the kingm, particularly in the immediate neighbourhood of Fleetpod; but other causes have also contributed to lessen the ffic on the Preston and Wyre Railway, which will be ore fully adverted to in this Report.

The annexed accounts refer to—

o. 3, Railway capital account, amounting to	£343,177 8 2
4. Harbour ditto	86,836 19 5
5. Railway and harbour ditto, united	432,014 7 7

It will be seen, from the foregoing documents, that the ailing outstanding debt of the Company is now reduced to 3*l.* 15s. 11d., of which 3,081*l.* 9s. 4d. on the railway, and 71*l.* 6s. 7d. on the harbour, against which there is to set f 1,462*l.* 6s. 7d. due to the Company in account current hese debts are now in course of payment.

There is also due to the Company, in arrears of calls, 2,124*l.*, of which 4,000*l.* might be legally recovered, should e shareholders think that it is as expedient as it would be t to bring actions at law against the defaulters.

The Company's permanent debts consist in 100,000*l.* due o the Royal Exchange Assurance Company, and 77,184*l.* 3. 6d. due to sundries on the deposit of shares. To this may be added some liabilities still undefined, namely, Colonel Landmann's claim for arrears of salary; Mr. Wakhman's claim for loss by the *Victoria* steamer, and the adjustment of Morris's accounts. These items altogether exceed not 3,000*l.*, and, according to Mr. Alger, Solicitor to this Company, they cannot be maintained at law. They will soon be disposed of, probably by reference.

Resuming the subject of income and expenditure, and forming an estimate for the future from the present, the following is likely to be the result of the year closing on the 28th of February next:—

Railway Income—			
Gross income of the last six months		£6,436	0 0
Receipts from 1st September to 8th October		1,831	0 0
20½ weeks from the 8th October to the 28th February, estimated at 180*l.* per week		3,690	0 0
Half year's rents and conveyance of mail		133	0 6
		£12,090	0 6
Harbour Income—			
Harbour receipts for six months 99*l.* 15s., for one year	£199 10 0		
Passenger traffic to the Lakes for six months 598*l.* 5s. 4d. for one year	900 0 0		
		1,099	10 0
		£13,189	16 0
Expenditure of Railway and Harbour from 1st Jan., 1843.—			
Railway per annum	£7,676 1 6		
Harbour ditto	987 9 0		
James Dennistoun trading steamer	1,226 18 0		
		9,840	8 6
Financial Prospects—			
Surplus applicable in future to the payment of interest on the permanent debt of 100,000*l.* due to the Royal Exchange Assurance Company		£3,349	7 6

But as there is no available surplus at present, the half-yearly sum of 2,500*l.* due to that Corporation since August last, is not yet paid, a circumstance which cannot fail to produce serious consequences, if the shareholders do not take energetic measures for the protection of their property.

It may be reasonably asked whether a property which has a net income of only 3,349*l.* 7s. 6d., and a permanent charge of 5,000*l.* per annum is worth the attempt to save it. This question may be fairly answered by a series of incontrovertible facts. The present season has been most injurious to railway traffic throughout the land, and, as it is known to have affected the neighbouring lines to an equal extent, 25 per cent. of the present annual deficiency, of about 9,000*l.* will probably be recovered next year. The opening of the Bolton line too, confidently expected next spring, will, in the opinion of the best judges, materially promote the interest of the Preston and Wyre. An increase of traffic to the extent of 20,000*l.* is not in itself a visionary hope, or a miraculous event in railway speculations; and as the said increase would be attended with very little additional expenditure, it would enable a dividend of 5 per cent. on the sum of 430,000*l.*, which is the entire capital vested in this undertaking, without any necessity for calling on Sir Hesketh Fleetwood to make up any deficiency from the rents of the town of *Fleetwood itself*, which are now pledged to the shares created under the Deed of Trust. It must be borne in mind that the capabilities of the undertaking as a whole have never yet been fairly tried. They may have been exaggerated, and large and immediate results may have been too confidently expected, but what has been held true for ages is still true. The Wyre is a good and safe river; its geographical situation is eminently adapted to trade with the north of Ireland and with the south-west of Scotland. It is still 20 miles nearer the Isle of Man and 28 miles nearer to Belfast than the Mersey, and Preston and its district is besides 20 miles nearer to Fleetwood by railway than Liverpool. Mr. J. Walker and Mr. Cubitt, two of our best engineers, have already recorded a favourable opinion of its merits; and some of our most experienced naval officers have on various occasions for the last six years uniformly reported favourably of this undertaking; what is then requisite to develop those latent capabilities so universally admitted? The completion of the harbour, and a Steam Navigation Company.

Harbour Works—

The first of these two important objects, namely, the completion of the harbour, the Directors are now endeavouring to press on the attention of her Majesty's Government; and although they have had no promise, direct or indirect, that it will be taken in hand, yet they are not without reasonable hope that something will be done. This hope is entirely grounded on the intrinsic merits of the plan, and the great advantage which the country at large would derive from its execution. It would be otherwise absurd to suppose that any administration would assist in carrying out the works of any Company however respectable. But the knowledge that a Company would derive direct and immediate benefit from an undertaking intended for the general advantage of the community, the Directors are satisfied will not prevent its completion. There are various motives that may induce Government to interfere in the present instance, which will be here briefly stated.

The harbour has been partly worked out at a considerable expense. In its present unfinished state it is an eye-sore and an impediment, the apparatus necessary for its completion, which has cost 16,000*l.*, is ready and available. The sum required is only 31,000*l.* under one hypothesis, and 42,000*l.* under another and a more expensive plan. The want of a harbour of refuge upon what is a lee-shore nine months of the year, is universally felt, and its erection desired. The wrecks which have taken place on the Isle of Man alone from 1822 to 1841, exhibit, according to an authentic return, the loss of 119 vessels, 122 human lives, and 207,902*l.* worth of property. Now it is the opinion of experienced naval officers, that the above melancholy result would have been in a great measure avoided had the harbour of Fleetwood been finished 20 years sooner. Again, Government by extending its protection to Fleetwood would give employment to the poor, promote steam navigation and commerce, open a communication with the western coast of Cumberland, hitherto a neglected district, and prevent the annihilation of a town which has been recently added to her Majesty's dominions, and somewhat increased the revenue of the country. But Government may, according to usual and necessary caution, insist upon terms and conditions, which may eventually entail a liability on the entire undertaking. Parliament may grant, or Government may lend the required sum. The Directors have not hitherto shrunk from any responsibility calculated to their opinion to benefit the shareholders; there are limits, however, which, in common prudence, they cannot overstep. Hence, they take the opportunity of a general meeting to consult the proprietary at large, determined not to act except under their authority and their orders.

Steam Navigation—

The second most important object which the shareholders will have to discuss is the expediency of establishing at Fleetwood a Steam Navigation Company for the purpose of keeping up a regular communication with Ireland and Scotland.

The shareholders are already aware that an attempt has been made to promote that object under circumstances of a most unfavourable nature. The *Fire King* was chartered at 200*l.* per week, and took up the line to Ardrossan; and the *Victoria* at 197*l.* per week, plied between Belfast and Fleetwood. The gross earnings of those vessels during six months amounted to 5,600*l.* There is reason to believe, after a careful inquiry into the matter, that *two* steamers, equally efficient, would be worked for Ireland at 94*l.* per week, for Scotland at 120*l.* per week; 15 per cent. per annum wear and tear on their value included; these rates would insure 10 per cent. profit on the Irish line, and nearly cover the expenditure on the Scotch line. This conclusion is fairly drawn from the experience of the past, and the future would probably afford much greater encouragement. The resumption of that traffic is of such vital importance to this Company, that the Directors have no hesitation in recommending to the shareholders, not only that the boats of the contemplated Steam Navigation Company should be exempt from all dues whatsoever, but also that the earnings derived by the railway from the said boats should be set apart for five years, and constitute a fund out of which the loss that might be incurred by the Steam Navigation Company is to be paid. This arrangement it is thought would preclude as far as human foresight can do so, the possibility of ultimate loss.

The establishment of a Steam Navigation Company is so intimately connected with the future welfare, if not the very existence of Fleetwood, that the Directors cannot too strongly impress the shareholders with this vital truth. It is obvious also that the interests of the Bolton and Manchester, Bolton and Preston, the North Union, Liverpool and Manchester, and Grand Junction Railways are, in this case, as indeed in most others, identified with the prosperity of the Preston and Wyre Railway, of which the chief traffic accrues to their respective lines; and the Directors hope that on this ground alone the shareholders of those Companies will promote the object which is here respectfully submitted to their consideration.

But there are other parties even more immediately interested in the above matter. The owners of houses and other property in Fleetwood itself, and its neighbourhood, must needs be aware that steam navigation would enhance the value of their property, which is otherwise threatened with deterioration.

To promote the object of finishing the harbour, and establishing a Steam Navigation Company, without which the capabilities of the Fleetwood undertaking cannot be fairly tried, the Directors think that a sum of 70,000*l.*, or 15 per cent. on the capital already invested, will be sufficient: and only 40,000*l.* or 10 per cent. will be required for steam navigation should the Government undertake to finish the harbour. The Directors call upon the shareholders to discuss and decide a question which virtually involves the existence of their property.

Matters of detail—

A few matters of detail require some notice in this Report. The first is a comparative statement (No. 8) of traffic between 1841 and 1842, showing a deficiency of 53,916 passengers, and 3,593*l.* 17s. 9d., and 1,999*l.* 12s. 7d. in the goods traffic, together 5,518*l.* 10s 4d.: but the entire deficiency assumed for 1843, is 8,763*l.* 15s. 3d., the difference between 20,853*l.* 15s. 9d., traffic to 1st September, 1841, and 12,090*l.* 0s. 6d. estimate of revenue for next year.

The next subject is the fares, on which opinions are greatly at variance. Statement (No. 7) shows the original fares of the Company; the alterations they have since undergone, and the fares charged by the two neighbouring lines—the North Union and the Lancaster Railways. The shareholders are requested to decide whether any further alterations be necessary.

There is an apparent discrepancy between the six months consumption of coals used by the *James Dennistoun*, which amounts to 144*l.* 5s., and the yearly estimate which is only 136*l.* This if not explained, may lead to the suspicion that the accounts were altogether carelessly made out; but the fact is, that the figures are in both instances correct, and the appearance of discrepancy is accounted for by the fact that the price of coals at Fleetwood, which was originally 11s. 12s. and per ton, subsequently 9s. and 10s., is now 8s. per

Digitized by Google

ton, at which price good steaming coal can now be exported. The *Dennistoun* besides run every day in the summer, and only twice a week in the winter, and her new boilers will materially diminish her consumption of fuel.

The Manager had his attention called to the coal trade on his first visit to Fleetwood, and has never since lost sight of a branch of business which is sufficient in itself to make the prosperity of the place. The proprietors of coal mines also begin to be aware of its importance. Coal is already within 6d per ton as cheap at Fleetwood as at Whitehaven, and the opening of the Bolton line will contribute to make it cheaper.

The survey of Morecambe Bay is entirely charged in the accounts, but two-thirds of its cost will be ultimately defrayed by Sir Hesketh Fleetwood, our worthy Chairman, who in this, as in several other instances, spontaneously offered to relieve the Company's expenditure. Of the merits of that survey the professional high standing of Captain Denham is sufficient evidence; and as to its utility, it will be hereafter apparent when it is borne in mind that 15 per cent. is now the premium of insurance between Liverpool and Fleetwood.

The Manager cannot conclude this Report without bearing testimony to the valuable services of Mr. H. B. Jones, acting Secretary and Accountant; Mr. S. P. Bidder, Resident Engineer; Mr. C. Cooper, traffic clerk; and, in general, to the zeal and activity of the Company's servants, without whose assistance and hearty co-operation it would have been almost impossible to carry out effectually the large reductions which have taken place.

FREDERICK CORTAZZI, Managing Director.

[The accounts were exceedingly voluminous, but the substance of them is given in the above Report. We shall therefore merely reprint the account No. 1.]

FREDERICK CORTAZZI, Managing Director.
H. BAZETT JONES, Secretary and Accountant.

The CHAIRMAN proposed that no objection should be taken to the reception and adoption of the Report, as it was principally a statistical document—a document highly creditable to the Managing Director. Any discussion that might be deemed necessary could arise on three resolutions which the Directors meant to propose. The resolutions were then read. The first affirmed the indispensable necessity of finding funds to meet the arrears of interest due to the Royal Exchange Assurance Company; the second proposed the appointment of a Committee of Investigation, consisting of proprietors and non-proprietors, to co-operate with the Directors; and the third instructed the Directors to take law proceedings against parties in arrear of calls.

The suggestion of the Chairman was agreed to, and a motion for the adoption of the Report, moved by the honourable gentleman, and seconded by Mr. Boyce, was carried unanimously.

The CHAIRMAN then, at very considerable length, entered into a detail of circumstances connected with the undertaking. The principal points touched upon were as follows:—Having gone abroad at the precise period when the harbour works were stopped, parties who were enemies to the concern had ascribed his (the Chairman's) departure to something in connection with the Company. This was wholly untrue. He had gone to the Continent entirely for the benefit of his health—his departure having been delayed for a year in consequence of the pressure of business, principally connected with the Company—and now he had returned on the same account, although at first he had intended to winter on the Continent. As connected with the Company and himself many ill-disposed rumours had got abroad, and there were parties who looked on and were anxious to get possession of the Company's property for little or nothing. Means would, however, be taken to prevent this. For himself, having embarked so largely in the shares of the Company, and having so heartily encouraged the scheme, he should see with regret anything happen which could interfere with the property of the proprietors. He had always had a good opinion of the undertaking, and principally on this ground, that the original statements put forth had not been falsified, although as yet they had not had an opportunity of carrying the project fully into effect. They had now only the railway in operation to a place which was formerly little better than a desert; the works of the harbour were incomplete, and the docks had not been commenced. The great drawback had been the excess in the professional estimates, which had entailed a vast excess of expenditure. [At a subsequent stage of the proceedings the honourable Chairman fully exonerated Captain Denham, R.N., from the charge, stating, that as far as they had yet proceeded, the harbour works had been completed within the gallant gentleman's estimates.] If the excess had been such that the whole scheme could not be carried out, the Directors were not to blame. With respect to the future, it was requisite, first of all, to provide for the claims of the Royal Exchange Assurance Company. Of course, if the shareholders thought proper to sacrifice their property for so trifling a sum as 2,500*l.*, it would be useless to proceed further. The honourable gentleman then went over the three resolutions above referred to, and, amid applause, concluded a very forcible speech by again alluding to his own connection with the scheme, and enforcing the propriety of placing the undertaking upon a sound basis.

A great deal of conversation ensued, much of which was of an extremely desultory character, and as regarded "order" entirely irregular. It would be an utter sacrifice of space to do more than indicate the principal points.

It was stated that the Exchange Assurance Company had shown great forbearance, and it was not doubted that some further indulgence would be granted pending the consideration of the means for paying off the arrears.

Mr. CORTAZZI stated (in answer to a question) that the only security which could be offered for any money now to be advanced was the chattels of the Company, consisting of engines, carriages, &c., valued at 40,000*l.*

Mr. RUFFORD inquired what was the nature of the loan by the Exchange Company. Was it redeemable? If the Assurance Company took the line and worked it till the debt was paid off, would it then revert to the shareholders?

Mr. ALGAR (Solicitor to the Company) said of course the Exchange Assurance Company had the usual power of mortgagees—first, either to foreclose the mortgage—secondly, to sell the property and pay themselves—or, thirdly, to work the property for themselves. The third course was, he need scarcely say, far from usual.

Mr. RUFFORD was surprised to hear that any loan had been contracted with the Exchange Assurance Company.

It was explained by Mr. Cortazzi, the Chairman, and the Solicitor, that the Company were precisely in the same position as before, the only difference being that 66,000*l.* due to the Exchequer Loan Commissioners, and 34,000*l.* due to Sir H. Fleetwood on bonds under the Act of Parliament, had been converted into this loan of 100,000*l.*

Mr. RUFFORD had always supposed that the 66,000*l.* had been advanced by the Exchequer Loan Commissioners solely for the harbour works.

Mr. ALGAR said it was so, but the re-payment had been secured not only on the works of the harbour, but on the railway, and conjointly on Sir Hesketh Fleetwood's estates. Their position was so far improved, that they had now a commercial Company for their creditor instead of the Crown.

Mr. F. CORTAZZI, after some preliminary remarks, proceeded to read the following statement, which he had put into that form, he said, in order that it should go correctly before the public:—It would not be good taste in him, as Manager of that undertaking, to expatiate on its capabilities. He ought to be, and he hoped he was, the best authority as to its present condition; but with regard to its future prospects, whatever hopes he might entertain, it was incumbent on him to express them with caution, lest he should be exposed to imputations of which the least uncharitable would be that he laboured under a

Digitized by Google

usion. This [he proceeded] I will say, however, it if the Preston and Wyre undertaking has hitherto been overrated by its friends, it is now most deedly underrated by the public. That its capabiies have not yet been fairly tested or tried, every partial man must admit. Make the harbour accessible at all hours, and thereby eligible as a packet ation, and if you do not materially improve your operty I shall readily acknowledge that I am out my calculations. This acknowledgment, if ever rced upon me, would, I am aware, afford little nsolation to those who might have lost their oney. Hence they must judge for themselves, for decline the responsibility of giving them advice. at I am aware that to do all that is necessary, a rge additional outlay of money must be incurred, nich few will be inclined to risk, considering the tle encouragement they have hitherto received. must be stated, also, that where so many petty al interests and prejudices combine to embitter e opposition under which this undertaking labours, mething more powerful than even money itself is ecessary to turn the tide of popularity in our faour; we are in want of the moral support which e influence of Government alone can give us. An pinion is fast gaining ground that Government ould enable us to finish the harbour; not to get e shareholders out of jeopardy, which it would e absurd to expect, but for the advantage of the comunity at large. It is the deliberate opinion of me experienced officers of the Royal Navy, that harbour of refuge on that coast is very desirble, and that Fleetwood is the most eligible spot. his object might be accomplished at a trifling exense—at the outside an expense of 40,000*l*. A ock would cost some 20,000*l*. or 25,000*l*. more; and communication by steam with Ireland and Scotand would immediately follow these improvements, Belfast, the most commercial and enterprising port Ireland, and all the northern part of that country, the grievances of which are, on every occasion, nd by everybody, as ostentatiously proclaimed as hey are slowly removed—Belfast now labours under great disadvantages. The mail of all that district s in the summer 12 hours, and in the winter 14 ours, later than if it came through Fleetwood. The bags are sent to Dublin, thence to Holyhead, nd reach London the next day at 4 o'clock in the fternoon, too late for business. This happens invariably, under the most favourable circumstances; but in the winter the delivery, instead of taking place the next day, is almost always made the day after. I know of instances where this delay has proved a serious and irreparable injury, and one of these has recently come to my knowledge at Liverpool. The subject has already attracted the attention of the mercantile community on both sides of the channel, and I believe some parties intend to petition Government that the mail to the north of Ireland may proceed to Belfast direct from Liverpool. There is, however, in the geographical situation of Fleetwood, a decided superiority over Liverpool in this respect; not only is the distance shorter, and about the same as the distance between Liverpool and Holyhead, but the Wyre is, owing to prevailing winds and currents, more readily accessible than the Mersey. Liverpool has so many advantages over Fleetwood, that it may concede this point without accusing us of imitating the folly of the frog in the fable, when it attempted to equal the bull in size by copious draughts of wind. The merchants of Liverpool may perhaps endeavour to secure the conveyance of the Belfast mail to themselves; but I am satisfied that, should they oppose us, there will be nothing spiteful or mean in their opposition, or nothing inconsistent with the spirit of fair competition and usages of trade. They are too conscious of their strength, too enlightened and liberal, to feel jealous of any advantage which may naturally belong to Fleetwood. Now it is the interest, it is the duty, of every shareholder present to inquire into these matters, and explain them clearly to such members of Parliament as may feel an interest in them, especially to the members representing Belfast, Londonderry, Coleraine, Sligo, Down, and even Donegal. I believe that four steam-boats would keep up a daily communication with Belfast. Two of them might be supplied by the shareholders, friends, and supporters of this undertaking; the other two by the Post-office. As the average passage to and from Belfast is 13 hours, the mail would be only 24 hours in its way to London. But this is not the only benefit that the Government would bestow upon the country by completing the Harbour of Fleetwood; they would enable this Company to open a regular and daily communication with the western coast of Cumberland from Rampside to Whitehaven, a district hitherto as deficient in that respect as the wilds of Connamara. Ten hours would be the utmost length of a land journey from Whitehaven to Liverpool, which now requires in some cases 24. The Fylde district, too, in north Lancashire, where Fleetwood is situate, would derive an important benefit from this facility of communication, and partake in the general prosperity of the rich and populous county of which it is a neglected and outlandish portion. Gentlemen, there are many reasons which if clearly stated, and moderately urged, may, and probably would, challenge the serious attention of an enlightened Government. But it were vain to expect the salvation of your own individual interest in this concern from that source. You may receive help from measures intended for the general good; but even this you will not get unless you prove that you are willing and able to help yourselves. First rescue your property from the risk of being sold, which you must expect unless you interfere. Next take measures for the improvement of that property; and let your Directors and a Committee of shareholders call upon Government for aid after you have matured your own plans.

Mr. DARRELL wished to know, if leaving the payment of interest out of the question, the receipts would meet the current expenditure.

It was answered, that the receipts would do more than this. If the traffic which they had the first year were again secured, the interest also would be paid, and something left for the proprietors. It was explained that the receipts during the first year had been augmented by the carrying on of the Company's works.

In answer to a question as to the *James Dennistoun* steamer, it was stated that no loss had accrued from that vessel taking into account the number of passengers who but for her would not have used the railway—which number had amounted to 2,640 during the six months.

Mr. JOHN ABEL SMITH, M.P., said, he was not an original shareholder in the Company, and had only become a Director after having fully made up his mind that the scheme laid before him would, if carried out, be advantageous to all parties concerned. Nothing that had since occurred had weakened the impression he then entertained. He believed that if the project were carried out fairly and fully it would realise a fair return, while by opening up as it were a new district, it would confer an important benefit on the country. No one could regret more than himself that the Company had exceeded their means, but it should be borne in mind that whatever had been done by the Directors had been done with the sanction of the proprietors, and under the impression that the new shares would be fully taken up. Had this been done, their means would have been sufficient to complete the undertaking as originally planned. With respect to their prospects, he thought it was a question which called for the attention of a Committee of shareholders to ascertain how far they felt themselves sanguine in reference to any expectations which they might form as to the future well-being and prospects of the Company, provided that the present arrangements connected with it were carried to their fullest extent. His own opinion, he hesitated not to say, was, that there were strong grounds—though whether these grounds were sufficient or not he would not pretend to say—but he conceived there were very strong grounds for believing that great results might be obtained from the working of the railway, and great improvements take place with the funds in their possession, by a prompt and energetic appliance of means towards carrying out the whole of what was originally intended, without which he did most humbly maintain that no fair judgment could possibly be formed, either as to the conduct of those who had managed their affairs, or of the expectations which they may be justified in entertaining for the future. He therefore hoped that the Committee would be instructed to co-operate with the Directors—examining not only into all matters connected with the past, but into all their prospects for their future—that they would make a full and ample Report at as early a day as possible to the shareholders, and then it would be for the shareholders to determine what steps they would eventually take. If they thought fit to abandon the concern, he should think them to be judging more wisely than himself, but it would be a matter of gratification to the Directors, as well as to themselves, should they think proper before doing so to make another struggle, in order to put the undertaking upon such a footing as to give them the prospect of a profitable return. (Hear, hear, hear.)

After much further discussion, it was proposed by Mr. Rufford, that in lieu of the three resolutions read by the Chairman, one should be passed to the effect that a Committee be appointed to devise means for paying off the arrears to the Royal Exchange Assurance Company, and "to adopt immediate measures, in concert with the Directors, to raise, upon the security of the property of the Company or otherwise, as they may consider most desirable, 2,500*l*., to pay forthwith to the Royal Exchange Assurance Association for the half-year interest now due to that Association, and further to report upon an early day the state and condition of the undertaking, together with its future prospects, and the best mode to be adopted to carry into effect such measures as may, in their opinion, be requisite to carry out the undertaking."

Mr. DARRELL seconded the motion, which was then carried unanimously.

Mr. DARRELL inquired, if these shareholders who might feel disposed to advance money on the chattels of the Company, could do so legally on their own property.

Mr. ALSAGER said, the Company was known only as a corporation, and that as individuals the shareholders were in precisely the same position as other parties.

It was stated in answer to a question by Mr. Bourne, that no proprietor could be compelled to advance any further funds.

More than half an hour was now wasted in a vain attempt to nominate a Committee. Mr. Rufford, and others, declined for various reasons to serve, and at last only three names could be got, namely, those of Mr. Darrell, Mr. H. Smith, and Mr. Kemp. A list of principal proprietors was then read over, who were to be "requested" to serve (none of them being present), but it was understood that the three elected would form a quorum, should the others refuse to officiate.

A resolution for suing at law proprietors in arrear of calls, was then passed, and a vote of thanks to the Chairman having been carried by acclamation and suitably acknowledged, the meeting, which was not numerously attended, and the proceedings of which were rather irregularly conducted, broke up, after a sitting of two hours and a half.

THE EASTERN COUNTIES' RAILWAY.—From the discussion at the Eastern Counties' Railway Company's meeting, on Friday last, we are inclined to think, taking into consideration the time assumed by the Directors, and the season of the year, that the line will not be opened for passengers until February, but that trains for the conveyance of goods will begin to run in about six weeks. At Widford and Chelmsford we observe that the works are getting on well, and the gigantic embankments are nearly completed. The station on the Duke-street viaduct is nearly completed. It is to have in the centre a large clock with four faces, and to be illuminated with gas. This will be a great public convenience, as the clock, being kept to mark the London time, will serve to regulate the clocks and watches of Chelmsford.—*Essex Standard.*

PRESTON AND WYRE RAILWAY.

To the Editor of the Railway Times.

SIR,—Although I resigned some time ago the Secretaryship of the Preston and Wyre Railway Harbour and Dock Company, and gave up the management of the railway last winter, I attended the half-yearly meeting of the proprietors on Monday last, both as a shareholder and to answer any questions which might be asked relative to the former proceedings of the Company. It was my intention to have said a few words in explanation of the statement made in the present Report, as to the past and future expenditure of the railway department; but a Committee of the shareholders having been appointed at the meeting to inquire into and report upon the affairs of the Company, I thought it better to reserve that explanation for the Committee, than to divert the time and attention of the meeting from the vitally-important questions they were called upon to discuss. I consider it necessary, however, to send you a few observations in anticipation of the remarks and inquiries which the present Report is likely to call forth from yourself and all those who are not intimately acquainted with the Company's affairs.

The former annual expenditure of the railway is stated in the commencement of the Report to have amounted to 15,914*l.* 4s. 11d.; but this includes the two following sums, which belong to the capital and not to the revenue account. First, 910*l.*, which forms part of the item of "salaries," 4,812*l.* 12s., being the amount of wages paid to the men who were employed in *making* railway carriages and waggons, the Company having themselves built a number of first and second-class carriages, and of waggons, trucks, and carts, valued altogether at 2,200*l.*, in order to test the differences of cost and quality of the carriages of their own make and of those made by contract. These workmen were discharged as soon as the carriages were finished. 2ndly. A large proportion of the item put down as "maintenance of way,"—3,180*l.*, was for ballasting and other expenses, invariably carried to capital account, inasmuch as they form part of *making* and *finishing* a line, and not of repairing or keeping it up. The portion of this item applicable to the revenue account for the actual maintenance of the railway was about the same in amount as that now charged in the estimate of the future expenditure of the railway. This will reduce "maintenance of way," 1,200*l.*, which, added to the 910*l.* deducted from salaries for wages of coachmakers, gives a total deduction of 2,100*l.*, and reduces the former annual expenditure to 13,804*l.* 4s. 11d.

In order to compare fairly the first item in the statement of the former expenditure—("salaries," 4,812*l.* 12s.)—with the corresponding charges in the estimate of the future expenditure, I must first deduct from that item in the former statement the sum of 910*l.* for carriage-*makers'* wages, which belongs to the capital account. This will reduce the item to 3,902*l.* 12s. I must next add to the numerous items of stipends to employés and servants, which follow "salaries" in the estimate of future expenditure, those of the Engineer and Inspector, of the engine-drivers, firemen, &c., and of the foreman and workmen of the carriage-shop, as the whole of those payments were included in the item of "salaries" in the statement of the former expenditure. When taken thus, the salaries and wages of the future expenditure will be found to amount to 3,174*l.* 4s., which gives a reduction of 728*l.* 8s., as compared with the former expenditure. This reduction arises chiefly from the great decrease in the traffic both in passengers and goods mentioned in the Report, which has proportionately diminished the work, and enabled the Directors to discharge altogether a number of persons, and to reduce the stipends of others. For instance, the decrease in the number of the passenger trains is one-third—from 9 to 6 trains per day in summer, and from 6 to 4 in winter.

The large difference between the former and future expenditure (upwards of 4,000*l.*) in the next item—that of "locomotive power," arises, first, from the item in the former expenditure being for 13 months and a half, instead of a year; secondly, from the diminution of one-third in the number of the trains; and thirdly, from the Company having paid to the North Union Railway, first 2s. 6d., and then 2s. 1d. per mile for the hire of engines, while the cost of it in the future expenditure is estimated at only 9d. per mile. I was always very desirous that the Company should have their own engines, instead of hiring; but the contradictory statements of others as to the cost of working engines, the wish to compare the result of the two modes, and other reasons, had hitherto prevented the Directors from buying engines for the passenger traffic.

The third item, mileage duty, shows a difference of 465*l.* 7s. 8d., occasioned by the united effect of the reduction of that tax last session, and of the diminution of the traffic. I have already accounted for the difference in the last item, "maintenance of way," and the others require no explanation. It is obvious that the item of "stationery and other charges," in the former expenditure (which expenses are also for 13½ months,) includes a variety of charges which are given separately in the estimate of future expenditure.

Permit me to say a few words concerning the undertaking itself. Having had nothing to do with the origin of the Company (with which I did not become connected until some years after its formation), I am in no way called upon to take up its defence; but I wish to see fair play, and will briefly state one or two facts, solely for the purpose of showing the real state of the case. The bane of the enterprise has been the great disproportion between the original estimate (made, however, seven years ago, when such things were but little understood) of the cost, and what would be necessary to develop the resources of the undertaking, and what they have since been found to be. This necessity for much greater means than had been contemplated, is really the only evil; for if the original estimate of both cost and traffic be compared with what they have actually turned out to be, the increase of the traffic will be found to have been much larger than that of the cost, while the actual cost, irrespective of the original estimate, will bear an advantageous comparison with other English railways. The line, including the extension to the wharf at Fleetwood, is upwards of 20 miles long, without counting the numerous sidings, &c., which measure a mile or two more. This brings the cost to 17,000*l.* per mile, to cover every expense to this date, including two large terminal stations and two intermediate ones, with complete fitments for an extensive traffic in passengers and goods, and containing workshops, storehouses, &c., a capital stock of carriages, waggons, and trucks, and two locomotive engines; two large houses, offices, and a number of cottages; the cost of five Acts of Parliament, and an expensive and vexatious opposition before a Parliamentary Committee; and the expenses of the Company for five years before the opening of the line.

The railway, therefore, is comparatively a cheap one; and how can complaints be reasonably made that it is not returning a dividend, while the original plans and intentions have not yet been carried out, and the undertaking is left so incomplete? The traffic was expected to arise from the combined effects of a watering-place, a packet-station, and a commercial port, for which it was necessary to build a town, to make a harbour and approaches, and to construct a dock. The first only of these three conditions has been fulfilled, and it succeeded far beyond the most sanguine expectations; so long as the two others seemed about to be carried out; but the postponement of the two latter not only arrested the further development of the whole undertaking, but has had a most injurious and retrograding effect on what had already been achieved. Are, however, the soundness and ultimate success of the scheme to be doubted on this account? As well might the London and Birmingham Railway have been abused for not paying, if it had not been carried beyond Wolverton. The half-yearly Reports of April and October, 1841, besides several special circulars, will show how alive the Directors were to the necessity of carrying out the whole of the original plans without delay, and that they did all in their power to impress this upon the shareholders, as by this and every other means to obtain money for that purpose. In this, however, they failed, and the further prosecution of the works was necessarily abandoned, though the Directors have since raised among themselves, by means of new shares, sufficient (I believe 40,000*l.* to 50,000*l.*, or more,) to pay off the whole of the Company's floating debt. No men ever made such personal sacrifices of money and time for a public Company as the Directors of this line.

The plain question is now—shall the undertaking be carried out to completion, or the whole be abandoned? That there is no medium has been proved by the experience of the last 10 or 12 months. So long as the original scheme was being carried out the town of Fleetwood progressed with giant strides; its success was the wonder of the north, and the first three months of the second year since the opening of the railway showed an increase of traffic of 20 per cent. as compared with the corresponding period of the first year, extraordinary as the traffic of the first year was universally allowed to be. But no sooner were the works suspended, than the scene changed like magic. Despair succeeded to despondency; the town retrograded almost as fast as it had previously progressed, and the railway receipts diminished nearly 40 per cent. The Managing Director has used every means to meet this diminution by reducing the expenditure, but for every shilling saved in that way, two or three have been lost in the receipts, and it is evident that reduction alone will not do. The remaining part of the undertaking must be carried out, for which there has never been so favourable an opportunity as the present. The Company is now out of *debt*; money is extremely abundant, and good investments scarce; the Bolton and Preston Railway will be completed early in spring; and, by opening a much cheaper and shorter route between Fleetwood and Manchester, and the other manufacturing districts, must bring a large accession of traffic to the railway and port from Ireland and Scotland. There seems also a good chance of Government aiding to complete the harbour works, if the Company can show that they will do the rest. In short, there can be no doubt of the success of the undertaking if the original plans be carried out.

I am, Sir, your obedient servant,
JOHN POWER.

November 2, 1842.

GREAT WESTERN RAILWAY—FACTS OR FALLACIES?

To the Editor of the Railway Times.

SIR,—"Alpha," in your last number, has enumerated a long list of what he calls "*facts*," but which, I think, might be more truly called *fallacies*, respecting this railway.

One of "Alpha's" "*facts*" is, that the line has already cost 6,350,000*l.*, and will cost, when finished, more than 7¼ millions.

But the *real* "fact" is, that although 6,350,000*l.* have been expended, yet 300,000*l.* of that sum were borrowed *temporarily*, to be repaid by the sale of the surplus land, buildings, stock, &c.; consequently, the actual cost is 6,050,000*l.*

However, as the Directors, with a wise foresight, are making ample provision for a *great* and *safe* traffic, by substituting stout rails for light ones, and by finishing off the line, in all its parts, in the most substantial and complete manner, an additional sum of 50,000*l.* may be required, which will raise the total cost to 6,100,000*l.*; or to make a liberal allowance to cover these expenses, as well as any balances that may have been due, I will suppose the final cost of the *present* line to be 6,200,000*l.*; and if, at some future time, it should be thought desirable to *extend* the line, and to make a new terminus in London, 300,000*l.* would cover the cost—so that the grand total cost may be estimated at 6½ millions, or 1 million less than "Alpha's" "*fact!*"

Digitized by Google

Another of "Alpha's" *facts* is, that the cost of the new engines ought to have been charged to the expenses account, instead of the capital account; and that the dividend should have been 3 instead of 6 per cent.

But the *real* "fact" is, that these engines were required to work the new ground, and were an *addition* to the plant. The cost was therefore properly charged to the capital account.

Another *assumed* "fact" is, that the line is now 182 miles long, and "saddled" with rent and tollage "much exceeding, this year, 70,000*l.*"

The *true* "fact" is, that the line is 118 miles long, and that the Company rent other lines at a rent and tollage less, this year, than 60,000*l.*!

Among the other *facts* of "Alpha," which, in general are too loose to require particular remark further than that they too, like the above, are *fallacies*, there is one which is so strange a *fallacy* that I cannot understand how a writer so acute as "Alpha" can have *palmed* it off upon *himself* as a "*fact*." I allude to the following paragraph:—

"*It is* also a *fact*, and this, to those who can hear, will be very intelligible, that upon this line of 182 miles, charged with above 170,000*l.* a year interest on borrowed capital, which is 130,000*l.* more than the Birmingham, and saddled with rent and tollage to above 70,000*l.* per annum, the receipts are less than the shorter line by 3,000*l.* per week, though, as has just been shown, it is charged with outgoings, from which the other is free, to the extent of 200,000*l.* a year, or 4,000*l.* a week, which is just the same as if, all other things being the same, the receipts on the Great Western were 7,000*l.* weekly less than those of the Birmingham."

Not to dwell on the minor mis-statements in this paragraph respecting the rent and tollage, and interest, *each* being here stated 10,000*l.* in excess of the *real* "fact," I will at once call attention to the *gross* fallacy which "Alpha" calls a "fact;" viz., that the 130,000*l.* a year interest, which the Great Western has to pay more than the London and Birmingham, is a *disadvantage* to the former equivalent to a *less* weekly receipt of nearly 3,000*l.*

Why! "Alpha" *ought* to have known that if the Great Western line has 130,000*l.* a year more interest to pay than the London and Birmingham, it has, *in consequence*, a proportionately less amount of share capital to pay dividends upon.

If the Great Western Company had not incurred this burthen of interest of 100,000*l.* a year by borrowing 2,600,000*l.*, it must have called up this sum from the shareholders, and have had to pay dividends upon just so much more capital; and, as the dividends have been 6 per cent., and will probably soon be 7 per cent., the Company would have had to pay either 156,000*l.* or 182,000*l.*, where it now pays 130,000*l.*; or, in other words, the extra charge of interest upon the Great Western as compared with the London and Birmingham, instead of being a disadvantage to the former equivalent to a *less* weekly receipt of about 3,000*l.* (which "Alpha" asserts to be a "*fact*") is an actual *disadvantage*, equivalent to about 500*l.* or 1,000*l. greater* weekly receipt. The difference then between "Alpha's" *fact* and my *fact*, is nearly 4,000*l.* per week in the *net* revenue of the Great Western Company!! Which is the *fact?* which the *fallacy?*

So far then, from this burthen of interest being an evil, it is a position good to the Great Western Company, and the true policy of the Directors would be, to call up no more capital from the shareholders, but as fast as money may be wanted to pay off debentures, or for other purposes, to meet such requirements by borrowing at the market value—now 3 to 4 per cent. only.

One word as to the prospects of this railway. The resources of the main line are far from being fully developed, and of the branches scarcely developed; yet the gross receipts of this half-year will be 360,000*l.*, and supposing the expenses to be the same as before, the *net* profit will exceed 3½ per cent. I am, Sir, yours, &c.,

L.

RAILWAYS AND THE POST-OFFICE—THE SHEFFIELD AND ROTHERHAM RAILWAY.

To the Editor of the Railway Times.

Sir,—As I am aware you occasionally read the *Sheffield Independent*, I beg to call your attention to a public meeting of the merchants, bankers, and others, held at the Cutlers'-Hall last Wednesday, in reference to the future transmission of the mails to and from that important town, and their recent removal from the railway to the turnpike-road. Being present simply as a spectator, I was much pleased to observe the spirited and impartial manner in which the subject was handled, and I should think, that if the Postmaster-General is not callous to the opinions of the mercantile community regarding his transactions, and illiberal in the extreme, he will not hesitate to grant his memorialists the full extent of their supplication. There seems to be a mystery about their late transfer to the old gig system that none of the speakers could fathom, and although the Solicitor of the Sheffield and Rotherham Railway Company assured them the price was fixed by the Post-office arbitrators, and no objections offered to, or proposal made to reduce it, the meeting considered it must be on the ground of expense. One influential gentleman, whose veracity could not be doubted, explained, that while temporarily sojourning in London, he called on Lord Lowther, and not finding him present, obtained an interview with his secretary, to whom he represented the impropriety and injustice of the proceeding. The only extenuation he could offer was the high price paid to the Sheffield and Rotherham Company, and the low one for which they were conveyed by the road. In these raging times for economy this might be plausible and cogent reasoning, but the excuse is hardly sufficient for the gratuitous annoyance (I had almost said insult) offered to the Sheffield public, and the unceremonious treatment of the Sheffield and Rotherham Railway Company. There is no doubt, from what transpired at the meeting, that the mails would have been conveyed by the latter, efficiently and securely, for a reasonable compensation, if a proper representation had been made that this was the only grievance, and it was not to be expected that they were to be the first to a retrograde movement. As the case now stands, the plan is slovenly, insecure, and unworthy the high character her Majesty's Post-office authorities have maintained for so long a standing.

Much discussion took place on the subject of a day mail for Yorkshire as well as Lancashire; but the chief complaint, next to the abstraction, was the injurious inconsistency of taking the north bags from Sheffield to Rotherham along with the south ones, at 8 o'clock in the evening, and depositing them in the Post-office there until the arrival of the down mail train at 4 in the morning, and in the same manner allowing letters from the north to slumber at Rotherham all night, when they might be taken on to Sheffield by the return train at 9 o'clock the same evening, and delivered, if requisite, by special application. The effects of concession to this part of the memorial would be, that merchants and others could post letters at Sheffield until 10 o'clock, thus affording them an opportunity of communicating with their correspondents on the following day. It was allowed on all hands that this would be a great boon, but such a one as a town with the population and eminence of Sheffield was fairly and justly entitled to. A useful hint was thrown out that the customary mail guard might be dispensed with, and the one in attendance on the railway train be substituted, who would doubtless be both competent and willing, for a small extra consideration, to take charge of the bags, and that if necessary the Company would guarantee their security. As therefore the present mode is so reprobated, and every desire to return to the acknowledged legitimate one, on an improved principle and reduced terms, I trust to see it immediately adopted. For the accommodation of the public, the Company now dispatch a train at mail hours, and, under such circumstances, cannot they also convey the bags for any amount that will recompense them for trouble and outlay? I am no railway shareholder, and this expression was generally made the preface to each speaker's argument at the meeting. It was seeing men strenuously advocating the welfare of their town so disinterestedly that induced me to trespass on your time by this letter.

I am, Sir, yours, truly,

EQUITY.

CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

Sir,—I write to express my regret at the non-appearance in your last number of a table showing the loss sustained by the Croydon Railway, by their unjust treatment of the Greenwich Company. As you publish weekly the loss sustained by the Greenwich, by what *you* are pleased to call their "prohibitive toll," you ought in all fairness, and for the information of the shareholders in both Companies, to publish the losses sustained by both parties;* and notwithstanding your constant and zealous advocacy of the interests of the Croydon Company, I never could see why the Greenwich, in its depressed condition, should give up part of its income to the Croydon—for that in effect is what is aimed at. In fact, if there is to be an alteration, it ought to be the other way; for the 20*l.* shares in the Croydon are worth 10*l.*, whilst the 20*l.* in the Greenwich are only worth 5*l.* When this state of things is reversed, then it will be soon enough to ask the Greenwich to give up part of its income to the Croydon. I am aware that the advocates of the Croydon will say that their propositions would benefit both Companies; but I beg leave to differ with them, and although I am a most serious sufferer (holding 160 original shares) by the depreciation in the Greenwich shares, I would rather lose the little that remains, than submit to the unjust propositions of the Croydon Company.

I am, Sir, yours, &c.

A. B.

Hornhill, Oct. 31, 1843.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—In your last number a correspondent acquaints you that the annual sum of 114,000*l.* is paid for the conveyance of goods in the line of this railway. It may be so; but the two navigable rivers running parallel to the line have never exceeded 20,000*l.* a year; and a railway, even if it undersells water carriage, must still incur very great expenses. There is certainly a great waggon trade upon the line, but I believe this extends chiefly to Cambridge and to Suffolk.

I am, Sir, yours, &c.,

CARTERA.

Letters from Berlin mention that it is proposed by the Government there to defray the cost of the railways projected for the various parts of the Prussian dominions by an issue of paper money to cover the entire amount. The sum that will be required for the purpose is estimated at about 80,000,000 Prussian thalers. No particulars are given of the probable character of the paper issue in question, but it will, it is assumed, consist of Treasury notes, and therefore be limited to a local circulation.—*Morning Post.*

—o—

Effects of Railways.—A Cheshire farmer, residing near Crewe, in consequence of the fall in cheese, determined to discontinue manufacturing that article, and instead, to send genuine milk to Liverpool, and actually, by contracting with the Railway Company, now conveys this nutritious article a distance of 43 miles, delivering the same by ½-past 8 o'clock in the morning.—*Stockport Advertiser.*

* Give us the particulars, and we shall publish them.—Ed. R. T.

NOTES TO THE TRAFFIC TABLE,
(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

5. The total amount of stock on which dividends are payable is 750,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, as also the toll from the Manchester and Birmingham Company. The divisor employed to ascertain the daily receipts per mile is 121 (85+15+21.) The Company do not now carry goods to Manchester.

14. The receipts include those derived from the Cheltenham and Exeter lines; the former opened for 18 miles, and the latter for 44¼. The divisor employed to ascertain the daily receipts per mile is therefore 180¾ (118¼+18+44½.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. At the last meeting no dividend was declared, the disposable balance from the previous six months' working being only 1,472*l.* 10s. 9d.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,326*l.*, and there was a balance from the previous half-year of 12,479*l.* Out of these two amounts combined, the dividend (after making certain deductions) was paid.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch. The dividend is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c., and subject to payments to the Grand Junction Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27 The 4,261*l.* 19s. 11d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 38*l.* 15s. 6d.; carriages, 44*l.* 12s. 6d.; dogs, 2*l.* 15s. 0d.; parcels, 289*l.* 5s. 3d.; cattle, 19*l.* 16s. 6d.; corn, 6*l.* 18s. 8d; heavy goods, 501*l.* 15s. 6d.; coal and lime, 164*l.* 19s. 10d. —Total, 1,068*l.* 18s. 9d.

31. The amount of stock *created* is 3,000,000*l.*, on which dividends are payable; and the sum of 850,000*l.* is borrowed money at interest. The 3,000,000*l.*, however, is nominal, inasmuch as the shares were some of them issued at a discount, which reduced the actual amount to 2,589,500*l.*, viz.:—15,000 shares at 100*l.* = 1,500,000*l.*; 15,000 of 50*l.*, issued at 40*l.* = 600,000*l.*; 22,500 of 33*l.* 6s. 8d., issued at 21*l.* 13s. 4d. = 489,500*l*; total 2 589,500*l.* The details of the receipts are as follows—Passengers, 2,100*l.* 12s 0d.; carriages and horses, 187*l.* 16s. 4d.; parcels, 168*l.* 16s. 8d.; mails, 50*l.* 5s. 9d.; merchandise, 1,092*l.* 16s. 9d.; minerals, 326*l.* 6s. 1d.; cattle, 19*l.* 16s. 8d. — Total, 3,896*l.* 9s. 10d.; including North Midland proportion of Manchester and Leeds traffic, and amount received for Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester an Birmingham toll.

37. The length stated includes branches.

39. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Investments in Railways.—We are constantly receiving applications for advice with respect to the sale or purchase of particular shares. We have repeatedly stated, that we are very unwilling to offer any opinion upon such points, and, indeed, our readers have the same data as ourselves whereby to form a judgment. Nevertheless, as they *will* have our opinion, we cannot refuse to give it. We wish them, however, to bear distinctly in mind, that we do not, in any instance, hold ourselves answerable for the event. The course we recommend to our correspondents, is simply what we ourselves would follow, were we buyers or sellers under the circumstances detailed by them respectively. With this caution, which we shall take care to keep before parties who apply to us on such subjects, we proceed to notice the applications of the week. We may just add, that the figures and letters have no reference whatever to our traffic list, or to the initials of any railway. We cannot notice questions where this rule is violated. In order that we may not be subjected to needless questions, we must have the name and address of every inquirer, although the answers may be given under a fictitious designation:—R. S.: *A. B. is a good investment at present prices. No doubt the shares will rise. C. D. we would not recommend to purchasers, but if we hold shares, would not sell just yet. E. will no doubt pay* ultimately 5 *per cent on the present price.*—S. (*Carlisle*). *By all means hold on in the railway of which you principally write. It is an excellent line. As to the others, the following is, in our judgment, the order of merit* at present prices, *Nos.* 3, 4, 1, 5, 2, 7, 6.—C. O. L. (*Geneva*). *No.* 1 *do not sell at the present ruinous prices. We have reason to believe there will be an improvement by and-by. No* 2, *we think* 4 *per cent. will be secure, perhaps not immediately, but ere long. No.* 3 *sell; the shares will never be in so good a position; No* 4, *as good as ever; No.* 5. *the last half-year's dividend may be calculated on in February, therefore we would not sell; No.* 6, *do not buy; the shares will most assuredly go down. No.* 7, *an excellent line, well managed. Should our correspondents write again, we hope they will address us in English, as their handwriting is none of the clearest.*—J. F. D. *No.* 1, *not good; the dividend is not likely to be higher. No.* 2, *ditto.*—M. G. (*Pershore*). *We do not think Y. will go much higher, and if either* must *be sold, let it be Y. in preference to Z., which latter, we think, will be a very good investment at the prices named.*—J. H. P. (*Leicester*). *Nos.* 6, 7, *and* 8, *are the best for investment at present prices.*—Septentrion. *We think a further purchase at the present price would be advantageous. The dividend specified may not be secured from the working of the current half year, but we expect* that, *and more, very shortly. To the other question, there is* not "*the remotest chance,*" *at least in our time.*—J. S. E. (*Salop*). *We see no reason to doubt that the dividend of No.* 11 *will be maintained. No.* 12 *will, we think, fall. Nos.* 13 *and* 15 *are both very good at present prices, and so also is No* 14 *to a considerable extent.*—*Even if* X. A. C. (*Old Broad-street*) *had given his name, we should not have answered him, as we do not countenance* "speculative *purchases*"—Nestor. *Nos.* 1 *and* 2 *will both come lower. No.* 3 *is a safe investment* — R. W. & Co. (*Manchester*). *Do not sell Nos* 1 *and* 2 *at present. Nos* 3 *and* 4 *are very good at present prices. By not meddle with the others*—F. *No* 2, *good to buy; No.* 3, *either to buy or sell. No.* 1, *very doubtful.*—B. H. *We have no doubt that the traffic will be considerably increased under the circumstances stated, and that the dividend specified will be available. Hold on.*—J. S. (*Waterford*) *Nos.* 1, 2, 3, 5, 12, *pretty good at present prices; Nos* 5, 13, *and* 15, *very good; have nothing to do with the purchase of Nos.* 6, 8, *and* 14. *The other Nos. may probably answer, but we would not particularly recommend them*

A Subscriber, *who writes relative to the London Bridge station, shall be inquired into.*

A Sufferer *will see that the subject of his note has not been overlooked.*

North Midland Railway.—*In our paper of the 15th October there was a typographical error in the amount of receipts. The sum total was right, but the returns from "passengers, &c." should have been stated at 2,965l. 0s. 6d. instead of 3,965l., as there given. We notice the error lest in making calculations any of our correspondents should overlook the discrepancy.*

Kept Railway.—*A correspondent who gives his name and address, says:—"Being left an executor to the estate of a friend, amongst whose securities I found 100 scrip shares in the Kent Railway, on which my departed friend had paid 2l. per share, making paid 200l., you will confer a favour by informing me where the Directors are to be found, or in short, to whom am I to apply for the recovery of the money? I beg to add a list of the signatures to the certificates, which may induce the parties to tell us what they have done with the money. Signatures to the certificates*—J. M. A. Skerrett, John Yates, Rond. Ronald, H. Short, P. Milepoles."

W. (*Dover*) *is much too eulogistic. He should come at once to the point, and state facts.*

Med.—*There can be no doubt that the quotation in the daily* Times *was a mistake. Probably another railway with a somewhat similar name was meant.*

A Bristol Subscriber *should apply to the Engineer; we cannot answer his questions.*

North Midland Railway.—*A private note in reference to an office on this line has been received in the best possible spirit.*

"English Patents."—*A very useful little work, by Mr. A. Pritchard, has just been published under this title. It embraces a carefully arranged, and apparently very complete, register of all patents granted during* 1841, *besides some notice of the Acts for the Registration of Designs. To inventors and intending patentees it will prove most serviceable.*

"£30,000 per Mile."—*The correspondent (Whitechapel post-mark) who adopts this odd signature, must give us the whole of his "facts," before we can make any promise. We assure him, however, that we are not indisposed to enter fully into the matter.*

We have received so many letters with reference to the Great Western, Midland Counties', and North Midland Railways, that we have been compelled to make a selection. Our correspondents whose communications are omited, must therefore excuse us. If our space would permit, the whole should have insertion.

Assessment of Railways.—*A case decided at Winchester, in reference to the South-Western Railway, is unavoidably deferred till next week.*

In type—A late Servant of the Company—Look Out—Hand Captus oculis—Examiner (*on Railway Monopoly which will keep*)—A Glasgow Citizen, &c. &c.

A large number of letters are kept back by the press of temporary matter.

THE RAILWAY JOURNALS.

The Stamp Returns for April, May, and June, just published by Order of the House of Commons, enable us to complete the Returns for the year ending the 30th of June last. The results, as affecting the railway journals, are as follows:—

RAILWAY TIMES.....	146,374
Railway Magazine	68,500
Majority in favour of the RAILWAY TIMES ..	77,874

from which are to be deducted 10,874 Supplement stamps used for double numbers, still leaving the ordinary circulation of the *Railway Times* just about double that of its contemporary.—*September* 17, 1842.

THE RAILWAY TIMES.

SATURDAY, NOVEMBER 5, 1842.

THE Reply of the Directors of the North Midland Railway to the Report of the late Committee of Investigation will be found elsewhere in our present publication. The latter document has already appeared in our pages, but we repeat it in order to present, at one view, the whole details of the case.

We are gratified to find that the statement put forth by the Directors is, upon the whole, so satisfactory as regards the reductions which *they* conceive may at once be made in the working expenses of the line. The expenditure for salaries and wages on the 10th of August last, stood at 36,908*l.*, which amount the Committee propose should be reduced to 20,307*l.*, but which the Directors believe cannot safely be brought lower than 26,148*l.*—being about 6,000*l.* per annum over the estimate of the Committee. So material a reduction as the Directors themselves now propose is the severest censure that could be cast upon the past management of the Company's affairs.

Digitized by Google

and although we freely grant that the present Board are not to be held responsible for the effects of errors committed by their predecessors, and although, moreover, we cheerfully admit that many of the reductions now proposed, have been for some considerable time in contemplation, we cannot help thinking that a little more promptitude in this matter would have been creditable to the Directors, and might possibly have warded off the investigation which has resulted in the arrangements now under discussion.

It is fruitless, however—nay, worse than fruitless—to dwell upon what is past. The future should engage the anxious attention of the proprietors, since upon the next step taken will depend very much whether they are to remain permanently in their present state of disappointed expectation, or retrieve, as far as *that* can now be effected, the mistakes, and more than mistakes, which marked the early history of the undertaking. And it is with this sole object that, after mature deliberation, we would earnestly urge upon the shareholders, at the approaching meeting, to adhere to the scale proposed by the Directors, rather than carry the reduction to the extent of the Committee's recommendations. The difference is really so little, not amounting, it would seem, to an additional 2s. per cent. on the dividend, even if the whole were profit, which most certainly it could not be—the difference, we say, is comparatively so trifling, that we trust and believe there will be no diversity of opinion upon *this* point. We are the more disposed to offer a suggestion, as it appears that it would be principally by cutting down the wages of the *really* working staff beyond the maximum fixed by the Directors, that the 6,000*l.* could possibly be saved. The servants of the Company have in many, we may say in most, cases already been subjected to heavy reductions in point of remuneration, and although we know very well that the first duty of the Directors and of the Committee is to consult the interests of the proprietors, we would fain hope that as much consideration as possible will be extended to those who, through no fault of their own, are placed in the present painful position of the Company's servants.

Upon other parts of the Report we cannot so readily go along with the Directors. The extraordinary course of counter-questioning the servants of the Company, with a view apparently of fixing upon the Committee a charge of fallacious statements, will not escape the attention of our readers. It was not considerate—it was not fair—thus to compel the officers of the Company to sacrifice the truth, or to run the risk of losing their appointments. We do not hold in much respect the opinions of these parties upon a matter in which they are themselves so directly interested, nor do we imagine that the proprietors will come to a decision upon the strength of such testimony or such opinions, but we must reprobate in strong terms the step taken by the Directors—a step which, whatever they may allege to the contrary, was in no way necessary—to subject their servants to such an ordeal.

As regards the engineering department, the plea put forth by the Directors in justification of outstanding accounts with contractors is most unsatisfactory. Why should there be any differences between the Company and the contractors? Whose fault is it that there should be the shadow of an excuse for the contractors in putting forward unjust or unreasonable "claims?" The answer plainly is, that through the fault of the Engineer, or of those who prepared the contracts, there has been opened this door for dispute. It is very well for the Directors to say, that "the Engineer, *acting under the instructions of the legal adviser of the Company*, has left no means untried to bring all differences with the contractors to a final adjustment." If the Engineer has been receiving a large salary pending these disputes, perhaps it would have been quite as well for the shareholders, had the "claims" of the contractors—which we are to presume have *some* foundation—been at once allowed; now that *legal* expenses appear to be added, we think there can be no doubt that the sooner they bring the matter to a settlement in some way or other, albeit, as the Directors say, by in some degree "sacrificing the (present) pecuniary interests of the proprietors," the better it would be for themselves.

We need not enter into a discussion of the several other points of agreement or difference between the Committee and the Directors. We have no doubt the whole question will receive that ample and earnest consideration which it so well merits. The scale of wages proposed respectively by the Directors and the Committee will, it is likely, form a sort of standard in any alterations which other Companies may have in contemplation, and therefore we have printed the tables in full, without desiring, or feeling ourselves competent, to pronounce an opinion upon the items at large—although we cannot help thinking that, as well by the Directors as by the Committee, the rate of remuneration is in more than one instance fixed at too low a figure. True economy does not always, nay seldom does, consist in cutting down salaries to starvation point. As we said on a previous occasion while discussing this matter, pay a man liberally, and you give him "heart" to go about his daily duties, and render him careful against committing a fault which may subject him to the chance of dismissal; reduce his allowance to the means of a bare subsistence, and you convert the spirited efforts of a volunteer into the forced exertions of a slave.

With reference to the improvement of the Company's revenue by the attraction of new traffic, very little is said either by the Committee or the Directors. Important as the reduction of current expenditure may be, it is mainly to an increase of traffic that the proprietors have to look for an increase of dividend, and it is much to be regretted therefore that so little of the Committee's attention was directed to this subject. The Directors state that their best efforts have been, and continue to be, given to secure this important object, and we trust that the experience which is in the course of daily development on other lines will not be lost upon them.

We have hitherto refrained from drawing the attention of our readers to the Railway Clearing-House which was established in London at the commencement of the present year. The objects which its promoters had in view we highly approved, but we wished the arrangements which they had adopted to be tested by experience before we pronounced an opinion on their merits. We are now glad to be able to state that these arrangements have been found in practice simple, efficient, and well adapted to effect their intended purposes.

This important and useful office was organised chiefly, though not exclusively, with the design of affording to passengers the utmost degree of accommodation by booking through in all directions, and to ensure at the same time to the interests of the respective Companies protection against the numerous risks to which this extension of public accommodation necessarily exposed them.

The other objects to the attainment of which the office has been made subservient, have relation to matters in which the public are not directly concerned. In addition to the purposes originally contemplated, the Clearing-House has since been applied to others, and has in all respects worked to the satisfaction of the Companies who are parties to the arrangement.

We learn with regret that the Companies whose lines extend from Birmingham to Liverpool and Lancaster, are not of this number, owing to the opposition of the most important of the group, but we have reason to believe that this opposition will be shortly withdrawn, and that the clearing system will soon be in operation on all the connected lines running northward from the metropolis.

The most valuable feature of this establishment is the possibility of its unlimited extension, without any diminution of its efficiency, as a means of protection. There is no reason why its arrangements should not extend to the whole of the United Kingdom, and even to the adjacent parts of the Continent. A passenger might then, by the payment of one fare at Edinburgh or Dublin, be conveyed, without interruption, to Paris or Brussels; and we do not despair of yet seeing the public accommodated to this extent.

The Railway Clearing-House owes its origin to a suggestion made by Mr. Robert Stephenson, to Mr. Glyn, the Chairman of the London and Birmingham Railway Company. It is, however, mainly to the exertions and influence of the latter gentlemen that the railway body are indebted for the development of Mr. Stephenson's idea and its practical application. This is but one of the many obligations which both the public and Railway Companies owe to Mr. Glyn. No one has laboured to improve the management of railways with more ability or zeal, and, if we may judge by the line with which he is most closely connected, with greater success. Did generous feelings, keen perception, and sound principle, more frequently preside over public establishments, we might hope to have more examples of the same results.

The affairs of the Preston and Wyre Railway Company seem to be in no very satisfactory position—in fact the concern is virtually bankrupt, and unless energetic measures are at once adopted, the whole of the property stands a fair chance of passing into the hands of the creditors. Here is another instance of a railway ill planned and worse constructed—a scheme which nothing but the *furor* of a few years since could have brought even to its present incomplete state. That the receipts should not suffice to pay interest on borrowed capital, holds out but a poor prospect for the shareholders, and hence we need not wonder that there should be so large an amount of arrears on calls, or that the unfortunate defaulters should now be handed over to the tender mercies of the law officers of the Company.

From the difficulty and delay which occurred in nominating the Committee of Investigation, we do not expect much from their labours. The inquiry will in all probability turn out, as such inquiries usually do, a complete mockery, and if perchance the arrears of interest should now be discharged, the very same dilemma will most likely await the share-

Digitized by Google

holders on the occasion of their next meeting.

We should suggest to the Committee, if we thought that any but Directoral plans would meet with attention from *such* a Committee, to make some inquiry as to the necessity of keeping up a metropolitan establishment. What possible need there can be for an office in London, in connection with 19 miles of railway the nearer terminus of which is at Preston, we cannot conjecture. Like the Clarence Management, the Preston and Wyre Board seem to be strongly in favour of non-residence, and in both cases the result is pretty much the same. If an office in London *must* be preserved, probably a little scrutiny into the expenditure thereby incurred might be of use.

An item of 75*l.* in six months for "taxes," and another of 11*l.* for "insurance," upon a rent of 25*l.*, are somewhat out of the ordinary course, and should be explained. And then a charge of 147*l.* 16s. 10d. for "travelling expenses," in six months, in such a pitiful concern as this, appears somewhat odd, to say nothing of 120*l.* 12s. 2d. put down to "postage, provender for two horses [what a strange jumble of particulars!] and incidental expenses." How, might we ask, does the Secretary earn a salary of 348*l.* 16s. 5d. *in six months*; or why should so large an item as 113*l.* 5s. 6d. be expended in the same period for "printing, advertising, and stationery?" The whole of the accounts require a very exact scrutiny; and no delicacy towards the Directors or their Chairman, who, if he has acted liberally towards the Company, has had sufficient reasons of his own for so doing, should prevent a most rigid examination.

We would just hint to the "Managing Director," who appears to perform, in his single person, the duties of the entire Board—he having got up the official Report—that it would be in rather better taste were he less lavish of compliments to his brother officers. Very "valuable," we make no question, are the "services" of all the gentlemen connected with the establishment, but perhaps it would be quite as well that their praises were sung by other parties than "FREDERICK CORTAZZI, Managing Director."

A letter from Mr. POWER, the late Secretary of the Company, will be found in another page.

WE have been favoured with a copy of a very ample and elaborate Report addressed by Mr. ROBERT STEPHENSON to the Directors of the South-Eastern Railway Company, comprising the details of that gentleman's "late examination of the lines of railway which are now projected to connect the various towns lying to the north of the French capital, and at the same to combine an eligible route for communicating on the one hand with Brussels, and with London on the other." We had purposed to give an abstract of the Report in our present number, and to make some remarks in reference to it, but have been prevented by the unexpected influx of matter which cannot easily be postponed. We hope, however, to be able to publish the Report itself in two or three of our earliest numbers. Meantime we give the concluding paragraphs of the document, which, we need scarcely observe, is marked by the usual ability of Mr. STEPHENSON:—

"Having thus before us what I would call the capital of the Company, let me at once enter upon the question of revenue and annual expenditure. The total estimated receipts have been shown to amount to 845,078*l.* per annum; upon this I have calculated 50 per cent. as fully adequate to defray the expenses of working the entire lines.

The surplus thus left will be.....	£845,078
Deduct 50 per cent.....	422,539 for expenses.
Total.....	£422,539

Or, 14 per cent. upon the required capital.

"This extremely large per centage, however, cannot be considered as applicable solely to revenue. It will be remembered that the concession of the French Government is limited; that the term at present proposed for the lease is confined to 35 years, of which 4 at least must have elapsed ere the entire railway can be in profitable operation to the Company. It will be necessary, therefore, to deduct from this annual surplus a sufficient reserve, as at the expiration of the lease shall be calculated to refund the investment.

"This deduction I have estimated at 2 per cent. upon the gross capital, which, invested for 30 years at 4 per cent. interest, will more than reimburse the subscribers, who, during its gradual augmentation, would, as I am led to believe, be in the enjoyment of at least a net dividend of 12 per cent.; and, moreover, ere they relinquished the railway and its dependencies, at the dissolution of the agreement would be claimants upon the French Government for the fair estimated value of their stock, including the more valuable materials of the permanent way. This property, which in my estimate I have calculated at 2,656,220*l.*, could not justly be valued at less than 40 per cent. of its original cost; for, during the working of the line, the annual expenditure of the Company would have continually renewed and retained in efficiency this portion of their property.

"The sum, therefore, to be refunded would amount to 1,062,488*l.*, which I cannot consider applicable to any purpose but a dividend of 34 per cent. upon the subscribed capital. With this statement of what I believe to be the fair nature of the undertaking, I may now close my Report; yet I cannot do so, without expressing my thorough conviction of the profitable influence which the construction of this line must infallibly have upon the best interests of the South-Eastern Railway Company, and my firm belief that its establishment will not only complete the channel of communication by Dover for existing traffic between Paris and London, but will, by its facilities, daily augment this international association; and I would fain hope, that those whose interests may hereafter be embarked in the undertaking, upon its independent merits, may find in its development the confirmation of my views."

WE gather from a long account which appears in the local papers of the proceedings of the Worcester Town Council, that the Directors of the Birmingham and Gloucester Railway Company propose applying to Parliament, in the ensuing session, for powers to construct the branch line which certain of the Solons of the "faithful City" are so resolute in opposing. We rejoice at the decision, feeling quite satisfied that the legislature will not take a narrow view of the question, like the Town Councillors referred to. If we may draw any conclusion from the published Reports of the Council's proceedings, we have no hesitation in saying, that the intelligent portion of the members are very decidedly in the Railway Company's favour, and although party and professional pique may hold sway in the petty squabbles of a borough council chamber, the case is happily, on such a question as this, far otherwise in the deliberations and decrees of the high court of Parliament.

IT appears from what passed at the adjourned general meeting of the West London Railway Company on Wednesday last, a report of which will be found in another part of our paper, that the new shares are going off well; and indeed we should be surprised were it otherwise, considering that they are entitled to a preference of dividend of 1*l.* per share, or 10 per cent. per annum upon the sum to be raised. We trust, therefore, we shall shortly have it in our power to congratulate the Company on having surmounted the difficulties which have so long encompassed it.

The *Morning Chronicle* of Thursday last, in noticing the plan for raising additional capital to complete this railway, has quoted our opinion on the subject of the traffic to be expected upon it, and has suggested that it would have been better for the Directors to borrowon debentures the sum required to complete the line rather than by the issue of new shares with so large a preference of dividend, and that if the Company have not the power to do so, they ought to have had it by their Act of Parliament. We have made inquiries on this subject at the office, and find that although the Company possess the power to borrow money on debentures, they are restricted from paying more than 5 per cent. interest upon the amount so borrowed, and on these terms the Directors have not been able to raise money. They had therefore no alternative but to issue new shares with great advantages, as to dividend over the original shares, and if the present shareholders have not taken the whole of such shares, they have nobody to blame but themselves should the principal share of the profits get into other hands. We beg to call the attention of our readers to a letter upon this line in another page of our journal.

WE publish the following letter rather that we may not be accused of unfairly suppressing what may appear to make against ourselves than because it either in any degree impugns the correctness of our remarks of last week, or seems in itself to throw any additional light upon the question; and though much pressed for room, we will shortly notice our correspondent's inquiries.

"*To the Editor of the Railway Times.*

"SIR,—I did not anticipate that my few remarks would have been honoured with a place in your leading article. But I cannot help suspecting that I owe this position to your fancied discovery of the author, and your pointed allusion to a gentleman at Liverpool. Were it worth while I could easily account for the Liverpool post-mark, but this, and similar trifles, are not interesting to the public. They care only for the facts of the case. Now, how stand they? You will pardon me if, adopting your own style, I observe that your leader looks very much as if it had come out of the same mint that produced the advertisement in question. The following is strong language for a railway Editor:—'We should be exceedingly unwilling to believe that two such Companies as the Grand Junction and the Manchester and Birmingham had formed a coalition for the purpose of securing a monopoly of the Manchester and London goods business!' Why, what in the name of fortune was the Manchester and Birmingham Railway made for, but to do this! With 50 miles admitted in their favour, would it not be disgraceful did they *not*? Perhaps you will favour me with a reply—and you would increase the obligation if you, at the same time, reconciled your assertion that a reduction 'to 52*s.* 6*d.* a ton on goods from London to Manchester is preposterous—a price which certainly does not leave for tonnage and locomotive power more than 10*s.* or 12*s.*,' with the subsequent remark that 'carriers can carry 50 miles round—serve the public as well,' and 'gain by it.' *I* am a plain man, and these things puzzle me. I have already trespassed on you kindness, but as I have asked you to answer two questions, perhaps I may be bold enough to put a third, and request your opinion whether, ad-

Digitized by Google

mitting for argument's sake that "10s. or 12s." only were realised for haulage and toll, this is not better than nothing? While the Leeds gentlemen boast of being able to carry at 1d. a mile, all expenses included (I am not certain whether the 9½ per cent. dividend is also embraced), are the Manchester and Birmingham Company to turn up their noses at 1½d. a mile?

"I am, Sir, yours, &c.

"A LOOKER-ON.

"Bond-street, Manchester."

The amusing insinuation as to the authorship of our "leading article" is too manifestly absurd to require comment; we pass at once to our correspondent's first question. *There* he has, either wilfully or with strange obtuseness, failed to comprehend what we mean by a monopoly. If the Manchester and Birmingham Company can secure the whole of the Manchester and London goods' traffic, and can manage it on similar principles to those on which other leading Railway Companies manage the same business, we are the last persons in the world to object, and we have *not* objected. It was undoubtedly for that purpose the line was made. But we did, and we do, deprecate that spirit of monopoly which has led some Companies, not content with being the sole toll-owners and the sole proprietors of the locomotive power, to seek to become the sole carriers also, and *that* sometimes not only on their own line but on others; and we are and shall be most unwilling to believe in any combination of two such Companies as the Manchester and Birmingham and the Grand Junction for any such purpose, because we think it is unjust in itself, and can never tend to the benefit either of the public or of the Companies concerned.

But the second demand of our correspondent we are utterly unable to comply with. We cannot reconcile two assertions which we never made. If he will turn back to the remarks which so puzzle his plain understanding, he will see that we did not say that the reduction to 52s. 6d. was preposterous, but that though at first sight it appeared so, yet it in fact admitted of a very ready solution. And as to a carrier "going 50 miles round, serving the public equally well, and gaining more," surely "A Looker-On" must see, that what a carrier gains will depend not on the distance his goods travel, but on the amount of tonnage he has to pay on any given railway, and that he *may* pay the less sum upon the greater distance. We stated nothing more than this self-evident proposition last week.

Lastly, we are asked for an opinion upon a matter which, while it has nothing to do with the principles or the question before us, opens up the whole subject of the differences said to exist between the Manchester and Birmingham and Manchester and Leeds Railway Companies—a subject which we should be unwilling to touch upon at all, but which at any rate this is neither the place nor the time to discuss. We decline to give an opinion.

Since the above was written, we have received a note from Messrs. PICKFORD, which it will be as well to insert in this place:—

"*To the Editor of the Railway Times.*

"SIR,—We have read a letter signed 'A Looker-On,' in your last week's *Railway Times*.

"There must be an error on your part in surmising that the author is one of the Grand Junction Railway Company's establishment, because we feel satisfied that our conduct towards that Company, since the judgment in the long-contested case of Pickford and Co. v. the Grand Junction Railway Company (given early in July in our favour), would not be so met.

"We should wish 'A Looker On' to give his own name if he should again address you. If he belongs to the Grand Junction Railway Company, let him read the judgment that has been given, and the correspondence that has since taken place. At all events, let him show who he is, and he may rest assured we will be prepared to meet him. "PICKFORD & Co.

"London, Nov. 3, 1842."

WE adverted last week to the new scheme of the Brighton Railway Directors for an application to Parliament to authorise the formation of an "independent" line from Croydon to London. The *Brighton Gazette* of Thursday thus notices the project:—

"We understand that the London and Brighton Railway Company have prepared plans and estimates, with a view of going to Parliament in the next session for an Act to authorise the construction of a branch line from Croydon to Vauxhall, in order to form a west-end terminus to their railway. The line, we hear, is easy of formation; and it is evident that, if carried into effect, it will be a great convenience to the inhabitants of the western part of London, who form a considerable proportion of our visitors."

That any body of men in their senses could be found to advance nearly a million of money for the purpose of carrying out even a feasible scheme, with Mr. JOHN URPETH RASTRICK for Engineer, and Mr. JOHN HARMAN and certain of his colleagues for Directors, we do not for one moment believe; but the question demanding the immediate attention of those who, unfortunately for themselves, have already embarked, or will have to embark, three millions in the railway beyond Croydon is, whether that Engineer and these Directors ought to be allowed to expend the money of the shareholders on *such* a scheme, without leave asked or given. These preliminary "plans and estimates" are not got ready for nothing, as we think the proprietors would find, if they had before them the particulars of charge made in respect of the Horsham branch line, and other abortive projects patronised by the same gentlemen.

It might possibly prove very convenient to some parties to keep the Brighton Railway capital account open for a year or two longer, but the shareholders are not of that number. If they are wise, they will without delay convene a special meeting, and give their Directors to understand that it will be time enough to project new schemes when they have fairly ascertained the cost of those in which they are already involved. If the shareholders are wise, they will "let *bad* alone," lest they should make it worse. The idea of inducing Parliament to sanction such a line is absurd. The tactics which secured the success of Sir JOHN RENNIE'S railway to Brighton will not avail now; but meanwhile *somebody* will reap a rich harvest, and this at the cost of the proprietors. Let them look to it in time. They are forewarned.

WE alluded last week to measures now in progress for the immediate carrying out of railway communication to Scotland *via* the west coast. We understand that on Tuesday next a meeting will be held at Birmingham of deputations from the London and Birmingham, Grand Junction, and other Railway Boards interested in the success of the scheme, at which meeting a decision will be come to relative to one or other of the modes proposed for carrying it into effect. The best plan, as it appears to us, would be for the several great Companies to guarantee a fixed interest for a certain number of years on the capital embarked, in the same way as has been done on a portion of the eastern route. These points, however, are in excellent hands, and the public, we doubt not, will feel satisfied with their decision.

THE Post-office again! The short comings of the officials in this important branch of the public service cannot too frequently be brought before the public, and *we* are especially concerned in the matter, because the blame which should fall upon other parties, is generally thrown upon Railway Managements.

We have before us a memorial addressed to the Lords Commissioners of the Treasury, by an influential body of bankers, merchants, traders, and others of the city of Edinburgh, in which the memorialists represent that since the opening of the Edinburgh and Glasgow Railway, they have been subjected to great inconvenience in their correspondence with Glasgow, Greenock, and other towns on the west coast of Scotland, and with Ireland, in consequence of the very unsuitable hours at which the mails are made up, and the letters delivered—that formerly there were three services daily between the two cities, viz., the first at 6 o'clock, a.m., the box closing at 4 45, a.m.; the second at 12 o'clock noon, the box closing at 11 40, a.m.; the third at 9 30 p.m., the box closing at 8 45, p.m.—that shortly after the opening of the railway the service corresponding to the first was altered to 7 a.m., and was conveyed by a common stage coach drawn by two horses, without a guard; but since the 5th current, this service has been altogether discontinued! They further state, that since the discontinuance of the 7 o'clock mail, there are now only two services daily between the two cities. The first takes place by the 11 o'clock, a.m., railway train, and is despatched from the Post-office at 10 40, the box closing at 10 o'clock, a.m., in consequence of which the memorialists have not time to answer their letters received by the previous mail; the two mails therefore may be said to resolve into one; and, further, the letters by this mail which arrives at 1 30 p.m., are not delivered in Edinburgh till 4 o'clock, nor are the letters allowed to be delivered to parties calling for them on the arrival of the mail—a grievance of which the memorialists have much reason to complain. The second service is afforded at 9 30, p.m., as formerly; but since the 5th July last, this mail has been conveyed by a common mail gig with one horse, without a guard—a mode of conveyance most unsafe at the present time, and which it will be impossible to maintain during the winter months. They also complain that they suffer serious inconvenience from the present despatch and receipt of their Irish letters. These letters arrive in Glasgow early in the morning, and were formerly sent by the 7 a.m. mail, and delivered in Edinburgh at 12 noon; since the discontinuance of this mail they are forwarded by the 11 o'clock train, arrive at 1 30 p.m., and are not delivered till 4 o'clock, p.m. The Irish letters also that are sent from Edinburgh by the 11 o'clock train are detained three hours and a half in Glasgow, there being no despatch thence till half-past 4 by the Ayr Railway. They then proceed to say:—

"That your memorialists take the liberty to suggest, that in place of the present very imperfect arrangements, four services daily should be afforded per railway, viz., the first at 8 a.m.; the second at 12 noon; the third at 3 p.m.; and the fourth at 10 30 p.m.; which would be a great public convenience, and materially increase the Post-office revenue. On considering the extent, variety, and

Digitized by Google

importance of the correspondence between the east and west districts of Scotland; and also, as somewhat an analogous case, that there are six services daily between the towns of Liverpool and Manchester per railway, your memorialists are humbly of opinion they are asking nothing improper in the present case.

"That while your memorialists respectively beg leave to state, that they have no other motive in preferring the railway, than the benefit derived from increased speed and saving of time, they cannot admit the validity of the objection of the Postmaster-General to that mode of transmitting the mails, on the ground that the remuneration sought is too much in the present condition of the Post-office revenue. Your memorialists are aware that it is in the power of the Postmaster-General to compel the Railway Company to carry the mails at such hours as he may direct, and refer the remuneration to arbiters mutually chosen.

"That your memorialists further beg leave to observe, that while the mail coaches were on the road, and afforded the most expeditious conveyance for both the letter bags and passengers, every one was on an equal footing; but now it will be apparent, that those who communicate by the railway, personally or otherwise, will have a great advantage over those who trust to the more tedious mode of corresponding through the Post-office; and further, that it was no condition of the Penny Postage Act that any of the existing facilities afforded by the Post-office were to be withdrawn, or any additional accommodation that might be afforded by the formation of railways, or other improved modes of transit, were to be withheld, in consequence of the reduced rate of postage—the effect of which would be to limit correspondence, and deprive the new system of a fair trial."

The prayer of the memorialists is, that the transmission of the mails between Edinburgh and Glasgow may be taken into the *early* consideration of their Lordships, and proper steps adopted in the matter. Surely so reasonable a request will not be disregarded.

A correspondent of the *Scotch Reformers' Gazette* (described by the Editor as "a respectable merchant of Glasgow") states, that the letters from Inverness to Glasgow reach Edinburgh at 10 p.m., and are detained in the Edinburgh Post-office till 11 a.m. next day—that is, they are locked up in the Edinburgh Post-office *for thirteen hours!*

It appears there is some prospect of the mail *gig* from London to Brighton being exchanged for the railway train. Why the horse conveyance should ever have been adopted we cannot tell.

A letter which appears in another column saves us the trouble of again adverting to the conduct of the Post-office authorities in connection with the important town of Sheffield and the Sheffield and Rotherham Railway.

BRIGHTON RAILWAY.

In the early part of the summer, when so much excitement prevailed relative to the Management of the Brighton Railway, one of our correspondents put forth statements tending to impeach the professional or personal reputation of Mr. Combe, one of the Assistant Engineers of the Company. Of course *we* could have no desire to do the slightest injustice to Mr. Combe, who was, up to that period, unknown to us; we merely looked upon the statements made to us (believing them to be correct) as practical illustrations of the system of mismanagement which we were assailing. We have, however, since ascertained that there are no grounds whatever for the imputations attempted to be cast upon Mr. Combe in the matters alluded to by our correspondent, and we have to express our great regret that currency should have been given to them through our columns.

On Monday last, 31st October, a distinguished party again assembled at Woormwood Scrubbs, to repeat a series of experiments on the temporary line laid down upon the Atmospheric principle, by Messrs. Clegg and Samuda, upon the West London Railway. These experiments have been conducted by M. Teisserenc, a highly scientific gentleman, who has been sent over to this country by the French Government, officially and purposely to inquire into this novel power. The proceedings of Monday were at the express request of his Excellency M. de St. Hulaire, the French Ambassador, who was present with part of his suite, and attended by M. Durant St. André, the Consul-General of France for the United Kingdom. In addition to the French authorities, the experiments were watched and noted by Major Lutterman, of the Royal Engineer corps of Hanover, and by M. Hausmann, a member of the Hanoverian Government. These gentlemen both belong to the Railway Board of Hanover, and have been purposely deputed to examine into the Railway System of England generally, and into the Atmospheric in particular. There were also present Signor Gomez, and some other gentlemen interested in the projected railways in Spain; and several Engineers connected with the Continental railways. A deputation was expected from Wurtemburgh, but they will not arrive in this country for some weeks yet. Besides these distinguished foreigners, the experiments were witnessed by Mr. Bergin, of the Dublin and Kingstown Railway, who attended in the absence of Mr. Pim, the Treasurer and General Manager of that Com-Company. Mr. Vignoles, the Engineer, was also present, and several other gentlemen connected with railways. Notwithstanding the very imperfect state of the line, the results of the experiments were highly satisfactory; and the gentlemen who conducted them appeared well satisfied, and it is likely that favourable reports will be made in due course.

We take this opportunity of observing that the progress of the new works is very rapid upon the railway extension from the terminus of the Dublin and Kingstown Railway at the latter town to Dalkey. It is here that the Atmospheric Railway will be first tried in the United Kingdom, owing chiefly to the exertions of Mr. Pim. In a few weeks the Atmospheric tubes will be laid, and the whole line will be at work very early in the spring. The success of this bold and energetic step, of which not a shadow of doubt exists in the minds of any one connected with the Kingstown Railway, will decide the adoption of the Atmospheric principle in many parts of the Continent, and we trust of this country. The lectures and Reports of Mr. Vignoles, who has studied this subject a long time, have so seriously drawn the attention of foreign Governments to this invention, that the present official inquiries into it have been instituted, and practical results will soon follow the success of the Dalkey undertaking. We believe the Cornwall people are becoming sensible of it, and various lines in Great Britain could adopt it with advantage—from Chester to Holyhead for instance, and many other localities we could name. Several important publications on the Atmospheric Railway are in preparation, and we hope to have the opportunity of giving an early notice of them.

—o—

The improvements at the Euston station of the London and Birmingham Railway are proceeding with much spirit, and will probably be fully completed early in the ensuing year. The very elegant covering which has been so much extended over the departure and arrival platforms, contributes greatly to the accommodation of the public, as we had an opportunity of personally noticing a few evenings since on the arrival of a heavily-laden train during wet weather. One thing, however, struck us as capable of considerable improvement, namely, the *pavement* of the carriage-way under the arrival shed. So loud was the reverberation from the carriages rattling over the granite blocks, that parties calling for cabs or coaches could scarcely make themselves heard. This is so very easy of remedy, by laying down wood pavement in a spot peculiarly adapted for it, that we are rather surprised it should have escaped the notice of a Management proverbially alive to the convenience of the public. The difference in first cost must be very inconsiderable—ultimately, we are sure, wood would be found cheaper than granite—and even were it otherwise, we feel quite satisfied that no considerations of an ill-judged economy would be allowed to stand in the way of the convenience of the public in connection with the London and Birmingham Railway.

—o—

A correspondent of the *Scotch Reformers' Gazette* says, with reference to the Glasgow and Ayr Railway:—"I had occasion to go to Paisley on Thursday morning last, and having finished my business, came to the station-house, secured a ticket for the latest train—20 minutes to 10—and took my place in the carriages. More tickets were sold than the number of carriages warranted, and after spending a deal of time endeavouring to cram in the passengers, the engine was disengaged and dispatched to Glasgow for more carriages, leaving the train and some 200 or 300 astonished passengers to wait in the bitterly cold night air till it returned with carriages for the few persons on the platform who could not get seats. The engine returned in 40 or 50 minutes, and at length, after being almost starved with cold, and our patience worn out with delay, we left Paisley at 11—exactly *an hour and twenty minutes after* the appointed time. I do not wish [he adds] to blame any one, but content myself with making the matter public, hoping that the Railway Companies will see after the matter, and take care that in future their servants be more attentive to the interests of their employers, and the comfort and convenience of the public."

—o—

Although particulars and conditions of sale of the Clarence Railway have been issued by Messrs. Shuttleworth and Son, the eminent auctioneers, we understand that the concern is not likely to pass from the hands of the proprietors, an arrangement with the Exchequer Loan Commissioners having been effected. If the shareholders desire to prevent a recurrence of their late unpleasant dilemma, they will lose no time in committing the management to more experienced and more energetic Directors.

—o—

A Report from Captain W. S. Moorsom to the Directors of the Hayle Railway with reference to certain contemplated improvements in the working of that line will be found in another part of this number. It appears to be merely a preliminary

Digitized by Google

Report, and (from circumstances therein fully explained) necessarily incomplete; but we recommend it to the notice of the profession as a specimen of the clear, sensible, business-like style in which such documents ought to be, but very seldom are, drawn up.

—o—

The Directors of the Blackwall Railway have reduced the fares to and from the intermediate stations to the old amount. It is a pity they do not return to the former scale entirely. The experiment of high fares has proved a complete failure.

—o—

The following appeared the other day in the *Times*:—

"Villainous Outrage on the South-Eastern (Dover) Railway.—As the last up-train on Friday evening was on its way from Headcorn to London, and soon after reaching Tunbridge, some miscreant fired into a first-class carriage with, as is supposed, an air-gun. The missile, which was projected with astonishing force, passed through the carriage without injuring any of the passengers, smashing in its course the plate-glass windows of the carriage, which were nearly a quarter of an inch thick. We regret to say that, notwithstanding the most diligent search, the villian remains undiscovered."

Our contemporary has been imposed upon; no such occurrence took place.

—o—

A meeting of parties interested in the proposed railways to Plymouth was held at Newton on Wednesday last. The question for discussion was, whether what is called the "South line" should be preferred to the Dartmoor line, or not. Even as regards a mere vote, no very decided opinion was announced, while as respects *subscriptions*, the case was still worse. It is very plain that Plymouth is still far from the benefits of railway communication.

WEST LONDON RAILWAY COMPANY—GENERAL MEETING.

An adjourned general meeting of the proprietors of the West London Railway Company was held on Wednesday, at the Company's offices, Abchurch-lane, City.

On the motion of Mr. Wilkinson (a Director), seconded by Mr. Whittaker (a Director), Robert Gunter, Esq., was unanimously called to the chair.

The Secretary (John Thompson, Esq.) having read the resolutions passed at the last meeting,

The Chairman stated, that since the last meeting the creditors had been spoken to, and all of them who subscribed the original agreement had agreed to extend the time for the filling up of the share-list to the 1st of January next, which removed all difficulty on that score. He had the pleasure of informing the meeting that an additional number of new shares had been taken up by the original proprietors; and that the Directors having, pursuant to the wish of the last meeting, offered the remainder to the public by advertisement, applications were rapidly coming in, the period for receiving them having been extended to the 7th inst., after which date an allotment would take place. (Hear, hear.) With respect to a detailed estimate from Mr. Stephenson, for the production of which the motion for the adjournment of the meeting had professedly been made, the Directors were in a position of some difficulty, Mr. Stephenson being of opinion that it would militate against the interests of the shareholders in their arrangements with contractors, if the very unusual step of laying detailed estimates before the public were adopted. (Hear, hear, hear.) As regarded the allowance claimed by the late Board, a meeting of members had been held, but there was not a sufficient number present to enable them to come to any conclusion, although letters had been received from some of the absentees, stating their anxiety to consult as far as possible the wishes of the proprietors. Mr. Garland, who on a previous occasion had mooted the question, and who he was sorry to see was not now present, had attended the meeting referred to, and had acknowledged the difficulty of the position in which the present Board were placed. He was not aware that he had anything further to communicate. Matters were going on as favourably as under all the circumstances could be expected, and he trusted that after the 7th instant, the affairs of the Company would be placed upon a more satisfactory basis. (Hear, hear.) The Directors had deemed the present meeting altogether unnecessary, as, until after the time had expired for receiving applications for the new shares, they thought no good purpose could be served by entering into particulars as to the exact number subscribed for. Nevertheless, as the meeting *had* been convened on the motion of an honourable proprietor, he should have much pleasure in giving any further explanation, or of answering questions that might be put. (Hear, hear, hear.)

Mr. Wilkinson thought it highly satisfactory to know that a large number of the new shares had been applied for. (Hear, hear.)

Mr. C. Craufurd presumed, that although it might be imprudent to enter into details, the estimate of Mr. Stephenson would be reduced to about 25,000*l.*, as previously stated?

The Secretary said, Mr. Stephenson was not prepared to enter into full details, and therefore thought it safer to deal with the estimate of 32,000*l.* as originally given in. Mr. Stephenson, however, had hopes that a very considerable reduction might be effected.

Mr. Howie expressed his regret that when 25,000*l.* had been named as the amount of the estimate, Mr. Stephenson should now wish to have the range from 25,000*l.* to 32,000*l.*

The Secretary said, Mr. Stephenson's estimate was 32,000*l.*, although that gentleman had stated verbally, that he hoped, from the reduction of wages and materials, to bring the amount down to 25,000*l.* The preparation of detailed estimates was a work of much time, and Mr. Stephenson had recently been overwhelmed by the occurrence of a severe domestic calamity.

The Chairman having again inquired if there were any further explanations required, and no one answering,

Mr. Wilkinson moved a vote of thanks to the Chairman for his kindness in presiding, and for the satisfactory statements which he had been enabled to make.

The motion having been seconded was carried by acclamation.

The Chairman, in returning thanks, expressed a hope that the Company would now see their way clearly out of all their difficulties, and that their future operations and meetings would be distinguished by more spirit than had of late characterised them.

The meeting then broke up.

WEST LONDON RAILWAY.

To the Editor of the Railway Times.

Sir,—As the proposals of the West London Railway Company for raising their new capital of 32,000*l.*, have attracted the attention of the public, and appear to have been favourably received, a review of the original project and present prospects of the Company may not be unacceptable to some of your readers.

The Company was incorporated in the year 1836, for the purpose of conducting a portion of the traffic of the Birmingham and Great Western Railways to the river Thames. It was ascertained by the proprietors that a considerable portion of the goods brought by these two great lines would find their way to that river, and that ultimately the railways springing from the Surrey district of London would require a line or link connecting them with the trunk railways to which I have adverted.

To carry out these views, the projectors purchased the Kensington Canal (a tidal canal, reaching to the Great Western turnpike-road), secured land sufficient for an extensive station at the canal basin; a line to the London and Birmingham Railway, including the freehold of the very important piece of land at the crossing of the Great Western Railway; the right of crossing under the Paddington Canal, and the land required for the terminus at their junction with the London and Birmingham Railway. Here, unfortunately, they halted. Had they carried on their railway to Knightsbridge and the Thames, it would have been probably without exception the most lucrative in proportion to the capital embarked of any railway in the kingdom. By arrangements which were subsequently made with the Great Western, they obtained the right of stopping all the trains on that line, and the Great Western Company engaged to build, at their own expense, the requisite station at the point of junction of the two lines.

The West London Company then proceeded with their works, purchased and obtained possession of the Kensington Canal, and of all the land which they required; arranged their cross rails with the Great Western Company, constructed the gallery under the Paddington Canal—a most difficult and expensive work—and nearly finished their deep cutting to the Birmingham line, and then they stopped. Their expenditure to this time was from 120,000*l.* to 140,000*l.*, and their 20*l.* shares, which had been selling at about 13*l.* per share, dropped to about 2*l.* 10*s.* There were three reasons for the discontinuance of the works. First, they could not

Digitized by Google

get under the metropolis roads; secondly, their funds were exhausted; and thirdly, they could not obtain money, unless under the powers of a new Act of Parliament. After some delay, they applied for an Amended Act, which received the Royal Assent in 1840, and contains, certainly, very valuable provisions, giving to the Company full power to raise the metropolis roads, subject to restrictions beneficial alike to themselves and the public, and enabling the Company to raise any new capital they might require (not exceeding 60,000*l.*), by the creation of new shares having preference, if requisite, over the original capital. The Directors, after procuring this Act, laid several plans before the shareholders for raising the new capital required, but none of them appear to have been seriously entertained by the proprietary until the present (suggested, I believe, by some of the creditors) was set on foot. By this plan, as shown in the resolutions advertised, the creditors are postponed until the dividend of 10 per cent. per annum is paid on the new capital.

A large proportion of the new shares have been taken by the original shareholders—the remainder have been offered to the public; and if the statements made are correct, the applications received for them are numerous, and the completion of the line may, I think, be considered certain. The question now is, what return will the original shareholders get for their outlay of 150,000*l.*? The estimate of traffic, as first made, showed that the gross annual receipts of the Company would be 26,775*l.*; and there is no reason for supposing that this estimate was overstated. Deduct from this sum 50 per cent. for the cost of working, the net income will be 13,387*l.*, to be divided as follows:—

	£
First—The Lion's share to the new proprietors on their 3,200 new shares (a dividend secured without risk)	3,200
Secondly—The 5 per cent. dividend on the creditors' 760 shares (well secured)	760
And lastly—The surplus dividend of 9,427*l.* to be divided among the first class preferred 3,200*l.* shares, the second class 760 shares, and the original 7,500 shares, viz., 16*l.* 5*s.* per share, on 11,460 shares, increasing or diminishing according to the prosperity of the Company	9,527

Thus giving to the holder of a 10*l.* share who pays his money by instalments of perhaps not more than 1*l.* per share in every three months, an annual sum of 1*l.* 16*s.* 5*d.*, or 18½ per cent. per annum. To a holder of a creditor's share, 1*l.* 16*s.* 5*d.*, or 9¼ per cent. per annum. To a holder of an original share, 16*l.* 5*s.*, or 4½ per cent. per annum.

I am, Sir, your obedient servant,

A SHAREHOLDER.

Kensington, November 2, 1842.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—I am desired by the Directors of the London and Blackwall Railway Company to express their reluctance to add a single word to what was stated by them in their address to the shareholders of the 15th instant. The Directors believed that all further controversy would be avoided by the publication of the Report made by Messrs. Stephenson and Bidder on the 25th February, 1839, more than twelve months after the date of their original Report (wherein they held out a distinct promise of a saving of 173,000*l.* in the cost of constructing the railway), and after all the contracts for the main line had been entered into.

Messrs. Stephenson and Bidder, in the Report of February, 1839, stated that on taking into account the united amounts of those contracts, and adding thereto the cost of the permanent way not included by them, they felt themselves justified in stating their conviction that the anticipated saving to be effected by the alteration of the width and levels of the railway would be fully borne out by the result.

Messrs. Stephenson and Bidder, when they made their first Report, had before them the revised estimate of the expense of constructing the railway from Blackwall to the Minories, with all its details, amounting to 322,842*l.* This estimate had been delivered to them by order of the Directors. No estimate had been subsequently made. From what, then, was the saving to be effected, if not from that estimate?

Should Mr. Bidder persevere in his assertion that the saving anticipated by him was not a saving on the previously estimated cost of the work, it is perfectly clear that both his Reports (but particularly the last) were entirely calculated to mislead the Directors and the shareholders.

Relying, therefore, upon the Reports of Messrs. Stephenson and Bidder, published by the Directors, and inserted in your journal of the 15th instant, they leave the whole case in the hands of the public, and will not be tempted to say another word upon the subject.

I am, Sir, your obedient servant,

JOHN F. KENNELL, Sec. *pro tem.*

60, Fenchurch-street, October 26, 1842.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—Without pretending to enter into the dispute between the Directors of the Blackwall Railway and their Engineer, I must enter my protest on behalf of myself and many of my professional brethren, against what I do not hesitate to stigmatise as the disgraceful line of excuse taken by Mr. Bidder in respect of the estimates for the above railway. Such kinds of argument are justly styled by legal men, quibbling, pettifogging, and so forth. Men of common dealing would give them a much harsher name. I cannot believe that Engineers of such high standing and honour as George Stephenson and his son Robert Stephenson, will suffer the public in general, or the Directors of the Blackwall Railway in particular, to suppose that they have given the least sanction to the writings of their representative. The recent and severe domestic calamity under which their family is labouring must alone have prevented them from indignantly disclaiming being parties to such reasoning. On Mr. Bidder's own showing, he has been "keeping the word of promise to the ear, and breaking it to the hope." At any rate the members of our profession feel that they would be involved as "*participes criminis*," if they appeared by their silence to sanction such arguments for sheltering sins of omission and commission. We are indeed all liable to such sins, and have been perhaps more especially chargeable with them in the first starting of the gigantic operation for constructing and working railways; but I trust few of us would have written such letters about estimates as Mr. Bidder has done.

No wonder, Sir, that capitalists and speculators view such proceedings with disgust, and shrink from the very name of an Engineer. Is it surprising that, independent of the generally depressed state of business, there should exist distrust and dislike against any new measure or public work dependant on the estimates of persons such as the public conclude us all to be, when arguments and fallacies like those put forth by Mr. Bidder are imputed to be sanctioned by the whole profession? No wonder every monied man sneeringly observes to us—"You are all alike." Many friends unite with me in denying that we deserve this reproach, and we will not rank with those who are supposed to avoid telling Directors "what a work will cost for fear they should decline undertaking it;" or to expose ourselves to be hung on one or other of the horns of that dilemma upon which Mr. Bidder must most inevitably be gibbeted—namely, that of really not having been able to judge, *a priori*, of the true and actual cost of the Blackwall Railway, which will fix him with the lesser sin of ignorance—or that of having known what it might swell to, and concealing it from the Directors, leading them on step by step (as also appears to have been done on the Brighton Railway), which will give Mr. Bidder a still less desirable characteristic. I send you my name as your justification for inserting this disclaimer against sentiments and arguments such as those put forth by the late Resident Engineer of the Blackwall Railway, which, left unnoticed, would damn for ever in public opinion the profession which has hitherto stood high in general estimation, and the loss of which shall certainly not be jeopardised by one of those at least who signs after his name the designation of

A CIVIL ENGINEER.

London, Nov. 1, 1842.

THE HAYLE RAILWAY—CAPTAIN MOORSOM'S REPORT.

To the Directors of the Hayle Railway, London.

GENTLEMEN,—In consequence of your resolution passed on 1st September, to the effect that I should "revise the present system of working the traffic of the Hayle Railway, having regard particularly to the existing traffic, and the means whereby it may be improved with advantage to the traders and the public generally, as well as to the proprietors of this Company," I proceeded to Cornwall on the 23rd September and remained on the line until the 18th of October, and the object of this Report is to lay before you as clearly and succinctly as possible: first, what has been done; secondly, what is doing; and thirdly, what remains to be done, in reference to the objects embraced in the resolution above quoted.

The two principal points of inquiry appeared to me to be—Can our gross revenue be increased? And can our working expenses be reduced?

To answer the first question satisfactorily it was evidently necessary to gain an exact knowledge of the several sources of supply from whence our present traffic is derived; the extent of those sources in themselves, and whether yet fully developed upon the railway or not; the conditions under which that traffic has been received by the Railway Company; the prices paid for it; the several details of work performed by the Railway Company for those prices; and the competition existing either by means of road carriers, or arising out of hostile feeling, to which other railways as well as the Hayle are more or less subject at present. It was also evidently desirable to put myself in communication with those who may be termed the agents of our supply, and I have accordingly seen or opened correspondence with the Messrs. Williams, Reynolds, Richard Taylor, the representatives of the two Companies at Hayle, and the managers of most of the mines west of Tresavean.

The returns, which I specially requested from Capt. Bawden, have not yet arrived; and it is therefore impossible for me to state with accuracy, conclusions which can only be drawn from accurate returns, such as those now preparing by Captain Bawden. Returns of the character contemplated have not hitherto been kept, and it will cost Captain Bawden and his clerks much care and some labour, ere they can produce records of the past and of the present sufficiently comprehensive to enable you to take clear and decisive measures for the future development of your traffic. In the absence of these returns I may state generally that while I believe the general traffic on the railway may be increased, I am of opinion that one means necessary for effecting such increase will be to lower the charges for transit. For example, there are about 17 mines, the yield from which, and the supplies to which, form the principal part of our revenue; but some of these mines send away and receive only a small portion of their total supplies through the medium of this railway, and after making all due allowance for jealousy or other feelings extraneous to purely commercial transactions between Englishmen, it appears to me that the main bar to a greater trade from these sources is the *price* of transit by the railway as compared with other means. Take another example in the instance of timber. The Roskears mines are at present supplied with timber to an extent annually which Captain Bawden's returns are intended to show, but of which not one stick comes upon the railway. The price paid for carrying this timber would amply remunerate the railway, even under its present system; but it would be necessary to arrange with the Devoran Railway Company to bring up such timber to Wheal Buller, and there to receive it without the expensive process of unloading and reloading. If this were

Digitized by Google

combined with a reduction in the price of the transit on the Hayle Railway. I think I have sufficient ground for saying that all the timber for Roskears, as well as probably for Stray Park, Dalcoath, East Crofty, Tincroft, East Pool, and possibly also Tresavean, might be expected to come upon this railway, under such advantages as to be beyond the reach of road competition. I am inclined also to believe that the salesmen at Redruth might be supplied with agricultural produce with greater certainty, and at less cost, and in better condition, by means of the railway than they are at present supplied by carts and vans from the west; and also that a further increase of traffic might be obtained by despatching the trains at regular hours between Redruth and Hayle, and carrying in each train one (or more) passenger-vans, converted out of your present waggons. There is also a traffic in coal to East Pool and to other places, which may, by proper arrangement, be brought upon the railway; but you must not expect to obtain these or any other items of additional traffic without much pains in negociation, nor without the exercise of a good deal of skill in perfecting your arrangements for receiving and delivering the traffic upon the railway itself, and you will probably understand more clearly the nature and extent of these arrangements when you have come to the latter part of this Report. You will now, however, perceive some means by which, in my opinion, the general traffic may be increased. And in reply to the question, what has been done, as applied to this part of the subject, you will perceive that communications have been opened with those who have in some degree the sources of our traffic under their control, and that observations and accurate notes have been commenced, which will mainly enable us to appreciate how far we ought to advance, either in opposition to, or in conciliation of, parties whose interests may in some instances induce them to withhold traffic from us, and who may in other instances be led to perceive that the railway may be rendered available for their own advantage.

I will not dismiss this part of the subject without stating that the question of an *increase* of charge for carriage, which was mentioned at the meeting in September last, has received much attention and inquiry. A proposition has been received from Mr. R. Taylor, to the general effect of assimilating the charges on both the Devoran and the Hayle Railway in respect of certain localities. Mr. Taylor has been requested to put his proposition distinctly in writing, and when this is received it shall be laid before the Directors. My present impression is, that the charges for carriage into and out of the district between Wheal Buller and Tresavean on one side, and Consols on the other, may probably be raised with some small benefit to this Company, but that the present rates will bear no increase whatever to the west of South Basset, and that our truest policy is to unite our trade with that of the Devoran Railway in the manner before alluded to, and (*as a general measure*) to take every means for reducing rather than for increasing our present rates with the object of securing a larger traffic to our railway.

I now come to the second part of the inquiry, namely, can our working expenses be reduced? My first object on arriving at Redruth was to visit each sample floor from whence the ore is taken, and each plot on to which it is delivered, as well as each coal wharf at the ports, each coal yard at the mines, and each timber stack. The importance of giving to all these points the most thorough consideration may be estimated by the fact, that in consequence of the difficulty of access to or from these spots, or in consequence of the way in which the difficulty is at present overcome, you pay annually about 3,100*l.*—more than a fourth part of all your income. I have caused accurate measurements to be made in every instance where I perceived that a better and cheaper connection might be made without any serious expense or other obstacle between the railway and the sample floors, or coal yards, or wharfs, and estimates of the expense required in each particular case are now being made by Captain Bawden, assisted by Mr. S. Jenkin, who has offered his services gratuitously for these purposes. I do not anticipate as a necessary consequence that the Company will be obliged to lay down at their own expense the small connecting branches here alluded to. I am in hopes that a better system may be brought to bear, under which the mines will deliver their own ores into the Company's waggons, or rather into waggons on the Company's railway, and will receive coal, timber, and other stores, in like manner; but as it will be absolutely necessary in advancing this system, that we should go to the miner and show him where he may gain an advantage out of what we recommend, and as it will be also necessary to guard ourselves from making or accepting offers which may not realise a fair amount of profit, it follows that we must be prepared with a thorough knowledge of all the details requisite for carrying out the whole matter, and of the expense attaching to any portion if taken upon ourselves.

In visiting the various principals or managers, both at the mines and at the ports, upon this part of the subject, I have been met in every instance, from Tresavean down to Portreath and Hayle, in a fair spirit, and the general impression I have received is, that as soon as the details are fully worked up, and the subject clearly explained to the miners and to the purchasers, and the disposition of the Railway Company is evinced to reduce some items of expense which are at present a source of loss to the Company and of cost to the miners, the ores and other articles will be received and delivered by the Company in the waggons, and a reduction of probably two-thirds of the present expenses attaching to this part of the Company's service may be hoped for.

I may here observe, that in the course of these investigations it has turned out that the Company has a stock of rails in reserve to the extent of about 1,000 yards, besides some hundreds of yards of flat rail bars; and whenever more rails than these are required, the Company may, by a very simple alteration of their inclined planes, and without diminishing their efficiency, secure a further reserve of nearly 2,000*l.* yards of rails. This will show that we have the means of meeting the mines in any fair arrangement for laying down small branches.

The next item of expense that claimed my attention was the sacking, for which the Company would appear to have paid last year (1841) about 1,000*l.*, but which appears likely to cost about 600*l.* in the present year. Captain Bawden appearing to be deeply impressed with a view that to do away with the sacking would only involve an increased expense in loading and discharging the ores, I took particular pains to explain to Captain Bawden the mode by which I propose in each instance to receive the ores from the sample-floor into the waggon, and to discharge the ores on to the plots, and afterwards to take in the coal or other stores: each of these operations is more or less connected with the question as to the propriety of loading in bulk rather than in sacks. I also brought Captain Bawden into conversation with the Manager of the Wadebridge Railway, Mr. Dunstan, who has been accustomed to convey copper ores on that railway in bulk, and Captain Bawden now agrees with me, that provided the arrangements which I contemplate are carried out, the sacking may be almost entirely done away with, and that a reduction in the cost both of loading and discharging will ensue. I have some doubts whether the sacking can be *wholly* done away with, because in cases such as South Basset, where there is no practicable way (consistent with due economy) of getting the railway waggon up to the sample-floor, it seems absolutely necessary still to employ cartage, or to give up the trade; and if carts are employed, I am not yet prepared to do away with the sacks in such cases, and it is only by means of the elaborate returns in course of preparation by Captain Bawden, as before stated, that we can form a judgment as to the propriety of giving up the trade, or of continuing the sacking system in such cases.

The next item of expense is your locomotive power, and having already generally stated that, in my opinion, this department was managed quite as economically as was consistent with due efficiency, I may state now generally, that further observation leads me to a similar conclusion; and although I think that the work at present performed (so far as I am enabled to judge of its actual extent by my own notes, in the absence of Captain Bawden's returns) might be executed for about 350*l.* per annum less than it costs at present, I should not expect to effect this reduction by any direct operation in the locomotive department itself, so much as by a change in the system of carrying, which would obviate to a great extent the delays to which the engines are now subject, and under which we might probably increase the number of waggons or the gross loads per train, so as to reduce the cost of locomotive power *per ton* carried.

To meet the present position of the locomotive department in some of its most prominent points, I have agreed with Captain Bawden that we will draw up a clear specification of repairs, and that upon this specification tenders will be sought from each of the two Companies at Hayle, from Mr. Lewis at Redruth, from Mr. Vivian at Roseworthy, and from the present contractor, Mr. Darke, as well as from any other parties who may be deemed competent. I hope that eventually this contract may be extended into one for the entire supply of locomotive power at per mile run, but much remains to be cleared away before we can expect favourable terms from contractors upon a specification of that character. I may here state that the mode of working the trains is a most important point for further consideration, and I can only at present say, that I hope we may, by due arrangement and care, work the locomotive engines from Redruth right down to Hayle Wharf, so as to do away with almost all the horse-power which is now so costly at Hayle. But we cannot do this until we obtain, by means of efficient breaks, a perfect command over the descent of the Augurrack plane independently of the rope; and some technical questions regarding the power of the stationary engine, the capability of the present rope, and the position of the tubes of the locomotive engines, must also be previously determined and carefully met. On these points Captain Bawden is engaged, and I have obtained sample sketches of nearly a dozen kinds of efficient break to aid in the same object. Captain Bawden is also now making some tanks, or small reservoirs, to allow a settlement of the muddy particles which at present infect the water used by the locomotives, and which are quite as detrimental to their efficient action, and as destructive to their materials, as any one other cause which I have observed at present. Your waggon disbursements are the only remaining item on which I need comment. These are not peculiarly heavy, but rather the reverse, and I only notice them to observe that it will probably be your best policy to turn all your waggons, or the greater portion of them, into the hands of carriers, such, for example, as the Companies at Hayle and at Portreath, or to any other parties who may be disposed to take them at a fair valuation, and to work them on the railway for their own benefit. In such event you would probably provide locomotive power, a right of way, and nothing more, and your charges would be made per mile, on a scale which will be more readily appreciated when we obtain Captain Bawden's returns. This plan has been mentioned to Mr. Reynolds, and to the two Companies at Hayle, and the replies have indicated generally a disposition to accede to some fair arrangement for carrying it out.

Thus, gentlemen, I believe you have before you all that I can at present communicate as to what has been done, what is doing, and what remains to be done. I may add, as a summary, that whereas from the accounts supplied by your Secretary, Mr. Pike, the expenses on the railway during the last year, 1841 (exclusive of interest paid) were about 9,100*l.*, the expenses during the last six months ending 30th September, by Captain Bawden's account (which Mr. Pike believes to be nearly exactly

Digitized by Google

correct), are at the rate of less than 8,000*l.* per annum, while the traffic does not appear to have fallen in so large a ratio. I cannot conclude without regretting that my statements cannot possibly be made more closely or conclusively, until I am placed in possession of the more accurate and detailed information which is now in progress.

I have the honour to be, Gentlemen, your obedient and faithful servant,

W. S. MOORSOM.

4, Norfolk Crescent, Hyde Park, Nov. 1, 1842.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—As a considerable shareholder in this line, I trust you will allow the insertion of this note in your next number. I am very desirous of expressing, my opinion, that a Committee of Inquiry cannot have any *ill* effect; but *much*, very much, *good* may result from it. I am at a loss to comprehend why the Directors do not lend their assistance in promoting what appears to be the wish of a large body of shareholders. If there be no "hidden secrets," a thorough investigation would set the Directors in a very different position to that in which they now stand.

The Brighton Committee did no harm, nor do I think the North Midland will; "a stitch in time saves nine."

It is a perfect farce to suppose that an allowance ought to be made to Sir William Heygate, Ichabod C. Wright, Esq., and several other gentlemen Directors, possessing large private fortunes, whether they pocket 50*l.* a piece, and laugh in their sleeves, for doing—what? I don't know.

I do not think it would be a bad system for the Board to consist of six paid Directors, say at 100*l.* each, and nine honorary members, each Director holding not less than 50 shares. It gave me pleasure to read the letter from a "Glasgow Citizen," in your last number; I trust the shareholders generally are stirring themselves. I am writing without the least vindictive feeling towards the Directors, although I think they have treated the shareholders too cavalierly; but with all due deference to them, I do expect, if the inquiry is fully carried out, and proper economy enforced, that I shall receive 5 per cent. instead of 3, as I never doubted the Midland Counties' Railway paying, with good management, and well too.

I am, Sir, yours obediently,
A SUFFERING SHAREHOLDER.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—On reading the letter, signed a "Glasgow Citizen," in the *Railway Times* of the 22nd, I cannot help remarking the surprise (which he evidently manifests) at the great disparity of cost of maintenance of way between the Midland Counties' Railway and other railways in similar circumstances. Of course, he will allow that the cost of maintenance of way is partly in proportion to the quantity of traffic; but leaving that aside, if the Directors of the Midland Counties' Railway were to let the maintenance of way by tender, and allow a fair competition to take place, I am quite certain they would find that it would be let (exclusive of finding permanent materials) quite within your Glasgow correspondent's estimate.

By fair competition, I do not mean merely advertising the contract as being to let, and (after drawing a number of contractors together) accepting the tender of some individual, merely because he has a personal acquaintance with the Engineer or some of the Directors, when another equally competent will undertake to do the work for a less sum, and find ample security for the due performance thereof. If the "Glasgow Citizen" would take the trouble of making himself acquainted with these matters, he would soon find that the true interests of the Company are not always exactly considered. Your obedient servant,

A CONSTANT READER.

Chelmsford, October 28, 1842.

RAILWAY "MONOPOLY" AND THE PUBLIC.

To the Editor of the Railway Times.

SIR,—Your correspondent's last favours upon railway monopoly [and the public demand some notice from me, not on account of any new arguments which they bring to bear upon the subject (for these letters contain little but "stale, flat, and unprofitable" reflections, enlivened by naked, bold assertions, unsupported by fact, or even a show of reasoning, save such as "I cannot but think"—which indeed seems the ultimate process of reasoning that "N. O. E." is capable of), but by reason of the misrepresentations which in one of them "N. O. E." indulges in. * * *

"N. O. E." impugns the correctness of some of my statements in my last letter: this must be looked to. "N. O. E." says that "'P. Z.' affirms that the old conveyances were less expensive and more comfortable than the new." Now, in the first place I did not say any such thing, and *en passant* I may remark, this is the usual way in which "N. O. E." interprets the arguments of his opponents. What I did say with regard to the expenses of travelling was the following:—"Is it not the case that on many roads the fares are higher than were those by coach?" I do not recollect that I said anything with regard to superior comfort; but if I did, *coute que coute*, I am ready to maintain it.

With regard to cheaper travelling, having first remarked upon the wide difference between my questioning the superior cheapness of railway travelling upon many roads, and "N. O. E.'s" perversion of it into a general affirmation of the superior cheapness of coach travelling on all roads, I need only allude to the London and Greenwich and the London and Blackwall Railways, as notable instances of the truth of what I affirmed.

"N. O. E." cannot object to these as short distances, for he remarks, "It is well know that fares for short distances by coach were always higher in proportion." But supposing he should, moving in his usual eccentric orbit, object to these short distances, I will refer him to the travelling between London and Leicester, between London and Oxford, and also between London and Brighton—one of the instances which he quotes against me, but which upon inquiry I find to be in my favour. So much for "N. O. E.'s" impugning the correctness of my statements! and I have no doubt, had I the time and opportunity to extend the comparisons, that I should find the travelling by coach cheaper than by railway upon many other roads.

"N. O. E.'s" table is good for nothing, for in addition to the error with regard to the fares by coach to Brighton, I did not assert that it was the fact on *all* roads, but I questioned its being the case on many roads. Then do the *four* instances quoted by "N. O. E." controvert the position that I took up? Surely none but "N. O. E." could have the assurance, "for none but himself could be his parallel" in this particular, to say that they did. Now, with regard to "superior comfort," although believing it a gratuitous assumption on "N. O. E.'s" part of what I did say, still I am ready to stand by it, whether asserted originally in my letter or not. Will "N. O. E." contend that the tub in which people are conveyed to Greenwich for 8d., without seats, and in which persons are liable to be blinded by the hot ashes continually scattered from the engine, is superior in point of comfort to the outside of a coach or the inside of an omnibus, the fares for both of which are 6d.? Will he also be inclined to make the same assertion with regard to the travelling to Blackwall? I think that this would be beyond the "modest" assurance even of "N. O. E."

The next point of my letter which "N. O. E." takes up, he obviates any necessity of reply, by honestly refuting himself. He says, "equally unfortunate is he in his assertion, that after the coaches were driven off the road, by underselling them, the fares were raised." And in the very next sentence he admits that "in one or two cases the fares were slightly raised." And yet he says, my calling on him to refute, if he could, the above statement, the truth of which he himself admits, "is so palpably absurd as to be truly surprising." Surely than this "the force of nonsense can no further go;" and it is only requisite for me to *repeat* his own statements, or arguments I suppose he would call them, to show their utter futility and absurdity. * * * I must not omit to thank the courteous "Justus," first, for his kindness in begging "N. O. E." not to break a butterfly, like myself, upon the wheel; and secondly, for his candid acknowledgment of the truth of the description that I gave of him. * * *

He is a "simple foolish old man," and he glories in it. If his former lucubrations did not give him an indisputable claim to the character which "he glories in," his last must pre-eminently do so.

I am, Sir, yours, &c.,

P. Z.

Tuesday Evening, Nov. 1, 1842.

* To Steventon.

[We have struck out several lengthy passages from our correspondent's letter, because, although cleverly done, mere personal *hits* (if *personal* can be applied to what is said of one anonymous correspondent by another) only serve to distract attention from the matters really at issue.—ED. R. T.]

THE ATMOSPHERIC RAILWAY.

FOR the first time in her annals, Ireland has taken the lead of other countries in the practical application of an improvement. The Kingstown and Dalkey Railway, which has been commenced on the atmospheric principle, is likely to prove the first step in a series of works of which it is hard to predicate the limits either in point of extent or usefulness. The French and Hanoverian Governments have already deputed Commissioners to inquire and report on the system; and a *projet*, strongly in its favour, has been laid before the Prussian Cabinet by the Minister of State. M. Teisserenc, the French Commissioner, has arrived within the last few days in London, to make his observations on the experimental line at Wormwood Scrubbs; and two gentlemen deputed by the Hanoverian Government on a similar mission are daily expected. M. Teisserenc is a member of the Chief Commission of Railways in Paris, and is reckoned among the most distinguished *elevès* of the Polytechnic School; we shall look forward to his Report with considerable interest, though, in all probability, the results of the undertaking at Dalkey will be known almost as soon as those of his investigation. Mr. Pim's letter to the Earl of Ripon, which first brought the merits of the system distinctly before the public, has, we understand, been translated into Polish, and published at Warsaw; it has also appeared in a German dress at Stuttgard, so that the matter may now be regarded as an "European question."

In the midst of the depressing events with which we are surrounded, it would be satisfactory to know that we were making progress in anything, even though that progress were a tardy effort to overtake others who had long outstripped us; but, seeing

Digitized by Google

that in this important improvement is one of the chief means of promoting civilisation, we have "taken the initiative," not only of the European nations, who generally wait to see the working of such matters in England, but also of England herself; and, considering the part, however humble, which we ourselves bore in bringing the question at first under public notice, we must confess we feel a high degree of pride and pleasure in announcing these proofs of the great importance now attached to our Irish undertaking by the most enlightened nations in the world. Ireland, we trust, is not destined long to remain as she has been, in the back-ground of Europe—following, if at all, timidly at an humble distance, in the wake of even the pettiest of her neighbours in everything that conduced to the advancement of the arts of life.—*Dublin Evening Mail*, October 28.

EXPLOSION ON THE DUBLIN AND KINGSTOWN RAILWAY.

On Thursday morning, between 5 and 6 o'clock, while the *Hibernia* engine was waiting at Kingstown for the mail, a terrific explosion took place, by which engine and tender were thrown "heels over head" in opposite directions, and a shower of coke thrown to a very considerable distance.

On examination it appeared that the boiler (which is of copper, and of considerable thickness) had collapsed, and that the re-action of the sudden burst of high-pressure steam produced the extraordinary effect above stated.

The engine in question was one of those with vertical cylinders, of which the Company possessed three, and the boilers were also of a peculiar construction, but from which no danger was ever apprehended. The construction of these engines in other respects not being approved of, as not admitting some important modern improvements, the Directors some months since ordered three new engines to replace them, and which are now in progress of construction at the Company's works. The first of these, the *Shamrock*, will be ready for work in a few weeks.

A minute inquiry has been instituted into all matters connected with this singular and very serious accident, and we are happy to state that no blame whatever is attributable to either the engineman or fireman. The former is a very steady and efficient man, and has had the charge of this particular engine for more than three years, and was engaged the entire of the previous day in its minute examination.

Lest, however, any alarm should be excited, the Directors have given instructions that the two remaining engines of this construction shall not, in future, be used for the conveyance of passengers; and, from the perfectly different construction of the boilers of all the other engines, including those built in the Company's workshops, no such accident can possibly arise. The engineman and fireman had scarcely entered the waiting-room provided for them when the explosion took place. Providentially no one was in the least degree hurt, and the carriage next to the engine was not even marked.—*Dublin Morning Register*, Oct. 29.

[We understand from private sources, that the investigation made by the Directors resulted in clearing the servants from all blame, and that Mr. Bergin, the very able Secretary of the Company, who is now in town, has intimated to the Board of Trade that the engine and tender will be allowed to remain for some time in their present position, in case their Lordships should think it necessary to institute an inquiry into an occurrence of so novel a character.—Ed. R. T.]

Dublin and Kingstown Railway.—The Directors of the Dublin and Kingstown Railway, in compliance with a wish very generally entertained and expressed, have not only agreed to continue the half-hour trains during the winter nights, but have also made arrangements for starting an extra train from Kingstown, at a quarter past nine, a.m. This will be a great accommodation to the residents at Kingstown, and especially to men of business, to whom "time saved is money gained." The Directors of this deservedly popular, and deservedly prosperous undertaking, have at all times manifested the utmost anxiety to meet the wishes of the public, and we believe the new arrangements will be generally felt and acknowledged to be of great practical utility.—*Dublin Morning Register.*

BRANCH RAILWAY TO OXFORD.

On Thursday last a private meeting of persons desirous to promote the formation of a railway from Oxford to the Great Western, was held at the Star Hotel. The meeting was of a most respectable character, and consisted of gentlemen of the county, members of the University, and citizens. The opinion appears to have been unanimous in favour of such an undertaking, and generally in favour of a line to Moulsford, as most desirable.

Mr. Stephenson, who has had a survey with reference to a line to Moulsford, expressed himself strongly in favour of that line; and said that the junction with Moulsford, including carriages and every expense, could be effected for 120,000*l*. In addition to his professional reputation, Mr. Stephenson gave strong evidence of his conviction upon the subject, by offering to advance, by himself and friends, half of the sum named, and to guarantee to shareholders a clear 5 per cent. for their capital.

The meeting appointed a deputation, consisting of J. W. Henley, Esq., M.P., Rev. Dr. Buckland, and the Mayor, to wait on the Vice-Chancellor, in order that the opinions of the leading members of the University on the subject might be ascertained, and every facility afforded for the maintenance of the discipline of the University.

A deputation from the Great Western Company was present, but declined taking part in the discussion; the Directors, it is understood, preferring the Didcot line.

It will be remembered that the opposition to the Didcot line, when proposed several years since, originated in the city council, on the ground that charity estates, pledged as security for the Folly Bridge Debt, were endangered. We know not the present state of the trust, but the matter is too important to be overlooked. Private interests are always sharply looked after in all railway speculations; and we hope in our next report of proceedings in this matter to have to state that the interests of the charity have been cared for.—*Oxford Chronicle.*

RAILWAY ADJUDICATIONS.

THE QUEEN v. THE MANCHESTER AND LEEDS RAILWAY COMPANY.

Court of Queen's Bench, Nov. 2.—The Solicitor-General applied for a rule *nisi* to quash a mandamus, ordering the Company to complete the road to a width of forty-two feet. A trial had taken place, in which the jury had determined two of the issues in favour of the Company. They had found that the Company had extended the railway to its full width. The cause had since been removed into the Exchequer Chamber by writ of error.

Lord Denman—You had better have the rule enlarged for a twelvemonth.

The Solicitor-General—I thank your Lordship. It will render my present application unnecessary.

EX PARTE MARR v. THE MANCHESTER AND BIRMINGHAM RAILWAY COMPANY.

Vice Chancellor of England's Court, Yesterday (*Nov.* 4.)—This was an application on behalf of the plaintiff for an order respecting a sum of 450*l*., compensation and interest, for the occupation of a piece of land, purchased by the Company, for the purposes of the railway. On behalf of the plaintiff it was contended that the Company had entered into possession of the land without the consent of the plaintiff. This possession was taken in December, 1837; no purchase-money was actually paid, nor did the Company [illegible] to that money, responsible to the owner. The money was in a very unusual and extraordinary manner handed over to the two Solicitors of the Company, and by those gentlemen lodged in a bank in their own names. However good the responsibility might be, it was the responsibility of the Solicitors only, not of the Company. The Company had been in possession of the land ever since the above date, deriving a benefit from it, and now would neither pay rent nor interest. The Company relied on their own Act of Parliament; the purchase-money was paid in June, 1840, but the interest was still refused. The money had been shifted from the Company to the Solicitors, and from the Solicitors back to the Company, and had at last been lodged in the Court of Exchequer. It was paid into the Court in April, 1839.

Mr. Bacon was heard on the part of the defendants.

His Honour said the case involved a vast number of points, and he must read over the affidavits leisurely. He should also like to have an affidavit as to the receipt of the letter of the 12th of April, 1838, by the solicitors of the plaintiff. He should take time to give his decision.

RANGER v. THE GREAT WESTERN RAILWAY.

On the application of the Counsel on both sides, the hearing of this case and cross case was deferred till the 2nd of January next.

Railway Places of Worship.—Two places of worship have just been erected on that portion of the London and Dover Railway now in progress of formation between Tonbridge Wells and Folkestone, for the religious instruction of the excavators and workmen in the employ of the Railway Company. The proposal originated with Messrs. Grissell and Peto, the contractors for that portion of the line, who, in conjunction with the Company, have provided a Chaplain to preach on every alternate Sunday. Each place of worship will accommodate between 300 and 400 persons. Bibles and prayer-books are provided for the men and their families, and instruction is given to those who cannot read.—*Morning Post.*

GARNKIRK AND GLASGOW RAILWAY. —The FIRST INSTALMENT, or £5 per Share of the New Stock of the Garnkirk and Glasgow Railway Company, is due on the 11th of November next, and will be received at the Branch Bank of the British Linen Company, Queen street, Glasgow, where the receipts are deposited.

DIVIDEND.

The Second Half of the current Dividend of Eight per cent. will be paid on the 11th November next, at the Railway Office, St. Rollox, Glasgow, or to Shareholders resident in Edinburgh, at the office of Thomas Sprot, Esq., W. S., Drummond-place.

Shareholders residing at a distance from Edinburgh or Glasgow, may have their Dividends remitted to them by sending written instructions to that effect to the Secretary of the Company.

CHARLES ALEXANDER KING,
Secretary and Manager.

Railway Office, Saint Rollox, Glasgow,
19th October, 1842.

NORTHERN AND EASTERN RAILWAY. —NOTICE is hereby given, That in pursuance of a Resolution of a Special General Meeting of the Proprietors held on the 5th of October last, the Directors of the Northern and Eastern Railway Company are ready to receive Tenders from parties willing to advance money upon the Loan Notes of the Company.

The Tenders must state the periods for which the money will be advanced, and the rate of interest at which it will be lent.

By order of the Board of Directors,
WM. BOURNE, Secretary.

Shoreditch, London, November 3, 1842.

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—TO RAILWAY CONTRACTORS AND OTHERS.—The Directors of this Railway are ready to receive Tenders for the execution of the whole of the works necessary for the formation of that portion of their line extending from Rainton to Shincliffe, and the Branch to Durham, together about eight and a quarter miles, including the construction of Three Timber Viaducts over the Shincliffe, Sherburn, and Cassop Becks.

Plans, sections, and specifications of the works may be seen at the Office of the Company at the Railway Station, York, and at the Office of Mr. Thomas E. Harrison, South Shields, on and after Monday, the 24th of October instant. Sealed Tenders addressed to the Secretary must be delivered at the Company's Office at York on Wednesday, the 9th day of November, before One o'Clock. The Directors will meet at their Office, in York, on Thursday, the Tenth of November, at Twelve o'Clock at Noon, to let the Contracts, when parties who have previously sent in Tenders or persons duly authorised by them are requested to attend.

The Directors do not bind themselves to accept the Lowest Tenders.

GEORGE HUDSON, Chairman.

CAUTION.—This is to Caution the Public against employing William Forster, who has been lately at work on the Paris and Rouen Railway, near Pont de L'arche, 12 miles from Rouen, as a brickmaker, and who has absconded, leaving his workmen and other creditors unpaid, although 3,000 francs (about £120) was given him for these purposes. He has besides left debts owing to various tradesmen to the amount of about 1,000 francs (£40).

The said William Forster is about 35 years of age, of dark complexion, and about 5 feet 8 inches high, and belongs to Portsmouth. He was last employed in England on the Gosport branch of the Southampton Railway, and resided near Fareham.

Previous to absconding, he had been in the habit of remitting the greater part of the money he received for his work to his brother in England, and it is reported he is now at work on the South-Eastern line of Railroad.

MACKENZIE AND BRASSEY,
Contractors on the Paris and Rouen Railway.

By Order,
RICHARD PADDISON, Secretary

NORTH MIDLAND RAILWAY.—NOTICE is hereby given, That a Special General Meeting of the Proprietors of the North Midland Railway, will be holden on Wednesday, the 16th day of November, instant, in the large Room at the Commercial Buildings, in Leeds, at Twelve o'Clock precisely, to receive the Report of the Committee instituted at the Half-yearly Meeting held at Derby on the 25th of August last, "for the purpose of examining the position and future management of the North Midland Railway Company, with a view to increase the prosperity of the undertaking."

W. LEAPER NEWTON, Chairman.
ROBERT FROST, Secretary.

Secretary's Office, Derby,
Tuesday, the 1st day of November, 1842.

NORTH MIDLAND RAILWAY.—At a Meeting of Proprietors of the North Midland Railway, resident in Sheffield and the Neighbourhood, held at the Cutlers' Hall, Sheffield, November 1st, 1842,

GEORGE CHAMBERS, Esq., of High Green, in the Chair,

It was Resolved, with one dissentient—moved by Mr. Carr, of Sheffield; seconded by Mr. Wheatley, of Rotherham;

1. That it is the opinion of this Meeting, that the Report of the Committee of Inquiry, appointed at the last Half-yearly Meeting of the Proprietors of the North Midland Railway, is quite satisfactory, inasmuch as, after a laborious investigation, it holds out the prospect of safely effecting a saving of £17,788 per annum; and, from the known respectability of the parties, and the great interest they have in the undertaking, their Report is worthy of the strongest support of the Proprietors.

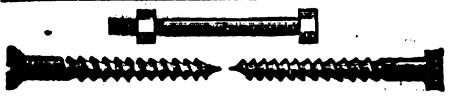
It was Resolved unanimously—Moved by Mr. Bishop, of Wath; Seconded by Mr. Hodgson, of Rotherham;

2. That the Committee appointed by the Sheffield Proprietors be requested to continue their services, and that they use every means in their power for the purpose of carrying out the Recommendations of the Committee of Inquiry.

Resolved unanimously—Moved by W. Vickers, Esq., of Sheffield; Seconded by Mr. W. Bradley, of Sheffield;

3. That the best thanks of the Meeting, and of the Shareholders generally, are due to Mr. Carr, for his zealous and efficient services.

GEO. CHAMBERS, Chairman.



That the best thanks of the Meeting be given to the Chairman, for his services in the Chair.

In pursuance of the above Resolutions, the Committee of the Sheffield Proprietors beg most urgently to request those Shareholders who, approving of the Report of the Committee, and not intending to attend the Meeting at Leeds, have not already furnished their Proxies, to forward them to Mr. John Carr, Surgeon, Sheffield, on or before Tuesday, November 8th, that being the last day on which they can be made available. Circulars, with a blank Form of Proxy, would have been sent to every Proprietor, had not the Directors delayed sending out their Report to the very latest moment.

The Official Report of the Committee, and Address of the Directors, having come to hand since the above Resolutions were passed, the Sheffield Committee have given them due consideration, but see no reason for modifying the sentiments above expressed.

JOHN CARR, Chairman of the Committee.

Sheffield, November 3, 1842.

T. H. RYLAND AND CO., OZELL'S STREET, BROAD STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws, Screw Bolts, Spikes, &c. for Railway and other purposes, also Boiler Rivets, &c.

I. AND D. GLASGOW, Trafford St. Knott Mill, MANCHESTER, Manufacturers, by Improved Machinery, of Wood Screws, Screw Bolts, Spikes, &c., for Railways; also Boiler Rivets, &c.

TO RAILWAY DIRECTORS, STEAM-ENGINE MANUFACTURERS, &c.—Wanted, by a Person of extensive experience, a Situation as Superintendant or Manager, either in the Locomotive Department of a Railway or in an Engineering Establishment, where Land, Marine, or Locomotive Engines are Manufactured or Repaired. The Advertiser will, in a few weeks, be disengaged, and is willing to treat with any respectable party who may require his services in the above capacity. The most satisfactory testimonials as to respectability of character and general qualifications can be produced.

Letters, pre-paid, addressed M. 3, *Mercury* Office, Liverpool, shall have immediate attention.

SMOKEY CHIMNEYS CURED AT ONCE. —The Advertisers have discovered the cause of Wind, Draughts, Downward Currents, &c., and they undertake in a few hours to perfect the Draughts of the most faulty chimneys. The cure is effected by a simple and permanent process, at a stated moderate charge when perfect.

BANKERS.

Messrs. Barnard, Dimsdale and Co., 50, Cornhill; Messrs. Hanburys, Taylor, and Loyd, 60, Lombard street.

SECRETARY,
Joseph Lloyd, Esq.

The object of the Tontines hitherto established has been the accession of a large benefit to the survivors at a remote period, by sinking the capital of the original subscribers.

The advantages proposed by the present plan are, amongst others, the return of the sum subscribed, and the receipt, by the last survivor, or his nominator, of a very considerable sum, to arise solely from the accumulation of interest.

The sum to be subscribed by each Nominator will be small in amount, will be payable by instalments, and will, within one month after satisfactory proof of the death of the Nominee, be refunded.

The present Tontine is to be divided into 20 classes, according to the ages of the nominees, who may be nominated respectively, either by themselves or by indifferent parties. The nominators in each class to pay, during 10 successive years, a fixed annual subscription, which will be for the classes including the ages from 8 to 29, £10; 30 to 37, £12 10s.; 38 to 41, £15; 42 to 45, £17 10s.; and 46 to 50, and above, £20.

When in any class the subscriptions of the survivors, with the accumulation of interest shall exceed £20,000, the surplus will be divided annually amongst the nominators of the surviving nominees of that class, until there shall remain but one survivor, when the £20,000 will become the property of the nominator of such survivor, or until there shall remain not more than five survivors, when, if mutually agreed on by their nominators, it may be divided.

More extended details cannot conveniently be given within the compass of an advertisement, but prospectuses with full particulars, and every other information, may be obtained at the offices, or by application per post to

JOSEPH LLOYD, Secretary,
39, Nicholas-lane, Lombard-street.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street;

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to August. Price 1s., in cloth.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand with a Map of London. Price 6d.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

BRISTOL AND EXETER RAILWAY.—NOTICE is hereby given, That in pursuance of a Resolution of the last General Meeting of Proprietors, the Directors of this Company are ready to receive Tenders of Loans of Money, in sums of not less than £200, and for terms of not less than three, nor more than seven years, on security of Loan Notes under the corporate seal of the Company, bearing Interest at the rate of 5 per cent. per annum, payable Half-yearly.

Tenders expressing the sum, the term of years, and the residence of the lender, to be addressed to the Secretary.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Bristol, Office, 30, Broad street, 14th Oct., 1842.

Interest Warrants will accompany the Loan Notes.

MANCHESTER, BOLTON, AND BURY CANAL NAVIGATION AND RAILWAY.—LOANS.—The Committee of Management are prepared to receive Tenders for the Loan of a limited amount of Money, in sums of not less than £1,000 each, to be secured by the Bonds of the Company, bearing interest at 4 per cent. per annum, payable half-yearly. Period of the Loans to be either for three, five, or seven years, the term preferred to be mentioned in the Tenders, which must be addressed to the undersigned.

By order,
JOHN HAWKSHAW, Clerk of the Company.

Canal and Railway Office, Salford, Sept. 22, 1842.

LONDON AND GREENWICH RAILWAY OFFICE, London Terminus, 37, Canterbury-square, October 25, 1842.—**TENDERS FOR CARRIAGES.**—The Directors are desirous of receiving Tenders for the supply of Four New Carriages and Four New Carriage Bodies. The drawing and specifications may be seen at the Company's Offices on Thursday, November 3, and two following days, between the hours of 10 and 4. The Board will meet to open Tenders on Tuesday, the 15th of November, at 2 o'clock, p.m. The Directors will not bind themselves to accept the lowest Tender.

By order of the Board,
J. Y. AKERMAN, Secretary.

CROYDON RAILWAY.—LOAN NOTES.—The Directors are now ready to receive Tenders for Loans of Money upon the security of Loan Notes, to be issued under the authority of a Resolution of a General Meeting of Proprietors, held at the London Tavern on the 8th of September last, payable in three years from the 15th of January next. The Notes will be under the Company's seal, bearing interest at the rate of 5 per cent. per annum, payable half-yearly, on the 15th of January and the 15th of July in each year.

N.B. The holders of the Notes have the option at any time previous to the 30th of September, 1844, of converting the same into shares of £30 in the Company, in the proportion of one share for every £15 of such Notes.

Tenders to be addressed to the Secretary of the Company, 205, Tooley-street.

R. S. YOUNG, Secretary.

SIR W. BURNETT'S PATENT PRESERVATIVE FOR TIMBER, CANVASS, CORDAGE, WOOLLEN, &c.—This process is a very cheap one. It effectually protects even the commonest domestic or Colonial Timber and Deals from Dry rot, and other causes of premature decay; and it renders them equal to the best Timber from the Baltic. No doubt can exist of its efficacy in the preservation of all the above-named articles, after the Official Reports from the heads of various Government Departments, which may be seen, together with the specimens, at the Company's Office, No. 4, Castle-court, Birchin-lane, Cornhill, London.

HORSE CLOTHS.—HORSE CLOTHS made WATERPROOF by the celebrated Burmese Japan Process of Newbery & Co. This excellent protection for that good and useful animal, the Horse, is fast superseding every other cloth or covering. It is totally impervious to rain, does not shrink, shrivel, or crack, and is very strong and lasting. The prices are moderate.

Improved Horse Cloths.—Horses, like ourselves, are benefited by a clothing, which, while waterproof, will not impede the free escape of perspiration. Newbery's Lycopodium, or ventilating process of waterproofing, is admirably adapted, and may be safely applied, for saturating the clothing of gentlemen's horses.

When very hard wear is required, and for common use, their Burmese Japan Canvass will be found all that can be desired, for it is at once the most impervious, tough, flexible, and durable composition ever offered to the public.

7, Cripplegate-buildings, Fore-street, City; 30, Pall-mall; 84, King William street; or, by post, at the Manufactory, Church street, Deptford, Kent.

THE PARISIAN BITUMEN COMPANY take leave to inform their numerous friends and the public that offices are established at 4, Great Winchester-street, Broad-street, for the City, and at 8, Denbigh-street, Belgrave-road, for the West-End and its vicinity, where every information will be promptly given.

SCALE OF PRICES PER FOOT.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Burgess, Medical Bookseller, 28, Coventry-street, Hay Market; Mann, 39, Cornhill; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

AN ENGINEER having the Management of an extensive Public Work, will take a respectable youth as an Articled Clerk, with whom a premium is required.

Address, C. E., Post-office, Rugby.

LONDON: Printed by JOHN THOMAS [illegible], 138, Aldersgate-street, in the Parish of St. Botolph without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride, Fleet-street, Middlesex.—Saturday, November 5, 1842.

" Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 254. Vol. V.—No. 46.] SATURDAY, NOVEMBER 12, 1842. [Price 6d.

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—TIME FOR MAKING TENDERS ENLARGED.—TO RAILWAY CONTRACTORS AND OTHERS.—The Directors of this Railway are ready to receive Tenders for the Execution of the whole of the Works necessary for the Formation of that Portion of their Line extending from Rainton to Shincliffe, and the Branch to Durham, together about 8¾ miles, including the Construction of 3 Timber Viaducts over the Shincliffe, Sherburn, and Cassop Becks.

Plans, Sections, and Specifications of the Works, may be seen at the Office of the Company at the Railway Station, York, and at the Office of Mr. Thomas E. Harrison, South Shields. Sealed Tenders, addressed to the Secretary, must be delivered at the Company's Office at York, on Wednesday, the 16th day of November, before One o'Clock. The Directors will meet at their Office, in York, on Thursday, the 17th of November, at Twelve o'Clock at Noon, to Let the Contracts, when parties who have previously sent in Tenders, or persons duly authorised by them, are requested to attend.

The Directors do not bind themselves to accept the lowest Tenders.

GEORGE HUDSON, Chairman.

TWENTY VERY SUPERIOR CART HORSES.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, November 18, 1842, at One o'Clock, Twenty remarkably fine-shaped, fresh, young, powerful Cart Horses, the genuine property of Messrs. B. and H. Sherwood, being the first portion of their much admired and truly valuable stock, that have been employed on the Chelmsford Contract of the Eastern Counties' Railway, sold in consequence of it now drawing to completion.

Colours—Bays, Blacks, Browns, Roans and Greys.

☞ The above lot of young, valuable, seasoned Cart Horses, are worthy the attention of Brewers, Distillers, Wharfingers, Wholesale Warehousemen, Corn and Coal Merchants, Contractors, and all persons wanting them for immediate work, having been purchased at great expense for the above Contract, and are now in remarkable fine condition.

On view, and catalogues may had two days previous.

A great variety of new and second-hand Carriages, of every description, always on Private Sale, at this Establishment, remarkably cheap.

FIFTY BRISTOL COACH HORSES, HARNESS, &c.—To be sold by AUCTION, by Mr. B. ROBINSON, at his Repository, Little Britain, City, on Thursday, November 17, 1842, at Twelve o'Clock precisely, by direction of Mr. Mountain, 50 capital, short-legged, powerful, active Horses; several Sets of Harness, &c., comprising the entire Stock which have been working the *Age* Bristol well-known, old-established Coach from the Saracen's Head, Skinner-street, Snow Hill, and sold in consequence of it being entirely discontinued.

The above genuine and extensive stock will be positively offered for sale without the least reserve, exchange, or addition; it offers an excellent and rare opportunity to Gentlemen and Tradesmen requiring horses for private and business purposes, Commercial Travellers for journey horses, Stage Coach and Omnibus Proprietors, Four wheel Cab and Fly Masters, and all persons in want of firm useful horses for immediate work, most of them being young and sound, and in capital working condition.

Colours.—Greys, Blacks, Chesnuts, Bays, and Browns.

On view two days prior to the sale, when catalogues may be had.

☞ P. Mountain takes this opportunity of returning thanks to his friends and the public for the support he has received in the parcel trade of the above coach, and respectfully informs them he has made such arrangements with the Great Western Railway Company, that packages and parcels will still be received at the Saracen's Head, Skinner-street, Snow Hill, and forwarded by every train to Bath, Bristol, South Wales, West of England, and to all places heretofore conveyed by the *Age* coach.

ENGINEER.—A Gentleman who has served his time in London wishes for a Situation in an Engineer's Factory, or in any establishment where his services would be wanted. Having an independent salary is not of so much importance as employment.

Address M. N., Churton's Library, 76, Holles-street.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

Will be published on the 1st December,

TUCK'S ROLLER CALENDAR FOR 1843.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensable to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting-house, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d.; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the times of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

THE PARISIAN BITUMEN COMPANY take leave to inform their numerous friends and the public that offices are established at 4, Great Winchester-street, Broad street, for the City, and at 8, Denbigh-street, Belgrave-road, for the West-End and its vicinity, where every information will be promptly given.

SCALE OF PRICES PER FOOT.

BRISTOL AND GLOUCESTER RAILWAY.—Notice is hereby given, That the Directors of this Company are ready to receive Tenders of LOANS of MONEY, in sums of not less than £200, and for terms of not less than Three, nor more than Seven Years, on security of Loan Notes, under the Corporate Seal of the Company, with Interest Warrants attached, bearing Interest at the rate of 5 per cent. per annum, payable half-yearly in London.

Tenders, expressing the sum, the term of years, and the residence of the Lender, to be addressed to the Secretary.

By order of the Board of Directors,
ROBERT FLETCHER, Secretary.

Bristol Office, Exchange-Buildings,
November 7, 1842.

BRISTOL AND EXETER RAILWAY.—Notice is hereby given, That in pursuance of a Resolution of the last General Meeting of Proprietors, the Directors of this Company are ready to receive Tenders of Loans of Money, in sums of not less than £200, and for terms of not less than three, nor more than seven years, on security of Loan Notes under the corporate seal of the Company, bearing Interest at the rate of 5 per cent. per annum, payable Half-yearly.

Tenders expressing the sum, the term of years, and the residence of the lender, to be addressed to the Secretary.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Bristol, Office, 30, Broad street, 14th Oct., 1842.

Interest Warrants will accompany the Loan Notes.

MANCHESTER, BOLTON, AND BURY CANAL NAVIGATION AND RAILWAY.—LOANS.—The Committee of Management are prepared to receive Tenders for the Loan of a limited amount of Money, in sums of not less than £1,000 each, to be secured by the Bonds of the Company, bearing interest at 4 per cent. per annum, payable half-yearly. Period of the Loans to be either for three, five, or seven years, the term preferred to be mentioned in the Tenders, which must be addressed to the undersigned.

By order,
JOHN HAWKSHAW, Clerk of the Company.

Canal and Railway Office, Salford, Sept. 22, 1842.

NORTHERN AND EASTERN RAILWAY.—Notice is hereby given, That in pursuance of a Resolution of a Special General Meeting of the Proprietors held on the 5th of October last, the Directors of the Northern and Eastern Railway Company are ready to receive Tenders from parties willing to advance money upon the Loan Notes of the Company.

The Tenders must state the periods for which the money will be advanced, and the rate of interest at which it will be lent.

By order of the Board of Directors,
WM. BOURNE, Secretary.

Shoreditch, London, November 3, 1842.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

ANGLO-FRENCH RAILWAYS—SOUTH-EASTERN RAILWAY.

THE following is the commencement of the Report by Mr. Robert Stephenson, the continuation of which we shall give in future numbers. The Report is illustrated by a Map, and is addressed—

To the Chairman and Directors of the South-Eastern Railway Company.

Gentlemen,—Before proceeding to give you the details of my late examination of the lines of railway which are now projected to connect the various towns lying to the north of the French capital, and at the same time to combine an eligible route for communicating, on the one hand with Brussels, and with London on the other, it will conduce to a clearer and more comprehensive understanding of the entire subject if I briefly explain what has already been done towards the prosecution of these important objects; and in doing so it will, I think, be better to avoid allusion to any circumstances which, though connected with the subject, are unnecessary to a full exposition of the present state of affairs.

In the year 1835 the French Government deputed M. Vallée to examine the whole of what may be termed the northern system of lines, which comprehended the opening of a railway communication between Paris and the northern ports of the country, as well as with the kingdom of Belgium and England.

The results of M. Vallée's study are given in the most elaborate manner in his Report, addressed to the Minister of Public Works in the year 1837.

In this Report he has developed his subject in the most comprehensive and explicit manner, not having confined himself simply to engineering details, but having entered minutely into the calculations of traffic to be expected on the different routes, as well as into the broad question, whether the execution of national and important lines of railway should be entrusted to the hands of public Companies.

This latter part of the subject the author has treated as one of political economy, and has undoubtedly been prepossessed with a feeling that the introduction of an extensive system of railway communication into any country ought to be the work of the Government, and not the production of private enterprise. He consequently recommends that the entire system of lines, which he has proposed, should be established under the direction of Government, that the capital should be gradually liquidated, and the tolls be ultimately reduced, to an amount calculated only for the maintenance and working of the lines; but, in case this proposal should be rejected, he strongly advises that no independent line whatever should be conceded to any individual Company—for then, he concludes that such routes would be selected as combined the greatest economy of execution with the richest prospect of returns,—that though the energy of speculation would be working the establishment of some lines, yet, from a dread of competition, it would at the same time be impeding the progress of other important national projects,—and that, whilst private interests were fostered, the public good would be betrayed.

The successful issue of the construction of railways in Belgium by the Government, or, at all events, the acknowledged benefits which have accrued from them to that country, no doubt lend much support to M. Vallée's views; but since directly opposite opinions on the matter are entertained in France, and more especially as the French Government have by their recent decrees implied their dissent from these views, and offered an outline of such terms as, they hope, may lead to the execution of several of the principal railways throughout the kingdom by public or incorporated Companies, I am entirely relieved from the necessity of taking up this part of his Report. Yet inasmuch as this feeling, the full appreciation of national claims for an unlimited and rapid railway intercommunication, has actuated, if I may so call it, a profuseness of design, I shall, in alluding to the character of his projected system, and in describing its course, feel myself called upon practically to discuss its influence.

The chain or system of railway, recommended by M. Vallée will be better understood by reference to the accompanying map. On leaving Paris the line proceeds nearly directly to Amiens, passing through Creil and Clermont. At Amiens the line is proposed to advance in two directions, one by descending the valley of the Somme to Abbeville, and thence to Boulogne by Etaples, this being considered the route best calculated to reach England; the other direction ascends for the short distance the valley of the Somme, traverses a high tract of country and descends into the valley of the Scarpe, which it crosses at Vitry, about midway between the towns of Arras and Douai, and reaches Hénin-Liétard, a point, whence three new directions are taken, one leading to Calais and Dunkirk, another to Lille and forward to the frontier, where it would unite with the Belgian railways, already executed through Courtria and Ghent, and the other to Douai and Valenciennes, where it would again unite with the existing railway, across the Belgian frontier, to Mons and Brussels.

Many other lines in connection with those just sketched, either as branches or as deviations, were proposed by M. Vallee; but as they are numerous, and several have been abandoned by him as impracticable or as comparatively ineligible, any allusion to them in drawing the outline would only embarrass those who are yet unacquainted with the localities. I leave therefore such as are worthy attention to be discussed hereafter, when each district shall be specially considered.

Soon after the delivery of M. Vallee's Report to the Minister of Public Works, a concession was granted to Mr. Cockerill for the formation of a series of lines of railway, generally coinciding with that recommended by M. Vallee. From various circumstances these powers granted to Mr. Cockerill by the French Government for a while lay dormant, and eventually the inadequacy of the pecuniary assistance offered by Government induced their entire cessation.

Nothing of moment occurred from the ceasing of Cockerill's powers up to a very recent date, when the Government appear to have been suddenly impressed with a strong conviction that some very decided steps should be taken in order to secure to France the benefit of railways; they had apparently, to within a few months, remained utterly indifferent to the vast strides which science and commercial policy were effecting in the intercommunication of the countries around them; they had done nothing to stimulate the spirit of enterprise, notwithstanding the example which almost every European nation was exhibiting, and especially their nearest neighbour, Belgium, which is literally so intersected with lines of railway that scarcely one important town is left without a direct participation in the advantages of this system of locomotion.

This procrastination, however detrimental its national effect, cannot, I would urge, in its immediate influence be unattended with advantages to public enterprise; for, roused at length into, perhaps, an unexampled energy, and actuated by the most liberal sense of the claims which France makes upon her Government for a more rapid communication with her capital and ports, their designs have been framed on the most gigantic scale,—and, fully impressed with the necessity of entrusting some portion of their execution to incorporated Companies, or the alternative of constructing them under the direction of their Engineers and at the sole cost of the nation, they now evince a disposition to render liberal terms, to secure the assistance of public co-operation.

The plan recently proposed by the Minister of Public Works, and approved and authorised by the Chambers, consists of bringing the funds of Government in aid of private enterprise, and, should fair and equitable terms be obtained from Government, there cannot be a doubt that such an arrangement will prove highly beneficial to the individual as well as to the country at large.

The outline of the Government proposition is this:—

They engage to purchase all the necessary land and construct the whole of the earthwork, bridges, and stations, leaving to the Company the execution of the upper works of the railway, that is to say, laying the rails, chairs, and ballasting, and to supply the whole of the carrying establishment, viz.: locomotive engines, waggons, &c. For this expenditure the Company are to work, and have the entire profits of the working of, the line for a given number of years; at the expiration of which, on the purchase of the then existing stock at a just valuation, the Government become the sole proprietors of the railway. It is further proposed, that if the Company prefer executing the earthwork, bridges, &c., leaving solely to the Government the purchase of all land required for the works, and the construction of the stations, the Government will pay to them such sums as may be calculated to afford an ample profit for the execution of these works. The Company will possess the entire control of the undertaking from the commencement, subject only, of course, to such laws as are expedient for the establishment of public security, and the maintenance of the public welfare. The lease, under these conditions, would, of course, be limited as before, and at the expiration of it the Government become possessors upon the same terms.

Under these, or somewhat similar conditions, a proposal, it is understood, was made by the Messrs. Rothschild; but owing, among other circumstances, to their express claim for a joint, instead of an independent station, and the passage of the traffic into Paris along a portion of the line already constructed between that city and Versailles, the negociation failed.

Since the termination of that treaty the Minister has entertained a proposition from M. de Tasse, which is now pending, and is in substance as follows:—The Government to supply all land, and pay for every description of property required for the site of the line and stations, to build all stations, and to pay 115,000 francs a kilometre as an equivalent for the execution of the earthwork, bridges, &c. The Company are to construct these and the upper works of the railway, and to supply the whole of the carrying establishment, and to enjoy solely the profits of the railway for thirty-five years; at the expiration of which term the Government must repurchase the stock at a fair valuation.

This contract for the execution of the railway by the Company will be based upon the design of the French Engineers, as now before the Minister, but he professes himself fully prepared to admit such alterations and modifications as may be proposed by the party and be approved by the professional authorities at his command. This design, with the exception of a short distance from Paris to the Col de Gannes, which has lately been surveyed in a detailed manner by M. Herel, Engineer of the Ponts et Chaussées, and an authorised Inspector of Railways, is that framed by M. Vallée; and from the general character of his views, and the circumscribed principles within which he has confined them, it will, as I shall show, admit of alterations at once important and desirable.

Before taking up the detailed examination of M. Vallee's plans and sections, it is necessary that I should allude to one or two of the engineering instructions which he appears to have received from the French Government, and under which he seems to have acted in almost every case, and in many, if we may conclude from the tone of his remarks, against his own judgment.

The restrictions I refer to are—

1. That no curve should be made under 1,200 metres in radius.

2. That no gradient should exceed 3 in 1,000, or, as it is expressed by English engineers, $\frac{1}{333}$, or about 16 feet a mile, and

3. That all curves of small radii should be level.

In deputing an Engineer to examine a tract of country extending from Paris to Belgium, and to the ports lying contiguous to England, and embracing several marked and difficult physical features, it were hard to conceive instructions better calculated to fetter the free exercise of his judgment, and prevent the results of his survey being practically useful, than those just laid down.

Those instructions would no doubt compel him narrowly to study every feature of the face of the country, for with limitations of this kind, the designing a line of railway over so extensive a district must necessarily prove a matter of extraordinary difficulty; indeed, so distinctly has this proved to be the case, that in some of the lines laid down by M. Vallee, he has been driven to the necessity of abandoning, in a few instances, the letter of his instructions; and in the projected line between Etaples and Boulogne, the increase of work occasioned by an adherence to his instructions has been of so extensive and glaring a character, that he has felt himself called upon to allege two untenable reasons for that adherence, namely, the short distance along which the difficult features present themselves, and the necessity of decreasing the load of every train on its approach to this incline, should he establish it at 5 instead of 3 in 1,000; in fact, such deviations have only been applied to the sections where the surface of the country actually defied the application of the Government regulations, except by the adoption of such expedients, as would have appeared, when developed, obviously preposterous. The nature of the country having in such cases proved unmanageable under those restrictions, and consequently having thrown the Engineer upon his own resources, it is to be regretted that throughout his examination he did not keep sufficiently in view, and more frequently and specifically point out in his Report, the results which would have attended any other mode of treating the section of country, which the line was proposed to traverse; on the contrary he seems even to have alluded to a deviation from the strict conformity with his instructions only when the nature of the surface rendered it imperative to do so, but wherever a given summit was to be encountered, and it proved to be within the scope of the specified gradients and other conditions, the line was designed in accordance with them, with-

Digitized by Google

out apparently any, or at most very little, regard being paid to the question of expense, or a consideration of those unforeseen contingencies which works of magnitude, such as those shown upon his section, must inevitably entail, and which have universally occurred within the experience of every Engineer.

I am far from wishing it to be understood that M. Vallee has contemplated or recommended such works as would be found impracticable in the execution, or that much skill has not been displayed in the performance of this part of the arduous task, which had been set before him; on the contrary, I fully appreciate the difficulties he must have experienced at every step in this preliminary survey, and willingly accede to him that merit which every one who has read his Report must feel to be richly due to him. My objections are confined to the mode in which he has been compelled to treat the sections of country over which he passed; they should, consequently, be regarded as referring more decidedly to the instructions under which he acted, than to the results which have inevitably flowed from their application.

I have stated that it was difficult to conceive restrictions more calculated to fetter an Engineer in such a gigantic task, but it is still more difficult to devise a cause for the French Government having originated such regulations; they could not have derived them from any railways in their own country, for both the lines from Paris to Versailles are direct contraventions of them; they could not have deduced them from the Belgian practice, neither could they have formed a basis in the engineering experience in England, for here they would have learnt that each case was treated as the local circumstances dictated.

It is true that Engineers may and do differ respecting the precise mode of meeting the natural difficulties which may present themselves in the projection of a railway through a long extent of country, and that they differently estimate the comparative advantages and disadvantages of what are termed good and bad gradients; and though I appreciate more highly than the generality of the profession the ultimate benefits which I believe will always be found to spring from the use of favourable gradients, yet I cannot but feel, and that very strongly, that the application of precisely the same principles as those which governed me in designing the London and Birmingham Railway to the section of country now under my consideration between Paris, Belgium, and the northern coast, must lead to consequences which the Government and every interested individual would hereafter have reason to lament; and I should not be fulfilling my duty as a member of a scientific profession were I not at once to avow my conviction of the injurious influence of circumscribing the free exercise and application of professional experience within the contracted limits of a code of specified instructions, which, while they fetter design, must entail expense and inconvenience in the execution.

The line at present projected must far exceed in cost any estimates which have yet been formed, and the period of its execution be much protracted beyond what it otherwise might be if a different system were pursued in the treatment of the section. This will be apparent when the various districts are hereafter spoken of.

In the preceding remarks I hope I have made intelligible the difference between my views and those upon which the line proposed by the French Government for the adoption of negociating parties is at present laid down. I have been somewhat diffuse in bringing the principles prominently forward upon which the French Government have acted; but when I justly appreciate the very direct and prejudicial influence which they must necessarily have upon the estimates of this extensive project, I feel myself justified in the very fullest consideration of them.

It cannot fail to be a leading question in its bearing on the intention of the negociating Company, the very nature of that negociation, the undertaking the execution of excavation, embankments and bridges, &c., of an extensive railway for a specific sum, is directly dependent on the application of these principles, at least so far as the estimate of prime cost may be concerned. It must be generally acknowledged to be a matter of the last importance, that, in such a transaction as this before you, the estimates should be brought within the sphere of certainty; nor should the fact be forgotten that every, even the slightest, reduction in the extent and character of more than average works cannot fail to lessen the probability of contingencies.

The importance of this consideration is not confined solely to the interests of the negociating Company, it cannot, surely, be a matter of indifference to the French Government; for if the desire of procuring the assistance of public enterprise for the purpose of simplifying and expediting the progress of the execution of their railways be formed, as I believe, with the sincere intention of being carried out, and the sum the Minister now offers as pecuniary remuneration for their construction be even approximate to his ultimate grant the reduction of the estimated first cost of the undertaking must there alike have its advantageous influence.

The character of the present design is such, that if the inadequacy of the estimates were supplied, the excess would be so large, that a treaty under the proposed terms could not for a moment be entertained; and with an entire conviction that such must inevitably prove to be the case, I cannot relinquish the hope, that the Government will be disposed to grant considerable deviations both on the plan and section as at present designed. I cannot in fact anticipate any real difficulty in obtaining this concession, for the deviations I should propose are not generally of a character to produce much essential difference in the course of the railway; for as regards the districts through which M. Vallee has traced the route, no very important difference of opinion can exist. He has manifestly paid much attention to this part of the subject, and has rarely left the large masses of population far out of his course, and in all cases has approached them within such distances as the number of the inhabitants, or the importance of the traffic, seemed to demand; and I may here express my conviction, from the tenor of the Minister's feelings, as exhibited at my late interview with him in Paris, and from the statements he then made, that the question of utility or public accommodation will have greater weight in favour of, or more strongly militate against, the proposed deviations than the consideration of any minor Engineering details. In fact, in this respect even M. Vallee appears scarcely to have completely met the wishes of Government, for since the receipt of his Report they have expressly ordered that, in proceeding with the details of the plans, some of those towns should be actually touched by the railways, which in the early survey had been only approached within two or three miles. These few instances, however, will hereafter be specially alluded to in my description of the section.

Seeing therefore that my views and those of M. Vallee so nearly coincide in the main features of the line—that the modifications I have to suggest are matters of detailed experience rather than of general principle—that they are designed for the purpose of materially reducing the first cost of the works, by lessening their heavy character and rendering any estimate of them an affair of absolute certainty, as far at least as such things can be rendered so,—and all this without, I am confident, interfering in any one respect with the utility of the line,—there surely can be no ground for apprehending that the French Government will treat such propositions otherwise than with the most liberal spirit. The inducements for their doing so are very strong, for I am clearly of opinion that any railway executed upon the existing design would require a much greater allowance of capital than is at present contemplated, and that consequently any Company contracting with the Minister upon this assumed basis, would soon find their interests and those of the Government virtually opposed to each other; a state of things little calculated to bring about the successful issue of an undertaking which, if carried through under equitable arrangements, cannot fail to accomplish all the views of the French Government, as a national measure, and to prove a safe and profitable employment of private capital.

(To be continued).

SERIOUS COLLISION ON THE YORK AND NORTH MIDLAND RAILWAY.—An accident which might have been attended with fatal results, took place a few days ago. Mr. Flintoff Leatham placed himself on the first-class train in a carriage the last but two on the line. He heard Mr. Clarke call out "go on," and "stop," to the approaching day-train. However, the shock took place, the London train coming up at the rate of 20 miles an hour, and smashed the buffers to atoms. The report was as loud as a cannon. Mr. Leatham was knocked down, and dreadfully bruised on the inside of the left arm and the shoulder, and for the space of ten minutes laid insensible by the concussion; and a poor child was much injured. Mr. L. proceeded to Hessle, was bled by Dr. Anderson, and put to bed, with not less than ten distinct bruises. We are glad to state that he has now recovered.—*Doncaster Gazette.*

RAILWAY ADJUDICATIONS.

COOK *v.* THE AYLESBURY RAILWAY COMPANY.

Court of Queen's Bench, Nov. 5.—This was an action for the recovery of damages occasioned by the loss of some cows, which, having strayed on to the line of rail, were destroyed by a train as it passed, and was tried at Hertford at the last Summer Assizes, when the following verdict was given:—"We find for the defendant; but at the same time we consider that the present construction of the gates leading on to the rail might be improved, the consideration of which is recommended to the Railway Company."

Mr. Serjeant SHEA now moved for a new trial, on the ground that the evidence did not support the verdict. By the 57th section of the Company's Act the Company were bound to keep in repair the "gates as aforesaid;" and by the 59th section it is incumbent upon them "to have gates of such a fashion that they open inwards towards the land to be protected." The evidence was to the effect that the Company had erected gates which were only partially swing gates—that is, did not close of themselves, or did not remain closed, or unfastened so lightly that the wind blew them open. A witness, named Newens, had passed through the gate in question on the same evening. On looking back and seeing it open he returned and closed it, but on again looking back he saw that it was again open. Several witnesses for the defendants proved, on the other hand, that the gates originally were properly constructed. One of them, who had examined the gate the day before the accident, found that it did shut of itself. The Lord Chief Baron, before whom the cause was tried, left it to the jury to say whether the construction was sufficient, and, if sufficient, whether they considered that the gates had been opened by some one else. The verdict, which the jury took some time to consider, was to the effect above stated.

Lord DENMAN—The question is, whether the learned judge was satisfied with the verdict. We will, therefore, speak to him on that subject.

FISHER *v.* THE GREAT WESTERN RAILWAY COMPANY.

Vice-Chancellor (of England's) Court, Nov. 9.—This was a suit for specific performance of a contract which the Company had entered into with Mrs. Greenfield and her children, and their trustees, for the purchase of a part of the line of the railway in the parish of Fulham, upon the extension of the terminus to Paddington. The only question related to the form of the conveyance, and arose in this manner: The legal estate was vested in the plaintiff, Mr. Fisher, as trustee for Mrs. Greenfield for life, with remainder to her seven children, of whom one was married to Mr. Ostler. Upon the marriage of Mr. and Mrs. Ostler, her seventh part was settled upon trust for sale at the request, in writing, of Mr. and Mrs. Ostler during their lives. Such was the state of the title. The contract with the Company was made in writing in 1837, Mr. Price and all the adult persons interested being parties to it, including Mr. and Mrs. Ostler, who, it was recited, were made parties in order to give their consent to the sale. It appeared the whole purchase-money had been paid, with the exception of one-seventh part, which was retained during the minority of the youngest child, who came of age in May, 1839. The vendor then urged the Company to complete the purchase, and arrangements were in progress for the execution of the conveyance, when, unfortunately, in October, 1839, Mrs. Ostler lost her mind, and could not, of course, be made a party to the conveyance. The Company insisted, however, that, without her concurrence to the conveyance, to testify that the sale had been made at her request, they would not have a good title, and refused to pay the remaining purchase-money, whereupon it became necessary to file the bill.

Mr. STUART and Mr. J. PARKER, for the plaintiffs, insisted that the concurrence of Mrs. Ostler in the contract had satisfied all that the power of the sale required, and that, independently of her

Digitized by Google

incapacity, the Company were not, in point of law, justified in requiring her to be a party to the conveyance.

Mr. BETHELL and Mr. STEVENS, on the part of the Company, urged the invariable practice of conveyances to the contrary, and that the terms of the power had not been complied with, and that the consent of a married woman was a different thing from her request, which the power required; and, at all events, they urged that there was no evidence of the mental incapacity of Mrs. Ostler, and that the only course the Court could take was to refer it to the Master to settle the conveyance.

His HONOUR said, however convenient it might be for the Court to give its opinion out of course, upon a point in dispute, it could only do so where all parties desired it. He had no evidence, nor was it admitted, that Mrs. Ostler had been labouring under mental incapacity, or that the inability does still exist. He should, therefore, refer it to the Master to settle the conveyance, and give him liberty to state any special circumstances as the ground of his approving the conveyance in the form in which he should approve it.

To the Editor of the Railway Times.

SIR,—As the Solicitors of the Manchester and Birmingham Railway Company, our attention has been directed to the head of "Railway Adjudications" in your paper of Saturday last, the 5th instant, in which you report a case entitled "Ex-parte Marr *v.* The Manchester and Birmingham Railway Company," involving, as stated in the report, some unusual and extraordinary deposit of purchase-money for land in the names of the Solicitors of the Company. We beg to assure you that the Manchester and Birmingham Railway Company have been concerned in no such case as that reported in your paper, and that your report must have reference to some other Railway Company. We trust you will correct the error into which you have been drawn in your next paper.

We remain, Sir, your very obedient servants,

SLATER AND HEELIS.

Manchester, Nov. 10, 1842.

[We copied the account from a daily paper.—ED. R. T.]

ASSESSMENT OF RAILWAYS—LONDON AND SOUTH-WESTERN RAILWAY.

[From the *Hampshire Chronicle*, Oct. 2.]

Winchester, Saturday, October 29.—This afternoon Sir William Heathcote, Bart., Chairman of the Court of Quarter Sessions for the county, delivered judgment in the appeal instituted by the Directors of the Southampton Railway against an assessment made on them for a poor rate, in respect of the portion of the line which runs through the parish of Mitcheldever. Last week, at the close of the proceedings, which continued three days, the Chairman postponed delivering the judgment of the Court, and signified his intention to do so on Wednesday, at the adjourned County Sessions, at Newport, in the Isle of Wight; but the honourable Baronet subsequently altered his determination, and communicated to the parties interested that he would this day promulgate the decision at Winchester, before the magistrates in Petty Sessions.

Among the magistrates assembled in the Grand Jury Chamber were, Sir W. Heathcote, Bart., M. P. (Chairman), Sir T. Baring, Bart., E. W. Blunt, W. C. Yonge, S. Wall, W. W. Bulpett, W. N. Hughes, J. T. Waddington, J. Barney, W. Thresher, G. W. Willes, W. T. Græme, Esqrs., Rev. Robert Wright, &c. The room was also crowded by persons anxious to learn the result; but at the close of the business of the petty sessions all were ordered to withdraw, except the magistrates, who continued in deliberation nearly an hour, after which they came into the Crown Court, where judgment was given.

Sir William Heathcote then pronounced the judgment of the Court as follows:—

"This is an appeal against a rate, dated April 1, 1841, for the relief of the poor in the parish of Mitcheldever, wherein the South-Western Railway Company were assessed at the sum of 4,320*l*., in respect of their railway, and against which they have appealed, on the ground of being over-rated.

"After an attentive consideration of the evidence adduced, and of the points raised in argument, the decision of the Sessions has eventually turned upon their view, not of the law, but of the facts, and for the purposes of the present appeal, it is therefore unnecessary to do more than pronounce simply, and without preface or subsequent explanation, the judgment of this Court, that the rate be confirmed.

"But, considering that other disputes have arisen, and more may hereafter arise, between the Railway Company and parishes within this county, in which some knowledge of the views of this Court may tend to prevent litigation, I am unwilling to decline all reference to the principles on which, in my opinion, the future decisions of the Sessions are likely to be governed.

"In estimating the total amount of deductions to be allowed, three questions are raised.

"1. Whether, in addition to actual repairs, a fund for future renovation should be included.—2. Whether rent for stations and other buildings, not actually paid, should be included.—3. Whether tenant's profits should be calculated on the amount of working capital, or of rent.

"The first of these deductions (including in it the repairs and probable cost of renovation of the station houses, and other buildings) will, I apprehend, be allowed by the Sessions, provided good grounds in fact are laid by the evidence for the amount claimed for the purpose.

"In estimating the force of evidence on this, or any other head of deduction, claimed by appellants, on whom the burden lies of supporting their claims by proof, the Sessions will not fail to attribute great weight to the authorised Reports of the Company, and to their statements of sums actually expended in repairs, or reserved for future renovation, as evidence against themselves, and in estimates of further sums stated to be required at future, and, perhaps, very distant periods, will scarcely be satisfied with vague surmises as to their amounts, and as to the times when they will be needed, nor with calculations for realizing such amounts, in which the consideration of the effects of compound interest shall form no element.

"Under the second question, relating to the rents of stations, it has been claimed that the Company, not actually paying any such rents, shall be allowed to sever from the whole rent, estimated as that which a tenant would give for the whole concern, as it has been termed, one part as being supposed to be given in respect of the stations and other buildings; such part so severed being liable to assessment in those parishes only in which the stations, &c., stand, and not being brought into the general amount to be divided for assessment between all the parishes on the line.

"If evidence should hereafter be given of distinct and appreciable earnings within these buildings, or if the measure of value in assessing a railway within a given parish should be taken to be the quantity of land which it occupies thereon (and both these conditions would be necessary in order to make *Reg.* v. *Cambridge Gas Company* a case in point, even if anything respecting the rent of building had been decided by the Queen's Bench in that case, which was not so, the Sessions having found the value of the buildings, and no point having been raised thereon), this Court would then have to consider the effect which such altered circumstances would have upon their decisions; but they are not now prepared to assume, without any proof—

"1. That there are such distinct and appreciable earnings within the station houses.

"2. That the measure of the amount of such earnings is to be found in a per-centage on the cost of the buildings on which they are supposed to be made.

"The third question, viz., as to the basis whereon to calculate tenant's profit, is a question not so much of law as of discretion and calculation in ascertaining what will be a remunerating profit to a tenant, in any given case, according to his own peculiar circumstances. And, accordingly, considering the peculiar nature of the circumstances in which a tenant of the railway would be placed, the Sessions are disposed to think that the amount of working capital will afford a fairer basis whereon to calculate the profit than the amount of rent.

"But, in arriving at the amount of such working capital, they will require that purchases of engines or other stock, made not in addition to previously existing stock, but to replace what is worn out and useless, shall be distinguished; or, in other words, that the important head of depreciation of stock, while it is admitted among the deductions, shall not be lost sight of in valuing the stock to which it refers.

"In addition to the foregoing questions, affecting the total amount of expenses to be allowed, another has been raised as to the mode of charging such expenses against the different parishes respectively—one party claiming that the length of railway, the other that the amount of earnings, should regulate the share of expense to be charged against a given parish. Neither of these principles has any foundation in law, as a recognized test. The actual expenses are to be proved, if possible, and if, in the absence of such proof, which can be furnished only by the Company, the Sessions shall adopt any plan of arbitrary calculation, either on the one principle exclusively, or on the other, or on the one as applied to some heads of expense, and on the other as applyed to the rest, they will do so, not as affirming a principle, or binding themselves to a rule which additional evidence may render inapplicable, but only as availing themselves of the best help within their reach for approximating to the real state of the facts.

"It may, however, be useful to parties to remark that the Sessions perceive this difference between the two antagonist principles, viz., that while the principle of mileage (unless, indeed, it be also employed to measure the receipts) can be applied to a few only of the heads of expense, with any show of reason or justice, the principle of earnings will be intelligible, and will have a tendency towards justice and truth in its application to all."

Mr. Gunning, on the part of the appellants, applied for permission to move the Court above; but the Chairman said that the Court had decided on a question of fact and not of law, therefore there was no appeal.

Mr. Gunning then said it would very much facilitate the investigation of this matter in other parishes, if the Chairman would state the amount of deductions allowed.

The Chairman said this was a subject which would require further consideration; in fact, he did not think it would be wise to do. Order confirmed—common costs.

FIRE ON THE LONDON AND BIRMINGHAM RAILWAY.—On Tuesday night, about 12 o'clock, as the luggage train of the London and Birmingham Railway was proceeding towards London, it was discovered, on arriving at Kilburn, that some of the trucks, which were heavily laden, were in a blaze. With the assistance of some of the Company's servants, and a number of the metropolitan police, the said carriages were speedily unloaded, and the engine, being detached from the train, went on to Euston-square; it speedily returned with a supply of water, and after the lapse of a short period the flames were entirely subdued, but not before a considerable deal of property had been destroyed.—*Daily papers.*

"SCREW HELP."—Under this title a Belgian railway journal alludes to a machine for the easy replacement on the rails of trains accidentally thrown off. It is described as being of great simplicity, and it is stated that several successful trials of it have been made. It is said that the machine is immediately to be introduced on the Versailles Railway.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—In the copy of the *Railway Times* which I received this morning, I find in your own department a contradiction of two unimportant passages in a letter written by me, and published in your previous number. The exposure thereby made of the extravagant management of the present Board, and of the means by which it may be remedied, appears to have galled probably some parties interested in the present Management, and hence their anxiety to lay hold of the wording of even an unimportant passage to cavil at. I am the last person in the world to publish intentionally any statement, the meaning and spirit of which is entirely without foundation; and I have little doubt of convincing you, that the only passage cavilled at, and which you mention you are authorised to state is entirely without foundation, is substantially true and well-founded.

The passage cavilled at in my letter is the last sentence of the two following:—"Instead, therefore, of obtaining a clause for reducing the number of Directors to 12, as was intended by the shareholders, the present Board have obtained a clause by which it is rendered illegal to reduce the number of Directors below 24, unless Directors either die or resign. *And even then, it is optional to keep up their number to* 24; *and at the meeting of the proprietary on the* 13*th of August last, the Directors used their proxies to keep up that number, with all their allowance of* 1,200*l. a year, Theodore Woolman Rathbone using upwards of* 1,000 *proxies for such a purpose.*"

Now, instead of the last of these two sentences being as you are authorised to say, "entirely without foundation," my authority for it is to be found in the account of the last half-yearly meeting published in the *Railway Times* on the 20th of August last, which I request all shareholders again to read, in order that they may know what sort of a Board of Direction they have got. After a lengthened discussion in which the proprietary, not in the Direction, were opposed and thwarted by the Directors, one of the subjects of discussion being the propriety of reducing the number of Directors to 12, and their yearly allowance to 600*l.*, the following account of what occurred towards the close of the meeting will be found in the *Railway Times* of the 20th of August last.*

"The Chairman said, there were four Directors to retire by rotation, Messrs. Cropper, Rathbone, Horsfall, and Fox, who were all re-eligible.

"A long discussion followed; the majority present not wishing to fill up those vacancies, but gradually to reduce the number of Directors, and expecting they had the power to do this, as it was one express purpose for which they had applied in their last Act. This Mr Ormerod, Mr. Rathbone, and others, stated to have been the wish of the previous meeting, and also their impression, on hearing the draft of the Act read.

"Mr. C.C. Macaulay stated, that if a Director went out from any other cause than rotation, as resignation or death, then the vacancy might be left unfilled up.

"Mr. Moxon moved, that Mr. J. Ellis and Mr. S. Waters be chosen Directors, in the room of Messrs. Garnett and Evans; which was seconded and carried, after an interruption from some informal proceedings.

"The whole of the remaining business was transacted in a very confused informal manner. Some one moved that the gentlemen going out of office should be re-elected, which was seconded.

"Mr. Seddon moved, and Mr. Ormerod seconded, that the two last-mentioned gentlemen, Messrs. Horsfall and Fox, be left out.

"Some altercation followed, and the opposing party persisting, the non-election of these parties being carried by a considerable majority on a show of hands, a gentleman with 20,000*l.* proxies demanded the ballot. Several shareholders exclaimed, that while the Directors had things their own way, they were satisfied with a show of hands, but when their wishes were opposed, they demanded the ballot, because they knew that they had the power.

"Mr. Heyrick said, he was a most unworthy member of the Board, and very seldom attended; he therefore wished to step in as a peace-maker between the parties, and offered his resignation that there might be no disputes, and no ballot.

"This was not accepted; and the so-called ballot was taken, when a very large majority appeared for the re-election of the two Directors; principally owing, however, to the large number of proxies 1,016, possessed by one individual, Mr. Rathbone.

From the preceding extract it is obvious to any reader that the question at issue between the proprietary and the Directors was, whether two of the Directors, Messrs. Horsfall and Fox, going out by rotation, should be re-elected, and the number of Directors be thereby reduced to 22 or not, for there was no proposal, and I believe no intention on the part of the proprietary, to appoint others in their stead. The offer of Mr. Heyrick to resign does not alter the question, for by that time the proprietary had resolved to try their strength with the Board.

Now, considering the question at issue in the above light, and believing the contents of the extract from the *Railway Times* above inserted to be true, I feel warranted in repeated *that at the meeting of the proprietary on the* 13*th of August last, the Directors did use their proxies to keep up their number to* 24, *in opposition to the will of the other proprietors present, Theodore Woolman Rathbone using upwards of* 1,000 *proxies for such a purpose.*

To say that the only use made by Mr. Rathbone of the proxies was to prevent the expulsion of two valuable members of the Board, is a pitiful subterfuge. We have no means of knowing people's private reasons for voting, except from the question at issue. And did I not despise all sophistical cavilling about words, you might be authorised to state, that the assertion that Mr. Rathbone only used proxies to prevent the expulsion of two valuable members of the Board, *was entirely without foundation.* Their expulsion never could be entertained by the proprietary, for the obvious reason that they had already gone out of the Direction by rotation. And the real question at issue was, not whether Messrs. Horsfall and Fox should be expelled, but whether they should be re-elected, or their places left unfilled up.

The other part of the sentence, viz., "with all their allowance of 1,200*l.* a year," is for the sake of brevity expressed in a manner that may admit of being cavilled at—only, however, by a quibbling sophist. The spirit and intention of the passage is, to call the attention of the proprietary to the fact, that the annual allowance to the Directors of 1,200*l.* a-year was perpetuated, without diminution, by themselves, contrary to the wish of the other proprietors present at the meeting. In proof of this being the case, and as my authority for the statement, I have again to refer to the account of the meeting published in the *Railway Times* on the 20th of August last. You will find it there stated that Mr. Heyworth, after some preliminary remarks, says, with a view to reduce the expenditure, that "a considerable saving might be effected by reducing the number of Directors to 12, with an allowance of 600*l.* a-year, instead of 1,200*l.* On the Grand Junction they had 15 Directors, and 800*l.*" In a subsequent part of the account, Mr. Ormerod repeats the same idea; he says "he would be happy to point out one or two points on which a saving might be effected. If the Board of Directors were reduced to 12, then there would be a very visible saving, with a reduced allowance of 600*l.* a-year. (Applause.)" In answer, the Chairman, who acted as spokesman for the Board, says, that "he did not think they would do wisely in reducing the sum paid to the Directors." Neither Mr. Rathbone, nor any other Director, uttered a whisper of dissent from the opinion expressed by their Chairman, and therefore they must be understood as tacitly concurring with him. The same point was at a subsequent period of the meeting pressed upon the Directors by Mr. Heyworth, but equally without success. And no pledge, though repeatedly asked for, could be obtained from the Directors that they would take any steps with a view to economy and retrenchment. Such is my authority for calling the attention of the proprietary to the fact, that the annual allowance to the Directors of 1,200*l.* a-year, was perpetuated, without diminution, by themselves, contrary to the will of a majority of the other proprietors present at the meeting, who wanted their allowance reduced.

In opposition, Mr. Editor, to the above statement, you say, "that so far from keeping up the amount allowed to the Directors, or being in any way interested in it, the Committee of Management (of which Mr. Ellis, the new Director proposed by Mr. Rathbone and Mr. Cropper, was a member) voluntarily reduced that allowance from 1,200*l.* to 700*l.* a year." Now, this statement in your paper is the first intimation published or received by the shareholders, that any such reduction in the charge for Direction has been made. And judging from what occurred at the meeting in August last, I am inclined to think that such reduction would never have been made, but for the previous exertions of Mr. Heyworth to procure proxies to enable him to enforce economy in that as well as in other departments of the present Management.

In conclusion, I hope you are now convinced that the only passage cavilled at in my letter, instead of being entirely without foundation, is in spirit and essence substantially correct. And even in the case of the recent unpublished voluntary reduction (as you call it) of the allowance for Direction made by the Committee of Management, which shareholders had no means of knowing anything of, I have certainly fallen into no error whatever, for my letter was published anteriorly to any publication or intimation to the shareholders that such a reduction was ever contemplated by the Committee of Management.

I am, Sir, yours, &c.

A GLASGOW CITIZEN.

Glasgow, October 31, 1842.

* Our correspondent should not forget that the accuracy o this report, copied from a local paper, is impeached.—ED. R. T.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—A special meeting having been called to inquire into the management of the Midland Counties' Railway, I beg leave to hint the propriety of putting a stop to the bad practice of allowing the servants of the Company the privilege of continually riding up and down the line when off duty.

I travel pretty often by the railway, and consequently am well acquainted with who are, and who are not, in the service of the concern, and it is a rare case not to see some one or more of the clerks, guards and other servants, riding, not in second-class, but luxuriating in first-class carriages. I have seen two, and three, and four—nay, as many as six, with *their friends*, at one time, *all free.* Nothing shows the very loose management of the Company's affairs more than this. The chief fault rests with the Superintendent; but I never see anything of the kind on the London and Birmingham, or any other railway. It is quite sufficient to suffer the numerous body of Directors to travel on the line free, without being mortified by the sight of the common servants *swelling* in our first-classes; and I trust the Committee that will be appointed at the ensuing meeting will look after this, and prevent it for the future.

I am, Sir, yours, &c.

OBSERVER.

RAILWAY "MONOPOLY" AND THE PUBLIC.

To the Editor of the Railway Times.

SIR,—Your correspondent "N. O. E." gives no outward indication of logical faculties, without which his rhetorical efforts will have little effect in solving the "vexed question," between railway monopolists and the public, to the satisfaction of any judge of equity. And, moreover, the mode in which he rubs shoulders with a writer, as little remarkable for refinement or delicacy as for honourable principle, forces one to remember the adage, that "cleanliness is next to godliness."

I confess there is no fixing "N. O. E." He is as slippery as an eel, dips down like a diver, eluding pursuit till he re-appears in some other direction. No shot can reach him, for he will not stay to be fired at. He claims to be "Old English," but makes no sturdy old English stand-up fight. He crows for victory with "Gallic" triumph, while he proclaims his intention to fight no more—possibly "because his opponents do not know when they are beat enough,"—the reason the Frenchman in the farce assigned for retiring from Waterloo. Instead of reading his initials "No Original Examiner," we must translate them, "No Open Enemy."

From his last communication I have endeavoured to pick out some subject for argument, and stop at the following :—

"To pamper the drones at the expense of the industrious workers is his (P. Z.'s) idea of public good."

"Which is the merchant here, and which the Jew."

If "N. O. E." be a Director, or Engineer, or Chairman, or other *useful* official, and discharges his duty, he is undoubtedly an "industrious worker." If a mere shareholding capitalist, he may, in his own person, be as very a "drone" as ever drew a public pension at the expense of the community. In that capacity he may have watched for the fruits of (other mens') enterprise with great "sagacity," and without "the soul to conceive, or the vigour to execute, a great or useful undertaking." It is the claim of monopoly for the "drones" that "N. O. E." seeks to establish against that unfortunate many-headed simpleton, the public, in whose service no servant can gain either credit or recompense, being ever equally ready to tear its friends in pieces, and to worship those who take the pains to work on its gullibility with fine phrases.

"N. O. E." blinks the question at issue. All the world knows that "railways have (in some cases) conferred a benefit on the humbler orders." But the "humbler orders" owe no thanks to railway shareholders for this. They sought simply a good investment for their capital; and Engineers, Directors, and Secretaries, were all more or less under the same category. All this is as it should be—private interest working out public good, and making as good a bargain as possible with the State; but all this without any regard to the public, save that the public was the customer from whom the profit was to be reaped, and without which consideration the railways would not have been made. *The question at issue is this*—that the "humbler orders" and the public allege; that, whereas the existing railways are competent to afford travelling facilities to the great mass of the community with a profit to the shareholders doubling that of the public funds, and without any personal exertion on the part of the shareholders, yet, notwithstanding, only a very small portion of the community are thus facilitated, at an expense much greater than would be warranted under due and efficient management :

That the "humbler classes" acknowledge that they could not travel, save by waggon, under the old highway system, and the public acknowledge that they are in many cases carried much cheaper and much faster, under the present system; but they submit that it is as great an injustice to retard the progress of a better system, out of a mistaken idea of the interests of existing railway shareholders, as it would have been to retard the present system, out of a mistaken idea of the interests of the old coach proprietors :

That so long as the existing railways are protected against the wholesome influence of competition, there will be no hope of the Directors or Managers proceeding on the soundest and most economical system, so as to give the benefit of railway transit to the largest possible number ;

That railway shareholders are in many cases women, and persons incapable of personal exertions, who have invested their capital for the purpose of securing an income not subject to fluctuations, and becoming permanent shareholders :

That many others, assuming to be railway shareholders, are mere jobbers, whose interest it is to produce continual fluctuations, in order to profit by buying and selling :

That the best mode of preventing fluctuations is, so to work the railways, as to ensure a moderate profit to the shareholders, combined with the best system of management, reducing the cost of transit to the public to the minimum; thereby giving a salutary check to the wasteful speculation of making two lines where one will suffice :

That the best system of management with the minimum cost of transit to the public, is not likely to exist under the present virtual monopoly; because the managers would prefer carrying on a small business at a larger rate of profit, to a large business at a small rate of profit—this being the natural tendency of all monopolies :

That the only mode of remedying the evil, would be by compelling the Companies to put up the working of their lines to public tender, at certain stated periods. This would reduce the actual working cost to the minimum, and the profits accruing to the Companies would be accurately ascertained. Nor would the public safety be endangered, inasmuch as the parties tendering to work the lines on their own account, would be the very persons at present engaged in working them at fixed salaries, on the account of the Directors and shareholders :

That inasmuch as the legislature has conferred on railway Companies, the right of property in their railways for ever, upon consideration of their carrying the public and their goods, at rates not exceeding certain fixed standards, it would be unjust, and productive of great evils, to interfere with them compulsorily, unless upon the principle of full compensation; as in all other cases, where private property is taken for public purposes :

That inasmuch as the legislature, for want of sufficient knowledge of the capabilities of railways, fixed the rates permanently, at a standard much higher than is consistent with moderate healthy profits, under a sound system—in short left to the Companies all the benefit of future economy, arising from advancing knowledge, without any participation on the part of the public, a manifest injustice is thereby done to the public, loudly calling for a remedy :

That the only remedy consistent with keeping the bargain unbroken between the legislature and the Companies, would be the construction of a public line by the State, such line to be put up to public tender, for working, at certain fixed intervals :

That in this mode a wholesome competition would be induced, reducing the expense of transit to the minimum, and affording to the humblest classes the means of a free circulation of their labour :

That a comparison would then be made between the competitive and the monopolising mode of working, and the State would be competent to construct a series of new lines, if it should appear that the public could thus be better served than by the existing Companies :

That no injustice would thereby be done to the Companies, inasmuch as their privileges would be preserved to them, to use in any mode they might think proper. If they should in such case voluntarily determine to open the working of their lines to competition, it would be at their own option.

Such would, I conceive, form the substance of the argument of the great body of travellers, in a petition to the legislature to amend the grievances under which they labour. And sooner or later as "agitation" will arise, growing stronger till the end is accomplished. Neither sneers, nor jests, nor witticisms, will prevent this, and the "maundering" will probably be on the part of "N. O. E." and his friends, till they awaken to find that they have "killed the goose for the sake of the golden egg."

"N. O. E." accuses me of "playing with the straws in the stream." If he be himself a "man of straw" floating in the railway "stream," which I am far from supposing—I must assure him that far from "playing," I am in sober earnest, and were I proprietor of half the most prosperous railway in the kingdom, should be very glad to commute my dividends for a fixed moderate income, and more especially if "my all had been sunk in railways," as "N. O. E." so feelingly expresses it.

As for his talking of "the spirit with which, in defiance of heavy blows and great discouragement, railway Companies have persevered in their undertakings, has established a claim to national gratitude," it is about equivalent to the common remark of people "bearing adversity;" *i. e.* they sustain an evil they cannot get away from. The railway Companies speculated on profits, and when they made losses their property fell in value. Not being saleable under such circumstances, they did what they could to make the best of a bad bargain, as people do in private affairs. Besides, the term "Railway Company" is a mere bug-bear. The only persons deserving of consideration are the individuals who were the original shareholders. Those who have bought in at reduced prices have no more claim than any other speculator, and the same with those who have bought rising shares.

"N. O. E." is quite right as to the advisability on the score of national *expedience* to protect speculators in national progress, so far as is consistent with fair dealing to the public, as an inducement to future speculators to do the same, but the claim must be strictly winnowed to make sure that only the *emeriti* are included. Otherwise hosts of swindlers will be found putting on the garb of *emeriti* for the purpose of making the public their "oyster."

I am, Sir, yours, &c.

EXAMINER.

November 2, 1842.

RAILWAY "MONOPOLY" AND THE PUBLIC.

To the Editor of the Railway Times.

SIR,—The uncourteous terms which your correspondent "P. Z." permitted himself to apply to me, clearly show that he had lost his temper, and with it his good manners. This is the more inexcusable in him, when his avowed motive for taking part in the discussion is considered. He commenced by condemning some alleged improprieties of expression, and he has ended by throwing aside all the common amenities of discussion. Concurring, however, in the opinion which led you to suppress certain passages of his letter, I shall confine myself to the subject under consideration in the remarks I now make; and which I send for insertion, in case "N. O. E." should persevere in the intention he has announced.

Your correspondent's complaint, that he has been misrepresented, is unfounded. The greater part of his second letter was an implied comparison between coach and railway travelling, with the obvious purpose of disparaging the latter. He distinctly charged Railway Companies with breaking their pledges, and adduced in proof the inferior comfort of their conveyances, and their higher fares. If this does not mean that the new conveyances were more expensive and less comfortable than the old, it means nothing. Maintaining, therefore, that he has been misrepresented, is equivalent to an admission that he had no meaning, and that his accusation of broken pledges was groundless. If not misrepresented, and the efforts made in his last letter to strengthen his position

prove that he was not, why so much waste of vehement indignation?

The manner in which "P. Z." assails his opponent on the subject of his tabular statement is most unfair. The coach fares given in that statement were those charged previous to the completion of railways, and I have ascertained that they are perfectly correct. Your correspondent, however, endeavours to prove the reverse, by referring to the fares of the few coaches which still linger on the road, and the proprietors of which try to allure a few "old ladies and timid ecclesiastics," by charging less for the whole journey than they do for many of the intermediate distances. For any benefit which these timorous travellers thus obtain, they are indirectly indebted to the source of their alarm; and "P. Z.," instead of convicting his opponent of an inaccuracy, has drawn attention to a fact which forcibly refutes his own allegations. He would lead us to infer that the coaches were driven off the road by an abuse of monopoly, by the exercise of irresponsible power, and by fallacious promises; and yet it is well known that, in the few instances in which it is tried, no inducement which coach-masters can hold out is sufficient to divert any portion of the stream of locomotive humanity from the new channel into which it has been turned, not by the means which he asserts, but by the recommendations of superior punctuality, economy, expedition, comfort, and safety.

"N. O. E.," as he was bound to do, extended his view to the great railways of the kingdom, and based his opinions on data furnished by this wide field; but your correspondent "P. Z." has narrowed the basis of his superstructure of grievances to two lines; and these the most limited in extent, and the most exposed to competition, in the empire. Surely some shocking atrocities must be perpetrated on the Blackwall and Greenwich Railways! Are tubs the only carriages on these lines? Have the gentlemen who rusticate at Blackheath no means of escaping the volcanic showers of hot cinders? Can policemen be retained to cudgel passengers into the tubs as Irishmen cudgel their pigs? We have heard, by the way, that a rigorous tug at the swinish tail, acting on the perversity of the swinish nature, has had a good effect, even where the cudgel has failed, and we would submit to the Managers of those lines if it would not be more humane to apply the same sort of argument to the coat-tails of their refractory passengers. I fear, however, that my trifling with a subject which has so thoroughly roused the indignation of my opponent, may bring down on my grey hairs more of the fury of his juvenile ire. Angry indeed he must have been ere he cited, as illustrations of railway monopoly, two railways, on one side of which we may jolt pleasantly in an omnibus; or glide smoothly in a steamer on the other. His wrath seems in an especial degree directed against railway tubs. I concur with him in disapproving of carriages without seats; but they were not resorted to from disregard to the feelings and comforts of the poor; but as a protection against the meanness of the rich; and there is reason to believe that many who most warmly denounce them may have indirectly had a share in causing them to be introduced. Your correspondent does not, however, confine himself to the atrocity of tubs; he is even more severe on the unheard-of crime of raising the fares. In fact, his condemnation could not be more unqualified if the railway shareholders were voracious monopolists, who, without conferring any benefits, preyed on the public, and possessed all the injurious privileges which rendered that name so odious in the olden times. Strange it is that if Railway Boards have the disposition and the power to oppress imputed to them, there powers should not be employed to silence the constituents, who are clamouring for more than the skeleton of a dividend! Strange that if they could extort 10 or 15 per cent. from the lieges, they should endure, meeting after meeting, the pelting of a pitiless storm of taunts and reproaches, for declaring only a few shillings per cent. No, Sir, the majority of shareholders, instead of being greedy vultures, are plucked pigeons, and an ungrateful public, not content with seeing the feathers gone, would tear away the skin. To apply the word monopoly in its invidious sense to railways, is an abuse of terms. If the shareholders have had a monopoly, it has in too many cases been a monopoly of the losses; the public, with more good fortune, having had a monopoly of the gains. But why labour to elucidate a truth which every candid mind will at once admit!

One remark on a passage in "Examiner's" last letter, and I have done. He states that the rights of man, having existed previous to the right of property should be more sacred; but he does not explain in what respect the latter is distinct from the former, or why pre-existence should have the alleged effect. The right of property is simply the right of a man to his property, and is therefore one of the rights of man. It must have existed from the moment the first man plucked the first fruit and killed the first animal for food, and it is not easy to conceive what right could have existed earlier—certainly not the right of education, as your correspondent states, for there was none to instruct, nor the right of a free press, for there was none to convince; nor the right of cheap transit, for there was no need to travel.

The right which secured to man the means of sustaining life must have had precedence of every other right. The general law of property being merely an extension of this right still holds the same place, and one of the chief uses of a free press, of civil liberty, of just laws, and of a strong government, is to serve as bulwarks to ensure the inviolability of this grand element of civilization.

To assert as "Examiner" seems to do, that "cheap transit" is a natural right, is not very intelligible. It may be expedient for a country to provide the means of cheap locomotion to its citizens, and if the provision is made at the national expense, then a common right to the important privilege is created; but in no other way can such a right exist, except in the case of a pedestrian. To charge a man for the use of his own legs would certainly be a violation of natural rights, and in this way alone can "Examiner's" position be held good. He might as well plead the natural right of a man to be fed in justification of breaking into a baker's or a butcher's shop, as the natural right of a man to travel cheaply, in justification of an injurious interference with railway management. But I should apologise for taking up your space with the exposure of such transparent fallacies. I shall now follow "N. O. E's," example, and retire from this discussion with the supercilious young man who has twitted me with the sin of grey hairs, and found me guilty of the crime of being old. As he advances in life he may learn that the young are not always infallible, and that the proneness to assume an arrogant superiority, to make rash assertions, and jump to conclusions, is usually in an inverse ratio to the acuteness of the intellect, the extent of the information, and the soundness of the judgment.

I am, Sir, yours, &c.

JUSTUS.

HULL AND SELBY RAILWAY.

To the Editor of the Railway Times.

SIR,—In times of distress, like the present, we find all parties looking into the state of their own finances, with a view either of lessening their expenses or increasing their income. The feeling has been very general lately in all public undertakings, when the management is vested in a few only of the shareholders, that a searching inquiry should be made into those concerns, when the dividend does not answer the expectations of the shareholders; and it seems not unlikely that at the next half-yearly meetings the balance-sheet of most railways will be much more narrowly looked into by the shareholders than has hitherto been the case. Among other lines, I am interested in the Hull and Selby Railway, having been a shareholder in it from the beginning; and I must say am much disappointed at the results. The cost of the line per mile up to the present time is 20,500*l.*, while the average of the railways in the United Kingdom is (as drawn from your weekly tabular view of the cost of each line up to the present time) 34,750*l.* per mile; it may therefore be called an exceedingly cheap line in its construction. Its gradients are extremely favourable, perhaps (with the exception of the Dundee and Arbroath line) the most so of any line in the kingdom; its expense of working ought therefore to be less per mile than any other line. Its locality is good—leading from one of our most important seaports towards the heart of the great manufacturing district of the country, and it should therefore command a great extent of traffic.

With these advantages then—an extremely cheaply constructed line—an extremely cheaply working line, and situated in an excellent locality—why does it not pay? But here I am at fault; for I am not sufficiently acquainted with the details of its expenditure to be able to assign a reason. I cannot even persuade myself that there is any fault in the Management, for the Directors may be giving every attention to the line, and be acting for its interests to the best of their power. I can only say, that in viewing the line in every way, except that of its actual results, the line should be a good investment; and I should be much obliged if you, or one of your readers, could tell me why the results are not satisfactory.

From the annexed statement I send you of its traffic, its gross income seems to be constantly increasing, though the last dividend I received was less than the previous one.

Per mile per week first six months	1840. ——	1841. £20 10 0	1842. £27 15 0
Ditto last six months..	£21 10 0	29 10 0	37 0 0

This statement shows that the railway is gradually working its way, though very slowly.

I am, Sir, yours, &c.

A SHAREHOLDER.

Manchester, October 31, 1842.

P. S. It has just struck me that if the Hull and Selby and York and North Midland lines were incurporated together, it might be advantageous. They are both rather short lines, the one being 30¼ miles, and the other 27 miles; and certainly the expenses of management would be very materially reduced. The management of the York and North Midland we know to be good from the results; they are paying 10 per cent., while the Hull and Selby can but raise a paltry 2 per cent., and if any arrangement could be made between the two by which the York and North Midland would not lose, while the Hull and Selby would gain, it is very questionable whether it is not the interest of the Hull and Selby Directors to propose it.

AN AERIAL STEAM CARRIAGE.—This is the name which has been given to a new machine, for which a Company has taken out a patent, and which is to convey passengers, goods, and dispatches through the air, performing the journey from London to India in four days! and to travel at the rate of from 75 to 100 miles per hour. At the first glance of such an announcement our readers will doubtless feel disposed to treat it as some chimerical absurdity, written merely to excite wonder, and expressly for the marvel-loving mass of society; but the facts connected with the subject are of a kind to diminish disbelief, at least as to the truth of such a contrivance being in process of formation. A Company of gentlemen is really formed, even of mechanical men; the patent was formally sealed on the 29th of September last, and systematic arrangements are in progress to complete the design. In such an age of improvement we really have no right or precedent to deny the possibility of this measure. In January the machine will be thoroughly organised, and until then we take leave of the subject, and only trust that this alleged invention is neither exaggerated, nor an Utopian project; and from the conversation we have had with those in connection with the design, we have every reason to believe that neither is the case.—*Atlas.*

RAILWAY MANAGEMENT.

LETTER V.

To the Editor of the Railway Times.

SIR,—The division of Railway Management which is to form the subject of this letter has a very important bearing on the pecuniary interests of Railway Companies. In all transactions involving the receipt and expenditure of money these interests are exposed to numerous hazards. The income of British railways, now amounting annually to many millions, is received in sums varying from 6d. to 30s., and the accounts of a large part of their expenditure are divided into items almost as small. Hence it is obvious that no ordinary degree of vigilance is required to guard against the losses which may result both from negligence and dishonesty. These sources of probable injury have not, if we except a few Companies, received adequate attention from Railway Managers.

In order, therefore, to render the importance of the stringent checks to be recommended sufficiently clear, it will be necessary to enter very largely into details. The revenue of Railway Companies is obtained in fares paid by passengers, in charges and tolls for the conveyance of parcels, gentlemen's carriages, horses, cattle, and merchandise; in payments by Government for the transmission of mails, and in rents of houses and land. Their expenditure consists of salaries and wages—of purchases of stores, carriages, and engines—of payments to contractors for building and repairing houses, and maintaining the permanent way—and of interest and dividend.

The passengers' traffic, in which are included gentlemen's carriages and horses, being at once the most lucrative and the most vulnerable, we shall begin with it. In this division of their traffic Railway Companies may be defrauded both by their own servants and the public. Booking-clerks may permit passengers to pass without demanding the fare, or enter into collusion with them, and receive less than the proper fare, or receiving the whole fare, may apply it to their own purposes. On the other hand, passengers may enter the train without purchasing a ticket, or having paid the fare for a short distance may proceed to a greater, or having booked a place in an inferior class carriage may occupy one in a superior. It is essential therefore, that the safeguard adopted should serve the two-fold purpose of checking both the passenger and the booking-clerk.

The arrangements by which Railway Companies seek to arrive at these objects differ very materially, but those to be now described will be found in practice both simple and efficacious. The tickets or cards which are issued to passengers should have printed on them the names of the stations between which they are current, the amount of fare, the class of carriage, the date and train, and be numbered consecutively. Of these cards, only a limited number should be given to the clerk at a time. Their value should be charged to him as cash. The money he receives should be paid daily to the cashier, or more frequently if circumstances permit, and he should be required to render at the close of each day a detailed account of all the tickets he has issued, showing the commencing and closing number of the various kinds of tickets—the class, the train, their destination, and their value. The consecutive numbers afford a ready means of checking this account, the commencing numbers in it, if correct, being the next in succession to the concluding numbers in the account of the preceding day. A passenger, on the other hand, who presents himself at a station without a ticket, should be made to pay for the longest distance he could have travelled, unless he prove satisfactorily that he had previously paid. If he present a ticket for a station short of that at which he leaves the train, he should be required to pay the difference of fare, *if* it be not clear that he was brought on in opposition to his wishes, and if found in a superior class carriage with an inferior class ticket, he should likewise be made to pay the difference, or if suspected of an attempt to defraud it may be advisable to prosecute.

In addition to the booking-clerks, the ticket-collectors are a class of servants through whose misconduct Railway Companies may suffer loss. Ticket-collectors should be subjected to a vigilant supervision, for they have opportunities of coming to an understanding with passengers, which they may turn to a use very disadvantageous to their employers, without the possibility of their being detected by documentary evidence.

As a partial check upon them, as well as to prevent the possibility of a ticket being twice used, it is of the highest importance that every ticket should be collected, and returned to the office where it is to undergo examination, on the day on which it is issued. If a number of the tickets be missing, or be not returned to the examining office on the day on which they are dated, there is nothing to prevent fraud being extensively practised, and there will be great reason to fear that such is the case. A difference of opinion prevails among Companies, as to whether it is better to take the ticket from the passenger at the place of departure or the place of destination. Something may be said both for and against the two modes; but the balance both of argument and practice is strongly in favour of the latter course, and as it is soon likely to become universal, it would be superfluous to argue the question.

When passengers' luggage exceeds a certain weight it is customary to charge for the excess. If in this case the duty of weighing be separated from that of money-taking, the two parties may, by an obvious arrangement, be made to control each other, and a check be thus obtained.

The branch of the coaching traffic next in importance is the traffic in parcels. Any loss sustained by Railway Companies in carrying on the latter must have its origin in the misconduct of the clerks, guards, or porters by whom the traffic is conducted. The risks against which it is necessary to guard are, incorrect accounts, the transmission of parcels free or for less than the proper charge, and the abstraction of the contents of valuable parcels—the Companies having in such cases to make compensation for the theft to the owner. A means of testing the accuracy of the accounts rendered by clerks may be thus obtained:—As every parcel must pass through two offices, the one at the place of receipt and the other at the place of delivery, the clerk at each should be required to send a detailed return of all the parcels he receives and dispatches, together with the way-bills and other vouchers, daily, to the examining department. The comparison of these returns first with each other, and subsequently with the cash accounts given in by the clerks, establishes a check of no mean value in daily operation. If it is suspected that parcels are conveyed free, or their contents purloined, the delinquent may be easily detected by a judicious system of watching. Some fraudulent attempts having been made to recover compensation for alleged losses never sustained, Railway Companies should be careful not to admit claims of this kind without sufficient proof. To prevent the public being imposed on by the persons entrusted with the delivery of parcels, each parcel should have affixed to it a label with the charge for carriage distinctly written thereon. The conveyance of parcels being a source of considerable profit to Railway Companies, no precaution should be omitted to prevent the traffic being diverted into other channels. That this will take place unless due care be taken is apprehended by many, in consequence of the recent decision in a case in which a great carrying house and a leading Railway Company were the parties at issue.

The modes of conducting the traffic in goods, practised by Railway Companies, differ widely. Some Companies are the exclusive carriers on their own lines; others admit common carriers to a participation in the traffic; while others, again, leave the traffic wholly in the carriers' hands. In the last case, all that is necessary for the purposes of check is to bring the declarations of the carriers to the test of the weighing-machine, and to exercise due vigilance in order that the appropriate toll may be charged for the various descriptions of goods. Great care, in reference to this point, is the more necessary that carriers, generally, are not disinclined to turn any negligence on the part of railway servants to their own advantage. The railway waggons should be weighed periodically, and the weight registered, in order that the quantity deducted for tare may approximate as near as may be to the truth. When Companies take upon themselves the duties of carriers, the arrangements for checking become more complex. A separate account must be kept with each customer, and the contents of each waggon must be weighed in detail; in short, all the precautions and checks recommended for the protection of the traffic in parcels are equally necessary and applicable in the case we are considering—for goods are merely parcels of a bulkier and heavier description, conveyed at lower rates.

The traffic in cattle may be checked by means of tickets, consecutively numbered, and issued on the principle already described when treating of the passenger traffic.

The modes in which accounts of rents may be tested, are too obvious to require special notice.

Having finished this rapid survey of the arrangements for the prevention of losses by fraud or negligence on the part of persons charged with the receipt of money, let us turn to the measures necessary to be taken with the same view in case of persons entrusted with its expenditure. This portion of the subject must, however, be reserved for a future communication.

I am, Sir, yours, &c.,

VIATOR.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—I beg the favour of your permitting me the use of your columns, in making a few remarks upon one part of the Report of the North Midland Committee, which, with the address of the Directors, appeared in your last number. I allude to the concentration of the offices of audit and account, which is recommended by the Committee, and acquiesced in by the Directors. How far the North Midland audit may be really worth the name I have no means of judging; but if it be not efficient, a recommendation to render it so would have been, in my opinion, a wise course. An efficient audit, whose action shall be independent of every other department, to whose supervision and verification the whole receipts and expenses shall be subjected, cannot be safely dispensed with in such large concerns as railways, and the concentration of such an office with that of the accountant is equivalent to its abolition. The effect of a well-conducted audit in stimulating the attention of the various clerks and officers, by the conviction that any remissness on their parts can scarcely escape discovery, is of great importance to proprietors, and it is particularly their interest that matters should be so managed as to render the safe commission of fraud impracticable, without the concert of many persons. The concentration of those offices, which ought to act as checks upon each other, invalidates this system of necessary precaution, and opens the door for the corrupt administration of the affairs of the Companies.

The confidence, as it is termed, reposed by shareholders in Engineers and Directors during the progress of the works, until the enormous outlay has involved the safety of the undertaking, need only be followed by penny wise and pound foolish attempts at injudicious savings, to insure the ruin which the lavish expenditure in the first instance threatens.

Great deference will doubtless be paid to the authority of some of the gentlemen who originated the proposal in question, and to the Directors who have adopted it; and it is this circumstance that

Digitized by Google

induces me to address you, as a recommendation so sanctioned may influence other Companies, and, if I am right in my objections to it, be followed by fatal consequences.

I remain, Sir, your obedient servant,

M. N.

London, November 9, 1842.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—I beg leave most respectfully, on behalf of the servants of the above Company, whose dismissal has been occasioned by the retrenchments the Committee propose to effect, to return you our grateful thanks for the sympathy you have always evinced in our behalf. At the same time I wish to inform you in what manner the reduction has been effected in the locomotive department. But first it may be as well to enumerate the "principal servants," as the Committee termed them, in this department. There is Mr. Dobson, head foreman; Leonard Stephenson, foreman over fitters and turners; John Dun, brother-in-law to Mr. Dobson, foreman over the smiths; Robert Harland, brother-in-law to Mr. Dobson, foreman over the joiners; and Mark Wakefield, foreman over the engine-drivers, &c. Every one of these foremen is a Newcastle man; and really, Sir, a man has no chance whatever, let his abilities be ever so good, unless he comes from that locality. For instance, in the fitting and turning department nearly all the hands that were taken on last are from that neighbourhood, for if a man left, or got discharged, the vacancy was sure to be filled up by a north countryman, and it was useless any one else applying; and most of them are very inefficient workmen—some of them are actually a dead weight on the Company. Now, Sir, it is customary in case of a reduction of hands to dispense with the last comers, and to keep their old hands if possible, but in this case it has been quite the reverse, for not one of the parties above referred to has got discharged; on the contrary, they have selected men who have been in the service from one year and a half to two years and upwards, against whom they had no cause for complaint. As a proof of this, they gave us all most excellent characters—without a single exception, I believe. It is a hard case for a man to be thrown out of employment at this time, under any circumstances, but more especially when he sees himself victimised in the above manner; but I hope this state of things will shortly be put a stop to. I will give you another instance. There is a brother of Mr. Dobson's, who is a smith by trade; when first he came he was put to fitting. Not making much proficiency in that branch, he got a situation in Liverpool at his own trade, and went there; but this situation either not suiting him, or having a desire to be more nearly adopted in his family circle, he came back again, and was at once put to a lathe, to learn the art of turning, for which he is receiving wages equal to the best men in the establishment! I could point out numerous other instances, but I think I have stated sufficient to convince the proprietors how much their interest is consulted, and I think they will agree with you in what you stated a short time ago—that if the late Committee had consulted some of the operatives, as well as the principal servants, they might have obtained a far greater amount of information.

I am, Sir, yours, &c.,

A LATE SERVANT OF THE COMPANY.

Derby, October 29, 1842.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—As a proprietor in the North Midland Railway, and a frequent traveller on the line, I have felt some interest in the Report that has just been issued by the Committee of Investigation, and the reply distributed to the shareholders by the Directors. On perusing the different items of proposed reduction, I find that at Normanton the Committee suggest not only a reduction in the number of pointsmen at that station, but also to employ two boys, in that capacity, at 1s. per day each, in lieu of men. On inquiry, I am informed that these boys are proposed to be employed, one during the day, and the other during the night; and that their stated duties would be to signal the trains at the junction with the Manchester and Leeds Railway at Gore Hill, which, be it remembered, is situated in a deep cutting. Now, surely this would be carrying economy too far, and might prove most mistaken policy. Any one the least conversant with railway management, I think, must allow that great danger would arise from entrusting so important an office to youths so inexperienced, and probably thoughtless, as the wages stated would indicate; and I cannot but fear that should such an arrangement be persevered in, the interest of not only the North Midland, but of all the other lines connected therewith, might suffer; as, on account of the sensitive state of the public mind in matters bearing upon the efficient and safe working of railways, the knowledge of such an appointment (even should no accident actually occur) might have the effect of inducing parties travelling southwards from places west of Wakefield, or others proceeding to or from Scotland, to prefer the Grand Junction route. I therefore trust that at least this point of economy may not receive the sanction of the approaching general meeting, as (to make use of a common and homely expression) I cannot but think that it would be *penny* wise and *pound* foolish.

I remain, Sir, your obedient servant,

A PROPRIETOR.

Wakefield, November 8th, 1842.

RAILWAY SALARIES—NORTH MIDLAND RAILWAY, &c.

To the Editor of the Railway Times.

SIR,—The investigation lately instituted into the management and expenditure of the North Midland Railway will be productive of advantage, not alone to that concern, but I should hope to others, its near neighbours, and labouring under similar difficulties. Here we have a Committee recommending, and the Directors themselves, we must infer after all that has passed, *reluctantly* and to a certain degree acknowledging, the justice and practicableness of reducing the expenditure of this Company to the amount of 17,000*l.* per annum! Now, granting that this reduction cannot to its full extent be carried out, what a picture does this Report present to us of the indifference, or something worse, of those in authority to the interests of the unfortunate people who have invested their money in this railway! It will powerfully confirm the opinion now very generally entertained, that the various departments connected with the management of these roads are most extravagantly overpaid. And this is the case, totally irrespective of the rather important fact that one concern may be paying a good dividend, and another nothing at all. What, for instance, can be more, I would almost say discreditable, than Mr. Bell of the Midland Counties' receiving from the impoverished funds of that line 800*l.* a year! His services, Sir, cannot be worth it. There are scores of gentlemen of education and talent, well qualified too, to fulfil the duties of such a post, who would be thankful for half that sum. Indeed, I am prepared to say that there is *no* situation—none whatever—connected with these establishments, be it Secretary, Superintendent, or Engineer, which would not be well and liberally paid at 500*l.* a year. These preposterous salaries were established (the only excuse that can be made for the system) when people's minds were led astray by wild anticipations as to the extraordinarily successful result to the shareholders of this entirely new species of investment; not from any conviction that smaller sums would not have been fully adequate!

These anticipations—grounded, let me add, upon fallacious calculations furnished by these very engineers, &c.—have been in most instances miserably disappointed, and yet these men, as if it were far otherwise, continue to pocket a scale of remuneration greatly above what the Companies can afford to pay, and I will say, more than their services, *past* and present, entitle them to. I do not wish to be led into any illiberal observations, but it is notorious that the—what shall I say?—the good luck of engineers and contractors—their present prosperous circumstances contrasted with the situation of those unfortunates who have too implicitly relied upon them—have become a byword and a proverb.

With respect, however, to the more immediate subject of this letter, the North Midland Railway, I cannot think, however necessary and proper it may be, and no doubt is, that these reductions should be made, that they can bring about a very material addition to the present dividend; but, coupled with a moderate and judicious raising of the fares on the through traffic and on merchandise, I have no doubt that this railway, without competition of any kind, as it is, may be made to pay its proprietors 5 per cent., and that when the Newcastle and Darlington Railway shall have extended the communication by railway from the metropolis to Newcastle, it will pay still better.

But to do any good, I am persuaded that there must be a revision of the fares. I know, Sir, this will not meet with your approbation. You advocate, and very properly so, the interests of the public, and have set your face against the course I recommend—which, however, *I* would not advocate with the view of obtaining or maintaining an *extravagant* rate of dividend; I ask for a return at the rate of 5 per cent. for my share of the capital embarked in this splendid road, and I really think that a small increased charge levied upon the through traffic, upon those who can afford to pay, would not be felt by them. Would a small additional sum to the present fare incurred by a passenger from London to York, be very material to him?

I must also recommend a revision of the rates charged for merchandise on this railway.

Your obedient servant,

A NORTH MIDLAND PROPRIETOR.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—It is with regret that I venture to obtrude upon your columns, but, as the half-yearly meeting of the Brighton shareholders approaches, I trust that the same zeal for their interests which induced you, previous to the late one, to point out to the proprietors of this ill-managed concern the inevitable ruin into which the Company was falling, will again stir you to the same disinterested exposure of the imbecility (if nothing worse) of the party in the Brighton Board whose folly is still plunging this sickly concern into the slough of despond.

Of the miserably weak conduct of the various Guerilla bands at the late meeting, who by the commonest rules of party tactics might, with the slightest combination, have made a clean sweep of the obnoxious members of the Board, but who suffered themselves to be beaten, one by one, or talked over by the *bland persuasiveness* of the Chairman, I have not now time to speak; and I have felt, like yourself perhaps, that until the period should again come round when the same farce was to be enacted, it would have been vain to have continued to expose the evils of a management which had dexterously concealed all its defects beneath so splendid a dividend as 10s. a share to the proprietors, *too glad* to get *even that* to think how much *more* they might have had. Every one has felt how he has one day hugged even a dividend of 5s. in the pound, when a bankruptcy has seemed to promise nothing. That a joke from Mr. Levy, and a dividend of 10s. a share, should disarm a justly exasperated meeting of shareholders, in a Company where three millions of money is laid out as a *profitable* investment of capital, only proves how forlorn must be the hope of the expectants.

My attention has been drawn to the hapless state of this concern in the present instance, by the notice lately given by the Brighton Board of their

intention to go to Parliament next session for a new line of railway from Croydon to Vauxhall, or thereabouts, as well as by your remarks upon the *insanity* of such a project. If other equally obvious proofs were wanting, certainly no better instance of complete insufficiency for their duties as Directors could have been evinced by any set of men than in this ill-timed expenditure of the funds of the Company. If the abortive Horsham scheme, as you say, cost the Company 700*l.* in preliminary expenses, must not such a bantling as this new one cost at least 1,000*l.*, being much about the same distance as the other, but traversing a thickly-inhabited district—a suburb of the great metropolis? Will any one be fool enough to suppose that such a line could (Parliamentary expenses included), be made under 700,000*l.*? If he be *so soft*, the most fitting terminus for *him* would certainly be the large house in St. George's Fields, where speculative gentlemen but too often end their career; or, if he be disposed to *run all risks* of the *cost* of this new branch, there is yet another asylum in that vicinity where he will as well deserve to pass the remainder of his days, under the protection of her Majesty's laws. Can it be supposed possible that the Croydon and Greenwich Companies will set tamely down to endure this *bye-blow?* Will Parliament give no ear to the opposition of the latter Company, who so lately, on the faith of receiving the toll of the Brighton Company, was induced, at the consent of Parliament, to widen their line for their accommodation? Is there the slightest possible chance that any such branch line as that proposed will find a sufficient number of advocates to fill a share-list; yea, even unto the paying the preliminary expenses? Will investors of money coolly lay down their thousands to back a concern under the auspices of the parties who have brought the Brighton line to its present plight?

In the name of heaven, Sir, are these men absolutely insane, that they would thrust this Bedlamite scheme, this insult on common sense, down the reluctant throats of their proprietors? Can they really be so deficient in common sense of reasoning as to hope to justify such an undertaking before the eyes of the world, at a time, too, when their shares are so lamentably depressed? All the world knows that, if the South-Eastern money be not speedily paid (and thereby hang lawsuits and delays of all sorts), the shareholders must ere long be called on to supply fresh means of finishing the line, and the workshops of the concern, to the tune of somewhere about 300,000*l.*!!! And yet, though all these things *are known*, up start these men, and propose two new schemes, in absurdity equally alike—the one, the Vauxhall terminus; and the other, an extension of the Shoreham line to Chichester. Has too much prosperity made these Directors mad? Has a miserable 10s. dividend, and a rise of 3*l.* per share in the market, so intoxicated them that they do not observe how every second man they meet turns his tongue in his cheek and cries, *fudge?* Can they be so blind that they do not perceive how this very rise was the effect of a belief in the public mind that, after the exposures at the late meeting, as well as from the criticisms in your journal, a more steady, business-like system was being pursued, and that the time had *at last come* when the Directors were determined to apply themselves to the most rigidly-economical mode of executing the traffic of their line, as well as to the exactest and most effective administration of their various duties? And yet, Sir, just as affairs are beginning to make a more cheerful appearance, and the serio-comic countenance of Mr. Levy (radiant with pounds, shillings, and pence) is being lighted up with the eager anticipation of "a *werry* good dividend," in steps the Engineer of the Earlswood embankment, and urges on the Directors to the prosecution of two new branches, which bid fair to drain the very life's-blood from the parent trunk. Are these schemes got up in the pure unselfishness of men's hearts, with a view to benefit the proprietors? Can any one believe they are? And yet, i'faith, a Mr. Lawrence Heyworth will doubtless be found, without difficulty, at the next meeting, to bluster forth an *indignant refutation* of the proceedings of the Directors, in a *disinterested* appeal to the *good sense* of the meeting, who will forthwith re-elect their Chairman, and record a vote of thanks to the *wise* projectors of these two *precious* branches to the long-hoped-for El dorado of the Brighton Company. Let the shareholders look to it, Sir, if they hope for any more 10s. dividends. "There is a tide in the affairs of railways, which, taken at the flood," &c.

I am, Sir, your obedient servant,

O.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Generally admiring the upright administration of your journal, I cannot but think that, in reference to the Brighton Railway, it would be well if many of the writers in it would remember the maxim, "*Est modus in rebus*," even in their censure of the Brighton Board. I applaud a proper vigilance in the shareholders relative to their own property; and, as one of them greatly interested in this undertaking, am fairly disposed to attach a proper value to the exertions of the press; but that vigilance may degenerate into a morbid suspicion, and those exertions so pass the mark as to make the poor shareholders think of Sir Lucius O'Trigger in the play, and cry "Save us from our friends."

I, for one, was much pleased with the explanations given at the last meeting, which I deemed copious, manly, and unreserved; and in the sentiment generated by this conduct I feel that the Directors are disposed to profit by their former errors (principally of inexperience in a new application of science), and to take a straight and determined course to the successful issue of this great projection. I place confidence in these words of our Chairman on the occasion referred to—"We want nothing more. We have quite enough; and the money received from the South-Eastern and Dover Company will not be required for the purposes of the railway." Excuse me, therefore, Mr. Editor, for not adopting the *postulate*, "that three millions will be required for the main line." That some extras will present themselves in the future I do not doubt, but I believe to no great extent; and that, in such event, the position and profits of the line will be such as to make them a matter of perfect indifference.

Yours, very truly,

VINCIT OMNIA VERITAS.

London, October 31, 1842.

Actual receipts for 17 weeks ending October 22, 1842—an average of 4,341*l.*	£73,797
Take the average for the remaining 9 weeks at 3,500*l.*	31,500
Six months' total—very low indeed	£105,297
Working expenses,* toll, rates, &c., as last Report, 38,000*l.*, say about 39 per cent.	£40,000
Interest on mortgage bonds, six months, 5 per cent., 600,000*l.*	15,000
Loan notes, balanced by 337,000*l.* from South-Eastern Railway, invested in the names of the Directors	
Amount requisite to pay 5½ per cent. on 36,000 shares—that is, 27*s.* 6*d.* per share for six months	49,800
	£104,800
Balance	497
Total	£105,297

At the present price, 36*l.*, this estimate will pay purchasers 7*l.* 12*s.* 6*d.* per cent. This I deem a certainty, in February next.

* The expenses are taken from last Report; and, if considered low, so also is the assumed average of the remainder of the six months.

LONDON AND BRIGHTON RAILWAY.

To the Directors of the Brighton Railway.

GENTLEMEN,—I beg leave to take this method of complaining against you for partiality; and the more especially when you make our interests, and the prosperity of the concern, *subservient* thereto—which, *vice versa*, ought to be *paramount*.

As the Directors of an extensive and important Company, you ought to be above any petty littlenesses, and show, by a strict rectitude, and undeviating course for its sterling welfare, turning neither to the right hand nor to the left, honesty of purpose, and masters of what you take in hand. You confine your advertisement of the comparative routes between Paris and London to an obscure publication. Now, as a shareholder, I must beg to protest against this, and request that all our advertisements appear in the *Railway Times* as well. In fact, if you are to confine them to only one paper, you ought to give them to the one that has the greatest circulation, as any one would naturally suppose it to be your desire and wish to make the same known as generally as possible. The advertisement in question should appear more frequently than it does—you should order it into some of the daily papers. I believe that your not having sent it to the *Railway Times* arises from that paper finding fault with your management now and then; but out of this evil I trust good will come, and you would act a much *nobler* part to show yourselves above this, rather than to be below it. I leave this subject, and shall trust to your letting that advertisement appear more generally.

And next, with regard to your extension of the line. Unless we should authorise you at a general meeting, I must beg to protest against our money being squandered away. What you propose may perhaps be of benefit; but pray let us know what its intended advantages are before you spend our money; and you need not think that faith will be put in any estimate of our present Engineer. I hope you will attend to what I say as to this.

And now, with respect to the fares, I certainly do think, that if you will reduce the first-class to 10*s.*, and the second to 7*s.*, it would tend greatly to increase our already increasing traffic.

It is for my own interest, and that of the other shareholders, that I now write. I care nothing for either the *Railway Times* or the *Railway Magazine*, further than their usefulness in these undertakings; and I trust you will not disregard what I have now said.

I am, Gentlemen, your obedient servant,

INVESTOR.

Liverpool, November 9, 1842.

LONDON AND CROYDON RAILWAY.

To the Editor of the Railway Times.

SIR,—My letter recently inserted in your paper, on the affairs of the above railway, having called forth some remarks from "A Lancashire Shareholder," which appear to require from me some reply, I proceed at once to do so. Your correspondent appears to concur with me in the general view I took of the present position of the railway, and the best means now left—viz., by suspending the intermediate traffic—of obtaining the most profitable result for the proprietors, but differs with me in the estimate I made of the probable amount of tolls to be received from the Brighton and Dover Companies. He says, the tolls for the present half year are expected to reach 18,000*l.*, which would be equal to about 700*l* per week. This is evidently too sanguine a calculation. The receipts on the Brighton line for the present six months are not likely to average more than 4,000*l.* per week, one-tenth of which is payable to the Croydon Company, and the amount of toll from the Dover line will certainly not average more than 120*l.* per week for the same period. The two amounts together will make 520*l.* per week, which is equal to 13,520*l.* for the half year. I stated 450*l.* per week as likely to be the average amount for the next twelve months, and I am still inclined to adhere to that opinion, for the following reasons: The best half year for the Brighton and Dover traffic is the present; and though it is true the Dover line will be further opened during the next six months, still we must not persuade ourselves that it will make up for the great falling off that must be expected in the Brighton receipts during the first three or four months of the coming year. Your correspondent then endea-

Digitized by Google

years to show that there is every probability of a dividend of 10s. 3d. per share for the present half year, which is equal to about 7½ per cent. per annum, while the shares are to be bought in the market, at the present time, at nearly 30 per cent. discount! I should have been too happy to have been convinced that we had such agreeable prospects before us, but it appears to me that "A Lancashire Shareholder" has come to this erroneous conclusion from an over estimate of the amount to be received from the toll-paying Companies, and from the opinion he appears to have formed, that the cost of working the short traffic will be diminished in proportion to the decreased receipt. I think I have shown that he is wrong in the first opinion; and with respect to the latter, I will observe, that the peculiar nature of the Croydon traffic makes the expenses of working it almost of a fixed character—therefore if the Company carry 100 or 1,000 passengers per diem, the expenditure will remain the same. It is therefore evident it will not do to calculate the expenditure at a *per-centage* on the receipts, for the expenses do not rise and fall with the traffic; and, in my opinion, this is a strong argument in favour of giving it up, for with the present very small sums received, and the *unavoidable* higher expenditure, it must of necessity entail upon the proprietors a very serious loss. I will add also, that they have the mortifying conviction that the traffic is carried on to their injury for the benefit of a Company whose grasping Board, taking advantage of the fortuitous position of their 1¾ miles of railway, will not allow their best customer to come on it without handing over to them the whole of the profit that can be derived from carrying on the business of the line. I repeat that the short traffic *must* be given up, and the sooner our Directors do so the better, though I cannot agree with "A Lancashire Shareholder," that we shall receive a dividend at the next half-yearly meeting of 10s. per share; yet I think we may confidently anticipate a surplus in hand that will allow of 6s. or 6s. 6d. per share being divided, which I think the following calculations will show:—

DEBTOR.			
The last half-yearly expenditure, including interest on bonds, toll to Greenwich Company, and every other expense, amounted to	£17,517	0	0
To which must be added three months' interest on new loan notes	750	0	0
Total	£18,267	0	0
CREDITOR.			
Amount of toll to be received from Brighton and Dover Companies, 520*l.* per week, for six months	13,520	0	0
To be received from Dover Company for the use of the New Cross station	1,000	0	0
If the Directors have done their duty we may take credit for a reduction in expenditure of	1,500	0	0
Less amount paid to Greenwich Company this half-year	800	0	0
We can safely take credit for a saving in locomotive power, &c., of	1,000	0	0
Sundries—rent, transfer fees, &c.	600	0	0
The local traffic has produced, since August 1, 12 weeks	5,072	0	0
For remaining 14 weeks—say 250*l.* per week	3,500	0	0
Balance of last half-year	1,800	0	0
	£28,792	0	0
From which deduct	18,267	0	0
Net profit for dividends—equal to about 6s. 3d. per share	£10,535	0	0

Considering the many adverse circumstances which the Company have had to contend with, I think the dividend, though a small one, is satisfactory, and convinces me that *ultimately* the line will yield a profit of 8 or 10 per cent.

I cannot conclude this letter without noticing the rumour of an intention of the Brighton Company applying to Parliament for an independent line from Croydon into London. This report has not given me a moment's uneasiness, but the threatened danger is of too serious a character to be treated with indifference; we must therefore buckle on our armour, and prepare for the coming contest, which I am convinced will end in the disgraceful defeat of the projectors of this notable scheme, and will add another chapter to the edifying history of the Brighton Railway Company.

I am, Sir, yours, &c.,
A CROYDON SHAREHOLDER.

Bedford, Nov. 2, 1842.

THE TOLL QUESTION — CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—Your correspondent, "A. B.," is a beautiful specimen of the real no-surrender tribe. He commences in the approved phraseology, by talking "of the loss sustained by the Croydon Railway by their *unjust treatment* of the Greenwich Company." He then falls foul of you, for what he terms your "constant and zealous advocacy of the interests of the Croydon Company;" he then proceeds with that peculiar perverseness which characterises all that genus, to convert a simple proposition to secure to the Greenwich Company *at least* 50 *per cent. more* from the Croydon Company than they now receive, into an aim that the Greenwich Company "should give up part of its income to the Croydon." He then goes on, with the accustomed tact of his class, to bring into prominent notice the speaking depression of the Greenwich shares, as compared with those of the Croydon; and adds that which I am sure no one, not even Mr. Chairman Wilkinson, will deny, that "when this state of things is reversed, it will be soon enough to ask the Greenwich Company to *give up part of its income to the Croydon*"—such a monstrous request never having been, as far as I can understand, for a moment suggested. And he winds up in the old, original, fire-and-fury spirit of his party, that he "would rather lose the little that remains" of his shares, than submit to the *unjust* propositions of the Croydon Company.

Now, Sir, this may do very well for "A. B." and his blindly-prejudiced, party-spirited sect, but I, who have less of the leaven of envy, hatred, and all uncharitableness, towards the Croydon, and more of the *amor nummi*, must protest against this wanton waste of money and sacrifice of property; for I would infinitely rather "take the good the gods (are willing to) provide" me, and accept what I cannot but consider the advantageous offer of the Croydon Company, although it may possibly prove some slight relief to those terrible Turks, the Croydon Directors, and so secure, not only the little that remains of my shares, but the increased value which they would instantly acquire, and which I am satisfied would not be less than 50 per cent. Shareholders! choose for yourselves—an uncompromising spirit, with wormwood and gall to both Companies, and shares at ——; or a forgiving temper, with peace and good-will to both parties, and shares at 7*l.* 10s.

I am, Sir, your never failing reader,
P. Q.

Brighton, November 9, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—Your correspondent, "A.B." having, in your last number, expressed his regret at the non-appearance in your pages of a table showing the loss sustained by the Croydon Company, *by their unjust treatment of the Greenwich!* I beg to apprise him that he may always satisfy himself of the loss incurred by the Croydon Company, by the perverseness and obstinacy of the Greenwich Board, by inspecting your weekly traffic returns.

As a shareholder in the Croydon Company, I cannot but applaud the conduct of our Directors, and I defy any body of men to offer more equitable terms to the Greenwich Board than they have done, and as those offers have been promulgated so often and so lately in your columns, I should only tire your readers by enumerating them. I shall merely remark that the pith of these offers has been to guarantee to the Greenwich Company, in lieu of the present toll, a fixed sum much exceeding the present tollage, and equal to the highest amount the Greenwich Company have ever received from the Croydon Company as toll—to leave all existing disputes to the arbitration of an impartial tribunal, or lease the new portion of the Greenwich line. To all of these offers repeatedly made to the Greenwich Board, the answers have been invariably "No; we will exact the whole amount of toll guaranteed us by Act of Parliament, and we can make no alteration, as our shareholders are against any change." Surely, Sir, it is very inconsistent that the Greenwich Company, while they exact the utmost farthing from the Croydon, should cry out against the Croydon Board for raising their passenger fares, the amount of which is still below what is allowed them by Act of Parliament.

Your correspondent "A. B." states that the Croydon Company wish the Greenwich to give up part of their income. I cannot make out how any part of an income can be given up before it is absolutely realised, and the repeated offers of the Croydon Board prove quite the reverse.

In conclusion I beg to state, that as the Greenwich Board have refused an arbitration of all existing disputes, the onus lies with them to prove that the Croydon Company can carry on a remunerating traffic at a toll of 4½d. per passenger.

I am, Sir, yours, &c.
A SUBSCRIBER.

November 7, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—Your correspondent "A. B.," a holder of 100 Greenwich original shares, is mistaken as to your table showing the number the Greenwich lose by their prohibitive toll; that table shows the number lost to the Greenwich by the South-Eastern Company *only*. The Croydon Company carried more than 300,000 passengers, and paid a tollage of upwards of 6,000*l.* per annum to the Greenwich Company, which traffic is nearly destroyed by the *unwise* policy of the Greenwich, abetted by their proprietors. If the Greenwich proprietors would examine into the matter for themselves, they would soon find that, as "Blind lead the blind, both fall into the ditch." To men of business, it was clearly seen from the first, that the toll of 4½d. could never produce to the Greenwich so much money as the toll of 3d.; and it must be clear as the sun at noon-day, that the Directors *acted wrong* in enforcing the larger toll, which is only producing about 3,000*l.* per annum, and will in a very short time *cease entirely*. The Greenwich say, the Croydon lose more than they by falling off of traffic, and have *rejoiced* in the belief that it was *double* their own loss; but it ends *here* to the Croydon, for their traffic pays nothing to their *own proprietors*, therefore *it ought immediately to be stopped*. The Greenwich may again exult, but they will be *losers* by such a step to the tune of 3,000*l.* per annum. As a Croydon shareholder, I regret loss to the Greenwich; but they have power to save themselves; the game is in their own hands. If they will but carry out the maxim of *live and let live*, by accepting the FAIREST terms ever offered by man to man, or Company to Company, they may again receive from Croydon traffic 6,000*l.* per annum. The case is clear; but as each Company have made certain statements, so they do not *like* the appearance of giving up their opinions. If left in this way, proprietors may rely the Directors will consult what they call consistency, while the proprietors of each Company will be *mulct* of *at least* 6,000*l.* per annum. If anything is done, it is certain it must be done by the shareholders. Let then a friendly feeling arise in the breast of every shareholder of both Companies, and let them call upon the Directors of both to make an immediate settlement, or in default, to *insist* upon their referring the dispute to some disinterested parties to settle it. Let "A. B." join in this, and he will soon find his 100 shares worth *double* their present price. I am, Sir, yours, &c.,
A CROYDON SHAREHOLDER.

London, Nov. 9, 1842.

							For Notes	see next	Page					

NOTES TO THE TRAFFIC TABLE,
(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

5. The total amount of stock on which dividends are payable is 750,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, as also the toll from the Manchester and Birmingham Company. The *divisor* employed to ascertain the daily receipts per mile is 121 (85+15+21.) The Company do not now carry goods to Manchester.

14. The receipts include those derived from the Cheltenham and Exeter lines: the former opened for 18 miles, and the latter for 44¼. The divisor employed to ascertain the daily receipts per mile is therefore 180¾ (118¼+18+44¼.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. At the last meeting no dividend was declared, the disposable balance from the previous six months' working being only 1,472*l.* 10s. 9d.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,326*l.*, and there was a balance from the previous half-year of 12,479*l.* Out of these two amounts combined, the dividend (after making certain deductions) was paid.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch. The dividend is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c., and subject to payments to the Grand Junction Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,201*l.* 9s. 1d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 108*l.* 3s. 6*d.*; carriages, 34*l.* 6s. 6d.; dogs, 1*l.* 1s. 0d.; parcels, 244*l.* 5s. 0d.; cattle, 30*l.* 1s. 0d.; corn, 8*l.* 15s. 6d.; heavy goods, 465*l.* 10s. 10d.; coal and lime, 177*l.* 10s. 10d. —Total, 1,069*l.* 19s. 2d.

31. The amount of stock *created* is 3,000,000*l.*, on which dividends are payable; and the sum of 850,000*l.* is borrowed money at interest. The 3,000,000*l.*, however, is nominal, inasmuch as the shares were some of them issued at a discount, which reduced the actual amount to 2,589,500*l.*, viz.:—15,000 shares at 100*l.* = 1,500,000*l.*; 15,000 of 50*l.*, issued at 40*l.* = 600,000*l.*; 22,500 of 33*l.* 6s. 8d., issued at 21*l.* 13s. 4d. = 489,500*l.*; total 2,589,500*l.* The details of the receipts are as follows—Passengers, 2,199*l.* 4s. 9d.; carriages and horses, 219*l.* 15s. 1d.; parcels, 232*l.* 9s. 6d.; mails, 50*l.* 5s. 9d.; merchandise, 1,092*l.* 14s. 5d.; minerals, 320*l.* 3s. 9d.; cattle, 18*l.* 10s. 4d. — Total, 4,133*l.* 3s. 7d.; including North Midland proportion of Manchester and Leeds traffic, and amount received for Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester an Birmingham toll.

37. The length stated includes branches.

39. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Investments in Railways.—We are constantly receiving applications for advice with respect to the sale or purchase of particular shares. We have repeatedly stated, that we are very unwilling to offer any opinion upon such points, and, indeed, our readers have the same data as ourselves whereby to form a judgment. Nevertheless, as they *will* have our opinion, we cannot refuse to give it. We wish them, however, to bear distinctly in mind, that we do not, in any instance, hold ourselves answerable for the event. The course we recommend to our correspondents, is simply what we ourselves would follow, were we buyers or sellers under the circumstances detailed by them respectively. With this caution, which we shall take care to keep before parties who apply to us on such subjects, we proceed to notice the applications of the week. We may just add, that the figures and letters have no reference whatever to our traffic list, or to the initials of any railway. We cannot notice questions where this rule is violated. In order that we may not be subjected to needless questions, we must have the name and address of every inquirer, although the answers may be given under a fictitious designation:—Mr. C. *(Dublin). We will first briefly notice the merits of the several lines. No.* 1 *will not likely pay more than* 5 *per cent.* for years. *No.* 2 *will, we think, prove* ultimately *a ruinous concern. No.* 3 *will improve, and No.* 4 *remain in its present productive state. From this it will be seen that we would get rid of No.* 2; *but as probably it would be difficult at present to sell even at the quoted price, and the money* must *be raised, we would dispose of about half the old shares of No.* 4, *more especially if the current income can be conveniently dispensed with. This would produce more than the sum required for present purposes. Nos.* 1 *and* 3 *we would keep; No.* 2 *we would exchange for the other stock alluded to, but not numbered.*—Plenipo *(Salop). In the following order, Nos.* 3, 5 *and* 1. *Do not have anything to do with No.* 2.—H. D. N. *(Lancaster). Do not sell unless compelled; you* may *be better, but can scarcely be worse.*—S. Y. *(Plymouth). We think very highly of the line. By the time named it will doubtless pay* 6 *or* 7 *per cent. We would purchase further. The Company is not included in the list referred to in the postscript.*—A. Z. *(Leeds). Hold on; it will pay eventually.*—G. S. D. *(Pentonville). Do not sell the shares first alluded to. None of those numbered are good for much, except No.* 4.—J. P. B. *No.* 1 *will not maintain its present dividend for any length of time. Nos.* 2, 3, *and* 4, *at present prices will no doubt be profitable with good management. Nos.* 5 *and* 6 *are by far the best.*—Mr. G. S. *(near Carlisle). We do not preserve such letters, and therefore cannot comply with our correspondent's request. Let him write again; we do not mind the "trouble."*—Keilham. *We would sell at once. The shares will go lower unquestionably.*—M. M. *(Clifton). We do not think the shares will rise before the next meeting; they certainly ought not. We would not purchase at all. The dividend would be secured by purchasing at any time previous to the closing of the books.*—J. B. M. *(King's Norton). We think* all *will pay at present prices, except No.* 4, *with which we would not have anything to do.*

E. P., *who advertised in our journal a few weeks ago, will find a letter left for him at our publishing office in Fleet-street.*

We have to acknowledge the receipt of the "Commercial Almanack for 1843," *published by Messrs. Harvey and Darton, of Gracechurch-street. It embodies a vast deal of useful information, but we are sorry to see any part of its space occupied by railway time-tables, some of which are incorrect* already, *and all of which will probably be erroneous before the commencement of the year. Such tables, unless corrected periodically, are almost certain to mislead.*

W. *We have only to say that praise in general terms is frequently more injurious than otherwise.* Facts *should be stated, leaving the public to draw their own conclusions.*

C. *is thanked for his attention; we shall be glad to hear from him after the meeting.*

Railways and Burying Places.—*A correspondent who subscribes himself* A Lover of Public Decency, *is anxious that we should advocate the employment of railway facilities in connection with the interment of the dead. Our correspondent alludes particularly to the disclosures contained in the evidence and published works of Mr. G. A. Walker, the well-known surgeon, on this subject. To the able and untiring exertions of Mr. Walker in this important cause we cheerfully render every praise; but in the present position of the matter, and pending a Parliamentary enactment, we do not think that any good purpose would be answered by discussing the question in our columns.*

A correspondent whose two *communications this week are marked* (on the outside) PRIVATE, *is thanked for his reappearance. We need not more particularly allude to him. His communications cannot fail to do good.*

Argus *was anticipated last week*

Argus *(whose letter came to hand on Thursday at noon) surely does not expect that we should trust* him *again. His disguise will not avail him.*

Eboracum *should send his communication to the journal in which the "attack" appeared. For our own parts, we do not think any "vindication" necessary. The gentleman assailed can point to his whole life as a refutation of the calumny. Besides, we cannot in any shape, or however remotely, approve of* Eboracum's *proposed appeal to law. The character must be little worth which requires* such "*vindication.*"

Kent Railway.—*The correspondent who wrote last week in reference to this railway, may, on application at our office in Fleet-street, have the name and address of a gentleman who promises information in reference to the scheme.*

There is nothing worth extracting in the circular to which we are requested to "give a turn." There may be in future circulars. The late extract has led to similar applications from five or six other parties. As a general rule, we cannot notice such circulars.

A Sufferer *should give his name and address before preferring charges against nearly the whole staff of a Company.*

Brighton Railway.—"One of the Fooled" *says*—"*As an original shareholder of the London and Brighton Railway, designated the Rennie line, and who was called on to pay* 30*s. out of every* 2*l. deposit, as preliminary expenses, I should feel obliged if you would state if there be any truth in the report currently afloat of* 1,000*l. having been lent to the Chairman of the then Provisional Committee, and whether the said Chairman was ever required to repay the said debt by the Provisional Committee, many of whom are said still to belong to the Brighton Board. No doubt the books of this Company (I mean the Rennie Committee) can be produced, if called for, and those would disprove a rumour equally current respecting a resolution referring to this transaction, that would enlighten the Brighton shareholders upon the subject.*" *We really cannot give the information required.*

A Well-Wisher to the Railway.—*Before the receipt of our correspondent's letter we had devoted as much space to the subject as we could afford; next week, of course, the communication would be useless.*

Traveller *should apply to some bookseller.*

TRAFFIC OMITTED.

Dublin and Kingstown Railway.—*For the week ending October* 23—*Receipt from passengers (number of passengers* 33,346) 599*l.* 7*s.* 1*d.*

THE RAILWAY JOURNALS.

The Stamp Returns for April, May, and June, just published by Order of the House of Commons, enable us to complete the Returns for the year ending the 30th of June last. The results, as affecting the railway journals, are as follows:—

RAILWAY TIMES.....	146,374
Railway Magazine	68,500
Majority in favour of the RAILWAY TIMES ..	77,874

from which are to be deducted 10,874 Supplement stamps used for double numbers, still leaving the ordinary circulation of the *Railway Times* just about double that of its contemporary.—*September* 17, 1842.

THE RAILWAY TIMES.

SATURDAY, NOVEMBER 12, 1842.

We are not displeased to see that the shareholders of non-paying railways are rousing themselves from their lethargy. It is time that those to whom they delegated the management of their property should be required to give an account of their stewardship. It is time that the sad disparity between the flattering prospectus and the ruinous results should be inves-

Digitized by Google

tigated. If the search were fairly gone into, it would we fear unveil, if not actual dishonesty, certainly criminal neglect, and woful incapacity. It would disclose, we suspect, rash confidence, reckless extravagance, and the absence of all salutary control. It might even exhibit grey-headed Directors as the mere puppets of beardless boys. It might, in short, show that many Boards, instead of being the watchful guardians of the purses of their constituents, were merely courts for registering the edicts of despotic Engineers. These last-named gentlemen we believe to be the great culprits. We do not wish to relieve Directors from any part of their responsibility, neither do we think the proprietors themselves free from all blame, but we hold the Engineers to be mainly answerable for the deplorable condition to which many railways are reduced. Reports clothed in all the pomp of professional phraseology, were got up; estimates elaborately minute were prepared; assurances the most solemn were given that these estimates should not be exceeded. And how were these pledges kept? We may look for a reply to the blank faces which crowd to half-yearly meetings, asking for information which they will never obtain.

The broad accusation of falsified Reports, doubled estimates, and broken pledges, is undeniable, but the charge of reckless extravagance could not be so easily brought home to Engineers. This could only be done by faithful and detailed accounts; and where are they? Nowhere, alas! Their existence would be an inconvenient key to the enormities that are concentrated in that comprehensive word, "*works*," which makes so conspicuous a figure in railway accounts.

But with whomsoever the chief blame rests, the results are lamentable. Companies with enormous revenues are unable to meet their outlay, because their profits are paid away in interest on borrowed capital; and in utter hopelessness the proprietors are about to resort to the desperate expedient of penurious management.

Our readers are aware that on Wednesday next, the proprietors of the North Midland Railway are to assemble for the special purpose of taking into consideration two Reports, both recommending large, though unequal, reductions of the establishment of the Company. We would admonish the gentlemen who will meet on that day to be cautious what they do. The flying investigations of the peripatetic Committee may possibly not prove a sound basis to proceed upon; and the Report of the Directors, following so close on its heels, is hardly of higher authority. We wonder the latter gentlemen did not prefer the abdication of their functions to the presentation of such a Report. After an investigation protracted through 12 long months, they announced that they had reduced the establishment to the lowest limit compatible with safety, and now, with a celerity as remarkable as their previous procrastination, they have discovered that it may still be retrenched to an amount almost equal to that previously effected!

We do not by these remarks mean to dispute the practicability of the proposed reductions. We do not, in fact, feel that we are sufficiently well informed to give a decided opinion on the matter; but this we know, that the admitted safety of railway travelling is chiefly owing to the precautions taken against its dangers—to good engines kept in thorough working order—to strong carriages kept in complete repair, and to a large staff of vigilant and contented servants. Offices may be consolidated, salaries may be reduced, and workmen may be discharged; but if any serious accident should occur, and it can be traced to an inefficient establishment the result of such retrenchment, the sinning Company may rest assured that it will bring down on itself the indignation of the public, if not the interference of the legislature. The public safety must not be perilled because railway proprietors have been apathetic, because Railway Directors have been remiss, or because Engineers have been incompetent, or worse. We say again, therefore, be cautious.

The most ardent advocate of economy in the affairs of the North Midland Railway, cannot but feel grieved when he reflects upon the position of those of the Company's servants, who it is now clear are to be turned entirely adrift, and of those who, being retained, are to be subjected to a reduction of wages—in some instances a reduction by no means immaterial. For ourselves, we freely admit that this reflection had not left us wholly unbiased, pending the investigation of the late Committee. We witness daily so much of the personal and social misery resulting from want of employment, however inadequately recompensed, that deeply as we sympathise with those whose property has been embarked in this unfortunate undertaking, and some of whom, it may be, are suffering from troubles more apparent, though scarcely less real, than those of "hope deferred," we cannot but again express an anxious expectation and belief, that in the dismissals and reductions now in contemplation, self-interest will be somewhat modified by considerations of kindness.

Holding such sentiments, and being desirous of impressing them upon others, we much regret the appearance, in a local journal, of a document purporting to emanate "from the workmen of the North Midland Railway," and which, at the urgent request of several members of that body, we reluctantly transfer to our columns. The parties concerned may rest assured that *this* is not the mode by which to help forward their cause. It savours far too strongly of the "appeals" put forth some months since by the discontented operatives in the manufacturing districts—being, in fact, a strange combination of what are commonly designated as "blarneying" and "bullying." The bad taste which pervades the document we might feel disposed to overlook, on the same score as we overlook the bad English in which the "grievances" are set forth; but surely it must be a very small minority indeed of the "workmen of the North Midland Railway" who would allude to their fellow-servants in such terms as are applied to the Company's engine-drivers. It is in the very worst style of vulgar exclusiveness. We trust that this ill-advised address of the "workmen" will not react to their disadvantage at the coming meeting.

THE Executive of the South-Eastern Railway being about to open another instalment of their line (11 miles) for public traffic, extending the present 56 miles from Headcorn to the market town of Ashford, a distance by the railway of 67 miles, we take this opportunity of redeeming a pledge we made some time since, of describing the other portions of the undertaking. The situation is central, as will be seen on reference to the maps, with roads diverging off in various directions; *eastward* to Canterbury, and the whole Isle of Thanet and the Kentish coast, and the watering-places upon it; *southward* to Hythe, Folkestone, Dover, and Wimer; and *westward* the whole extent of the coast and country to Hastings.

The works between Headcorn and Ashford do not seem to present anything extraordinary, the line continuing in a valley, with a succession of ordinary cuttings and embankments. Crossing the River Stour, and through woods and meadows, it approaches very close to the church and town of Ashford. There will be an intermediate station at Pluckley.

From Ashford station, which is just completed, and is very similar in its arrangements to that at Tunbridge, the distance will be 11 miles to the terminus at Dover. This distance, as well as the last 11 miles, has had the powerful energies of able contractors unceasingly devoted to its accomplishment; common report says they are within their time. The 11 miles already spoken of will, a few weeks hence, require no longer the vast day and night gangs now engaged, and the continuous line of night fires on that portion will be known only as things of the past.

From Ashford to Dover (about 21 miles) the works, after the first few miles which pass through villages, with ordinary cuttings and embankments, are of considerable magnitude. At Smeeth there is a long embankment, the formation of which will occupy we suppose about four months. Beyond this to Stone-street, the old Roman road, the works are light and very forward, and are going on vigorously. From Ashford to a proposed station in Stone-street the distance will be 7 miles.

From Stone-street to Folkestone, another length of about 7 miles, the character of the works varies, and being through a bolder country they are of a much heavier nature. Short and deep cuttings and embankments precede the entrance to Mr. Dieder's park, contiguous to Saltwood castle. On entering this domain the geological stratum assumes another aspect, namely, the sand formation. A shallow embankment and cuttings, near to the mansion, are screened by a glacis thrown up to be planted. Continuing southward, we get into the deep cutting at the north tunnel face. This cutting is nearly out, and the brick entrance is about to be built, as well as that at the south end. From these entrances the construction of the tunnel will go on, as auxiliaries to the shafts, which are 13 in number, all of which are made. The tunnel is drained by a drift-way which is now formed. The tunnel, it is said, will certainly be completed by Midsummer next. Beautiful dells and plantations form the continuation to Cheriton, where a cutting and embankment of three miles in extent follow. These works have been pushed forward vigorously for some months, and the quantity remaining will be all shifted by the time the Saltwood tunnel is completed. The excavation being in sand, can be worked in all weathers and at all times. The embankment is made in three lifts. The long leads and numerous lines of road, and the working incessantly during the 24 hours, require an enormous force both of men and horses, upwards of 400 of the latter being applied to this portion alone of the work. The south end of the bank unites itself to another valley, where a brick viaduct of many arches is in the course of construction over the river and mill-stream. The line of way will be about 100 feet high when the viaduct is finished. The viaduct will be attached to an embankment, with skew bridges already finished. The line then takes a curve eastward to the town of Folkestone, where it is expected a station will be opened for public traffic about

Digitized by Google

Midsummer next. From this it will be 7 miles to Dover.

From the Folkestone station, a cutting commences leading up to the Martello tunnel—a short work, the brick faces of which are built, the construction of the tunnel is being worked from them, as well as from shafts. A few months will complete this work.

The butting at the east face is completed, and the warren works of two miles in length in continuation of cutting and embankments, without a single bridge, are complete.

At the east end of the broken cutting, the Abbot's Cliff tunnel, (through those celebrated cliffs 700 feet high,) is in construction. The material is a firm hard chalk, requiring no invert. The tunnel is worked by shafts and cross galleries to the sea, and is being proceeded with at a gratifying rate, and in a manner and at a cost with which perhaps no other tunnel can compete. In fact, strings of bricklayers work more after the style of getting up retaining walls in open daylight, than in subterranean channels by artificial light. The probability is, that this tunnel will be finished shortly after the Folkestone opening.

From the east face of the Abbot's Cliff tunnel the Sea wall commences. It has been going on for some years; a few more months will see its completion. Some parts are already up to formation level; other parts nearly so; and all much above the beach. The face of the cliffs is being reduced to the required slope by gangs at various heights, to form the way behind the hill on which the rails are to be laid. At the extreme east of the Sea wall, and near the west face of the Shakspeare tunnel, a large abruption of the cliffs will shortly be effected by blasting; it is expected that many thousands of pounds in cost, and months of time will be saved by this operation. Immediately following are the Twin tunnels, nearly a mile long, through the Shakspeare cliff: these, as well as their *modest faces*, are completely finished.

From the west face along the beach to the town, arrangements are making with the authorities for the ultimate entrance to, and terminus in, Dover. We cannot anticipate the Engineer's proceedings, or his Report for the forth-coming half-yearly meeting; but we think another autumn will enable the public to enjoy one of the most delightful railway excursions from our mighty metropolis to this delightful part of the English coast, and to the continent of Europe.

We fear that no grade in society has benefitted less by the introduction of railway locomotion than that grade for whose transit third-class carriages are professedly provided, and by whom alone we should be glad to see such carriages used. There can be no doubt that Railway Companies are frequently compelled to abridge the comforts which otherwise they would feel disposed to offer to their poorer countrymen, from an apprehension that individuals of a superior position in life might be inclined to travel in these inferior vehicles, if the facilities and accommodation which second and first-class carriages present were not far greater—if, in short, the conveyances of the third class were not rendered as little comfortable as may be. We think, however, that this apprehension is often allowed to have too much influence. No one can object that the speed of third-class trains should be less than that of the better carriages, nor yet that the accommodation should be of an inferior order—for accommodation, whether as regards speed or other matters, must be in proportion to the price paid; and, moreover, even with the worst accommodation which British railways supply, the parties for whose convenience third class carriages are put on, can scarcely be more uncomfortable than they were under the old system of things. At the same time, however, we cannot countenance unnecessary, much less capriciously oppressive, regulations, as affecting these third-class travellers, and therefore did we denounce the (actual) "pig-pens" of a Manchester railway, and the (theoretical) "soot-bags" of a metropolitan Chairman. Such contemptuous treatment of the "lower orders" (as they are usually styled) is, we rejoice to know, very rare indeed in the management of railways; but there are other modes of inflicting annoyance and injustice, and one of these is so well set forth in the letter of a correspondent, that we give his communication in this place:—

"A train [he says], with third-class cars attached, leaves Leeds early in the morning. The public is informed, by notices in the office, that third-class passengers are taken to London for 1*l.* 7*s.*, but the fare at *Leeds* is only taken as far as *Derby*. The early train proceeds direct to London, but the third-class carriages are detained at Derby till another train arrives from Leeds (which, however, from Leeds to Derby takes no third-class passengers), and at about a quarter past 1 this second train is forwarded to Rugby, taking with it the third-class passengers who had arrived by the early train from Leeds, and professing to reach Rugby before the arrival of the luggage train from Birmingham, by which the third-class passengers are forwarded to their destination, the train proceeding with first and second-class carriages only. At Derby the fares are only taken as far as Rugby. The use of all this complexity is, I presume, to drive travellers from the third to the second class.

"On Wednesday last several persons left Leeds by the early train for London in the third-class carriages, and stopped, of course, at Derby, till the arrival of the second train, which being unusually large was detained one hour by the breaking of one of the connecting chains. In consequence we did not leave Derby till an hour after our time, and when we got to Rugby the luggage train had gone on, and we passed it at Roade, but did not stop. The third-class passengers were then compelled to get into second-class carriages at Rugby, paying second-class fares to Wolverton, whence they were forwarded to London by the luggage train, which arrived soon after. Among them I noticed three cases in particular: one a soldier-lad going to join his regiment at Woolwich; another an old man who had served at Waterloo, who had saved up a few shillings to visit his son who had enlisted and was about to leave England; and the third a poor child of 12 years old, whose friends were to meet him at the station in London, and who would have been lost had he missed them. This boy had only 8d. above the third class fare from Rugby, and had not enough to pay his way up from Wolverton. The old soldier had taken charge of him, and I paid the excess of the fares of the three, amounting to 4*s.* 6*d.* in the whole. The office-keeper at Wolverton acted in the fairest and most proper manner, saying it was a case of great hardship, but not of unfrequent occurrence.

"In the case of the passenger from Leeds, I have no doubt the excess of fare might be recovered from the North Midland Company, by whose notice they were attracted. Those passengers also who got in on the Midland Counties' line might also recover, unless they were *informed* expressly that the train would be too late at Rugby.

"Surely, Sir, both Companies are highly culpable in not making arrangements with the Birmingham to forward their passengers at third-class prices in such cases. Why should not third-class passengers be booked through from Leeds as well as first-class? This case is, I think, particularly worthy of notice, inasmuch as the persons whom it concerns are those who are the least able to protect themselves. I heartily wish the Midland Counties' and Derby Junction were leased to the Birmingham Company."

In the concluding wish of our correspondent, many, we suspect, will very cordially join. The simple narrative which he relates, shows very forcibly the great hardship which a divided system of management in the lines of railway running northwards entails upon the public. Nor can we help joining him in expressing a belief that these arrangements are adopted with the express object of forcing persons from a third-class to a second or first-class vehicle. The practice is altogether unworthy of respectable Companies. Let the several Boards of Management make what regulations they please as to third-class passengers—let them enact that third-class trains shall be 10 or 20 hours on the road longer than is necessary—but do not let them entrap and mislead persons by such practices as those of which our correspondent so properly complains. It is ridiculous to imagine that persons who are unable to pay a shilling or so of extra fare, could venture to contend in the expensive game of law with influential gentlemen like the Managers of railways, backed by a joint-stock purse, and therefore our correspondent's hint as to the recovery of the excess fare will of course lead to no practical result; but we would fain hope that nothing beyond a public appeal to the Boards more immediately connected with the subject of these remarks, will be necessary to induce a reconsideration of their third-class arrangements. In this hope, we refrain at present from further remarks.

We briefly alluded in our number of Saturday last to a meeting which had been held on the previous Wednesday at Newton, on the subject of the proposed railway to Plymouth. It would be a complete waste of space to enter into details upon such a matter, did not the course taken at this meeting illustrate very forcibly the feeling which too frequently prevails in reference to projected railways.

"George Templer, Esq., said, if the South Line were formed, he believed that it would bring a large influx of people to Newton, and lead to the establishment of a packet station at Dartmouth, but if the railroad went over Dartmoor neither of these objects would be obtained. *As far as his assent went, therefore, he would give it to the measure, but as to money, he would candidly tell them they must look elsewhere.* It was indisputable, however, that a railway would be advantageous to the neighbourhood."

No doubt of it; the line would indisputably prove "advantageous to the neighbourhood," but what avails the advantage of a neighbourhood when placed in opposition to the advantage of one's own pocket? Mr. Templer would *give* his vote, but he would not even *lend* his money on the faith of recovering in due season both interest and principal. Mr. Templer does not stand alone, nor is the Plymouth project the only one to which "assent" is most readily, and subscriptions very sparingly, supplied.

The sort of "interest" which ought to be "felt" in such an undertaking was very properly pointed out by the Secretary, when he said that the Directors expected parties to take "even one or two shares, according to their ability, which would afford proof that they *really* felt an interest in the undertaking." Newton Abbott certainly does not appear be the place whence subscriptions are to

Digitized by Google

expected. It is to be hoped that other parts of the county will show a better example.

It will be noticed, too, that various parties seem inclined to oppose the scheme should it be carried far enough to give them a *locus standi*. They may spare themselves the trouble of prematurely protesting against a particular route, for unless public spirit in that part of the kingdom should make amazingly rapid strides, the close of the next decade will scarcely see the actual commencement of the "Plymouth and Exeter Railway." We are unfeignedly sorry for it.

THE meeting of deputies to which we adverted last week, with reference to the construction of a west-coast line of railway to Scotland, took place at Birmingham on Tuesday. We have not been able to ascertain the exact course of proceeding to be adopted, but there can be no doubt that the line will be immediately carried forward. The interests of all the Companies, but especially of the Grand Junction Company, render this step indispensable. If the west-coast line is not carried out forthwith, the east-coast line, under its present able Management, will make another great stride northward, and then woe to the future dividends of the Grand Junction, North Union, and Lancaster and Preston lines!

GREAT dissatisfaction is shown in Manchester with certain recent alterations in the conveyance of the mails from that important town to Hull, and other parts of Yorkshire, and considerable discussion took place on the subject at a late meeting of the Manchester Town Council. With several of the grievances very justly complained of, we, as railway journalists, have nothing to do, but one fact mentioned by a worthy Alderman deserves notice. Formerly, it seems, the box at the receiving-house for Yorkshire letters was kept open till half-past 8, but since the 1st of September (said the speaker), the time of departure of this mail had been altered; and, instead of further extending the time, for the benefit of the public, the box was now closed as early as half-past 5 o'clock; and letters from Manchester to Leeds, which, by railway, could be transmitted in two hours and a half, the distance being only about 40 miles, were now actually sent round, first by the Grand Junction Railway to Birmingham, thence back to Derby, and by the North Midland Railway to Normanton, and thence back to Leeds, making in all a distance of 160 miles, instead of 40! Can anything more preposterous than such an arrangement be conceived?

A memorial to the Postmaster-General was agreed to by the Town Council. The London *Standard*, in adverting to the matter, says, "the zeal and unwearying devotion to the interests of the commercial and trading classes *always* displayed by the noble Postmaster-General *are well known and appreciated*; and we feel assured that the subject only requires to be fairly stated to ensure the prompt attention of his Lordship." We wish we could see the smallest reason to join in this laudation of his Lordship.

A letter on the subject of the Yorkshire mails will be found in another page.

We are sorry to find that the negociation for the conveyance of the Brighton mails by railway has, after all, "gone off." The *Brighton Gazette* of Thursday says:—

"We regret to hear that the negociations for carrying the up night-mail on the railway have resulted not only in not attaining the object sought, but that *the down night mail is also to be taken off the rail*, and that both the night-mails are to be carried in future by a pair-horse van, with a driver and a guard. The new arrangement commenced last night; but we trust that a long time will not elapse before the whole of the mails between Brighton and London are carried by the railway."

The Directors of the Brighton Railway Company have quite enough to answer for, but it is only fair to state, that in *this* matter they have acted as becomes gentlemen anxious for the benefit of their constituents and the convenience of the town of Brighton. As to the Post-office people, their conduct seems to us wholly inexplicable. We can only recommend most urgently to the parties thus inconvenienced to bring the conduct of these functionaries before the legislature on the earliest possible day.

WE have great pleasure in hearing, that a prospect exists of a termination to the most unfortunate difference between the Directors of the Greenwich and Croydon Railway Companies. It appears that some of the most temperate and influential of the proprietors of the Greenwich Railway, several of whom are also shareholders in the Croydon line, have suggested to the Directors of the two Companies the propriety of submitting the broad question at issue between them to a Committee of disinterested gentlemen, competent to form a right judgment in the matter, with a view of bringing the unhappy dispute to an amicable termination. This cannot but be the earnest desire of every shareholder, of both the Companies, who has not suffered himself to be excited by the mere supposition that, on the one hand the object of the Croydon Company is to obtain a greater share of the advantage of the Croydon traffic than justly belongs to them; or on the other hand, that the Directors of the Greenwich Company are determined pertinaciously to adhere to their toll of 4½d., whatever may be the loss sustained by both Companies.

We are informed that the Directors of the Croydon Company did not hesitate for one moment to accept the proposition, and there can, we think, be little question that a suggestion so reasonable, and which compromises the opinions of neither party, will not be refused by the Directors of the Greenwich Company.

IT would appear that the Directors of the London and Brighton Railway have for the present abandoned their design of going before the legislature for power to extend the Shoreham branch line to Chichester. The Brighton organ of the Board states that this is "owing to their plans not being at present sufficiently matured." Whatever may be the cause, it is fortunate for the proprietors of the main line that the project is laid aside. Ere *another* session of Parliament takes place, the present Management will have but small chance of further involving their constituents!

It is to be hoped that the scheme for a railway from Croydon to Vauxhall will meet with the same fate. We are told that the Directors of the Brighton Company do not appear in this project. This is very possible; but then comes the question—*who* are to pay for the preliminary surveys? It is for the shareholders to require an explicit answer on this point. We call attention to several letters in another part of our present journal, which touch upon the matter.

We have been repeatedly asked if the Brighton Company are not restricted under the London Bridge Station Act from any connection with a new line of railway from Croydon. We believe there is nothing restrictive in the Act referred to, although in the agreement between the three Companies regulating the joint station there is the following clause:—

"That if at any time hereafter it shall be deemed expedient to make any line of railway from Croydon, or from any part of the London and Croydon Railway to or near any other station or place nearer London than the said respective stations, neither the South-Eastern Railway Company, nor the said London and Brighton Railway Company shall make, or apply for, *or concur in, or support*, any application to Parliament for making such last-mentioned line of railway, WITHOUT FIRST LEAVING A NOTICE in writing, under their respective common seals, of such their intention, at the office of the London and Croydon Railway Company, and offering to the said last-mentioned Company a participation to at least an equal extent with them, the Company or Companies making or supporting such application in the making of such line of railway, and in the profits to be derived therefrom; and upon such offer being accepted in writing under the common seal of the said London and Croydon Railway Company, within one calendar month after the time of such notice being left as aforesaid, but not otherwise, the same shall be binding on them and the Company or Companies making such offer respectively."

The notice alluded to, we have reason to believe, has *not* been given. The question, therefore, naturally recurs—*Who* are the parties guaranteeing the expense of preliminaries, and *with what object* is such expense, with such certainty of failure, incurred?

A VERY stupid paragraph has appeared in some of the London papers, to the effect that the Thames Haven Railway is to be connected with the Blackwall line. It is scarcely worth while to contradict formally so absurd a statement. We believe it originated in a squib in one of the Sunday journals. Of course it would be greatly to the interest of the Blackwall Company to form a connection with a line like the Thames Haven, which *is to* pay cent. per cent.! We flatter ourselves we have effectually "done the business" of the promoters of the *magnificent* scheme for converting Shell Haven into a mine of wealth—*not* for the shareholders.

THE Directors of the Midland Counties' Railway Company have complied with the requisition of Mr. JAMES HEYWORTH and others, and have convened a special meeting of the proprietors, to be held at Derby on Friday next. In connection with this meeting, the Board have issued a circular in which they earnestly request the personal attendance of proprietors, or failing *that*, a proxy on behalf of the Directors. They say:—

"The professed object of the requisitionists is to obtain the appointment of a Committee of shareholders to inquire into the expenditure of the Company, with a view to a more economical management of the railway. And the application for such Committee is grounded upon the assumption clearly implied, if not definitely expressed, that the Board of Directors, as at present constituted, is deficient either in the power or the inclination to make such retrenchment in the Company's expenditure as the present general reduction of wages, and prices, and the peculiar circumstances of the Company may render advisable.

"When the meeting takes place the Directors

Digitized by Google

trust that they shall be able, most satisfactorily, to *exculpate* themselves from the charge thus brought against them. In the meantime, they think it right to state for the information of their proprietors, *that* immediately after the last general meeting, and before any intimation had been given of Mr. Heyworth's intention to call a special meeting, *they appointed* a Sub-Committee of Directors, who have most carefully examined in detail every item of annual expenditure, and who, though they have *not yet* completed their labours, have already suggested reductions to the amount of between 4,000*l.* and 5,000*l.* per annum, the greater part of which *have* actually been carried into operation.

"The Directors respectfully, but earnestly, request that you will, if possible, attend the meeting, on the 18th inst., personally, and make yourself generally acquainted with the facts of the case.

"If, however, you should be unable to attend, and should feel satisfied that the exertions of the Directors now in progress will effect the important objects of economy and retrenchment better than a vote condemnatory of their past, and distrustful of their future proceedings, the Directors hope that you will place your proxy in hands where it will be used in support of that view."

Under the circumstances, we refrain at present from any remarks, further than to say, that we by no means approve of the tone of this circular, and greatly doubt whether it will answer the purpose of those who issued it.

LAST week the London and Birmingham Railway Company brought up the 3rd battalion of Foot Guards (about 500 men), as also a battery of the Horse Artillery, horses, guns, ammunition, waggons, &c., and a demi-battery of the Royal Horse Artillery. The Company also took forward the 15th regiment (about 800) to replace them, being upwards of 15,000 men in all. Another regiment, besides a large number of horses, guns, &c., are expected in the course of a day or two.

—o—

WE learn from the *Norwich Mercury* that a plan is in embryo for a railway on the route to Newmarket to Cambridge and Stortford. "Within the last week [says our contemporary] Engineers have been in the neighbourhood of this city, engaged in the survey of a course proceeding from the projected terminus of the Yarmouth Railway, to Cantley White House, Ketteringham, and so on to Wymondham and Attleburgh. These persons are, we understand, the assistants of Mr. Stephenson, and are employed under the direction of London *gentlemen*, from amongst whom the name of Mr. Adam Duff is prominently brought forward. The chief person in the survey is, we believe, Mr. Patteson, a relation of the family of that name so well known in Norwich." Mr. Patteson is favourably known to the public as having been for a considerable time Secretary to the North Midland Company. He now fills the same office in the Yarmouth and Norwich Company.

—o—

WE understand that a survey is now going forward with a view to the formation of a railway from or near Wisbeach, in Cambridgeshire, to the station of the London and Birmingham Railway at Blisworth, in Northamptonshire. The exact route we are not able to point out.

—o—

The following singular fact, taken from the *Book of Persecutions and Sufferings*, testifies [says a French journal] in a striking manner to the power of silence in Russia:—

"In the month of October, 1840, two trains upon the railway between St. Petersburgh and Zarskoiselo, met with a violent concussion in consequence of a dense fog. In the shock everything was broken. At the time it was scarcely heard of in St. Petersburg, although it is said there were 500 persons killed, mutilated, or dangerously wounded. The following day very early, some few curious persons only went to visit the scene of the disaster, but the dead, the wounded, and wreck of the carriages, had all been carried away, and the only signs of the accident were some police officers, who having questioned the persons on the motives of their early visit, reprimanded them for their curiosity, and ordered them to go to their own homes."

—o—

THE *Brighton Gazette* supplies another illustration of the beneficial effects of railways to the public. "Some of our butchers [it says] have lately availed themselves of the quick transit of goods by railway, and the reduced price of meat at Smithfield, to get their supply of stock from London; and the consequence has been a considerable fall in the price here."

—o—

RAILWAY WHEELS.—The Commission on Railways in Paris is unanimously agreed to recommend to the Minister of Public Works to prohibit the use of cast-iron wheels, on account of their brittle nature. All the Companies in future will have to employ wrought-iron wheels. In England and Belgium cast-iron wheels have disappeared, unless, indeed, they may be sometimes used in the transport of coals and goods.

—o—

LONDON AND DOVER RAILWAY.—A change is to take place in the superintendence of this line, in consequence of the resignation of Mr. J. S. Yeats.

—o—

HER MAJESTY'S VISIT TO WALMER CASTLE.—Many members of the Royal Household have within the last few days availed themselves of the London and Dover Railway as a means of conveyance *en route* to Walmer, the seat of His Grace the Duke of Wellington, to be in attendance on her Majesty during her sojourn there. On Wednesday last 22 horses (a portion of the royal stud) were conveyed by the same means to the Headcorn station, to proceed thence to Walmer. Should the report now current that her Majesty purposes making the above delightful seat her marine residence, the effect it must have, not only on the good fortunes of the Dover Railway, but on the inhabitants of East Kent, more especially Deal, Ramsgate, and Dover, will be incalculable; and recollecting as we do the great partiality displayed by her Majesty during her visit to Ramsgate, for the Kentish coast, previous to her ascent to the throne, such a report seems more than usually deserving credence.

RAILWAY OFFENCES AND OFFENDERS.

A FEW days ago Henry Simmons appeared before the magistrates at Bolton at the suit of the Bolton and Leigh Railway Company, to answer the charge of having attempted to defraud that Company by continuing his journey on the railway beyond the destination for which he had paid. The case was clearly proved. The defendant said, his object was not to defraud, and that he had got into the carriage before paying out of ignorance, and intended to pay his fare when asked for it. The Bench being of opinion that there had been an attempt made by defendant to defraud the Railway Company, ordered him to pay a penalty of 20*s.* with costs, which, together with the fine, amounted to 2*l.* 5*s.*—a very proper infliction.

Last week a man named Geo. Foster, a labourer, living in Clarendon-street, Hulme, was brought before Mr. Maude, at Manchester, charged with having attempted to defraud the Manchester and Leeds Railway Company of the fare due from him by endeavouring to leave the station without paying the money. The offence was committed on the previous night; and, being satisfactorily proved, the defendant was convicted in the penalty of 10*s.* and costs, or, in default of payment, fourteen days' imprisonment. The fine was paid.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.

Traffic Receipts for the Week ending November 8, 1842—the Tenth Week of the Low Fares.

Date.	First-Class.	Second-Class.	Third-Class.	Total.	Amount.
Nov. 2.. .	266	383	193½	842½	£182 3 0

					£1,189 16 6

The following is the return of the numbers who embarked and disembarked at New Cross during the same period:—

WEEK—2nd to 8th November, inclusive.

	1st.	2nd.	3rd.	Total.
Number of passengers booked *at* New Cross station from the 2nd to the 8th November, inclusive.....	89	164	271	524
Number of passengers booked *to* New Cross station from the 2nd to the 8th November, inclusive.....	127½	173	379	679½
Total	216½	337	650	1,203½
Add total to the 1st November, from last week's *Railway Times*.....				12,465½
Total loss to the Greenwich Company in *ten* weeks by their prohibitive toll.....				13,669

RAILWAY TRAFFIC AND DISPATCH.

ON Monday last, being the statutes' fair for hiring of servants at Rotherham, there were booked and safely conveyed, 7,801 passengers on the Sheffield and Rotherham Railway, being the largest number of any statutes' day since the opening of the line. During the middle part of the day, and in the evening, the trains were dispatched each way every half hour.

A new turntable which has been recently placed at the Sheffield terminus, added very much to the ease and expedition with which the trains were reversed, in a manner similar to that which has been the practice at Rotherham for more than 12 months. The engines and tenders were turned by two men, without uncoupling them, in about half a minute; two carriages or coaches were turned at once, and from what we saw of the machine it bids fair to become a general favourite, not only with the men who formerly had to unscrew the dirty joints of the hose, and now have not occasion to wet their fingers, but also with the Directors, who value its importance both for diminution of labour and saving of time.

There were 53 passenger trains in and out during the day, and the distance run by the carriages was equal to one carriage running 2,784 miles.

BRIGHTON AND BLACKWALL RAILWAYS.

To the Editor of the Railway Times.

SIR,—The American, French, and Belgian accounts of the working expenses of their railways reduce everything to a rate per mile, or kilometre, or some given distance run by the trains. I collect from them that the average of the Belgian expenses is 4s., and that of the American 3s., per mile per train. Some of the railways in the north of England, exclusive of the Government duty, have been lately worked at a rate as low as the latter sum. Mr. Vignoles, in one of his recent lectures on railways, gives the average working expenses of all the English railways at about 4s. per mile per train. Enclosed is a comparative account of the expenses on the Brighton and Blackwall Railways for the first six months of this year. They appear very high, and it is singular they should be both alike. Such calculations are easily made, and I hope some of your correspondents will take the trouble of sending you similar abstracts of the expenses of the principal lines in the United Kingdom. It would greatly advance the interests of railways and Engineers to have this only true comparative account of what it costs to work railways, as constantly before the eyes of your readers as the traffic returns. I am, Sir, yours, &c.,

SCRUTATOR.

London, November 1, 1842.

Comparative Calculation of the Working Expenses of the London and Brighton and Blackwall Railways, as deduced from the Accounts of Actual Expenditure, for the first Six Months of 1842. *(Reduced to a Mileage.)*

LONDON AND BRIGHTON RAILWAY. Length 56 miles, including Shoreham branch. Total d'stance run by trains in that period 130,000 miles.			Heads of Expenditure.	LONDON AND BLACKWALL RAILWAY. Length 3½ miles. Total distance run by trains in that period 58,933 miles.		
Per mile	per train.			Per mile	per train.	
s. d.	s. d.			s. d.	s. d.	
0 7¼	1 6		Wages to porters, guards, clerks, ticket takers, &c.	1 11	1 6	(including wages to engineers, stokers, &c.)

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—The official letter of the Directors of the London and Blackwall Railway Company, which appeared in your number of the 5th instant, announces their intention of not proceeding further with the discussion on the estimates connected with this undertaking. Had it not been for one expression in their letter, I should have joined them in this resolution, and cheerfully have left to all who are interested in this discussion, and who will carefully read and consider the respective statements, to decide between official assertions on the one hand, and arguments drawn from documentary evidence on the other.

The Directors, in their last letter, perceiving the difficulty of making the Engineers responsible for a standard estimate framed by other parties, whilst an admission to the contrary exists under the handwriting of the Chairman, endeavour to effect this object by insinuating that otherwise there must be an attempt at misleading.

The Directors appear to have lost sight of the real nature of the explanations contained in my letter of the 24th September with reference to the estimates.

On the part of the Engineers, I admitted that they concurred with the Directors in the opinion that the sum of 800,000*l.* would have been fully adequate for the completion of the railway to Fenchurch-street; and I am sure, had this conviction been realised, not one word respecting errors of esmates would ever have been uttered. Unfortunately, and to the surprise and consternation of all parties, the sum estimated as adequate for the purchase of property for a width of 71 feet, and including four lines of rails, was absorbed in the cost of property for a viaduct 26 feet 6 inches, only, in width, to accommodate two lines of rails; and the expenditure on Parliamentary and legal proceedings, Management, and interest, swelled to a sum total amounting to 177,000*l.* Now the latter, it was conceived, would never have exceeded 70,000*l.*, or 80,000*l.* at most; and, as before observed, a saving of 100,000*l.* was confidently expected by all parties to have been effected on the former, to cover the admitted deficiencies of the original estimates on which the Directors based their calculations. Had the result been consistent with these expectations, the Blackwall Railway estimates would have been sufficiently borne out.

In this erroneous conviction, as I stated in my former letter, the Engineers participated with the Directors; and had these gentlemen not lost sight of this, much subsequent discussion might have been avoided, and the insinuation of misleading, if at all necessary, applied to the proper item, and that is, the estimates of cost of purchase of property.

I am, Sir, your most obedient servant,

GEORGE P. BIDDER.

November, 8, 1842.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—"Assume a virtue if you have it not." So said Hamlet to his mother, and so no doubt the writer of a letter subscribed "Civil Engineer," in your journal of the 5th instant, said to himself. What he might say to himself, we have no right to quarrel with, but when he obtrudes his monologue on a public auditory, he must not complain if his soliloquy become the subject of public criticism. How, Sir, stands the matter to which these general remarks are the prelude? Why, that Mr. Bidder disclaims, on the part of Mr. Stephenson and himself, the adoption of certain estimates made by other parties, for which the Directors of the Blackwall Railway wish to make the former responsible. I know not which is right, for I know no more of the controversy pending between them than what has transpired through your columns, and therefore I wish to abide the issue of the discussion before I presume to offer an opinion upon the matter to which it refers. Not so, however, the "Civil Engineer," who, with an unfairness which to my taste is peculiarly un-English and detestable, aims a blow at one of the combatants, and that one the very party with whom, if not actuated by professional rivalry, private pique, or natural spleen, it would be presumed that he would sympathise; in the first place, because it is a contest between an individual and a Board of Directors, and in the second place, because Mr. Bidder's present position might one day become his own. In spite of these natural motives, he rushes in and deals a foul blow "*pendente lite*," and this too from under the mask of a professional "*Esprit du Corps.*"

"Oh! what a goodly outside falsehood hath!"

Wherever there is this inversion of the natural order of things, depend upon it there is an under-current of personal feeling, the workings of which are always discernible on the surface, notwithstanding the care that may be taken to prevent the eddy becoming apparent. On the whole, then, it appears that Mr. Bidder disclaims a responsibility which is attempted to be fastened upon him by the Blackwall Railway Directors, and whilst the interpleadings of both parties are appearing in your journal, this modern "Cantwell" must needs interfere, and offend the moral sense of every right-thinking man, by the unctiousness with which he simulates a disapproval

the conduct of a member of his own profession—profession that possibly leaves the "Civil Engineer" more time for indulging the "itch o' writing," than for active professional exertions, though I may be allowed to judge from such expressions as "distrust and dislike *against* any new measure," disclaimer *against* sentiments," and the substitution of adjectives for adverbs, &c. &c., his literary attainments are not of the very highest order. I trouble you, Sir, with these observations, in the belief that from the notoriety which you have given to the remarks of a "Civil Engineer," you will not refuse to those of

Your very obedient servant,

ANTI-HUMBUG.

November 7, 1842.

LONDON AND SOUTH-WESTERN RAILWAY.

To the Editor of the Railway Times.
